Commentary to Chandrakirti's *Supplement to the 'Middle Way'*
by Geshe Jampa Gyatso

(Note: Chandrakirti's *Explanation of the 'Supplement to the "Middle Way"'* inserted in these transcripts comes from an unpublished translation by George Churinoff distributed at Sera Monastery on the occasion of His Holiness the Dalai Lama's commentary in 1994, while the translation of Lama Tsongkhapa's *Illumination of the Thought* has been inserted from Jeffrey Hopkins' *Compassion in Tibetan Buddhism*.)

Today we begin the subject of the Middle Way based on Chandrakirti's *Supplement to the 'Middle Way'* (also called *Supplement to [Nagarjuna's] 'Treatise on the Middle* Way') and his commentary to that text, *Explanation of the 'Supplement to the "Middle Way,"'* together with the commentary to it by Lama Tsongkhapa called *Illumination of the Thought*.

Shakyamuni Buddha gave a great variety of teachings but among them the most profound and supreme are the Perfection of Wisdom Sutras. These teachings contain both explicit and hidden meanings; the hidden meaning having been clarified by Maitreya, and the explicit meaning, the profound view, emptiness, by Nagarjuna.

The etymology of the term 'middle way' in general is that it means a way that is free from either of the two extremes: the extreme of permanence and the extreme of annihilation. There are three types of middle way: a basis middle way, path middle way, and resultant middle way. On the other hand, in the specific context of the text *Supplement to the 'Middle Way'* the term 'Middle Way' refers to a particular text by Nagarjuna called *Treatise on the Middle Way* (*Madhyamakashastra*) or *Fundamental Treatise on the Middle Way Called 'Wisdom'* (*Prajnanamamulamadhyamakakarika*), which is referred to in George Churinoff's translation as *Fundamental Wisdom* and in Jeffrey Hopkins' as either the *Treatise* or *Treatise on the Middle Way*. The title of Chandrakirti's commentary on *Fundamental Wisdom*, which in Sanskrit is *Madhaymakavatara*, is variously translated into English as the *Supplement to the 'Middle Way,' Entering into the 'Middle Way,' or Engaging in the 'Middle Way.'*

I will give my commentary to Chandrakirti's *Supplement to the 'Middle Way'* based on Chandrakirti's autocommentary, *Explanation of the 'Supplement to the "Middle Way"'* and Lama Tsongkhapa's *Illumination of the Thought*. I received the transmission of these texts and commentary on them from His Holiness the XIV Dalai Lama at Sera Je Monastery in 1994.

(Note: In these transcripts
- Nagarjuna's *Treatise on the Middle Way* is referred to as *Fundamental Wisdom*,
- Chandrakirti's *Supplement to the 'Middle Way'* as the *Supplement*,
- Chandrakirti's *Explanation of the 'Supplement to the "Middle Way"'* as the autocommentary, and
- Lama Tsongkhapa's *Illumination of the Thought* as *Illumination*.)

The Tibetan version of Lama Tsongkhapa's commentary begins by giving the name of the text: *Illumination of the Thought, An Extensive Explanation of Chandrakirti's 'Supplement to the Middle Way.'*

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) continues:

Homage to Manjushri

> I bow down and go for refuge with great respect to the feet of the revered guru Manjughosha and the father – the superior Nagarjuna – and his sons.

With these opening lines of his commentary, *Illumination*, Lama Tsongkhapa pays homage to Manjughosha, or Manjushri, whom he calls guru in that he received teachings directly from him. The Tibetan word *je tsun*, here translated as 'revered,' has great meaning in Tibetan but we will not go into it here. The Sanskrit word *guru* (in Tibetan lama) is composed of two syllables *gun* and *rup*, which respectively mean 'quality' and 'heavy,' therefore together signifying 'one who is heavy in qualities.' The Tibetan for Manjugosha is *jam yang* which respectively mean 'soft' and 'melodious.' His very name indicates his mind is soft in that it is free of the afflictive emotions and his speech is melodious in that it possesses the sixty-four melodious qualities of a buddha's speech. When reciting this phrase one should do so with the desire to receive the blessings of Manjushri and to attain the qualities of Manjushri signified by his name.

In regard to "the father – the superior Nagarjuna – and his sons" there are two interpretations; the first being that there are two sons and the other being that there are four sons. In the latter case the father is Nagarjuna while the four sons are Aryadeva, Buddhapalita, Bhavaviveka, and Chandrakirti.

"I bow down and go for refuge with great respect to the feet" indicates that Lama Tsongkhapa bows down even to the lowest part of a holy being's body.

The Tibetan word *chag tsel*, translated here as 'bow down,' contains the following meaning. The syllable *chag* stands for the excellent qualities of the holy beings, while *tsel* means to strive, therefore together they mean "I strive for your excellent qualities." Bowing down, or prostrating, can be done by way of either body, speech, or mind. Physical prostration involves touching one's five 'limbs' (head, hands, and knees) to the ground, verbal prostration involves reciting praises of the excellent qualities of the holy beings, and mental prostration involves keeping in mind and generating faith in the excellent qualities of the holy beings.

"Go for refuge" means that on the basis of the trust that Manjushri can protect one from fear, the obstructions, and problems, one goes for refuge to him. In brief, going for refuge means to place one's trust, free from any doubt, in a particular object.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> May I always be protected by the King of Subduers,
> Sun of all teachers, treasure of all good explanations
> Of the profound and vast, unusual friend of all the world,
> Eye revealing the good path to migrators on the three levels.

The first three lines of this verse describe the excellent qualities of Shakyamuni Buddha. The word 'profound' refers to the teachings on emptiness, while 'vast' refers to the teachings on the paths and grounds. Shakyamuni Buddha is the treasure of all these explanations. "Unusual friend of all the world" is an epithet of Shakyamuni Buddha. The Tibetan word *jig ten*, in Sanskrit *loka*, which is translated into English as 'the world,' is composed of two syllables. The syllable *jig* means 'transitory' or 'momentarily disintegrating' and refers to our aggregates, and the syllable *ten* means to depend. Therefore together they mean 'that dependent on the transitory aggregates,' i.e., sentient beings. There are two types of transitory objects: the inhabitants and the environment. "Unusual friend" indicates that Shakyamuni Buddha is our dearest friend because he is completely impartial toward all beings and takes care of them equally. This quality is very strong in a buddha; it is for this reason that the second chapter of Dharmakirti's *Commentary on [Dignaga's] 'Compendium of Valid Cognition* describes the outstanding quality of a buddha in possessing equanimity toward all sentient beings. In this text Dharmakirti says that even if Shakyamuni Buddha were to have one person massaging one side of his body with oils and perfumes and one person cutting the other side of his body he would have the

same compassion for these two beings without making any distinction at all between them. Due to this quality, Lama Tsongkhapa calls Shakyamuni Buddha the 'unusual friend of the world.'

"Eye revealing the good path to migrators on the three levels" refers to the beings abiding on the three levels: below, on, and above the ground. "Eye" is mentioned because our eyes are of great value in that they allow us to see others, to recognize them, and so forth. Shakyamuni Buddha is said to be an 'eye' in that he opens the wisdom eye of sentient beings.

The Tibetan word *thub dbang* (*munindra*) is translated here as King of Subduers, *thub* literally meaning ability and *dbang* meaning lord or supreme. The word *thub*, translated as subduer, refers to hearer and solitary realizer foe destroyers who have overcome the afflictive obstructions. However, since Shakyamuni Buddha has not only overcome the afflictive emotions and is therefore superior to them he is called the King of Subduers or Mighty Subduer (see the translation of *Supplement to the 'Middle Way'*).

"Sun of all teachers" means that just as the sun illuminates darkness, Shakyamuni Buddhas teachings dispel the darkness of sentient beings' ignorance. (The order of my explanation differs from the English translation but accords with the order of the words in the Tibetan. There are two [valid] ways of translating a text: one that maintains the same order of the words and one that does not.)

This concludes the discussion of the homage to Shakyamuni Buddha.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> May I always receive the blessed empowerment
> From guru Manjughosha, source of profundity
> In the retinue of countless conquerors, unequaled
> In proclaiming the lion's roar of right discourse supreme.

Lama Tsongkhapa pays homage to Manjushri indicating Manjushri's particular quality of presenting the subject of emptiness, fearlessly proclaiming, like a lion's roar, these teachings in the midst of a throng of people.

Manjushri is said to manifest in the form of a bodhisattva in the retinue of all the supreme emanation bodies of buddhas, to receive teachings from them, and to then give teachings on emptiness. This is because if it is a supreme emanation body it is pervaded by having the eight close sons, one of whom is Manjushri. Although these eight close sons are called bodhisattvas, they are actually buddhas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Homage from my heart to the prophesied Nagarjuna,
> Who explained as it is the middle way of dependent-
> Arising, free from extremes, the mind essence of the sugatas
> In the past, present, and future. Hold me then with the hook of mercy.

Here Lama Tsongkhapa pays homage to Nagarjuna, one of the two clarifiers who opened the track of the Middle Way. This verse indicates that Nagarjuna explained the path of dependent-arising, the middle way, which is the essence of the mind of the sugatas of the three times. Nagarjuna is called an opener of the chariot way of the middle way. The Middle Way is the system that holds that all phenomena ranging from forms through the exalted knower of all aspects lack true existence, but are still possible as agents, actions, and objects. Because Nagarjuna clarified this point he is said to be a clarifier of the Middle Way or an opener of the chariot way of the Middle Way. In fact, Shakyamuni Buddha himself prophesied that Nagarjuna would open the chariot way of the Middle Way. There is a passage in the *Mahamegha Sutra* (see José Ignacio Cabezon, *A Dose of Emptiness*) concerning this prophesy in which Shakyamuni Buddha says: "This youngster will be born as a monk called Naga

when four hundred years have elapsed after my parinirvana. He will spread my teachings and eventually [he will be born] in the earthly kingdom called Radiance of Faith where he will become the conqueror known as the tathagata 'Radiance of the Gnostic Source.'" This prophecy is found in both sutra and tantra in that Nagarjuna is also said to be an innovator of tantra. In the *Descent from Lanka Sutra* (José Ignacio Cabezon, *A Dose of Emptiness*) it says: "In the south, in the land of Vaidalya, a monk renowned as the Glorious One, called by the name of Naga, will eliminate both the side of existence and that of non-existence. Having explained to the world that my vehicle is the supreme Great Vehicle, he will accomplish the stage of joy, and then proceed to Sukhavati."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Homage to the feet of the glorious Aryadeva,
> Who ascended to high rank through that protector's precepts,
> Clarifying for migrators what he had realized,
> Attaining dominion of discourse teaching the good path.

With this verse Lama Tsongkhapa pays homage to the main son of Nagarjuna, Aryadeva. Although Aryadeva is called Nagarjuna's 'son,' both the Prasangika Madhyamikas and the Svatantrika Madhyamikas consider Nagarjuna and Aryadeva to be of a similar level. This is because Aryadeva also composed a treatise on the Middle Way, called the *Four Hundred*, and likewise composed a commentary on the *Guhyasamajatantra*. It is said that the text *Four Hundred* arose from Aryadeva's teachings on the four noble truths in that he is said to have taught twenty-five stanzas on each of the sixteen attributes (perhaps this is just an oral transmission regarding its origin as this information is not found in any text).

Aryadeva lived in Veda, or Vaidalya, which is also called 'Glorious Copper Mountain,' in the same period as Nagarjuna. It is recounted that at one time the monks of Nalanda Monastery were in danger of losing to their opponent, Ashvagosha, as none of them were brave enough to face him. They decided to send for Aryadeva through Mahakala and for this purposed organized a ritual of appeasement to Mahakala (*kang-sur*). A message to Aryadeva was put in the torma inviting him to come to Nalanda to debate Ashvagosha. During the ritual, the torma was put on the roof of the monastery where it was eaten by Mahakala in the form of a crow who then took the message to Aryadeva on Glorious Copper Mountain. Aryadeva received the message and asked his guru, Nagarjuna, whether or not to accept the invitation. Nagarjuna advised him to accept it but suggested that Aryadeva train in debate against him, with Nagarjuna taking the position of the non-Buddhists. In this way they proceeded to debate but, as Nagarjuna was so good at upholding the position of the non-Buddhists, Aryadeva began to think that his guru might actually share these views. At one point, Aryadeva took off his shoes and circled them around Nagarjuna's head saying '*kor-sum*.' Due to his having made such an inauspicious gesture, Nagarjuna prophesied that although Aryadeva would win the debate he would encounter some problems. In fact, on his way to Nalanda Aryadeva encountered an old blind man who asked him for one of his eyes. As Aryadeva was a bodhisattva he complied and then continued on to Nalanda. The day after his arrival, during morning puja, Ashvagosha appeared in the door of the temple and began to count the monks while pointing at each of them with his walking stick. When he arrived at Aryadeva he asked, "From where has this bald-head which was not here before appeared?" To this Aryadeva said "This bald-head which was not here yesterday arose from the neck," whereupon Ashvagosha could not reply. Ashvagosha then asked Aryadeva, "Am I coming or going?" to which Aryadeva replied, "It depends on your mind," and once again Ashvagosha could not reply. A short time later the king and his retinue were invited to attend the debate between them. The opponents began by making an agreement that if Aryadeva lost the Nalanda monks would join the non-Buddhist school, while if Ashvagosha lost he would become a Buddhist. However, when Ashvagosha was on the point of losing the debate he instead flew up into

the air! He was followed by Aryadeva who warned Ashvagosha not to go too high saying that if he did so he would die. As Ashvagosha did not believe him, he told him to throw his long hair up into the air. When Ashvagosha did so his hair was immediately cut by the wind. Ashvagosha became frightened and descended, whereupon Aryadeva took him back to Nalanda where he was locked up in the library. There Ashvagosha began to read the Buddha's scriptures until he came across a passage in which it was prophesied that Aryadeva would debate Ashvagosha and win, whereupon Ashvagosha would be converted to Buddhism. Upon reading this Ashvagosha was in fact converted to Buddhism and went on to become a great Buddhist scholar.

Tuesday morning, January 18, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> I bow down with my head to the feet of Buddhapalita,
> Who accomplished the word of the revered Manjughosha,
> Illuminated the final thought of the Superior,
> And went to a place of knowledge bearer adepts.

Just as Manjushri taught, Buddhapalita explained his words to others. The term "the Superior" refers to Nagarjuna, while "the final thought of the Superior" refers to the Prasangika Madhyamika view. This it what was illuminated or explained by Buddhapalita. "A place of knowledge bearer adepts" means that Buddhapalita is a knowledge bearer of the tantra path.

Buddhapalita understood the meaning, or intention, of Nagarjuna's *Fundamental Wisdom* and explained it in his commentary, *Buddhapalita's Commentary on the 'Middle Way,'* using consequences. Acharya Bhavaviveka countered this by writing his own commentary *Lamp for [Nagarjuna's] 'Wisdom,' Commentary on the 'Treatise on the Middle Way*,' which explains the meaning of *Fundamental Wisdom* using autonomous syllogisms and asserting inherent existence. Because Bhavaviveka was a monk of high caste, while Buddhapalita was a lay person of low caste, Buddhapalita did not write another text refuting Bhavaviveka's position.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Homage to the honorable Chandrakirti and Shantideva,
> Who completely and perfectly revealed the path
> Of the great sage [Buddha], subtle and hard to realize,
> The extraordinary essentials of Nagarjuna's system.

There are two Middle Way schools: the Prasangika Madhyamika school and the Svatantrika Madhyamika school. Chandrakirti is said to have opened the chariot track of the Prasangika Madhyamika system, while Bhavaviveka opened the chariot track of the Svatantrika Madhyamika system. On the other hand, Nagarjuna opened the chariot track of the Middle Way school (the Madhyamika) in general. The chariot track, or system, of the Prasangika Madhyamika is that nothing is established by way of its own character, yet conventionally phenomena perform a function in terms of cause and affect, agent, action, and object, and so forth. The chariot track, or system, of the Svatantrika Madhyamikas is that, although nothing exists truly, phenomena are established by way of their own character or from their own side. Thus, the chariot track of the Svatantrika Madhyamikas is that true existence and establishment by way of its own character are not contradictory. Bhavaviveka himself makes this assertion and in order to present it used many reasonings.

Lama Tsongkhapa next mentions Shantideva in his homage. Shantideva was a great yogi who was skilled in the practice of the vast, the grounds and paths. When Shantideva first came to Nalanda

Monastery he was known as an ignorant monk who only engaged in three practices: eating, sleeping, and defecating. It is recounted that in the vicinity of Nalanda there was a nunnery that invited a qualified monk to give a Dharma teaching on the 15th of each month. The monks took turns, going according to their ordination status. When Shantideva's turn arrived the nuns thought to embarrass him and built an unusually high throne without stairs. However, when Shantideva arrived he was seen to suddenly be seated on the throne without any difficulty or need for assistance. He then asked the nuns what they wanted him to teach. The nuns requested him to give a teaching that had not been taught in the past by any of the Indian pandits. Shantideva agreed and began to teach his text *Engaging in the Bodhisattva Deeds* saying that although he was not skilled in poetry he would teach something that had never been taught before. In addition to the nuns there were also various scholars present at the teachings. Shantideva went through the various chapters of his text and when he arrived at the ninth chapter on wisdom he began to levitate higher and higher and at the conclusion flew away to the south of India. Fortunately, some of the scholars at teachings were able to retain the words of the teachings by means of their ear clairvoyance. As Shantideva no longer wished to return to Nalanda, after his teachings has been written down, some of the scholars went to the place were he was living and asked him to check the accuracy of the text. Because in the teachings on *Engaging in the Bodhisattva Deeds* Shantideva at times referred to a text he had written called the *Compendium of Trainings*, they asked him where it could be found and were told that he had hidden it in the ceiling of his room. He also told them that it had been written in Sanskrit, which was the language of the scholars!

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> I have seen well with the eye of stainless intelligence
> All the meanings of the uncommon essentials
> In the tenets of Nagarjuna and Aryadeva
> And commentaries of the three great charioteers.
>
> In order to remove the corruptions by the pollutions
> Of interpretations by most who sought to teach this system
> And because others have requested it I will explain at length
> In full and correctly the *Supplement to the Middle Way*.

Lama Tsongkhapa here promises to compose a text to explain Chandrakirti's *Supplement to the Middle Way*. The verse says that he will do so "in order to remove the corruptions by the pollutions of interpretations by most who sought to teach this system," thus indicating that there are commentaries composed by Tibetan scholars which contain misconceptions and errors.

The names Nagarjuna and Aryadeva are mentioned saying "the tenets of Nagarjuna and Aryadeva," while those who clarified their view are mentioned saying "commentaries of the three great charioteers." The three great charioteers are perhaps Chandrakirti, Buddhapalita, and Shantideva, since their names appear elsewhere in this homage. Another possibility is that they are the three charioteers of the Prasangika Madhyamika, Yogachara Svatantrika Madhyamika, and Sautrantika Svatantrika Madhyamika schools who are respectively Chandrakirti, Shantarakshita, and Bhavaviveka.

In short, Lama Tsongkhapa promises to compose this commentary, *Illumination*, saying: "In order to remove the corruptions by the pollutions of interpretations by most who sought to teach this system and because others have requested it I will explain at length in full and correctly the *Supplement to the Middle Way*.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Here I will explain, in accordance with his own commentary, Chandrakirti's *Supplement to the Middle Way (Madhyamakavatara)*, a great text settling without error the profound and the vast. The explanation has four parts:
>
> 1 The meaning of the title
> 2 Obeisance of the translators
> 3 The meaning of the text
> 4 The meaning of the conclusion
>
> 1 The meaning of the title
>
> In Sanskrit, one of the four language families of India, the title of this treatise is *Madhyamakavatara.* This is translated as *Supplement to the Middle Way.* The 'Middle Way' here is Nagarjuna's *Treatise on the Middle Way (Madhyamakashastra)* because Chandrakirti says, 'In order to supplement the *Treatise on the Middle Way*…'[6]

Chandrakirti's *Supplement* says:

> 1 Meaning of the title
> 2 Translator's homage
> 3 Meaning of the text
> 4 Meaning of the conclusion
>
> 1 Meaning of the title
>
> In the Indian language:[1] *madhyamakavatara bhashyam nama*
> In Tibetan: *dbu ma la 'jug pa'i bshad pa zhes bya ba*
> [In English: *Explanation of the 'Supplement to the "Middle Way"'*]

'Middle Way' in the context of the title of Chandrakirti's text refers to the *Treatise on the Middle Way* (or *Fundamental Wisdom*) by Nagarjuna, the full name being *Fundamental Treatise on the Middle Way, called 'Wisdom.'* The Tibetan word 'supplement,' literally engaging (*'jug pa*), means to supplement or to engage in the explanation in terms of both the profound and vast. The English word 'supplement' means to fill in the gaps, which is perhaps not quite the same meaning as engaging. The Sanskrit word *avatara* is the same word that appears in the title *Bodhisattvacharyavatara* (*Engaging in the Bodhisattva Deeds*) which is usually translated into English as 'engaging.' Because in *Fundamental Wisdom* only the profound side, emptiness, is discussed and not the vast side, the grounds and paths, Chandrakirti's *Supplement to the 'Middle Way'* and his autocommentary fill in this gap by also explaining the vast side.

Nagarjuna composed many texts including the Six Collections of Reasonings, the Seven Praises, and the *Compendium of Sutra*, however only three of them extensively discuss both the profound and vast sides: *Precious Garland*, *Praise of Sphere of Qualities*, and *Compendium of Sutra.*

Of the "four language families" of India, Chandrakirti composed this text in the languages of the gods of the Brahma Realm, i.e., Sanskrit.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Furthermore, when in his own commentary Chandrakirti cites Nagarjuna's *Treatise* as a source, he frequently says, 'From the *Middle Way*....' The *Middle Way* should, therefore, be taken to mean Nagarjuna's *Treatise on the Middle Way*, not other texts on the middle way[7] or any of the other meanings of *madhyamaka* [such as a person holding the tenets of the middle way or the tenets themselves].

[1] Of the various Indian languages, here, Sanskrit is referred to.

> In his *Lamp for Wisdom (Prajnapradipa)* Bhavaviveka explains that based on the verbal root *[ka* meaning proclaim] of *madhyamaka*, the term *madhyamaka* indicates a treatise of tenets of the middle way. Therefore, even though only the word *madhyamaka* appears [in Chandrakirti's title], it should be understood as referring to the *Madhyamakashastra*, Nagarjuna's *Treatise on the Middle Way.*

This shows that Middle Way can refer to various things including the *Treatise on the Middle Way* (*Fundamental Wisdom*), the tenets of the Middle Way, and so forth. In this context 'Middle Way' refers to the *Treatise on the Middle Way*, which is the *Fundamental Treatise on the Middle Way, called 'Wisdom.'* This text by Nagarjuna has twenty-seven sections or chapters. Chandrakirti begins to explain these twenty-seven sections with the sixth chapter of his text, *Supplement*.

The text *Fundamental Wisdom* begins with a praise to Shakyamuni Buddha and then there is a stanza saying: "There is no production from self, other, both, and causelessly." In this way Nagarjuna indicates that all phenomena are not produced from inherently existent causes because they are not produced from self, other, both, and causelessly.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: How does Chandrakirti's text supplement Nagarjuna's *Treatise on the Middle Way?*
> ANSWER: One person [Jaya-ananda] says that in Nagarjuna's *Treatise* conventional and ultimate natures are not taught extensively, but that Chandrakirti teaches these two extensively here and in this way supplements Nagarjuna's *Treatise.*

The name Jayananda is composed of the words *ananda*, in Tibetan is *gyel po*, meaning 'king,' and *jaya*, in Tibetan *kun ga*, meaning 'always joyful,' therefore together they mean 'Always Joyful King.' Jayananda is the only scholar who composed an explanatory commentary on Chandrakirti's autocommentary.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> This is not a good explanation because the forms of reasoning ascertaining suchness are far more extensive in Nagarjuna's *Treatise on the Middle Way* than in Chandrakirti's *Supplement.*

Lama Tsongkhapa says that the objection put forth by Jayananda regarding how the *Supplement* supplements *Fundamental Wisdom* is incorrect because the reasoning regarding the profound that are set forth in the *Supplement* are not as vast as those set forth in *Fundamental Wisdom*.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Our own system on this is that Chandrakirti supplements Nagarjuna's *Treatise* in two ways, from the viewpoints of the profound and of the vast.
> With respect to the first, Chandrakirti says that he composed the *Supplement* in order to indicate that the meaning of the middle way which he ascertained is not shared with other Madhyamikas [specifically, Svatantrikas].

The system set out by Chandrakirti is not shared with other Madhyamikas, such as the Svatantrikas. The assertions and non-assertions that are not shared are of eight types (*Illumination* page 215):

- The three non-assertions:

1. the non-assertion of a mind-basis-of-all that is a different entity from the six consciousnesses,
2. the non-assertion of the uncommon manner of refuting a self-cognizer,

3. the non-assertion of the generation of a view of suchness in the continuum of an adversary by means of an autonomous syllogism,

- and [the five assertions]:

4. the necessity of asserting external objects just as consciousness is asserted,
5. that hearers and solitary realizers realize functioning things as non-inherently existent,
6. that the conception of a self of phenomena is an afflictive emotion,
7. that disintegratedness is a functioning thing, and
8. an uncommon way of positing the three times due to those reasons.

These are assertions that are not shared with the Chittamatra and the Svatantrika Madhyamika tenets. The text *Note on the Eight Difficult Points* by Lama Tsongkhapa discusses these eight in detail.

The main point to understand here is that in the context of *Supplement to the 'Middle Way,'* the term 'Middle Way' refers to the text *Fundamental Wisdom*. However, in other contexts the term middle way can refer to, for example, a basis middle way, path middle way, and resultant middle way. The way in which the *Supplement* supplements *Fundamental Wisdom* is explained by Kunkyen Jamyang Shepa in his text *Great Exposition of the Middle Way* (the author was given the name 'Omniscient Laughter of Manjushri,' although his real name was Ngawang Tsondru, because he was of very sharp faculty which pleased Manjushri and caused him to laugh). It is said that when Kunkyen Jamyang Shepa wanted to recite a particular passage from a text, the text would open by itself to that page!

Tuesday afternoon, January 18, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> He also says that he composed it in order to show that it is not suitable to explain the meaning of Nagarjuna's *Treatise* in accordance with the Mind-Only system *(Chittamatra* or *Vijnaptimatra).* Chandrakirti says in his own commentary, 'The learned should determine that this system is uncommon,' and, 'This *Supplement* was written for the sake of unmistakenly indicating the suchness of the *Treatise* because, through not understanding suchness, this profound doctrine might be abandoned.' Chandrakirti's *Clear Words (Prasannapada)* says, 'The mode of dependent designation can be known from my *Supplement.*' Also, refutation of the Mind-Only system, which was not done at length in Nagarjuna's *Treatise* or in Chandrakirti's *Clear Words*, is extensive here in the *Supplement.* Therefore, one way in which this book supplements the *Treatise is* through its good determination of the meaning of the *Treatise* from the viewpoint of these two purposes [distinguishing the suchness of the *Treatise* from the interpretations by Svatantrikas and by Chittamatrins].

Chandrakirti's text *Supplement to the 'Middle Way'* is a supplement in terms of both the vast and the profound. Lama Tsongkhapa says that its way of supplementing *Fundamental Wisdom* in terms of the profound is not shared with the Chittamatrins and Svatantrika Madhyamikas. It is not shared in terms of the eight ways that were explained earlier. These eight are sub-divided into two groups of three and one group of two. The first group of three are assertions not shared with Chittamatrins, the second group are assertions not shared with the Svatantrika Madhyamikas, and the third group of two are assertions that are not shared with either the Chittamatrins or the Svatantrika Madhyamikas.

(*Illumination* page 215) "With respect to the way of commenting on the Superior's text, although there does not exist even a mere atom of establishment by way of its own character, in dependence on this unshared system that is a way of commenting which is permissible due to positing all actions and agents, there are many [points] not shared with other commentaries of completely pure tenets. What are they? If some of the main ones are described they are:

- The three non-assertions:

1. the non-assertion of a mind-basis-of-all that is a different entity from the six consciousnesses,
2. the non-assertion of the uncommon manner of refuting a self-cognizer,
3. the non-assertion of the generation of a view of suchness in the continuum of an adversary by means of an autonomous syllogism,

- and [the five assertions]:

4. the necessity of asserting external objects just as consciousness is asserted,
5. that hearers and solitary realizers realize functioning things as non-inherently existent,
6. that the conception of a self of phenomena is an afflictive emotion,
7. that disintegratedness is a functioning thing, and
8. an uncommon way of positing the three times due to those reasons.

In short, the Prasangika Madhyamikas assert that there does not exist a mind-basis-of-all different from the six consciousness, nor does there exist a self-cognizer, yet there do exist external objects. These three assertions are completely contradictory to the assertions of the Chittamatrins, and, therefore, are said to not be shared with the Chittamatrins. Chandrakirti supplements *Fundamental Wisdom* by refuting these three assertions of the Chittamatrins.

The next group of three are assertions that are not shared with the Svatantrika Madhyamikas in that this school asserts: (i) the existence of autonomous signs, (ii) that all superiors do not realize the selflessness of phenomena, and (iii) that the conception of a self of phenomena is not an afflictive obstruction.

The last group of two are assertions that are not shared with either the Chittamatrins or the Svatantrikas: (i) that disintegratedness is a functioning thing and (ii) an uncommon presentation of the three times. In this context there is a discussion as to whether there is a difference between cessation (*gag pa*) and disintegratedness (*zhig pa*). If it is a product is it necessarily a cessation (*gag pa*)? If it is a compounded phenomena it has three characteristics: production, abidance, and cessation (*gag pa*) or disintegration (*jig pa*). While the Svatantrika Madhyamikas assert that disintegration and cessation are functioning things, they do not assert that disintegratedness (the state of having disintegrated) is a functioning thing.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> It also supplements the *Treatise* from the viewpoint of the vast. According to the superior Nagarjuna's system, the two vehicles [Hinayana and Mahayana] are not distinguished by the presence or absence of the wisdom realizing the very profound suchness [but by the vast methods]. Although Nagarjuna's *Treatise*, except for the topic of profundity, does not indicate the features of vastness in the Mahayana, his text was nevertheless composed in terms of the Mahayana rather than the Hinayana. This is so because extensive teaching of the selflessness of phenomena through limitless forms of reasoning is solely for Mahayana trainees and in Nagarjuna's *Treatise on the Middle Way* such extensive teaching is given.

The superior Nagarjuna asserts two vehicles which are not distinguished from the point of view of having or not having the wisdom realizing suchness. According to the Prasangika Madhyamika school both hinayanists and mahayanists have the realization of emptiness. Thus, these vehicles are asserted to differ from the point of view of the vast and not from the point of view of the profound. In spite of this, the text *Fundamental Wisdom* belongs to the mahayana for the reason that it establishes the selflessness of persons through limitless reasonings. Such extensive reasonings are meant only for mahayana trainees.

In short, *Fundamental Wisdom* is a mahayana treatise that establishes the selflessness of phenomena and was taught for mahayana trainees. In this context there can be debate regarding the fact that Lama Tsongkhapa says Nagarjuna gave limitless forms of reasonings in that one can assert

that there are in fact a certain number. However, it means that a mahayana trainee of sharp faculty is able to use many reasonings with respect to one base in order to establish the selflessness of phenomena. For example, such a trainee can apply the reasoning: a sprout is not produced ultimately because it is not produced from self, other, both, or causelessly. In addition, he can use many reasonings in regard to 'because it is not produced from self,' many reasonings in regard to 'because it is not produced from other,' and so forth. This will be discussed in detail later on.

> Chandrakirti says this very clearly in his own commentary to his *Supplement*, 'It is correct that the Mahayana was taught for the sake of clarifying the selflessness of phenomena because [Buddha] wished to give an extensive teaching [of the selflessness of phenomena]. In the hearer vehicle the selflessness of phenomena is illustrated only briefly.' I will explain this later.

The selflessness of phenomenon is taught extensively in the mahayana while it is explained only briefly in the hinayana. This will be explained later on. When Nagarjuna establishes the selflessness of phenomena he does so mainly by means of the diamond slivers reasoning; for example, a sprout is not ultimately produced because it is not produced from self, other, both, and causelessly. This is one of the five reasonings used to establish selflessness.

Another of the reasonings is the reasoning of freedom from one and many which is used to analyze the entity of phenomena. This was explained extensively by Shantarakshita in his text *Ornament for the Middle Way* through his giving many detailed reasons. For this reason His Holiness the Dalai Lama suggests that one should do this analysis as set out by Shantarakshita. If a stanza from the *Ornament for the Middle Way* is set out as a syllogism: phenomena asserted by our own and other schools, as the subject, do not exist truly because they are free from being a truly existent one and a truly existent many, for example, like a reflection. Or it could be said: phenomena asserted by our own and other schools, as the subject, do not exist inherently because they are free from being an inherently existent one or an inherently existent many. In short, "other schools" includes the Samkyas, Vaishashikas, and so forth, while "our own schools" includes the Vaibhashikas, Sautrantikas, and Chittamatrins.

The third reasoning, the four alternatives, mainly negates production with regard to both causes and results. This is explained in *Discrimination of the Two Truths* by Acharya Jnanashribhadra. The four alternatives are: a single cause does not produce a single result; a single cause does not produce many results; many causes do not produce many results, and many causes do not produce a single result.

The fourth reasoning is that refuting inherently existent production with respect to results. It says that there is no production of an existent and that production of a non-existent is like a sky-lotus,. For example, a sprout, as the subject, does not exist ultimately because it is not produced as an existent at the time of its cause and because it is not produced ultimately as a non-existent at the time of the cause. In short, a result is not produced as an existent at the time of its cause and a result is not produced ultimately as a non-existent at the time of its cause.

The fifth reasoning is called the King of Reasonings because it is the best among all reasonings. It is also called the reasoning of dependent-arising, or dependent relation. Through such reasoning one is able to eliminate both the extremes of permanence and the extreme of annihilation. The word 'dependent' of dependent relation indicates that phenomena are dependent whereby they cannot be permanent, while the word 'relation' indicates that they exist in relation, whereby they do exist. Thus, the word 'dependent' eliminates the extreme of permanence and the word 'relation' eliminates the extreme of annihilation. The Sanskrit word for dependent relation is *samutpada* which can be interpreted in many ways in that it can mean 'meeting,' 'relying,' 'depending,' or 'arising.' There are specific reasons for these various interpretations.

> Thus, [Chandrakirti thought that] it would be very good to fill in the gaps in the paths explained in the *Treatise on the Middle Way* – supplying the other Mahayana paths of vastness by way of the quintessential instructions of the superior Nagarjuna [as found in his *Precious Garland (Ratnavali)* and *Compendium of Sutra (Sutrasamuchchaya)*]. In order to fill these gaps Chandrakirti set forth (1) the three practices done on the level of a common being, (2) the ten grounds of a learner superior, (3) the effect ground, and (4) the cultivation of special insight through the steps of the fifth and sixth grounds. The latter is an investigation by analytical wisdom of suchness – the two selflessnesses – in dependence on calm abiding, the entity of concentration.
>
> When the meaning of Nagarjuna's *Treatise on the Middle Way is* considered, you should be mindful of these topics as set forth in Chandrakirti's *Supplement* and should keep in mind the stages of the path which are a composite of both the profound and the vast. If a person does not do this, he forsakes the two purposes of Chandrakirti's composing the *Supplement*.
>
> Thus, the second way that this text supplements Nagarjuna's *Treatise on the Middle Way* is in supplementing the paths of the *Treatise* from the viewpoint of the vast.

(1) "The three practices done on the level of a common being" are great compassion, the awareness realizing non-duality, and the mind of enlightenment.
(2) "The ten grounds of a learner superior" are the ten grounds of bodhisattvas: the Very Joyful, Stainless, Luminous, Radiant, Difficult to Overcome, Manifesting, Gone Afar, Immovable, Good Intelligence, and Cloud of Dharma.
(3) "The effect ground" is the resultant ground which is omniscience, the result of the previous ten grounds.
(4) "The cultivation of special insight through the steps of the fifth and sixth grounds" shows that Chandrakirti sets out the cultivation of calm abiding and special insight.

Lama Tsongkhapa says that if one is not mindful of the vast and profound while contemplating the meaning of *Fundamental Wisdom*, then the two purposes to Chandrakirti's having composed the *Supplement* are lost. The two purposes are to supplement *Fundamental Wisdom* from the viewpoint of the vast and the profound.

This concludes the discussion of the section on the title of the text: *Supplement to the 'Middle Way,'* which includes a translation of the title and an explanation of the title. Next comes the obeisance, or homage, of the translator.

Chandrakirti's autocommentary says:

> Homage to youthful Arya Manjushri.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) likewise says:

> 2 Obeisance of the translators
>
> Homage to the youthful Manjushri.

"Arya" indicates that Manjushri is a superior, a being who is superior to ordinary beings in that he has gone beyond the level of ordinary beings. The Sanskrit name Manjushri in Tibetan is *jam pel*. *Jam* means soft and indicates that Manjushri has a soft mind free from the coarseness of the afflictive emotions, while *pel* means glorious and indicates that his body is adorned with the major and minor signs.

The translator prostrates, or pays homage, to Manjushri in order to apply a rule established by past Dharma kings who said:

- when translating a text belonging to the higher knowledge (abhidharma) basket the translator should pay homage to Manjushri in order to show that it mainly presents the higher training of wisdom;
- when translating a text belonging to the sets of discourses (sutra) basket the translator should pay homage to the buddhas and bodhisattvas in order to show that it mainly presents the higher training of concentration, and
- when translating a text belonging to the discipline (vinaya) basket the translator should pay homage to the Omniscient One to show that it mainly presents the higher training of ethics.

Here the translator prostrates to Manjushri because this text belongs to the abhidharma basket in that it mainly presents the higher training of wisdom and Manjushri is the deity of wisdom.

Wednesday morning, January 19, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The meaning of the words is easy to understand.
>
> Since this book presents ultimate knowledge *(paramartha-abhidharma)*, the training in wisdom is central. Therefore, the translators paid homage to Manjushri in accordance with the former partitioning of Buddha's word [into three scriptural collections: knowledge *(abhidharma)*, sets of discourses *(sutranta)*, and discipline *(vinaya)*].

Among the following divisions the first two have been concluded, and next comes the discussion of the third:

1. Meaning of the title
2. Translator's homage
3. Meaning of the text
4. Meaning of the conclusion

3 Meaning of the text

This section has four parts:

A Expression of worship – a means of beginning to compose the text
B Body of the text
C Way that it was composed
D Dedication of the virtue of composing it

3A Expression of worship – a means of beginning to compose the text

This section has two parts:

1 Praise of great compassion without differentiating its types
2 Homage to that compassion within differentiating its types

3A1 Praise of great compassion without differentiating its types

Chandrakirti's autocommentary says:

> In order to supplement the *Treatise on the Middle Way* (*Madhyamakashastra*), since I wished to compose the *Supplement to the 'Middle Way*,' rather than [praising] the perfect complete buddhas and the bodhisattvas in the beginning, in order to indicate as worthy of praise the first excellent cause of buddhahood: the blessed (bhagavan) great compassion which bears the characteristic of thoroughly protecting, without exception, immeasurable vulnerable sentient beings bound in the prison of *samsara*, I mentioned two stanzas:

> *Hearers and middling realizers of suchness are born from the mighty subduers,*
> *Buddhas are born from the bodhisattvas;*
> *Compassionate mind, non-dual awareness and*
> *Bodhichitta are the causes of the Conqueror's children.* [1.1]
>
> – and so forth.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The honorable Chandrakirti, having assumed the task of making a supplement to Nagarjuna's *Treatise on the Middle Way*, does not state as his object of worship the hearers and solitary realizers who are taken as objects of worship in other books. Furthermore, he indicates that, rather than praising buddhas and bodhisattvas, it is suitable to praise great compassion – the most excellent cause of buddhahood, bearing the nature of thoroughly protecting all vulnerable sentient beings bound in the prison of cyclic existence; it is also the main cause called by the name of its effect, the blessed one (*bhagavati*).

Who supplemented the *Treatise on the Middle Way* (*Fundamental Wisdom*)? Chandrakirti did so in his *Supplement to the 'Middle Way.'* In this text he takes great compassion, the cause of buddhahood, as his object of worship rather than paying homage to the hearers, solitary realizers, bodhisattvas, and buddhas as is done in other texts. The purpose of his praising great compassion is to indicate it as the root of both the great and lesser vehicles. Great compassion has particular characteristics in that (i) it has the nature of thoroughly protecting all vulnerable sentient beings bound in the prison of cyclic existence and (ii) it has the aspect of the aspiration to free sentient beings from sufferings and the aspect of the aspiration to protect them. Here what is most important is the aspiration to protect them from suffering. This is because the first aspect of compassion, the aspiration to free sentient beings from sufferings, also exists in the continua of hearers and solitary realizers, whereas they do not have the aspect of compassion that is the aspiration to protect sentient beings. Great compassion is called 'the blessed one' (*bhagavati*); this is a case of giving the name of the result, bhagavati, to the cause, great compassion.

The Tibetan word for bhagavati, *bcom ldan 'das ma*, or for bhagavan, *bcom ldan 'das*, can be translated literally as 'transcendent endowed destroyer.' However, it would have been more literal to translate bhagavan into Tibetan as only 'endowed destroyer.' A buddha is called an endowed destroyer in that he is endowed with the six fortunes and has destroyed the four types of maras. However, the word transcendent (*'das*) is added to the Tibetan translation of the Sanskrit word 'bhagavan' because bhagavan alone covers many beings including Brahma, Ishvara, Indra, and so forth, whereas by adding the word 'transcendent' a buddha is distinguished from these worldly beings.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti says:
>
> *Hearers and middling realizers of suchness*
> *Are born from the Kings of Subduers.*
> *Buddhas are born from bodhisattvas.*
> *The mind of compassion, non-dual understanding,*
> *And the altruistic mind of enlightenment*
> *Are the causes of children of conquerors.* [1.1]
>
> *Mercy alone is seen as the seed*
> *Of a conqueror's rich harvest,*

As water for development, and as
Ripening in a state of long enjoyment,
Therefore at the start I praise compassion. [1.2]

The discussion of this has two parts:

A Compassion as the main cause of a bodhisattva
B Compassion as the root of the other two causes of a bodhisattva

3A1A Compassion as the main cause of a bodhisattva

This section has three parts:

1 The way hearers and solitary realizers are born from Kings of Subduers
2 The way buddhas are born from bodhisattvas
3 The three main causes of bodhisattvas

3A1A-1 The way hearers and solitary realizers are born from Kings of Subduers

Hearers are so called because they listen to correct precepts from others and after attaining the fruit of their meditation – the enlightenment of a hearer – they cause others to hear about that fact. They say, 'I have done what was to be done; I will not know another birth,' and so forth. Many such instances appear in the scriptures.

Although there are some hearers – such as those in the formless realm – to whom this etymology does not apply, there is no fault because the features of an etymology do not have to apply to all instances for a term to be used as an actual name. For instance, the term 'lake-born' is used for a lotus grown from dry soil.

Hearers and solitary realizers are said to be born from the King of Subduers (*thub dbang*). This is in the sense that Shakyamuni Buddha, the King of Subduers, taught dependent-arising whereby the hearers and solitary realizers who listened to these teachings went on to attain their respective enlightenments.

The Tibetan word for hearer (*nyen thos*) is actually more literally translated as 'listener-hearer' in that the etymology indicates that having listened one causes others to hear.

"Correct precepts" here refer to instructions on the means of attaining the hearer and solitary realizer enlightenments. In the context of mahayana precepts the definition of a precept is: speech that teaches the means of attaining the object of striving of mahayanists, buddhahood.

Hearers say: "'I have done what was to be done; I will not know another birth,' and so forth." This indicates that hearer foe destroyers have destroyed the foes, or enemies, which are actions and afflictive emotions and, therefore, will not take another birth in cyclic existence due to actions and afflictive emotions. In short, what has been done is to have abandoned actions and afflictive emotions; due to this they will not be reborn in cyclic existence.

The etymology of the other word for hearer (*thos grogs*), literally hearer-proclaimer, implies that hearers abide in the midst of others in that they first hear the mahayana teachings and then proclaim them to others. However, there is no pervasion that this is actually the case because there are hearers in the formless realm who do not hear teachings, as there is no sound in the formless realm, and who do not proclaim what they have heard to others. This is similar to the case of the name 'lake-born' for a lotus although a lotus is not necessarily born from a lake since it can grow in dry soil. There are two kinds of names which appear in the text *Awarenesses and Knowers*: an actual name and an imputed name. Lama Tsongkhapa says "there is no fault because the features of an etymology do not have to apply to all instances for a term to be used as an actual name." If a term engages an actual name it does not have to be that actual name. If it is that which engages the actual name it is not necessarily the actual name, for example, 'definition.' Definition engages the name 'definition' but is not a definition. The definition of definition is: that which fulfills the three qualities of substantial existence.

If a name engages a basis as an actual name it is not necessarily the actual name of that basis. For example, 'functioning thing' engages pot as an actual name but it is not the actual name for pot because by means of the name 'functioning thing' one is not able to understand pot. Another example is the name 'human being' which can be applied to all human beings. But, does 'human being' engage the basis Thubten Sherab? 'Human being' does engage the basis Thubten Sherab as an actual name but it is not his actual name because Thubten Sherab is not understood by it. The definition of an actual name is (see *Awarenesses and Knowers*): that which is observed to be the common locus of (i) being a term initially applied arbitrarily to that object and (ii) being the main name of that object.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The Sanskrit word for hearer, *shravaka*, can also mean 'hearing and proclaiming' in the sense that they hear from buddhas about the superior fruit or the path proceeding to buddhahood and proclaim it to those of the Mahayana lineage seeking that path. The *White Lotus of Excellent Doctrine Sutra (Saddharmapundarika)* says [in reference to bodhisattvas who merely proclaim the path without practicing it]:
>
> > O Protector, today we have become hearers.
> > We proclaim the excellent enlightenment
> > And set forth the terms of enlightenment.
> > Thus we are like intractable hearers.
>
> For those two reasons these bodhisattvas are similar to hearers, but the actual meaning of hearing and proclaiming applies [only] to hearers.

The Sanskrit word *shravaka*, in addition to meaning 'listening and hearing,' can also mean 'hearing and proclaiming.' Bodhisattvas are like hearers in that they listen to mahayana teachings from buddhas and then cause others who are proceeding in the mahayana to hear them. The term 'listener-hearer' can be applied in general to those who listen to Buddha's teaching and therefore can also be applied to the bodhisattvas in Buddha's retinue. Thus, in this context the name 'hearer' also applies to bodhisattvas who are the disciples of Buddha. Bodhisattvas 'have become hearers' in the sense that they are disciples of Buddha who listen to his teachings and then proclaim excellent enlightenment. "Excellent enlightenment" is great enlightenment which is defined in the fifth chapter of the *Ornament* saying: "The exalted wisdom of the extinction and non-production of stains is called 'enlightenment.'" The word 'enlightenment' in Tibetan is *byang chub*; *byang* meaning purified, which indicates the purification of negativities and so forth, and *chub* meaning realization, which indicates the realization of all that is to be realized. In Sanskrit the word for enlightenment is *bodhi* which has various meanings, this being the reason for the various translations in English.

In sutra it says: "Thus we are like intractable hearers."

Q: What is the meaning of the Tibetan word *mi bzad* translated here as 'intractable'?
A: There are different ways of spelling this word in Tibetan and here perhaps it should be spelled without the *ba* prefix, but in either case the meaning is inextinguishable or inexhaustible.
Q: If it means inexhaustible in what sense is one inexhaustible?
A: A buddha has inexhaustible disciples or inexhaustible qualities.

"For those two reasons these bodhisattvas are similar to hearers, but the actual meaning of hearing and proclaiming applies [only] to hearers." What are the two reasons? (i) Because they listen to the teachings of Buddha and proclaim them, i.e., make others to hear them, and (ii) because they are disciples. In this sense, bodhisattvas are similar to hearers. However, the actual meaning of the terms

'listener-hearer' and 'hearer-proclaimer' applies only to hearers because they are actual names of hearers.

> [Jaya-ananda] says that because the word 'excellent' is absent in the third line [of the quote from the *White Lotus]* the former enlightenment is the Mahayana and the latter the hearer enlightenment. However, the thought of Chandrakirti's commentary is that the first is the Mahayana enlightenment and the second is the path proceeding to it.

That the former enlightenment is mahayana enlightenment and the second is the path proceeding to it is also mentioned in Chandrakirti's commentary.

> OBJECTION: Bodhisattvas would [absurdly] have to be [Hinayana] hearers because they hear the path of buddhahood from buddhas and proclaim it to trainees.
>
> ANSWER: There is no such fault because the thought is that hearers *merely* proclaim the Mahayana path; they themselves do not achieve even a similitude of it.

The point under discussion is that the term 'hearer-proclaimer' also refers to bodhisattvas. However, there is a difference between hearers and bodhisattvas in that hearers only hear and proclaim the mahayana while not practicing it and not achieving even a similitude of it, whereas bodhisattvas hear, proclaim, practice, and achieve it.

Next comes a discussion of the word 'middling buddhas' in the Tibetan translation of verse 1.1 which has been translated into English as 'middling realizers of suchness' in accordance with the original Sanskrit. In fact, someone argues that instead of saying 'middling buddhas' the text should say 'middling realizers of suchness.'

> [In Chandrakirti's root text 'middling realizers of suchness' was translated into Tibetan as 'middling buddhas'.] In the commentary Chandrakirti says that *tattva-buddha* applies to all three persons [hearer, solitary realizer, and buddha superiors]. With regard to the meaning of this, some identify *tattva-buddha* as realization of suchness and apply it to all three. As will be explained, this is a good interpretation because it is said, '*Tattva* means suchness *(tathata)*, and *buddha* means realization.'
>
> When the term *buddha* is taken to mean 'realization of suchness', this applies to all three persons.

The word 'tattva-buddha' refers to all three persons, hearer, solitary realizer, and buddha superiors, because it means 'one who has realized suchness.' In other words, if the term 'buddha' is understood to mean 'one who has realized suchness' then it also applies to hearers and solitary realizers. There are three levels of enlightenment: small, middling, and great enlightenment. Small enlightenment is the enlightenment of hearers, middling enlightenment that of solitary realizers, and great enlightenment that of buddhas.

Wednesday afternoon, January 19, 2000

Q: It was said that *Fundamental Wisdom* sets forth limitless reasons to establish the selflessness of phenomena. Can Geshe-la please say something more about what this means?
A: In general the mahayana treatises, as does *Fundamental Wisdom*, set forth many reasonings that establish the selflessness of phenomena. On the other hand, in general the hinayana scriptures do not set forth many reasons that establish the selflessness of phenomena, and in particular the unshared hinayana sutras do not give any reasons at all. This is because even if many reasons were to be set forth establishing the selflessness of phenomena hinayanists would not be able to understand them.

There are two ways of positing a hinayanist: one from the point of view of tenets and one from the point of view of path. According to those who are hinayanist from the point of view of tenets there are no sutras in which Buddha sets forth reasons that establish the selflessness of phenomena. In other words, the sutras accepted by those who are hinayanists from the point of view of tenets do not set out reasonings establishing the selflessness of phenomena. Those who are hinayanist from the point of view of path are the hearers and solitary realizers. According to the Prasangika Madhyamikas the subject of the selflessness of phenomena is suitable to be taught to those who are hinayanists from the point of view of path, but according to the Svatantrika Madhyamikas this is not suitable. What is an example of a hinayana sutra in which there is a presentation of the selflessness of phenomena? As it says in *Illumination*, quoting Chandrakirti's *Supplement*, there are very few: "In the hearer vehicle the selflessness of phenomena is illustrated only briefly." One example is the hinayana sutra, *Sutra Taught to Hearers*, it which it says: "Forms are like balls of foam. Feelings are like bubbles. Discriminations are like mirages. Compositional factors are like banana trees. Consciousnesses are like magical illusions. Thus, [the Buddha], the Sun-Friend said."

If someone were to say that only reasonings that establish the selflessness of phenomena are set forth in *Fundamental Wisdom* while reasonings that establish the selflessness of persons are not set forth, the answer is that this is not correct in that it also sets forth reasonings that establish the selflessness of persons. This is because in the twenty-second chapter it says: "When the Buddha was asked is there a beginning point he did not reply." This question was based on the conception of a self of persons and therefore it indirectly indicates the selflessness of persons. This question arose in the context of the fourteen unanswered questions called unspecified views, from among the sixty-two views. They are unspecified because the Subduer did not give an answer to them.

In short, many reasonings are set forth in *Fundamental Wisdom* that establish the selflessness of persons. There are twenty-five types of view of the transitory collection set forth in *Fundamental Wisdom*, among which there is a presentation of the conception of a self of persons together with a presentation of the selflessness of persons. However, the *Fundamental Wisdom* is included in the mahayana basket because it explains the selflessness of phenomena using limitless reasonings.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Though the term 'realizers of suchness' also indicates 'solitary realizers', it was translated [into Tibetan] as *buddha.* In general the term *buddha* should be rendered as 'buddha' but here this is not appropriate. For it is also explained that *buddha is* used to indicate an *opening* of lotus petals and an *awakening* from sleep; therefore 'buddha' is not the only translation.

The word 'buddha' in Tibetan is *sang gye*; *sang* meaning purified in the sense that a buddha has purified all obstructions, and *gye* meaning extended in the sense that a buddha's knowledge extends to all objects of knowledge.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> With respect to the meaning of 'middling', solitary realizers surpass hearers through their superior feature of practicing merit and wisdom for a hundred eons. However, since they do not have the two collections of merit and wisdom, nor the compassion viewing all sentient beings at all times, nor omniscience and so forth, they are inferior to perfect buddhas. Thus, they are middling.

Although solitary realizers are superior to hearers, they are inferior to perfect buddhas, whereby they are middling. Solitary realizers are middling in that they complete the two collections in a hundred eons; this being more time than a hearer who does so only for three lifetimes and so forth [and less time than that of bodhisattvas who do so for three countless great eons]. Sharp faculty hearers

accumulate the collections for three lifetimes and attain the state of a hearer foe destroyer. On the other hand, solitary realizers who accumulate the collections for only three lifetimes do not attain the state of a solitary realizer foe destroyer. According to the sutra vehicle mahayanists accumulate the collections for three countless great eons in order to achieve buddhahood, it being said that the first countless great eon is spent on the path of accumulation and the path of preparation, the second on the seven impure grounds, and the third on the three pure grounds. However, there is debate about this such as: "Is it necessary to remain on each of these three parts of the path accumulating merit for one countless great eon?" The conclusion is that it is enough to accumulate an amount of merit equal to that accumulated in this period but it is not necessary to do so for that entire period.
Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> One [Jaya-ananda] says that the meaning of solitary realizers' surpassing hearers in terms of wisdom should be understood in accordance with Maitreya's statement in his *Ornament for the Realizations (Abhisamayalamkara)*, 'They abandon the conception of objects [by realizing that object and subject are not different entities].' This is not correct because here in the Prasangika system it is said that both hearers and solitary realizers realize that all phenomena do not inherently exist. [Jaya-ananda] himself asserts this [when later he says that hearers and solitary realizers cognize the emptiness of all phenomena].
>
> In his commentary Chandrakirti says that a solitary realizer's wisdom surpasses in its increase that of a hearer. This 'increase' should be taken to mean proceeding higher and higher on the path. Solitary realizers are intent on cultivating merit and wisdom over a hundred eons; thus, unlike the hearers, they are able to continue cultivating the path for a long time.

If someone says that solitary realizers are superior to hearers in possessing the wisdom realizing suchness this is incorrect because hearers also possess the wisdom realizing suchness. Solitary realizers are superior to hearers because they cultivate their path accumulating merit and wisdom for one hundred eons, whereas hearers are not able to do so. In short, from the point of view of the collections of merit and wisdom solitary realizers are superior to hearers because they proceed in these for a hundred eons, whereas hearers do not do so.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [Chandrakirti says that solitary realizers do not collect merit and wisdom; however, they do have secondary or imputed collections.] The mere term 'collection' is indeed used for merit and wisdom in general, but it applies mainly to fully qualified merit and wisdom. As Haribhadra's *Clear Meaning Commentary (Abhisamayalamkara-nama-prajnaparamitopade-shashastravrtti)* says, 'By being entities that thoroughly achieve it, they *hold* the great enlightenment; therefore, great compassion and so forth are collections.' Collections are said to hold their fruit through being the means of unmistakenly achieving highest enlightenment. Those that are not fully qualified are secondary. This is a contextual etymology of the original Sanskrit word for collection, *sambhara*. [With letters added, *sam* comes to mean 'thorough achievement', *bha* 'entity', and *ra* 'bearing'.]
>
> Because solitary realizers' progress in merit and wisdom greatly exceeds that of hearers, they are able to generate the wisdom of a foe destroyer *(arhan)* during their final lifetime in the desire realm without depending on another master's teaching. Because they become enlightened – that is to say, attain or are in the process of attaining the state of a foe destroyer – for their own sakes alone, they are called 'self-enlightened' and also 'self-arisen.'

Q: The attainments of hearers and solitary realizers are the same, i.e., a hinayana nirvana, therefore if a sharp faculty hearer can achieve this state in three lifetimes whereas it takes a solitary realizer a hundred eons, why are solitary realizers considered superior to hearers?
A: The nirvana attained, in terms of being a liberation from the afflictive obstructions, is the same. However, the attainment of solitary realizers is superior because their realization continues to increase in time whereas that of hearers does not. The nirvana is the same because both sharp and dull faculty

hearers and solitary realizers attain the same state. Thus, in terms of nirvana the attainment is the same. However, the divisions into small and middling enlightenments are in terms of enlightenment being a realization whereby the realization of hearers is smaller than that of solitary realizers since they only spend three lifetimes accumulating the collections while solitary realizers do so for a hundred eons. For example, a sharp faculty person compared to a middling faculty person learns a subject very quickly while the other takes a longer time. However, in the end there is a difference because one of middling faculty who takes a long time to learn has developed much familiarity with the subject and does not forget it since his understanding is very stable, whereas one who learns quickly also quickly forgets whereby his understanding is very temporary. Although they studied the text over different amounts of time, at the end the person who did so for a longer period of time will have learned more and his knowledge will be more stable. We can see this based on our own experience. For example, I know someone who studied all four main texts and the supplementary subjects for nine years at Varanasi, took the exams, and became an acharya yet his knowledge cannot be compared to that of a monk who has studied these texts for twenty-five years. This is because the Varanasi student only studied for a short time while a geshe has familiarized with these subjects over a long time.

Q: If the nirvana that hearers and solitary realizers attain is the same, when they enter the mahayana path is there a difference in their way of progressing?
A: Solitary realizers take less time to attain the great enlightenment because they have a greater collection of merit than do hearers.

"This is a contextual etymology of the original Sanskrit word for collection, *sambhara*. [With letters added, *sam* comes to mean 'thorough achievement', *bha* 'entity', and *ra* 'bearing'.]" The particle *sam*, for example, comes in the context of *samyaksambuddha* which means perfectly complete buddha. It also comes in various mantras, for example, OM SAMBHARA SAMBHARA HUM, the mantra of the torma offering to the landlord spirits.

In the mahayana scriptures it is said that the collection of merit deposits the latencies to realize the form body, while the collection of wisdom deposits the latencies to achieve the truth body. Perhaps according to the hinayana scriptures the collection of merit enables hearers to achieve the body of a foe destroyer and the collection of wisdom to achieve the mind of a foe destroyer. However, there is debate about this: "It is said that the body of a hearer is a true suffering, but how can this be? Also a human body is a true suffering yet it is the result of the collection of merit, how can this be?" This discussion is based on the fact that it is taught that meritorious actions bring rebirth as a human being or god while demeritorious actions bring rebirth in the lower realms.

Thursday morning, January 20, 2000

Solitary realizers can also be called self-enlightened or self-arisen. As Lama Tsongkhapa's *Illumination* says: "Because they become enlightened – that is to say, attain or are in the process of attaining the state of a foe destroyer – for their own sakes alone, they are called 'self-enlightened' and also 'self arisen.'" In their last life solitary realizers attain enlightenment without depending on a master because of the prayers they made when they were on the learner's path. This is explained in the second chapter of the *Ornament* which says that solitary realizers prayed to attain enlightenment without depending on a master, to be reborn when there are no buddhas or hearers, and to give teachings by means of physical gestures without speech. In *Ornament* (v. 2.7) it says:

To whomever, whatever meanings, just as they are –
To so-and-so desiring to hear
This and that meaning –
They appear thus even without sounds.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [With respect to the phrase 'Kings of Subduers] the term 'subduer' is indeed used for hearer and solitary realizer foe destroyers, but since they are not *kings* of subduers, only buddhas are so called. This is because buddhas have attained an excellent lordship of doctrine superior to hearers, solitary realizers, or even bodhisattvas and also because the word of buddha rules these three in the sphere of doctrine. That hearers and solitary realizers are born from Kings of Subduers means that they are issued forth by them.

The word 'subduer,' in Sanskrit *muni* and in Tibetan *thub pa*, also applies to hearers and solitary realizers, while the term 'King of Subduers' or Mighty Subduer (*munindra, thub dbang*) applies only to buddhas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: How do Subduer Kings give birth to hearers and solitary realizers?
> ANSWER: When buddhas come to the world, they teach dependent arising without error. Those bearing the lineage of hearers and solitary realizers listen to the modes of dependent arising, think about what they have heard, and meditate on the meaning of what they have thought. Through these stages, the aims of hearers and solitary realizers are fulfilled in accordance with the effect to which they aspire, and in this way Subduer Kings give birth to hearers and solitary realizers.

Hearers and solitary realizers are born from buddhas in the sense that they hear teachings from the buddhas on dependent-arising, think about the meaning, and meditate on it, whereby they became hearers and solitary realizers. Buddha taught the *Rice Seedling Sutra* on the subject of dependent-arising in which it says that due to such-and-such there arises such-and-such and so forth; for example, due to ignorance there arises the second link of karmic formations. This sutra also says: "Having seen the Buddha, they see the Dharma. Having seen the Dharma, they see the Sangha." Thus, the term 'dependent-arising' includes both general dependent-arising and the instance of dependent-arising that is the twelve links.

Upon hearing teachings on dependent-arising hearers and solitary realizers understand how one remains in cyclic existence and how one leaves cyclic existence. They contemplate and come to understand the twelve links in both forward and reverse orders in terms of both the thoroughly afflicted and the completely pure. More specifically, through meditating on the twelve links in terms of the thoroughly afflicted they come to understand that true sufferings and true origins are to be abandoned, and through meditating on them in terms of the completely pure they come to understand that true cessations and true paths are to be achieved. In this way they achieve nirvana.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: Although many of the hearer lineage actualize enlightenment in the very life in which they hear the doctrine from a buddha, those of the solitary realizer lineage do not do so. Therefore, it is incorrect that their aims are fulfilled through hearing, thinking, and meditating on meanings set forth by Subduer Kings.
> ANSWER: There is no fault. Some bearing the lineage of solitary realizers become skilled in cognizing the ultimate just by listening to the Teacher's setting forth dependent arising. However, they do not attain the nirvana of a solitary realizer in just that life during which they hear the

> doctrine. Still, a solitary realizer practitioner to whom a buddha teaches dependent arising will definitely achieve nirvana in another life. An example of this is a person's accumulating an action the effect of which must be experienced but not in the same life as when accumulated; however, the effect will definitely be experienced in another birth. Also, since solitary realizers hear, think, and meditate on just the doctrine formerly taught by a buddha, the explanation that their aims are fulfilled is not intended to refer to this life only.

Although solitary realizers do not attain nirvana in the very same life in which they received teachings from the Buddha, they definitely do so in another life. Buddha did not teach them in order for them to attain enlightenment in that lifetime and the solitary realizers did not listen to these teachings in order to attain their enlightenment in that lifetime. However, through the Buddha's teachings their wishes are definitely fulfilled.

There are three kinds of actions (karma):

1. that which will definitely be experienced in that very same life,
2. that which will definitely be experienced in the very next life, and
3. that which will definitely be experienced in a future life other than the next.

In short, the fact of solitary realizers listening to the teachings of Buddha in one life and achieving their wishes in a future life is similar to a karma created in this life that will definitely be experienced in a future life other than the next life.

Q: Why is it similar to a karma that will definitely be experienced in a future life that is other than the next life and not that which will definitely be experienced in the very next life?
A: Because they have to accumulate merit for a hundred eons it is definite that they attain nirvana in a life that is not the very next life.

Q: But can they not receive teachings during those hundred eons?
A: This example of karma is given by Lama Tsongkhapa. However, solitary realizers are not like us in that we receive many teachings from many different lamas, in that for solitary realizers it is enough to hear teachings once and then they put them into practice for a long time [and achieve their result].

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Aryadeva's *Four Hundred (Chatuhshataka*, VIII.22) says:
>
> Though one who knows suchness does not achieve
> Nirvana here, in another birth
> He will definitely attain it
> Without effort, as in the case of actions.
>
> Nagarjuna's *Treatise on the Middle Way* (XVIII.12) says:
>
> Though the perfect buddhas do not appear
> And hearers have disappeared,
> A solitary realizer's wisdom
> Arises without support.

The wishes of solitary realizers are definitely fulfilled in a future life in that they make the prayer while on the learner's path to arise when hearers have disappeared and buddhas do not appear. At that time they also make prayers to be able to teach the Dharma by means of physical gestures without speech.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> One [Jaya-ananda] asserts that this section in Chandrakirti's commentary answers the doubt, 'It is seen that though dependent arising is taught, some do not achieve the state of hearers and so forth; thus, hearers and so forth do not fulfill their aims through the teaching of dependent arising.' Other [Tibetans] say that this answers the doubt that although it would be suitable for the effect to arise immediately after practicing the meaning of dependent arising and non-production, it does not, and, therefore, the effect might not arise later either.
>
> These explanations are instances of not understanding the meaning of this section. Because there are greater doubts about the Subduer Kings' giving birth to solitary realizers, [doubts about this] should be singled out and eliminated [but according to these explanations Chandrakirti] did not do so.

There is a qualm concerning the fact that in dependence on the teachings of dependent-arising some hearers do not achieve the result of hearer foe destroyer and therefore do not achieve their aims. Some others say that if hearers do not attain the result in this life perhaps they do not attain it even in another life.

Chandrakirti's autocommentary says:

> As they possess unsurpassed lordship of the doctrine, because of excellent noble lordship even over hearers, solitary realizers, and bodhisattvas; and because their word rules the hearers and so forth, the buddha bhagavans are called mighty subduers (*munindra*). That the hearers and so forth are born from them means they are produced by them.
>
> If asked: How?
>
> When the buddhas arise, because of engaging in teaching dependent-arising without error, because hearers and so forth will become fully complete in accord with their special aspirations also from the stages of hearing that, contemplation, and meditation.
>
> Even if there are some who indeed do not attain nirvana in just that very life (the life which sees), though they became skilled in realizing the ultimate from just hearing dependent-arising taught; nevertheless, practitioners of the teachings will without doubt attain full maturation of the desired result in another lifetime, like the results of definitely maturing actions (karma).
>
> As explained by Aryadeva [in the *Four Hundred Verses*, 8.22]:
>
> Even if nirvana is not attained here through knowing suchness,
> in another rebirth, effortlessly it will definitely be attained, as with actions.
>
> Because of that, it is also taught in the [*Treatise on the*] *Middle Way* [18.12]:
>
> When perfect buddhas do not emerge and even the hearers have disappeared,
> the exalted wisdom of the solitary realizers arises completely without support.
>
> There, hearers are so-called since they cause [others to hear] about attaining the results of the perfect oral instructions [they listened to from others]. Thus, "I did the tasks like this. I shall not know another existence beyond this," and so forth, are set forth.
>
> Alternatively, [they are called] hearer-proclaimers since, having heard the supreme result or the path of the perfect complete buddhas from the tathagatas, they proclaim it to seekers.
>
> It is taught in the *Sutra of the White Lotus of the Noble Dharma* [4.53]:[2]
>
> O Protector, today we have become hearers.
> We shall perfectly proclaim noble enlightenment

[2] See Poisson. p.253, note 6, for location. See Hopkins for more about differing translations of this verse.

> And also finely express the terms of enlightenment.
> Hence we are like intractable hearers.
>
> Although bodhisattvas are indeed like that, nevertheless, since those who just proclaim, not practicing even a similitude are hearers, it does not follow for bodhisattvas.
>
> The term 'buddha' of "*tattva-buddha*" (realizer of suchness) applies also to the three: hearers, solitary realizers and unsurpassed perfect complete buddhas, hence the term 'buddha' (realizer) indicates solitary realizers. Because they are specially distinguished from the hearers through the distinction of higher increase of merit and wisdom, and because they are inferior to the perfect complete buddhas through lacking omniscience and so forth, [they are] middling.
>
> Therefore, since exalted wisdom arises untaught and since they become awakened (buddha) for solely themselves, [they are called] solitary realizers (solitary buddhas).
>
> In the manner which was explained, because those hearers and solitary realizers definitely emerge through being taught the Dharma by the tathagatas, they are born from the mighty subduers.

This was already discussed in relation to Lama Tsongkhapa's *Illumination*. However in short, hearers and solitary realizers are born from mighty subduers, or Kings of Subduers, in the sense that buddhas teach profound dependent-arising, they listen to these teachings, think about them, meditate on them, and thereby fulfill their wishes. In this context there is the objection that the wishes of solitary realizers are not fulfilled because, although hearers attain nirvana in the same life in which they hear the teachings, solitary realizers do not and therefore their wishes are not fulfilled. The conclusion is that although their wishes are not fulfilled in that same life they will definitely be fulfilled in another life. The wishes of solitary realizers who listen to teachings on dependent-arising will be fulfilled in a future life other than the next immediate life and therefore the result of listening to the teachings will definitely be attained. For this reason the case of solitary realizers is said to be like that of a karma that will definitely be experienced in a future life that is other than the next. Solitary realizers do not attain the state of foe destroyer in the same life in which they hear the teachings because they made prayers on the learner's path to be able to give teachings to sentient beings when buddhas and hearers do not appear. If they attained foe destroyer in the same life in which they hear the teachings this prayer would not be fulfilled as in that life there is the presence of buddhas and hearers. For this reason they attain foe destroyer in a future life.

There is also a discussion in this context regarding the term 'hearer-proclaimer' concerning that fact that bodhisattvas could also be called hearer-proclaimers in that they also listen to the teachings and proclaim them to others. The answer to this is that hearers and bodhisattvas are not the same and that this term only refers to hearers because they merely listen to the mahayana teachings and then proclaim them to others, while bodhisattvas listen to them, put them into practice, and then proclaim them to others.

There is also a discussion of the term 'subduer.' The conclusion is that the term 'subduer' can also be applied to hearers and solitary realizers, while the term 'mighty subduer,' or 'king of subduers,' can only be applied to buddhas in that only buddhas have perfect mercy-compassion, wisdom, and ability. Hearers and solitary realizers do not have such perfect mercy-compassion, wisdom, and ability and therefore can be called subduers but not mighty subduers.

Before it was said that hearers and solitary realizers are born from the mighty subduers, next there is a discussion as to buddhas being born from bodhisattvas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3A1A-2 The way buddhas are born from bodhisattvas

Chandrakirti's autocommentary says:

> Further, if asked: from whom are the mighty subduers born?
>
> It was mentioned *buddhas are born from the bodhisattvas* [1.1b].
>
> If asked: are the bodhisattvas not called Conquerors' children since they are born from teachings by the tathagatas? If so, because of that, how are the buddha bhagavans born from the bodhisattvas?
>
> Though that is indeed true, none-the-less, bodhisattvas are causes of the buddha bhagavans for two reasons:
> 1. from the viewpoint of state, and
> 2. through instilling [them] to perfectly uphold.
>
> There,
> 1. from the viewpoint of state, because the state of the tathagatas has the state of the bodhisattva as a cause,
> 2. through instilling to perfectly uphold,
>
> just as it is set forth that Arya Manjushri through merely being a bodhisattva, instilled the Bhagavan Shakyamuni and the tathagatas other than him to perfectly uphold the bodhichitta in the very beginning. Therefore, the tathagatas are shown to be born from the bodhisattvas having thus relied upon being the principal cause of the final result.

It would appear to be contradictory that buddhas are born from bodhisattvas, yet bodhisattvas are known as 'the conquerors' children.' However, there is no contradiction because there are two reasons for saying that buddhas are born from bodhisattvas:
1. from the point of view of the attribute of state because a buddha is of the same continuum as the previous bodhisattva who practiced the path and
2. through instilling bodhisattvas to perfectly uphold which means that, for example, bodhisattvas instill other bodhisattvas to uphold the teachings whereby they become buddhas. For example, the bodhisattva Manjushri exhorted other bodhisattvas to uphold the mind of enlightenment and proceed to enlightenment, whereby they became buddhas.

Thursday afternoon, January 20, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3A1A-2 The way buddhas are born from bodhisattvas
>
> QUESTION: If hearers and solitary realizers are born from Subduer Kings, from what are Subduer Kings born?
>
> ANSWER: The perfect buddhas are born from bodhisattvas.
>
> OBJECTION: Are bodhisattvas not called 'conqueror children' because they are born from buddhas' teaching? Since bodhisattvas are conqueror children, how can buddhas be born from bodhisattvas? For example, the father of a child cannot be that child's child.
>
> ANSWER: It is true that bodhisattvas are the children of certain conquerors; however, there are two reasons why bodhisattvas cause buddhas. Bodhisattvas are causes of buddhas from the viewpoint of state because the state of a tathagata buddha is the fruit of that of a bodhisattva. This indicates that bodhisattvas cause buddhas through being the substantial cause which is of the same continuum as that buddha. The state of buddhahood is only attained through one's formerly having developed the state of a bodhisattva on the path of learning.

A buddha superior is pervaded by his having been in the past a bodhisattva of the same continuum. That bodhisattva practiced the path and became a buddha. "Bodhisattvas cause buddhas through being the substantial cause which is of the same continuum as that buddha."

Someone makes the objection that a buddha cannot be born from buddhas because they are called 'conqueror children.' The answer is that there is no fault because a single man can be both father and son, in that he is father with respect to his son and son with respect to his father. Likewise, buddhas are born from bodhisattvas. There are two ways in which buddhas are born from bodhisattvas: (i) from the point of view of substantial cause and (ii) from the point of view of cooperative condition. That buddhas are born from bodhisattvas in terms of substantial cause means that the buddha is the same continuum as the bodhisattva, and that buddhas are born from bodhisattvas in terms of cooperative condition means that, for example, Manjushri exhorts bodhisattvas to uphold the mind of enlightenment and thereby acts as a cooperative condition for the buddha they become.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Bodhisattvas also cause buddhas through causing them to bear the truth in the sense that, as it says in sutra, the venerable Manjushri as a bodhisattva caused our own Teacher and other buddhas to bear the altruistic mind of enlightenment at the very beginning. This establishes that buddhas are born from bodhisattvas from the viewpoint that a bodhisattva, who is of a different continuum from the buddhahood which another bodhisattva will attain, acts as a cooperative cause of that buddha.

In short, a bodhisattva [of a separate continuum] can be a cooperative condition for another bodhisattva to become a buddha.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: [Chandrakirti states the position of] an objector who says that since bodhisattvas are conqueror children, it is correct for them to be born from conquerors, but the opposite is not feasible. [In answer] he says it is true that bodhisattvas are conqueror children, thereby indicating that he accepts this. Though it is necessary to give the reason why, despite this assertion, there is no contradiction in saying that buddhas are born from bodhisattvas, Chandrakirti – without giving any such reason – [goes on to] establish that buddhas are born from bodhisattvas. Thus [his procedure] is wrong because a doubt has already arisen with respect to the topic and has not been eliminated.
>
> ANSWER: There is no such fault. With respect to the first reason why the root text says that buddhas are born from bodhisattvas, Chandrakirti explains the attainment of the fruit of buddhahood through a bodhisattva's practice on the path of learning. It is thereby known that a bodhisattva is not the child of the buddha that he himself becomes. Hence, when Chandrakirti says that it is true – meaning, 'bodhisattvas are indeed born from buddhas' – how could he be referring to a bodhisattva's birth from the buddha he becomes? Furthermore, one newly born as a bodhisattva from the speech of our Teacher is a child of this buddha, but this buddha is not born from the bodhisattva. Indeed, if one has intelligence, why would one not realize from the answer given in the commentary that the objector has not distinguished these two modes? Still, many senseless explanations have appeared with respect to this.

The bodhisattva who is newly born from Shakyamuni Buddha's teachings is said to be born from the conqueror Shakyamuni Buddha, but Shakyamuni Buddha himself is not born from that bodhisattva. In other words, in the case of a bodhisattva born from the teachings of Shakyamuni Buddha, it cannot be said that Shakyamuni Buddha is born from that bodhisattva yet one can say that Shakyamuni

Buddha is born from a bodhisattva. This is because there are the two modes in which a buddha can be said to be born from a bodhisattva:
(i) that of a buddha being the same continuum of a previous bodhisattva and
(ii) that of a bodhisattva having been exhorted by another bodhisattva to uphold the mind of enlightenment whereby he became a buddha.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Buddhas praise bodhisattvas because bodhisattvas are the principal causes of buddhas. There are four reasons for the praise.

Chandrakirti autocommentary says:

> 1. For that very reason, because the perfect cause is highly esteemed, and

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The first is that this excellent cause of buddhahood is very profound and precious.

These are the four reasons why buddhas praise bodhisattvas. The first reason is that it is very important to take care of novice bodhisattvas, those who have recently generated the mind of enlightenment, just as it is very important to take good care of a newborn baby. Afterward when the bodhisattvas have practiced for some time there is no need to take so much care of them as their mind of enlightenment has become stable.

Regarding the second reason Chandrakirti's autocommentary says:

> 2. since it is intended that through expressing homage to the cause, homage to the result will also be implied,

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The second is that through expressing worship to the cause – bodhisattvas – praise of the fruit – buddhas – is intended implicitly.

The second reason is that by expressing worship to the cause, the result is also indirectly praised. For example, if one takes care of a seed one indirectly takes care of the plant it will become. Chandrakirti takes great compassion as the object of worship in the *Supplement* because it is the initial cause of a bodhisattva. When someone pays homage to great compassion one indirectly pays homage to the bodhisattvas and buddhas. There are three causes of a bodhisattva. The first cause, great compassion, is the main cause because it is the initial cause of a bodhisattva and also because it is the cause of the other two causes, the awareness realizing non-duality and the mind of enlightenment.

However, there is debate concerning how the bodhisattva is also an object of worship. If bodhisattvas are also the object of worship it would contradict what it says in *Illumination*: "Rather than praising buddhas and bodhisattvas it is suitable to praise great compassion." Does Chandrakirti pay homage to the bodhisattvas? If the opponent replies that he does not, one then says: "Yet Lama Tsongkhapa says: 'The second is that through expressing worship to the cause – bodhisattvas – praise of the fruit – buddhas – is intended implicitly.'" On the other hand, if the opponent replies saying that Chandrakirti does pay homage to the bodhisattvas then one quotes: "Rather than praising buddhas and bodhisattvas it is suitable to praise great compassion."

Regarding the third reason Chandrakirti's autocommentary says:

> 3. because the buddha bhagavans teach that [the bodhisattvas] are to be cautiously cared for as is in the case when the stem and so forth of a great medicinal tree, which will definitely bestow incredible results, are seen and its leaves are tender, and

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The third reason is that one should value and sustain the state of a novice bodhisattva, for it is the shoot of the tree of buddhahood that nourishes all beings. Just as one who has seen the shoot, trunk, and so forth of a medicinal tree bearing countless wished-for fruits would cherish and sustain the leaves of the tree when they are young and soft, so one should value and sustain the state of a novice bodhisattva with great effort.

Just as one would take care of the shoot of a medicinal tree because in the future it will produce a great quantity of medicine, likewise the buddhas take great care of novice bodhisattvas since in the future they will become buddhas and benefit many beings.

Regarding the fourth reason Chandrakirti's autocommentary says:

> 4. because the throng of sentient beings who are near at that time and who are set in the three vehicles will definitely be conjoined with the mahayana itself, bodhisattvas are to be praised.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The fourth reason is that when bodhisattvas are praised in the presence of those who are established in the three vehicles, such persons thereby definitely enter into the Mahayana.

When bodhisattvas are praised in the presence of those who are established in the three vehicles, the hearers and solitary realizers turn toward the mahayana. In addition, those who are not yet established in a vehicle also turn toward the mahayana.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The *Pile of Jewels Sutra (Ratnakuta)* says, 'Kashyapa, it is like this: For example, people bow down to a new moon and not to the full moon. In the same way, Kashyapa, those who have great faith in me should bow down not to tathagatas but to bodhisattvas. Why? Tathagatas arise from bodhisattvas. All hearers and solitary realizers arise from tathagatas.' This establishes through scripture that buddhas are born from bodhisattvas.

Just as one would bow to the new moon and not to the full moon, one should bow to those bodhisattvas who have newly generated the mind of enlightenment and not to the tathagatas. This is because these novice bodhisattvas are more precious than tathagatas. In general, people tend to pay homage to the tathagatas and neglect the bodhisattvas but this is not correct. In the Hindu and Moslem cultures the full moon is worshipped, but not the new moon. However, it would be more appropriate to worship the new moon as it the new moon which develops more and more. Novice bodhisattvas are likened to the new moon and the buddhas to the full moon. This is because a buddha's knowledge is fully developed in that it encompasses all objects of knowledge. It is said that when one practices on the 8th, 15th, and 30th of the lunar calendar one creates a greater amount of

merit. In the *Kalachakra Tantra* it is also mentioned that there is a connection between the red and white constituents, the outer elements, and the phases of the moon.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The two former reasons establish it through reasoning.
>
> Thus, here Chandrakirti does not directly honor hearers, solitary realizers, buddhas, or bodhisattvas – who are renowned as objects of worship in other books. This is because he honors the causes that are their roots.
>
> The first two lines of the root text indicate that these four – hearers and solitary realizers, buddhas, and bodhisattvas – are in an effect and cause relationship respectively. This is for the sake of identifying the cause that is their ultimate root [compassion].

Chandrakirti's autocommentary says:

> As was taught in the exalted *Pile of Jewels Sutra*:[3]
>
> > Kashyapa, it is like this: for example, like bowing to the new moon and not to the full moon. Kashyapa, similarly, those who have strong faith in me should bow to the bodhisattvas; not like that to the tathagatas. If asked: why? The tathagatas arise from the bodhisattvas; all the hearers and solitary realizers arise from the tathagatas.
>
> Therefore, it is thus established through reasoning and scripture that "the tathagatas are born from the bodhisattvas."

Geshe Jampa Gyatso: In the statement "the two former reasons establish it through reasoning," what are the two former reasons in that there are four reasons for praising bodhisattvas?
Student: The two are: (i) from the viewpoint of the attribute of state and (ii) through instilling to perfectly uphold in that Chandrakirti's autocommentary says: "Though that is indeed true, none-the-less, bodhisattvas are causes of the buddha bhagavans for two reasons..."
Geshe Jampa Gyatso: That is correct.

With respect to the statement "This establishes through scripture that buddhas are born from bodhisattvas," does this mean that the *Pile of Jewels Sutra* is the only sutra that establishes this? Another scripture that establishes that buddhas are born from bodhisattvas is the *Great Wish-fulfilling Medicinal Tree*.

This entire discussion regards the statement that buddhas are born from bodhisattvas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Though bodhisattvas are born from the teaching of buddhas, Chandrakirti does not need to explain this as he did for hearers and solitary realizers when he said that they are born from Subduer Kings. He taught that hearers and solitary realizers are born from Subduer Kings in order to show that their root ultimately derives from compassion. [In the following stanzas] he indicates separately that the root of bodhisattvas derives from compassion.

If buddhas are born from bodhisattvas from what are bodhisattvas born? They are born from the three practices.

[3] Poisson, p. 255, note 3, cites another note in *Shikshasammuchchaya*, p. 52, note.

To conclude this discussion one can ask: "In what are the three vehicles rooted?" They are rooted in great compassion. Hearers and solitary realizers are born from the kings of subduers. From what are the buddhas born? They are born from bodhisattvas. From what are bodhisattvas born? They are born from the three practices of this context. The three causes of bodhisattvas are: (1) great compassion, (2) the wisdom of non-duality, and (3) the mind of enlightenment. From what are the wisdom of non-duality, and the mind of enlightenment born? They are born from great compassion. In this way the three vehicles come down to great compassion.

In short, the definite goodness of the three vehicles derives from great compassion. To indicate this Chandrakirti takes great compassion as the object of his expression of worship in his *Supplement*. Great compassion is considered very important, therefore our main practice should be its development and in all our various activities we should never be separated from it. Great compassion is so important that in Maitreya's *Sublime Continuum* it says: "The wisdom appreciating the supreme vehicle is the mother for those practicing the Buddha-Dharma. Those living in the comfortable womb of concentration and possessing the surrogate mother-like compassion are the children born from the subduers."

Friday morning, January 21, 2000

SUMMARY OF THIS WEEK'S TEACHINGS

The Buddha has given many mahayana teachings which can be condensed into the vast and profound. The stages of the vast come down to us from Maitreya's *Ornament for Clear Realizations* which sets out the hidden meaning of the Perfection of Wisdom Sutras. In this context the word 'vast' encompasses the paths from mind generation through enlightenment which are given the name 'seventy topics.'

Maitreya is said to have opened the chariot track of the vast. There are two openers of the chariot track of the profound: Nagarjuna who opened the chariot track of the Madhyamika and Asanga who opened the chariot track of the Chittamatra. Nagarjuna opened the chariot track of the Madhyamika by composing his Six Collections of Reasonings which settled the meaning of the profound. This was covered in the context of the teachings on the *Ornament*.

The Six Collections of Reasonings (*Ocean of Sport*, vol. I, page 29) are:

1. *Fundamental Wisdom*,
2. *Treatise Called 'The Finely Woven,'*
3. *Refutation of Objections*, ,
4. *Seventy Stanzas on Emptiness*,
5. *Sixty Stanzas on Reasoning*, and
6. *Precious Garland of Advice for the King*.

In addition, Nagarjuna composed *Compendium of Sutras* and the Collection of Praises, which includes the *Praise of the Sphere of Qualities* and so forth. Among these treatises only three of them present the entire path, whereas the others present only part of the path. These three are: *Precious Garland*, *Compendium of Sutras*, and *Praise of the Sphere of Qualities*. *Fundamental Wisdom* presents only the profound teachings and not the vast.

When Chandrakirti composed the *Supplement*, on the basis of presenting the profound, he also included a discussion of the vast, whereby this text presents both the profound and the vast. Chandrakirti's text is called *Supplement to the 'Middle Way'* because 'Middle Way' refers to the text *Fundamental Wisdom* and his text supplements *Fundamental Wisdom* by discussing both the profound and the vast.

Because both conventional and ultimate truths are explained extensively in the *Supplement* some say that this is why it is called 'supplement.' However, this is not correct because when the explanation of the profound in the *Fundamental Wisdom* and that in the *Supplement* are compared there is found to be more explanation of the profound in *Fundamental Wisdom*. Although *Fundamental Wisdom* does not present the vast, because it presents limitless forms of reasonings regarding the ultimate truth it is included in the mahayana basket. The main reasoning explained in *Fundamental Wisdom* is the diamond slivers reasoning which negates the assertions of lower schools regarding inherent production. For example, certain schools assert that phenomena are produced from self, produced from other, produced from both, and produced causelessly, all of which are refuted in Nagarjuna's text.

After the discussion of the meaning of the title comes the homage of the translators. Homage is paid by the translator to Manjushri because the *Supplement* belongs to the basket of higher knowledge (the abhidharma basket).

Then comes a discussion of the first verse of the *Supplement*. Hearers and solitary realizers are born from buddhas because they listen to teachings by buddhas on the profound, i.e., dependent-arising, then reflect on their meaning, and then meditate on it, whereby they fulfill their wishes.

The term 'hearer' has two etymologies: 'listening and hearing' and 'hearing and proclaiming.' Hearers are called listener-hearers because they listen to teachings on the mahayana and then cause other to hear them. They are called hearer-proclaimers because they do not practice the mahayana that they hear but merely proclaim it to others. Bodhisattvas are not called 'hearer-proclaimers' because they also put the mahayana teachings into practice by listening, reflecting, and meditating on them whereby they fulfill their wishes.

However, there is debate regarding the fact that, while hearers' wishes are fulfilled because having listened to the buddhas' teachings they attain their enlightenment in that very life, this does not apply to solitary realizers. The answer is that the wishes of solitary realizers are also fulfilled because although they do not attain foe destroyer in that very life they do attain it in a future life other than that life, like karma which will definitely be experienced in a future life other than the next life.

One difference between hearers and solitary realizers is that hearers accumulate the collection of merit and wisdom for only three lifetimes, whereas solitary realizers do so for a hundred eons. For this reason solitary realizers are said to be superior to hearers. They are also different in terms of their way of giving teachings. Solitary realizers give teachings only when buddhas have not appeared and the hearers have disappeared and do so by way of physical gestures without speech. According to Svatantrika Madhyamika school hearers and solitary realizers are also asserted to be different in terms of their mode of abandoning their objects of abandonment, but according to the Prasangika Madhyamika school this is not so. In the second chapter of the *Ornament* (2.8) it says: "Because it abandons the conception regarding apprehended-objects, because it does not abandon apprehending, and by the support, the path of the rhinoceros-like is to be known as perfectly summarized." It is in this way that according to Svatantrika Madhyamika school solitary realizers are superior in terms of their realization.

Then comes the question: "If hearers and solitary realizers are born from buddhas, from whom are the buddhas born?" The answer is that they are born from bodhisattvas. Having said this there arises the question: "How is it possible for buddhas to be born from bodhisattvas in that the bodhisattvas are said to be the children of the conquerors, i.e., buddhas? How can a father be born from his own son?" There is no fault in saying that buddhas are born from bodhisattvas for two reasons:

1. from the point of view of the attribute of state and
2. from the point of view of instilling to perfectly uphold.

The first means that the same continuum of a bodhisattva becomes a buddha through practice; the second that bodhisattvas exhort other bodhisattvas to uphold their mind generation whereby they become buddhas.

It is proven by scriptural authority that buddhas are born from bodhisattvas. In the *Pile of Jewels Sutra* there is a verse that mentions that it is like bowing to the new moon and not to the full moon.

Thus, buddhas are born from bodhisattvas in terms of buddhas being produced from the very same continuum of the bodhisattva and being produced from others' continuum in the sense of being exhorted by another bodhisattva to uphold the mind generation whereby they do so and become a buddha. Thus, in terms of both substantial cause and cooperative condition buddhas are born from bodhisattvas.

Q: It was said that solitary realizers make prayers to teach when there are no hearers and buddhas and to teach by means of physical gestures without speech. It would seem that they have an altruistic motivation to do so. If they do not then what is the motivation that impels them to make such prayers?
A: It is usually said that solitary realizers do have altruism, however, their altruism is not as strong as that of a bodhisattva. This is why in one text it says: "Although hearers and solitary realizers do have great compassion they lack the attribute of taking the responsibility of others upon themselves." Therefore, they are in fact kind-hearted and much less selfish than us.

Q: It was said that a solitary realizer does not speak in order to teach, so does he teach by manifesting as a bridge for example?
A: When it is said that they teach Dharma by physical gestures without speech it means that through magical emanations that cause faith to arise in the mind of others. Through their physical gestures others can understand the meaning. In the *Treasury of Knowledge* it says that by means of physical gestures one can understand the meaning in that this is a type of revelatory form which can be perceived and a meaning understood. For example, we can understand others are unhappy merely by their facial expressions and gestures.

Solitary realizers can fly, for example, and can also emanate fire blazing from the upper part of their body and water flowing from the lower part. They can also do the opposite. These appearances cause others to generate faith and to contemplate impermanence and so forth, whereby those who see them receive a teaching on impermanence and come to realize it. This way of teaching impermanence is very potent. Buddha gave his first teaching on the four noble truths beginning with impermanence and at the end of his life taught impermanence by showing the aspect of passing away. Thus, solitary realizers teach by physical gestures which cause those who see them to understand.

Q: Did Chandrakirti call his autocommentary a *bhashya*, an explanation, (*Madhyamakavatarabhashya, Explanation of the 'Supplement to the "Middle Way"'*) and not a *vritti*, a commentary, because it does not cover all the subjects included in Nagarjuna's *Fundamental Wisdom*? Also Geshe-la once said that for a text to be a *vritti*, a commentary, the author should have the three conditions: have received a vision of the deity, have received permission from him to write the text, and to have realized the subject it contains. Since this text is a *bhashya* and not a *vritti* do these three conditions also apply to Chandrakirti?
A: A *bhashya* is a commentary in that it is an extensive explanation. In Sanskrit the words *vritti*, *bhashya*, *tikka*, and so forth are synonyms. Did you suggest that Chandrakirti's text cannot be called a commentary, *vritti*, because it does not cover all the subjects of *Fundamental Wisdom*? That is not the case. This *bhashya* comments on the entire text of the *Supplement* and is therefore complete. Chandrakirti merely chose to call his commentary on the *Supplement* '*bhashya*.' It also can be said that

this *bhashya* was a public discourse by Chandrakirti on the *Supplement* which was then written down. In short, both a *vritti* and a *bhashya* are commentaries.

In short, although a *bhashya* is not called a *vritti* it is a commentary or an extensive explanation. It is up to the author what he prefers to call his text! There is no doubt as to Chandrakirti having all three conditions. He definitely had the first condition which is to have the unbroken lineage from the Buddha through the previous holy beings. He also had the second condition which to have had a vision of one's meditational deity and to have received permission from him to write the commentary. He also has the third condition which is to have the wisdom realizing the entire meaning of the text he has written (there are cases of people who write things and the next day do not even remember the meaning of what they themselves wrote!).

Q: Why do Middle Wayers not accept the scriptural authority of the *Ornament*? For example, Lama Tsongkhapa says that according to the Prasangika Madhyamika school it is not correct that solitary realizers abandon the conception of objects which is an assertion made by Maitreya?
A: The Prasangika Madhyamikas do accept the *Ornament*, but not literally. For example, Maitreya in the *Ornament* (v. 2.8) says:

> *Because it abandons the conception regarding apprehended-objects,*
> *Because it does not abandon apprehending, and*
> *By the support, the path of the rhinoceros-like*
> *Is to be known as perfectly summarized.*

The Prasangika Madhyamika school asserts that solitary realizers do not abandon the conception of external objects. The Chittamatrins and Yogachara Svatantrika Madhyamikas assert that external objects do not exist but that forms and so forth depend on the activation of latencies in the mental continuum. They assert that solitary realizers abandon the conception of apprehendeds. On the other hand, the Prasangika Madhyamikas say that this is incorrect because solitary realizers cannot abandon the conception of external objects because external objects do exist.

Q: When Geshe-la gave the example of the difference between hearers and solitary realizers he gave the example of the person who had studied at Varanasi and become an acharya but whose knowledge could not be compared to that of a geshe. This example is easy to understand but since hearers and solitary realizers achieve the same goal what is the actual difference? Is it in terms of altruism or pride or a wish to practice alone?
A: Hearers and solitary realizers are different only from the point of view of their motivation to accumulate the collections of merit and wisdom. In the example of one who has studied at the Tibetan Institute of Higher Studies in Varanasi and one who has become a geshe at one of the monastic universities there is a difference in their familiarity with the subjects studied. Likewise, when solitary realizers attain foe destroyer their familiarity with the collections of merit and wisdom is greater than that of hearers.

END

Monday afternoon, January 24, 2000

Q: Lama Tsongkhapa's *Illumination* says: "In general the term buddha should be rendered as 'buddha' but here this is not appropriate." Why is this so?
A: It means that in this particular context of middling buddhas it is better to translate the word 'buddha' as 'realizer of suchness.' There are two different translations of the *Supplement*, one of which is by Lotsawa Patsab Nyima Drag. He translated it into Tibetan according to the Kashmiri text and said "Hearers and middling buddhas are born from the kings of subduers." Later, the *Supplement* was retranslated and this same phrase reads: "Hearers and middling realizers of suchness are born from the kings of subduers." In this translation, 'middling buddhas' was translated as 'middling realizers of suchness.' Lama Tsongkhapa indicates that it is better to follow the latter translation which says 'middling realizers of suchness.'

We have concluded the discussion of the way in which buddhas are born from bodhisattvas; next comes a discussion of the three main causes of bodhisattvas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3A1A-3 The three main causes of bodhisattvas
>
> QUESTION: If hearers and solitary realizers are born from Subduer Kings and if Subduer Kings are born from bodhisattvas, what causes bodhisattvas?
> ANSWER: Chandrakirti's root text says:
>
> *The mind of compassion, non-dual understanding,*
> *And the altruistic mind of enlightenment*
> *Are the causes of Children of Conquerors.* [1.1cd]
>
> The main causes of bodhisattvas are three, a compassionate mind which will be explained [in the following stanzas], a wisdom realizing the meaning of freedom from the two extremes with regard to things, non-things, and so forth, and an altruistic mind of enlightenment.

Here, the root text lists the three main causes of bodhisattvas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti says in his commentary that the altruistic mind of enlightenment is as shown in the quoted sutra. The *Omnipresent Doctrine Sutra* says, 'One realizes the suchness of phenomena and generates the thought, "I will cause sentient beings to understand this nature of phenomena." This mind which is generated is called an altruistic mind of enlightenment.' This does not indicate all the characteristics of an altruistic mind generation because it takes cognizance of only one part – its objects of intent. The definition in Chandrakirti's commentary is also partial. He says, 'One definitely generates an altruistic mind thinking, "I will relieve all these worldly beings from suffering and will definitely join them to buddhahood."' The commentary does not mention taking cognizance of the object of attainment, one's own enlightenment.

Lama Tsongkhapa says that the quotation above in *Omnipresent Doctrine Sutra* "does not indicate all the characteristics of an altruistic mind generation because it takes cognizance of only one part – its objects of intent" – and that the definition in Chandrakirti's commentary is also partial in that it "does not mention taking cognizance of the object of attainment, one's own enlightenment."

There are two observed objects of mahayana mind generation, therefore, for the definition of the mahayana mind generation to be complete, it must observe both (1) enlightenment, one's object of

attainment, and (2) others' welfare. To establish this, one can cite the first chapter of Maitreya's *Ornament for Clear Realization* (v. 1.18ab):

> *Mind generation is the desire for*
> *perfect complete enlightenment*
> *For the welfare of others.*

Mind generation is the definiendum and 'desire for perfect complete enlightenment' is its short definition.

Then the *Ornament* (v. 1.18cd) says:

> *That and that are, as in the sutras,*
> *Expressed in a brief and extensive manner.*

'That and that' are respectively enlightenment and others' welfare, which are explained in the middling length Perfection of Wisdom Sutra and likewise in the brief and extensive Perfection of Wisdom Sutras. In brief, this stanza in the *Ornament* establishes that the mahayana mind generation observes both enlightenment and others' welfare.

Chandrakirti's autocommentary says:

> Further, if asked: bodhisattvas are the bearers of what causes?
>
> It was mentioned [in verse 1.1] that compassionate mind, non-dual awareness and bodhichitta [are] causes of the Conqueror's children.
>
> There, compassion is mercy, having an aspect and self entity which will be explained just here. Non-dual awareness is wisdom, separated from the two extremes, such as things and non-things.
>
> Bodhichitta is, as indicated in the *Exalted Omnipresent Doctrine Sutra:*
>
> > The bodhisattva, out of bodhichitta, is to understand all phenomena. All phenomena are equal in the sphere of dharma. All phenomena are to be merely known to arise adventitiously without abiding and, because they are empty of subjective-knowers, are merely to be fully known. Hence, this mind that is generated in a bodhisattva having thought: "I shall thus cause sentient beings to understand this nature of phenomena (dharmata)" is called the bodhisattva's bodhichitta. The mind of benefit and happiness for all sentient beings; the unsurpassed mind; the friendly mind due to love; the irreversible mind due to compassion; the mind without regret due to joy; the stainless mind due to equanimity; the unchanging mind due to emptiness; the unobscured mind due to the lack of signs and the non-abiding mind due to the lack of wishes.

A bodhisattva is born from the three practices of this context:
1. great compassion,
2. non-dual awareness, and
3. the mind of enlightenment.

In the passage above from the *Illumination,* when it says "The *Omnipresent Doctrine Sutra* says...", this does not actually quote the sutra but paraphrases its meaning, while the actual quotation appears in Chandrakirti's autocommentary.

Thinking merely to cause sentient beings to realize reality is not sufficient as a definition of the mahayana mind generation. Also if one merely thinks to liberate sentient beings from suffering and place them in buddhahood, this is not sufficient as it does not observe one's own object of attainment.

In the *Omnipresent Doctrine Sutra,* Buddha presents the four immeasurables – love, compassion, joy, and equanimity – respectively saying: "mind due to love, the irreversible mind due to compassion, the mind without regret due to joy, the stainless mind due to equanimity." Buddha then sets forth the three doors of liberation, saying: "the unchanging mind due to emptiness, the unobscured mind due to the lack of signs, and the non-abiding mind due to the lack of wishes." One needs to cultivate meditative stabilization on these three doors. When the three doors of liberation are discussed, the first door, emptiness, is that all phenomena have the entity of being empty of true existence; the second door, signlessness, is the pacification of signs of truly existent causes; and the third door, wishlessness, is that there are no truly existent results that are to be wished for. In the *Questions of Dritarashtra Sutra* it says: "Sentient beings, because of not knowing emptiness, pacification, and non-production, wander in cyclic existence."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> However, Chandrakirti later shows in his commentary that an altruistic mind of enlightenment is generated in dependence on compassion; he says, 'One wishes to attain buddhahood, which is the cause giving rise to the marvelous taste of ambrosia of the excellent doctrine, which is characterized by the disappearance of all wrong thoughts, and which has the nature of being the friend of all beings.' Thus, he clearly mentions taking cognizance of the object of attainment, one's own enlightenment. Therefore, the complete definition of an altruistic mind generation is asserted to be the wish to attain highest enlightenment – the object of attainment – for the sake of all sentient beings – the objects of intent.
>
> That such appears in [Jaya-ananda's] commentary is good. There is also no difference between what is said in Maitreya's *Ornament for the Realizations* and this system.

"That such appears in [Jaya-ananda's] commentary is good" refers to Jaya-ananda's explanatory commentary on Chandrakirti's autocommentary.

Lama Tsongkhapa says: "Therefore, the complete definition of an altruistic mind generation is asserted to be the wish to attain highest enlightenment – the object of attainment – for the sake of all sentient beings – the objects of intent." This is similar to what it says in verse 1.18 in the *Ornament,* which was cited above.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Assigning these three practices as the causes of bodhisattvas is the system of Nagarjuna's *Precious Garland* (174c-175):
>
> If you and the world wish to gain
> The highest enlightenment,
> Its roots are an altruistic aspiration
> To enlightenment firm like Meru, the king of mountains,
> Compassion reaching in all directions,
> And wisdom which relies not on duality.
>
> This passage indicates that these three are the roots of enlightenment but does not explicitly show that these are the roots of a bodhisattva; however, since root means 'beginning', Nagarjuna is indicating the three main causes of the beginning, and thus it can be known from the context that these are the main causes of bodhisattvas.

The main causes of a bodhisattva are:

(1) compassion,
(2) non-dual awareness, and
(3) the mind of enlightenment.

In this context there is a discussion of great compassion which is a cause of the second two causes: non-dual awareness and the mind of enlightenment. Initially there is great compassion which is the thought thinking, "How wonderful it would be if all sentient beings were free from suffering." Having generated this thought, one then examines whether one is actually able to free them from the suffering of cyclic existence. One finds that the root of cyclic existence is the ignorance conceiving a self and the view of the transitory collection. One then has to understand how this ignorance conceives a self, and examine whether this conception of a self is a correct or incorrect cognizer and whether its referent object exists or not. From this analysis, one comes to understand that the conception of a self is incorrect and can be harmed by a valid cognizer. Thereby, one generates the understanding that the referent object of the conception of a self, or the referent object of the view of the transitory collection, does not exist, whereby one generates the awareness of non-duality. The realization of non-duality is to realize that things and non-things do not exist truly, or to realize things and non-things. When one generates such an awareness, one understands that the conception of true existence can be abandoned. Understanding this, one also realizes that one can attain liberation. One also realizes that one is able to abandon all types of obstructions and achieve omniscience, buddhahood. Understanding that one can attain enlightenment, one thinks, "I must attain enlightenment for the welfare of others."

In this way, first there arises compassion, then non-dual awareness, and then the mind of enlightenment.

Someone objects: "I understand that great compassion and non-dual awareness are causes of bodhisattvas, but how can the mind of enlightenment be a cause of bodhisattvas?" A contrived mind of enlightenment thinking to attain enlightenment for the welfare of sentient beings is similar to an actual mind of enlightenment. This contrived mind of enlightenment is said to be similar to the taste of the bark of sugar cane. Although one has not yet entered the path, one has a special mind of enlightenment wishing to attain enlightenment for others' welfare. Such a contrived special mind of enlightenment is the cause of entering the mahayana path of accumulation.

It can be said that the mind of enlightenment is the cause of most bodhisattvas. This is because the earth-like mind generation accompanied by aspiration (the first of the twenty-two types of mind generation) is a cause for all the bodhisattvas on the middling path of accumulation upward. When someone generates the mind generation for the first time, among the twenty-two types of mind generation which does he generate? He generates the earth-like mind generation accompanied by aspiration.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's teaching these three practices as the causes of bodhisattvas occurs at the time of analyzing the doubt, 'If hearers and solitary realizers are born from buddhas, and buddhas from bodhisattvas, then from what are bodhisattvas born?' Therefore, these three are not suitable to be causes for positing someone as a bodhisattva; they are the causes producing a bodhisattva.

"Therefore, these three are not suitable to be causes for positing someone as a bodhisattva; they are the causes producing a bodhisattva." Here "causes for positing" refers to a definition. In other words, a definition can also be said to be "a cause for positing" or "a reason for positing." For example, it is a pillar because it is that which is able to perform the function of holding up a beam. Or it is a pot

because it is a bulbous-bellied, flat-bottomed water-holder. In this way a definition is 'a cause for positing.'

In this context, the three practices are the causes of producing a bodhisattva and not the causes of positing a bodhisattva, i.e., they are not the definition of a bodhisattva.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: Is the lowest type of bodhisattva, in relation to whom these three practices are assigned as causes, a novice bodhisattva who has just entered the path or not? If he is, then it is incorrect to assign the altruistic mind generation of the Mahayana as a *cause* because as soon as he attains such a mind generation he is a bodhisattva.

The objection is that the mind of enlightenment cannot be the cause of a novice bodhisattva who has just entered the path because entering the path and generating the mind of enlightenment occur simultaneously. According to Prasangika Madhyamikas, there must be a gap of time between a cause and its result; however, according to the Vaibhashikas, a cause and its result can arise simultaneously.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Moreover, it is not feasible to assign the wisdom that does not rely on the two extremes as a cause of a bodhisattva. This is because he initially generates a conventional mind of enlightenment and *then* trains in the bodhisattva deeds – the six perfections and thus only when training in the perfection of wisdom does he train in the wisdom not relying on the two extremes. On the other hand, if the lowest type of bodhisattva in relation to whom these three are posited as causes is not taken as a novice bodhisattva who has entered the path, then it would contradict the explanations of this lowest type of bodhisattva as like a new moon and as like the shoot of a medicinal tree.
>
> ANSWER: The second position is not asserted because it would incur the fault as explained. Therefore, the first position is asserted, but it does not entail the faults stated above.

Tuesday morning, January 25, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The 'mind generation that precedes a bodhisattva' refers to the time of cultivating mind generation and not to an actual mind generation that has been produced through having cultivated it. The difference between these two mind generations is like that between tasting the bark and the inside of sugar cane. Because the mere thought, 'I will attain buddhahood for the sake of all sentient beings' is just verbal understanding, it is like tasting the bark of sugar cane, and although it is *called* an altruistic mind generation, it is not. Through having trained in this mind of enlightenment in accordance with quintessential instructions, special experience is generated that can redirect the mind well. This is like tasting sugar cane itself; therefore, it is fully qualified as a mind generation. Thinking of this, Buddha said in the *Questions of Adhyashaya Sutra (Adhyashayasamchodana):*
>
> > Verbalization is like the bark,
> > Contemplating the meaning is like the taste.

There is no fault regarding the first position because when it is said that mind generation is the cause of a novice bodhisattva, it is the mind generation that is in the process of being cultivated and not the actual experience. It is said to be like tasting the bark of sugar cane compared to tasting the actual sugar cane in that the tastes are similar in that they have a factor of sweetness. Likewise, a contrived mind generation – which is that which is being cultivated – and an actual mind generation both have the aspect of wishing to attain enlightenment for others' welfare. Therefore, there is no fault in the first

position as it refers to a contrived mind generation that is in the process of being cultivated and not the mind generation that has been produced through cultivation.

"Through having trained in this mind of enlightenment in accordance with quintessential instructions, special experience is generated" means that one should develop mind generation through the two quintessential instructions: (1) the seven, the six causes and one effect, and (2) equalizing and exchanging self with others. By means of the seven instructions for mind generation, one first generates a contrived mind generation through the six causes:
(i) recognizing all sentient beings as having been one's mother,
(ii) remembering their kindness,
(iii) thinking to repay their kindness,
(iv) developing attractive love,
(v) developing compassion, and
(vi) the extraordinary thought.
These are followed by (vii) the result, mind generation. This mind generation is of two types: (1) a contrived mind generation and (2) an uncontrived mind generation. First, one develops a contrived mind generation, only later does one develop an uncontrived mind generation. An uncontrived mind generation is a wish to attain enlightenment for the welfare of all sentient beings that arises spontaneously and effortlessly.

The other technique for developing mind generation is that of equalizing and exchanging self and others. One first recognizes sentient beings as having been one's mother, then remembers their kindness, and then thinks to repay their kindness. On this basis one contemplates in many ways the faults of self-cherishing and the advantages of cherishing others, whereby one decides to give up self-cherishing and to cherish others. One then trains in the compassion that takes the suffering of sentient beings upon oneself and the love that gives away one's happiness to sentient beings, whereby one generates the extraordinary thought. In this context the extraordinary thought is the thought to take upon oneself the responsibility of freeing sentient beings from suffering and placing them in happiness. However, when one checks whether one can actually do so, one will discover that only a buddha can do so, whereby one generates the wish to achieve enlightenment. This is the meaning of Lama Tsongkhapa's saying that thereby "special experience is generated that can redirect the mind well."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> A bearer of the bodhisattva lineage with sharp faculties first seeks the view of suchness and then generates the altruistic mind. Therefore, as will be explained later, the second fault is also not incurred.

If it is a sharp-facultied bodhisattva, he is pervaded by having generated the view of suchness before the mind of enlightenment whereas for a dull-facultied bodhisattva there is no such certainty. This is because among dull-facultied bodhisattvas there are those who first generate the mind of enlightenment and then the view of suchness, and there are those who first generate the view of suchness and then the mind of enlightenment.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 'Non-dual understanding' does not refer to the absence of the dualistic appearance of object and subject [which occurs later on the path of seeing]. Chandrakirti's commentary explains it as wisdom free from the two extremes; thus, it is not contradictory for it to occur prior to becoming a bodhisattva.

If "the absence of the dualistic appearance of object and subject" is taken to mean that objects, forms and so forth, and the consciousnesses apprehending them are not different substances, this accords with the Svatantrika Madhyamika school. On the other hand, if it is said to mean that to the exalted wisdom of meditative equipoise there is no appearance of duality of subject and object, this would be acceptable to the Prasangika Madhyamikas.

With respect to "wisdom free from the two extremes," the two extremes are the extremes of existence and non-existence, or the extremes of permanence and annihilation. However, Chandrakirti says that the two extremes are things and non-things, which however are respectively permanence and annihilation. Although non-dual understanding means the wisdom free from the two extremes, there is no fault that such a wisdom occurs before the mind generation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [Jaya-ananda's] explanation that 'non-dual understanding' refers to an ultimate mind generation [which involves the non-appearance of subject and object and begins with the path of seeing] is quite senseless because 'non-dual understanding' must also indicate the wisdom that is a cause of a bodhisattva newly entering the path.

The explanation that non-dual understanding is an ultimate mind generation is not correct because ultimate mind generation is not present before the first ground and therefore cannot be a cause of a novice bodhisattva who has newly entered the path of accumulation.

Chandrakirti's autocommentary says:

> The three principal causes of bodhisattvas are the three practices (dharmas) called:
> 1. compassion,
> 2. wisdom of non-duality, and
> 3. bodhichitta.
>
> As taught in the *Precious Garland* [175]:
>
> > The root of that is bodhichitta, stable like the king of mountains, compassion reaching all classes and exalted wisdom not depending on duality.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3A1B Compassion as the root of the other two causes of a bodhisattva
>
> Compassion is the root of the altruistic mind of enlightenment and non-dualistic wisdom; therefore, it is the chief of the three causes. Indicating this in his root text, Chandrakirti says:
>
> > *Mercy alone is seen as the seed*
> > *Of a conqueror's rich harvest,*
> > *As water for development, and as*
> > *Ripening in a state of long enjoyment,*
> > *Therefore at the start I praise compassion.* [1.2]

Chandrakirti's autocommentary says:

> Because compassion is also the root of the [other] two, bodhichitta and the exalted wisdom of non-duality, wishing to indicate compassion as the principal itself, [the root text] mentions:

Since mercy itself is accepted as the seed of this excellent harvest
Of the conquerors, as water for development and
Like the ripening in a state of long enjoyment,
I therefore praise compassion at the beginning. [1.2]

Just as for excellent outer grains and so forth, seeds, water and ripeness are the essentials in the beginning, middle and end due to being the very principals, similarly, also during the three times, compassion itself is indicated to be essential for the excellent harvest of the conquerors.

In order to reap a harvest, one first needs a seed planted in a field. This is likened to compassion, which is the seed of the mind of enlightenment. Then, in order for the seed to grow, water is needed. Initially, due to compassion, one generates the mind of enlightenment but later without compassion the mind of enlightenment will be in danger of degenerating. Therefore, compassion is important at the beginning and also in the middle, as without it there is the risk of losing the mind of enlightenment. By means of the mind of enlightenment one attains enlightenment. Compassion is still important at that time because without it one will not be motivated to make a rain of Dharma fall. Because compassion is the root at the beginning, middle, and end it is taken as the object of worship by Chandrakirti in his *Supplement*.

It was said before that Chandrakirti takes compassion as the object of worship unlike other texts, which praise the buddhas and bodhisattvas. The question then arises: "What is the mother that is the object of worship in the context of the *Supplement*?" When this question is asked in the context of the *Ornament for Clear Realization,* the answer is that the mother, which is the object of worship of that text, is the three exalted knowers: the knower of bases, knower of paths, and exalted knower of all aspects. They are the mother that is taken as the object of worship because these three exalted knowers are able to fulfill the wishes of the four superior sons: hearer superiors, solitary realizer superiors, bodhisattva superiors, and buddha superiors. In the context of the *Supplement,* the answer is that compassion is the mother that is the object of worship because compassion is the root of all three vehicles: the hearer vehicle, solitary realizer vehicle, and the great vehicle (mahayana). This will be gone into in more detail in the coming discussions.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Mercy is important, like a seed, for the initial development of the marvelous harvest of a conqueror. In the middle mercy is like water for increase higher and higher. At the end mercy is like the ripening of a fruit in a state of long enjoyment for trainees. Because mercy is asserted in this way, I, Chandrakirti, rather than praising hearers, solitary realizers, buddhas, bodhisattvas, or the two other causes of bodhisattvas, praise great compassion at the start of this treatise.

It is not that Chandrakirti *will* praise compassion; the immediately preceding indication of its importance in the beginning, middle, and end with respect to growing the harvest of a conqueror is the praise. 'Mercy *alone'* indicates that unlike the three different examples of importance [seed, water, and ripeness] at the beginning, middle, and end for an external harvest, only compassion is important in the beginning, middle, and end for the harvest of a conqueror.

In short, compassion is important like a seed in the beginning, like water in the middle, and like ripening in the end.

Chandrakirti's autocommentary says:

Like this: since those having compassion are pained by the suffering of others, in order to provide refuge fully to the suffering sentient beings without exception, by considering "without

> doubt, I shall take all these worldly ones out of suffering and conjoin them definitely with buddhahood," they definitely generate the mind.

Compassion has two aspects:
(1) the aspect of wishing sentient beings to be free from enlightenment and
(2) the aspect of wishing to protect them or give them refuge.
Here, the second aspect is discussed. The way in which sentient beings suffer will be explained in detail later on.

In this context, praise is made to compassion without differentiating its types, while the praise to compassion within differentiating its types comes later. The three types of compassion are:
1. compassion observing mere sentient beings,
2. compassion observing phenomena, and
3. compassion observing the unobservable (or the unapprehendable or non-referential).

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The way that compassion's importance in the beginning is like a seed is this: Those who have great compassion generate a mind that observes their object of intent [the welfare of others] with the thought, 'In order to protect all suffering sentient beings pained by misery, I will relieve them from the suffering of cyclic existence and definitely establish them in buddhahood.' Seeing that [the ability to do] this depends upon their own attainment of buddhahood, they definitely generate a mind observing enlightenment with the thought, 'For their sake I will definitely attain highest enlightenment.'

Mind of enlightenment has two observed objects, as was explained before:
(1) the object of intent, others' welfare, and
(2) the object of attainment, enlightenment.
What is the thought to attain enlightenment for? It is for the welfare of sentient beings. What is the meaning of others' welfare and what is the meaning of enlightenment? Lama Tsongkhapa's *Golden Rosary*, [a commentary on the *Ornament*,] says that others' welfare is the nirvana existing in the continua of others and that enlightenment is one's own enlightenment. In some texts, others' welfare is said to be high status and definite goodness. Since high status and definite goodness are others' welfare, one has to achieve the perfect welfare. What is the perfect welfare? It is the two form bodies of a buddha, the enjoyment body and emanation body. Why is it called 'perfect' welfare? Because the enjoyment body and emanation body teach the Dharma whereby others attain high status and definite goodness. Thus, others' welfare can be understand as either the nirvana in the continua of others or as high status and definite goodness. Since definite goodness is nirvana there is not much difference between these two statements.

Q: Are the two form bodies of a buddha the *cause* of others' welfare or are they others' welfare?
A: They are the cause of high status and definite goodness. In general it is said that the two form bodies are the perfect welfare of others. There is a discussion of this in the context of the object of worship in Dharmakirti's *Commentary on [Dignaga's] 'Compendium of Valid Cognition'* which says: "To you who have dispelled the net of conceptualizations and possess the profound and extensive bodies, Samantabhadra, you who have light rays radiating everywhere, I prostrate." Here Dharmakirti presents the three perfections (or excellences):
(1) perfect self welfare,
(2) perfect others' welfare, and
(3) perfect enlightened activities.

"You who have dispelled the net of conceptualizations" presents the perfect self welfare in that it refers to the elimination of the conception of a self of persons and the conception of a self of phenomena. "[You who] possess the profound and extensive bodies" [refers to the perfect others' welfare]. "Profound and extensive bodies" is interpreted in different ways by different scholars, but one interpretation is that it refers to the two bodies of a buddha. The one possessing these two bodies is Samantabhadra. The word Samantabhadra in Tibetan is Kuntu Sangpo (*kun tu bzang po*), which means "Always Good," meaning that he is good in the three times. "You who have light rays radiating everywhere" presents the perfect enlightened activities because one possessing the two bodies radiates rays of light that enact the welfare of sentient beings.

"[You who] possess the profound and extensive bodies" is also explained to mean perfect realization. This is because perfect realization includes the realizations of both modes and varieties. One who has these realizations possesses the two bodies of a buddha in that the profound body is the realization of modes, i.e., emptiness, and the extensive body is the realization of varieties, conventionalities. Thus, in the first two lines the excellent qualities of a buddha are expressed in that "You who have dispelled the net of conceptualizations" presents the excellent quality of abandonment of a buddha, whereas "[you who] possess the profound and extensive bodies" presents the excellent quality of realization of a buddha. Saying "Samantabhadra, you who have light rays radiating everywhere" indicates the two form bodies of a buddha, the enjoyment body and emanation body. In this way, the remaining part of the third line and the fourth line present the perfect enlightened activities. Although there are many types of enlightened activities, there are twenty-seven main ones, for example, placing sentient beings in the four means of gathering disciples. These enlightened activities are performed by light rays radiating from the body of a buddha, whereby the mental continua of sentient beings are ripened. In this context, the two form bodies are the causes of perfect others' welfare, high status and definite goodness, which also include nirvana and the two bodies. (The object of worship in Dharmakirti's text is recited in the Tibetan monasteries at the beginning of *Lama Tsongkhapa's Guru Yoga (Ganden Lha Gyema)*.)

In short, although the observed object of the mind of enlightenment is others' welfare, there are various ways of positing others' welfare. In the phrase "the net of conceptualization," just as a net is used to trap animals, likewise the net of the conception of a self of persons and the conception of the self of phenomena traps sentient beings in cyclic existence. In order to become free from cyclic existence, one has to cut this net. To do so one has to develop the wisdom realizing the selflessness of persons and the wisdom realizing the selflessness of phenomena.

Tuesday afternoon, January 25, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Because they understand that such a promise cannot be fulfilled if the practices of giving and so forth – illustrated [in Chandrakirti's commentary] by non-dualistic wisdom – are forsaken, they definitely engage in these practices, the chief of which is wisdom. Therefore, the seed of all buddha qualities is great compassion. Referring to this Nagarjuna says in his *Precious Garland* (378):
>
> > Who with intelligence would deride
> > Deeds motivated by compassion
> > And the stainless wisdom as is
> > Taught in the Mahayana?
>
> Nagarjuna says that all the meanings of the Mahayana are contained within the three: general practices induced by (1) the altruistic mind of enlightenment preceded by (2) compassion, and the particular practice of (3) wisdom free from the stains of conceiving the two extremes.

If one gives up the practices of generosity and so forth, which are illustrated by the exalted wisdom of non-duality, then one's promise to attain enlightenment cannot be fulfilled. Therefore, one must engage in these practices, the chief of which is wisdom. "Definitely engage in these practices" means to definitely engage in the practices of generosity and so forth.

Compassion is the seed of all the excellent qualities of the buddhas. In Nagarjuna's *Precious Garland* it says: "Who with intelligence would deride deeds motivated by compassion and the stainless wisdom as is taught in the Mahayana?" Compassion and stainless wisdom should precede all activities; this is not to be derided by anyone.

Chandrakirti's autocommentary says:

> Also, since this promise cannot be fulfilled by forsaking the exalted wisdom of non-duality, they just definitely engage also in the exalted wisdom of non-duality. Hence, because of that, the seed of all buddha's qualities is compassion itself.
>
> As taught in the *Precious Garland* [378]:
>
> > Who with intelligence would deride all the deeds preceded by compassion and the stainless exalted wisdom that is explained in the mahayana?
>
> Although bodhichitta is already generated, if later it is not moistened repeatedly by the water of compassion, the extensive collections of the result are not accumulated. In this case, [one] will pass beyond sorrow through the thorough passing beyond sorrow (nirvana) of the hearers and solitary realizers.
>
> Although the state of infinite results already generated, if separated from full maturation of compassion, in this case, one will not be enjoyed (used) over a long time. Also, the stages of the great resultant community of aryas, the uninterrupted transmission from one to another will not strongly increase for a long time.

This concludes the discussion in the autocommentary of compassion without differentiating its types.

Compassion is generated at the beginning. After that, one generates the exalted wisdom of non-duality and then the mind of enlightenment. This order of generation is specifically for the sharp-facultied, in general it is also true for the dull-facultied, although it is not certain.

Lama Tsongkhapa's *Illumination* says: "Nagarjuna says that all the meanings of the mahayana are included in three: general practices induced by (1) the mind of enlightenment preceded by (2) compassion and the particular practice of (3) wisdom free from the stains of conceiving the two extremes." These three include all the practices of the mahayana. Therefore, when one completes these practices one completes the meaning of the mahayana.

Chandrakirti then says: "Although bodhichitta is already generated, if later it is not moistened repeatedly by the water of compassion, the extensive collections of the result are not accumulated." Lama Tsongkhapa explains this in the following passage (Hopkins, *Compassion in Tibetan Buddhism*):

> The importance of compassion in the middle is similar to water. For, although the seed of compassion initially grows into the shoot of an altruistic mind of enlightenment, if later it is not moistened again and again with the water of compassion, one will not amass the two extensive collections that serve as the causes of the fruit, buddhahood. In that case one would actualize the nirvana of either a hearer or solitary realizer. However, if the shoot of an altruistic mind of enlightenment is moistened again and again with the water of compassion, that will not happen; [one will actualize the enlightenment of a buddha].
>
> The importance of compassion at the end is similar to a state of ripeness. For, if one attains the state of a conqueror but lacks the ripened state of compassion, one will not be a source of

> enjoyment and use by sentient beings as long as cyclic existence lasts. Also, the collection of hearers, solitary realizers, and bodhisattva superiors [arising from] the transmission [of Buddha's word] from one to the other would not increase uninterruptedly. However, when great compassion operates continually at buddhahood, the opposite occurs.

If one attains buddhahood but does not have compassion one will not make the rain of Dharma fall, whereby the hearers, solitary realizers, and bodhisattvas will not be born and the continuity of the transmission of the Dharma will be interrupted. Therefore, compassion is necessary at the beginning, in the middle, and at the end. For example, if it is lacking at the end, although one has become a buddha with all the realizations of an enlightened being, sentient beings will not enjoy the ambrosia of the Buddha's speech. On the other hand, because of compassion there is the continuity of the Dharma teachings from Buddha down to us.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Through Chandrakirti's commentary on the meaning of these four lines you should gain firm conviction with respect to the teaching that it is necessary to train in these practices. You should think, 'If I wish to become a Mahayanist, my mind must first come under the influence of great compassion, and then in dependence on this I must generate from the depths of my heart a fully qualified altruistic mind of enlightenment. Once I have done this, I must engage in the general practices of bodhisattvas and in particular must penetrate the profound view.'

Thus, this section discusses the importance of compassion for becoming a bodhisattva. In *Great Exposition of the Stages of the Path of Enlightenment* (*lam rim chen mo*), it says that for someone to be a mahayanist it is not sufficient for the subject matter to be the mahayana – one must develop the mind of enlightenment in order to be a mahayanist.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3A2 Homage to great compassion within differentiating its types

This section has two parts:

A Homage to compassion observing sentient beings
B Homage to compassion observing phenomena and the unapprehendable

3A2A Homage to compassion observing sentient beings

Chandrakirti's autocommentary says:

> Now, especially clarifying the specific entities of compassion by way of their operation in particular instances of observation, desiring to compose a homage, it is mentioned:
>
> *Initially, there is adherence to a self, 'I', and then*
> *Clinging to things is produced, "This is mine."*
> *I bow to that compassion for migrators*
> *Who are powerless like a rambling water mill.* [1.3]
>
> The worldly ones, prior to strongly adhering to 'mine', thoroughly grasping to an 'I' consider that a self exists which [in fact] does not exist. Having finely imputed it, they strongly adhere to just this as true. Then, the consideration that "This is mine" is the strong adherence to every aspect of things other than the object of 'I' grasping.
>
> Because these worldly ones
> 1. strongly adhere to an 'I' and 'mine', very tightly bound by the rope of actions and delusions,

2. engage, relying upon the movement of the operator of the mechanism, the consciousness,
3. wander about the great well of samsara, from the peak of existence to the depths of the Most Torturous Hell (*Avichi*) ceaselessly,
4. by their own nature, engaging to migrate downward, [but] are to be drawn up with how much effort,
5. although having three [sets of] the fully afflicted – affliction such as unknowing, actions and rebirth – the order of the former, latter and middle are not definitely beheld, and
6. battered by the suffering of suffering and changeable suffering every day,
   they abide without passing beyond the state of a water-mill machine.

Since bodhisattvas are pained by those sufferings, having observed them through extreme compassion, they delight in protecting. Therefore, just at the very beginning, homage is made to the bhagavan great compassion. This is the compassion of the bodhisattvas observing sentient beings.

In order to generate compassion for sentient beings, one must first understand how they are suffering. First, they strongly adhere to an 'I.' As a result of this, they strongly adhere to 'mine.' This strong adherence to I and mine is present in all sentient beings. Due to it, sentient beings are said to be bound by the rope of actions and afflictive emotions, like a bucket in a well bound by a rope. The consciousness is likened to the one who turns the wheel. Cyclic existence is analogous to the well. Sentient beings go up and down in cyclic existence from the Peak of Existence to the Most Torturous Hell like a bucket going up and down in a well. This is because just as a bucket goes down into a well effortlessly, likewise sentient beings go to the lower realms without effort. On the other hand, when the bucket is full of water and is to be brought up, there must be strong effort on the part of the operator. Likewise, for sentient beings to go up to the upper realms there is the need of great effort.

There are three types of thoroughly afflicteds: (1) thoroughly afflicted *afflictions*, (2) thoroughly afflicted *actions*, and (3) thoroughly afflicted *rebirth*. These three form a circle, making it difficult to distinguish which comes first, as Chandrakirti says: "the order of the former, latter and middle are not definitely beheld." These three types of thoroughly afflicteds encompass all twelve links because:
(1) thoroughly afflicted afflictions includes the links of ignorance, craving, and grasping,
(2) thoroughly afflicted actions includes the links of karmic formations and existence, and
(3) thoroughly afflicted rebirth includes the remaining seven links.
This is indicated in Nagarjuna's *Precious Garland,* saying that as long as one conceives of the aggregates, one conceives of an I; due to this one creates karma, whereby one takes rebirth. These three paths continuously circle like the circling of a firebrand without beginning, middle, or end. In this way sentient beings wander in cyclic existence.

Sentient beings are "battered by the suffering of suffering and changeable suffering every day." As long as one takes rebirth in cyclic existence due to the power of actions and afflictive emotions, one will experience various types of sufferings.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti says:

Homage to that compassion for migrators who are
Powerless like a bucket traveling in a well
Through initially adhering to a self, an 'I',
And then generating attachment for things, 'This is mine.' [1.3]

The view of the transitory collection as a real 'I' generates the view of that collection as real 'mine'. Therefore, these sentient beings initially – prior to the view of the transitory adhering to real 'mine' – adhere to an 'I' as a truth. The view of the transitory apprehending a real 'I' thinks that the self – which does not inherently exist – does so. Subsequently, the view of the transitory apprehending

> real 'mine' generates attachment for the truth of the 'mine', thinking, 'This is mine,' with respect to phenomena other than the 'I' such as forms and eyes.
>
> Chandrakirti's homage to compassion observing sentient beings is: Homage to compassion for migrators wandering powerlessly like a bucket traveling in a well.

Sentient beings first strongly adhere to an 'I' and then to 'mine.' One should identify the nature of this view of the transitory collection. The definition of a view of the transitory collection is: an afflicted wisdom that observing either the I or mine in the continuum of the person possessing it in his continuum conceives it to exist inherently. What is the difference between the view of the transitory collection conceiving 'I' and the view of the transitory collection conceiving 'mine'? They are the same in observing the I; the difference is in the manner of conception in that the first conceives 'I' and the latter 'mine.' Is the view of the transitory collection a conception of a self of persons? Some interpretations say that it is. Then what are the conceptions adhering to the true existence of 'the eye which is mine,' 'the nose which is mine,' and so forth? Are they a view of the transitory collection? They are not, because they are not conceptions of a self of persons but are conceptions of a self of phenomena. This is because they are conceptions of true existence that, from among the two observed objects of the conception of true existence, persons and phenomena, take phenomena as their object. The view of the transitory collection conceiving 'mine' does not have a specific mine as its object, such as 'the eye which is mine, 'the ear which is mine,' 'the car which is mine,' and so forth. In other words, the view of the transitory collection conceiving 'mine' does not conceive of any particular mine. This subject is greatly debated – for example, some people assert four possibilities between the view of the transitory collection and the conception of a self of persons:

1. that which is a view of the transitory collection but not a conception of a self of persons,
2. that which is a conception of a self of persons but not a view of the transitory collection,
3. that which is both a view of the transitory collection and a conception of a self of persons, and
4. that which is neither a view of the transitory collection nor a conception of a self of persons.

An illustration of the first is the view of the transitory collection conceiving 'mine.' An illustration of the second is a mental consciousness conceiving a self of persons; this is a conception of a self of persons, but is not a view of the transitory collection because it is not a wisdom. An illustration of the third is the view of the transitory collection conceiving 'I.' An illustration of the fourth is the conception of true existence of a pot; it is not a view of the transitory collection because it does not observe the mere I and it is not a conception of a self of persons because it does not observe a self of persons. These four possibilities are mentioned in one text, perhaps Gyeltshap Je's commentary on the *Supplement* called the *Condensed Meaning of the Supplement*. There are, however, many scholars who say that there are no such four possibilities, but only three because there is nothing that is a view of the transitory collection but not a conception of a self of persons. They also say that the view of the transitory collection conceiving 'mine' is a conception of a self of persons. This is asserted by, for example, Kunkyen Jamyang Shepa. These scholars say that the view of the transitory collection conceiving 'mine' does not have a specific mine as its object but conceives only the I itself. According to them, it would appear that the view of the transitory collection conceiving 'I' and the view of the transitory collection conceiving 'mine' are not different. According to the Prasangika Madhyamika school, the root of cyclic existence is the view of the transitory collection. This is mentioned by Chandrakirti in the sixth chapter of his *Supplement,* after the discussion of production by four alternatives, in the context of negating a self.

One should meditate on how the conception of 'I' and 'mine' arise. To do so, one first needs to recognize the 'I' and 'mine,' and the 'self' and 'of the self.' One can see the I more easily when one is strongly attached to an object, when one is very angry, when one is so happy that tears come to the eyes, and so forth. One then has to distinguish between the I that is to be negated and the I that exists conventionally. This is a complicated subject. In fact, when some lamas teach mahamudra (Tib. *phyag rgya chen po*), they send people away to a place where there is danger in order to look for the I.

Wednesday morning, January 26, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: In what way are migrators similar to a bucket in a well?
> ANSWER: Sentient beings are the bearers of similarity, and a bucket in a well is the object of similarity, both having six features such as being tied.
> The first feature is that these worldly beings are bound very tightly by the rope of contaminated actions and afflictions. In Chandrakirti's commentary, the word 'these' should be applied to the other five features also.

"Worldly beings" are sentient beings who are bound very tightly in cyclic existence by the rope of contaminated actions and afflictive emotions.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The second is that the process [of cyclic existence] depends on being impelled by the mind, like the operator of the pulley mechanism.
> The third is that these sentient beings ceaselessly wander in the great well of cyclic existence from the Peak of Cyclic Existence down to the Most Torturous Hell.
> The fourth feature is that these sentient beings naturally and effortlessly go downward to bad migrations and must be drawn with great exertion upward to happy migrations.
> The fifth is that they have the three sets of thorough afflictions, the order of which cannot be determined one-pointedly. The three sets are (1) the afflictions of ignorance, attachment, and grasping, (2) the actions of compositional action and 'existence', and (3) the productions of consciousness, name and form, six sources, contact, feeling, birth, and aging and death.
> The sixth feature is that every day these sentient beings are battered by the sufferings of pain and change, and the pervasive suffering of being so conditioned as to be always ready to undergo pain. Therefore, these sentient beings do not pass beyond the state of a bucket in a well.
> Here the application of similarity by way of six features is not made merely for the sake of understanding the way that sentient beings wander in cyclic existence.

These six features of similarity between a bucket in a well and the way sentient beings wander in cyclic existence were already explained.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: Then what is the purpose?
> ANSWER: Previously Chandrakirti indicated that one who wishes to enter the Mahayana must initially generate great compassion, but he did not show how to generate compassion in meditation. Here, by showing the way that sentient beings wander powerlessly in cyclic existence he indicates how to generate great compassion through meditation.

The way to generate compassion is to meditate on the way in which sentient beings circle in cyclic existence and the way in which they are battered by suffering. Having done this meditation well, one will develop compassion. While meditating, one should think that sentient beings are battered by the three types of suffering: the suffering of suffering, suffering of change, and pervasive compounded suffering. There is no moment in which sentient beings do not experience one of these three. In the *Sutra on the Four Close Placements of Mindfulness* it says: "Hell beings experience the fire of the hells, hungry ghosts experience hunger and thirst, animals experience eating one another, human beings experience [the need for] nourishment and drink, gods experience a lack of conscientiousness. On the tip of needle-like cyclic existence there is never any happiness."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> By what agency do sentient beings enter into cyclic existence? By just this extremely unpeaceful, untamed mind.

In brief, only our own minds cause us to circle in cyclic existence.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Where and how do they wander? From the Peak of Cyclic Existence to the Most Torturous Hell without the slightest interruption in their circling.
>
> By what causes and conditions do they wander? By the power of contaminated actions and afflictions. They wander in bad migrations by the power of non-meritorious actions and afflictions, and in happy migrations by the power of meritorious and unmoving actions and afflictions. To be born in bad migrations the process operates automatically and without effort, but it is difficult to be born in happy migrations because great effort must be made to achieve their causes. The *Topics of Discipline (Vinayavastu)* says that instances of leaving either a happy or a bad migration and going to a bad one are as numerous as the particles of this great earth and that instances of leaving a happy or a bad migration and going to a happy one are as few as the particles held on the tip of a fingernail.

The difficulty and rarity of beings in bad or happy migrations dying and taking rebirth in a happy migration is likened to the number of dust particles on the tip of a fingernail. On the other hand, the number of beings who take rebirth in a bad migration are likened to the particles of dust the entire earth. What makes sentient beings circle in cyclic existence from the Peak of Existence down to the Most Torturous Hell is an unpeaceful and untamed mind. .

Cyclic existence is 'the continuous joining by the force of actions and afflictive emotions.' The cause of rebirth in the bad migrations is non-meritorious actions, which are easily and effortlessly created in that non-meritorious actions are created even by doing meaningless actions. In this way, we create a great amount of non-meritorious actions, whereby we take a great many rebirths in the bad migrations. On the other hand, the causes of rebirth in the happy migrations are meritorious actions and immovable actions. Meritorious actions are said to be easy to create compared to immovable actions, yet still they require great effort. Due to creating meritorious actions one will be reborn as a human being, antigod, or god of the desire realm. Due to immovable actions, one takes rebirth in the form realm and formless realm. The preparations that include calm abiding and special insight, which require effort and are not easy to attain, are immovable actions. In addition, the actualizing action for rebirth in the form realm is the attainment of an actual concentration, while that for rebirth in the formless realm is an actual formless absorption.

In this way, the number of beings taking rebirth in the bad migrations are likened to the dust particles of the entire earth, while the number of beings taking rebirth in the happy migrations are likened to the amount of dust particles that can be taken up on the tip of the fingernail of a tathagata.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Whenever any of the three groups of thorough afflictions in a round of dependent arising is present, the two remaining groups are also operating in other rounds of dependent arising. Therefore, the process is uninterrupted, and every day – like ripples in water – beings are tormented more than once by the three sufferings.
>
> If your mind has not been affected by thinking about the way that you yourself wander in cyclic existence, then when you think about these modes of suffering in other sentient beings, there is no way that you as a beginner can find their suffering unbearable. Therefore, as Chandrakirti says in

> his commentary on Aryadeva's *Four Hundred*, first you should think about these in yourself and afterwards meditate on them in other sentient beings.

For example, while one set of afflictions (ignorance, craving, and grasping) of one round of dependent-arising occurs, there is another set of rebirth (consciousness, name and form, six sources, contact, feeling, birth, and aging and death) of another round of dependent-arising occurring and another set of karma (karmic formations and existence) of another round of dependent-arising occurring. For example, our present rebirth as a human being belongs to one round of dependent-arising. To which link does it belong? We are presently experiencing the twelfth link of aging and death. From the point of view of the four existences, we are experiencing the fourth, the first being the death existence, the second being the intermediate state existence, the third being the birth existence, and the fourth being the previous time existence. Previous time existence is the existence subsequent to birth and prior to death. Although we are experiencing the twelfth link of a human life we are creating other rounds of dependent-arising due to ignorance and karmic formations, which accumulate karma for another rebirth. Therefore, even in one day a human being, who is in the round of dependent-arising of a human rebirth, accumulates karma that will bring future rebirths.

One should begin by thinking of one's own suffering before going on to think of others' suffering, as in this way the meditation will be more effective.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: Can great compassion be induced merely by meditating on the way that other sentient beings are tortured in cyclic existence by suffering and by the sources of suffering or is another aid needed?
>
> ANSWER: In the world when suffering is seen in an enemy, not only is it not unbearable, but one delights in it. When a person who has neither helped nor harmed one is seen to suffer, one will in most cases pay no attention to that person. These [reactions] are due to not having a sense of pleasantness with respect to these persons.
>
> When one sees a friend suffer, it is unbearable [in the sense that one must do something about it], and the degree of unbearability is just as great as one's sense of pleasantness toward him. Therefore, it is an important essential that one must generate a sense of strong cherishing and affection for sentient beings.

It is not enough to meditate on true sufferings and true origins with regard to sentient beings in order to generate great compassion; one must also meditate on the pleasantness or attractiveness of sentient beings. By doing so, love and compassion for them will arise simultaneously because when one explicitly wishes sentient beings to have happiness, one implicitly wishes them to be free from suffering and vice versa.

When a friend is experiencing intense suffering, one strongly wishes him or her to be free from this suffering. On the other hand, if that person is seen in an unattractive aspect one will not develop such a wish.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Among the kings of scholars, there are two systems concerning the means for generating a sense of pleasantness. Of the first, Chandrakirti says in his commentary to Aryadeva's *Four Hundred* that if sentient beings are considered to have been friends – such as parents – from beginningless time, then one can bear to plunge into cyclic existence for their sake. The great being Chandragomin and the king of scholars, Kamalashila, also presented it this way. The second is the system of the glorious Shantideva. These can be known from my explanations elsewhere [in the *Great Exposition of the Stages of the Path*].

Chandrakirti sets out the system for developing the mind of enlightenment of (1) recognizing sentient beings as having been one's mother, (2) remembering their kindness, (3) thinking to repay their kindness, (4) developing pleasant love, (5) compassion, and (6) the extraordinary thought. Here Chandrakirti says to consider sentient beings as having been one's parents, i.e., one's fathers and mothers. One can also think of them as having been one's sons or daughters, brothers and sisters, and so forth.

The second system for developing the mind of enlightenment is that of equalizing and exchanging self and others, which is usually said to come from Shantideva. However, the actual source of this system goes back to the *Precious Garland* by Nagarjuna.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Those who strive to train in great compassion through strongly cherishing sentient beings and reflecting on the ways in which those beings are tortured in cyclic existence make meaningful Chandrakirti's uncommon expression of worship. Those who otherwise claim to be skilled in this are like prattling parrots. This analogy applies to other situations as well.
>
> Later I will explain how this comes to be called compassion observing sentient beings.

If one meditates on the way in which sentient beings suffer in cyclic existence and thereby develops pleasant love for them, then Chandrakirti's expression of worship becomes meaningful – otherwise it is like being a prattling parrot merely repeating a phrase without understanding its meaning.

In this regard there is a story about a family who had a parrot that they kept in a cage by the door. One day a bald man entered the house. The parrot asked him, "Did someone turn a hot frying pan upside down on your head?" Although it appeared to be a meaningless question, in fact it had happened that one day a hot frying pan had been put upside down on the parrot's head whereupon his head had been burned! Sometimes people say things that appear ridiculous; for example, there is a story of a man who had a bump on his head who, when asked where it had come from, answered that his bottom had been butted by a sheep! However, this was the case in that when the sheep butted him he was bending down, whereupon his head hit against a wall.

The next outline in Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) is:

> 3A2B Homage to compassion observing phenomena and the unapprehendable

Chandrakirti's autocommentary says:

> In order to also clarify the compassion observing phenomena and the non-referential by way of their observations, [the root text] mentions:
>
> *That sees migrators like a moon in moving water,*
> *As fleeting and empty of self-nature.* [1.4ab]
>
> "Homage to that compassion" should be joined to that.
>
> Thus, when the reflection of the moon within a portion of very clear water covered by ripples from a mild breeze appear like observing in direct perception the actual previously observed object of support (the water) together with the disintegrating [moon] – the noble ones see it as a situation which clarifies these two specific essential-natures. That is, impermanence in each instant and emptiness of specific nature.

> Similarly, also when bodhisattvas who have come under the influence of compassion see sentient beings as abiding within an ocean of the view of the transitory collection – the characteristic of all erroneous conceptions – the extensive blue water of the ignorance of the entirety of migrators strongly agitated by the wind of improper conceptualization, the situations in front of them like reflections of their own actions, the suffering of the impermanence in each instant descending upon them, and empty by self-nature; they desire to perfectly attain buddhahood, the cause of the eminent taste of the nectar of the holy Dharma that destroys the suffering of their impermanence, the characteristic that overcomes all erroneous conceptions, the nature of the kinship of the entirety of migrators.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's homage to compassion observing phenomena is: Homage to compassion viewing migrators as evanescent or momentarily disintegrating, like a moon in water stirred by a breeze. His homage to compassion observing the unapprehendable is: Homage to compassion viewing migrators as empty of inherent existence though they appear to exist inherently, like the reflection of the moon in water.

Through changing the words of Chandrakirti homage slightly, homage is paid to the two types of compassion, compassion observing phenomena and compassion observing the unobservable (non-referential or unapprehendable).

Wednesday afternoon, January 26, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In order to illuminate the compassions observing phenomena and the unapprehendable from the viewpoints of the objects observed, Chandrakirti says in his root text:
>
> *[Homage to that compassion for] migrators*
> *Seen as evanescent and empty of inherent*
> *Existence like a moon in rippling water.* [1.4ab]
>
> Chandrakirti's homage to compassion observing phenomena is: Homage to compassion viewing migrators as evanescent or momentarily disintegrating, like a moon in water stirred by a breeze. His homage to compassion observing the unapprehendable is: Homage to compassion viewing migrators as empty of inherent existence though they appear to exist inherently, like the reflection of the moon in water.
>
> In commenting on this, Chandrakirti says, 'Homage to that compassion' omitting 'for migrators', but his thought is that the 'migrators' [of the previous stanza] are included as the objects observed by the latter two compassions.
>
> An image of the moon appears in a portion of very clear water that is covered by ripples from a mild breeze. The water that serves as the basic object is [actually] apprehended prior to the reflection, but the reflection is manifestly apprehended as a real moon that disappears each day. The excellent ones, namely, beings who are skilled in these ways, see momentary impermanence and the emptiness of the nature of the moon as it appears to be.

The last line [of the Tibetan] of the third verse in the *Supplement* (1.3d) says "Homage to that compassion for migrators." The word "migrators" also comes in the first line of the fourth verse (1.4a) which says "for migrators." "In commenting on this, Chandrakirti says, 'Homage to that compassion' omitting 'for migrators', but his thought is that the 'migrators' [of the previous stanza] are included as the objects observed by the latter two compassions." In the third verse homage is paid to the compassion observing mere sentient beings, while in the fourth homage is paid to the compassion

observing the unobservable and the compassion observing phenomena, however in all three cases migrators are observed.

The compassion observing mere sentient beings is compassion which observes sentient beings not qualified by impermanence, emptiness, and so forth and wishes them to be free from suffering.

The compassion observing phenomena is the compassion that observes sentient beings qualified by impermanence and wishes them to be free from suffering.

The compassion observing the unobservable is the compassion that observes sentient beings qualified by not existing inherently and wishes them to be free from suffering.

The fourth verse of Chandrakirti's *Supplement* (1.4) pays homage to both the compassion observing phenomena and the compassion observing the unobservable by changing the words slightly. In order to pay homage to the compassion observing phenomena the words need to be changed to: "Homage to compassion viewing migrators as evanescent or momentarily disintegrating, like a moon in water stirred by a breeze." And in order to pay homage to the compassion observing the unobservable the words need to be changed to: "Homage to compassion viewing migrators as empty of inherent existence though they appear to exist inherently, like the reflection of the moon in water." This is clarified by Lama Tsongkhapa.

In regard to this Chandrakirti's autocommentary said before:

> Thus, when the reflection of the moon within a portion of very clear water covered by ripples from a mild breeze appear like observing in direct perception the actual previously observed object of support (the water) together with the disintegrating [moon] – the noble ones see it as a situation which clarifies these two specific essential-natures. That is, impermanence in each instant and emptiness of specific nature.

The moon's reflection in water changes daily in that it is not seen during the day but only at night. During the day the moon disappears, or disintegrates, in the sky whereby there is no longer a reflection in the water. Then when the moon reappears so does the reflection in the water. The noble ones realize that sentient beings disintegrate momentarily just as the moon disintegrates both in the sky and in the water each day. In addition, the reflection of the moon in water appears to be a real moon although it is not, [and, likewise, sentient beings appear to be inherently existent but are not].

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> As in the example, bodhisattvas who have come under the influence of compassion also see sentient beings in an ocean – the view of the transitory – which is filled by a vast blue river of ignorance. They see that this ocean in which sentient beings abide is stirred by the winds of improper thought and that the reflections of the beings' own wholesome and unwholesome actions which are like the moon in the sky are reflected in front of them. Bodhisattvas see sentient beings with the suffering of composition – momentary disintegration – descending on them, and they see beings as empty of inherent existence. Observing them, bodhisattvas generate great compassion, and, as explained earlier, their great compassion arises from reflecting on the pleasantness of sentient beings and on the ways in which they wander in cyclic existence.

Here Lama Tsongkhapa set out an analogy likening the view of the transitory collection to an ocean and ignorance to a blue river that fills it. On the other hand, when Jedzun Chogyi Gyeltshen describes

the formation of the universe in his *Ocean of Sport* he takes the ocean as an illustration of cyclic existence, the surrounding twenty mountains as the view of the transitory collection, and the darkness above this universe as ignorance. These twenty mountains are huge and vast and covered with dense forests whereby it is difficult to exit from them, just as it is difficult to leave cyclic existence. These mountains are covered by darkness which is analogous to ignorance.

However, in *Illumination* Lama Tsongkhapa takes the ocean as analogous to the view of the transitory collection and takes the blue river flowing into it as analogous to ignorance. Sentient beings are drowning in this ocean, over which blows a strong wind analogous to improper conceptualization. In front of these sentient beings there is the reflection of the moon which is likened to their different kinds of actions.

Ignorance in this context is the conception of a self of phenomena while the view of the transitory collection is the conception of a self of persons. This is because the conception of a self of persons is based upon, or fed by, the conception of a self of phenomena. Although here the view of the transitory collection is said to be the cause of cyclic existence, the cause actually comes down to the conception of a self of phenomena.

The higher schools say that the view of the transitory collection is ignorance and an afflicted wisdom, whereas the lower schools say that it is not ignorance but is a wisdom. Thus, the view of the transitory collection can either be included among the six object-determining mental factors as wisdom, or among the six root afflictive emotions as ignorance. The lower schools assert that ignorance and afflicted wisdom are two different mental factors in that ignorance is one of the six root afflictive emotions while the view of the transitory collection is an afflicted view. In *Abhidharmakosha*, [which sets out the Vaibhashika tenets,] the view of the transitory collection is asserted to be included in wisdom and therefore to be one of the object-determining mental factors.

On the other hand, according to the Prasangika Madhyamika school the view of the transitory collection is both ignorance and an afflicted wisdom. However if it is asked whether ignorance is a view of the transitory collection, the answer is that it is not because ignorance is not a conception of a self of persons. For this reason ignorance cannot be a view of the transitory collection. In short, if it is a view of the transitory collection it must be a conception of a self of persons.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Even though the view of the transitory is ignorance, Chandrakirti explains ignorance separately [as a river flowing into the ocean of the view of the transitory] because he is referring to the ignorance that induces the view of the transitory – the conception of a self of phenomena.

If someone we do not know walks into this room, his form aggregate appears to us whereupon the conception of a self of phenomena arises (phenomena being the form aggregate of that person). At this point we have only seen his form aggregate and do not yet know who he is. When this person introduces himself as so-and-so whereby we come to know his name, we generate the conception of a self of persons. In this way the conception of a self of persons is based upon the conception of a self of phenomena.

Another example is what happens when someone sees an arm coming from an open window. If someone outside sees only the hand he generates a conception of a self of phenomena in relation to that hand. This person does not know whose hand it is and only after finding out whose it is does he generate a conception of a self of persons observing a person. In this way, the conception of a self of phenomena induces the conception of a self of persons.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> At this point in his commentary Chandrakirti says that the three compassions are distinguished by the objects that they observe, not by their subjective aspects. Therefore, all three types of compassion have as their subjective aspect the wish to free sentient beings from suffering; they are thereby similar in that they observe sentient beings. In discussing the first type of compassion Chandrakirti says (stanza 1.3a), 'Compassion for migrators', and in discussing the latter two types of compassion he says (1.4ab), 'Evanescent migrators.' In this way he shows that sentient beings are the objects observed.

In short, all three types of compassion have the same aspect.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Still, compassion observing phenomena does not observe just sentient beings, but those who momentarily disintegrate. Therefore, the objects of observation are sentient beings qualified by momentary impermanence. When one determines that beings disintegrate momentarily, the existence of a permanent, partless, and independent person is eliminated in one's mind. Thereby, one can ascertain the non-existence of sentient beings who are different entities from their mental and physical aggregates. At that time one understands that they are *designated* to the mere collection of the mental and physical aggregates. Sentient beings who are designated to the mere phenomena of the aggregates and so forth serve as the objects of observation, and thus this is called 'compassion observing phenomena'.

Because sentient beings are merely designated on the collection of aggregates, the compassion observing them is called 'compassion observing phenomena.' The compassion viewing sentient beings qualified by momentary impermanence is compassion observing phenomena, as is the compassion observing sentient beings qualified by being empty of being permanent, partless, and independent. The compassion observing sentient beings as empty of being self sufficient substantially existent is also compassion observing phenomena. In short, the compassions observing sentient beings as qualified by impermanence, as qualified by being empty of being permanent, partless, and independent, and as qualified by being empty of self sufficient substantial existence are compassions observing phenomena. Only when a compassion views sentient beings qualified by being empty of inherent existence is it compassion observing the unobservable.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Impermanent sentient beings are just an illustration. Observing those who do not substantially exist in that they are not self-sufficient is also called 'observing phenomena'. Therefore, giving the name, 'observation of phenomena', to observation of sentient beings who are designated to mere phenomena is a contraction.

The term 'observing phenomena' is a contraction in that specific words are missing which complete the meaning. In short, 'compassion observing phenomena' and 'compassion observing the unobservable' are contractions of respectively compassion observing sentient beings designated on phenomena and compassion observing sentient beings qualified by non-true existence.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Compassion observing the unapprehendable also does not observe mere sentient beings. It observes a special object, sentient beings who are empty of inherent existence. 'Unapprehendable' means 'not truly existent' and refers to the referent object's not existing in the way that it is conceived to exist by a consciousness grasping at signs [of inherent existence]. Giving the name, 'observing the unapprehendable' or 'unapprehendable compassion' to the observation of sentient beings qualified by non-true existence is a contraction.

> Many Tibetan commentators say that the second compassion observes momentary disintegration and the third non-inherent existence. These are explanations of those who have not understood well the subjective aspects and objects of observation of these two compassions. For, it is necessary to assert that both have the aspect of wishing to free sentient beings from suffering, and if momentariness and non-inherent existence were asserted as the objects of these aspects, then one compassion would have two discordant aspects as its mode of apprehension [because it would also have the aspect of realizing momentariness or non-inherent existence].

A single awareness cannot have two objects of the mode of apprehension. In short, a single awareness cannot have dissimilar modes of apprehension, one wishing sentient beings to be free from suffering and one apprehending sentient beings as momentary, or one wishing sentient beings to be free from suffering and one apprehending sentient beings as empty of inherent existence.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Sentient beings qualified by momentariness and non-inherent existence are put as the objects of observation of these two compassions. Thus, before a person can have these two in his mental continuum, he must ascertain that sentient beings are momentary and do not inherently exist. Then, in dependence on his previous ascertainment, the aspects of these two qualities must appear to his mind. However, it is not necessary that these compassions themselves apprehend sentient beings as impermanent or not inherently existent. [The appearance of these qualities to a compassionate mind due to previous ascertainment is sufficient.]

The compassion observing phenomena observes sentient beings qualified by impermanence, for example, and wishes them to be free from suffering, while the compassion observing the unobservable observes sentient beings qualified by being empty of inherent existence and wishes them to be free from suffering. The person who has these two compassions has necessarily previously realized that sentient beings are momentarily impermanent and empty of inherent existence. Lama Tsongkhapa says: "However, it is not necessary that these compassions themselves apprehend sentient beings as impermanent or not inherently existent." This means that while these compassions do not themselves apprehend impermanence and the emptiness of inherent existence, the person who has generated these two compassions does realize that sentient beings are impermanent and empty of inherent existent.

Q: Does he do so simultaneously?
A: The compassion observing sentient beings and the wisdom realizing sentient beings as impermanent arise simultaneously and manifestly, likewise the compassion observing sentient beings and the wisdom realizing sentient beings are empty of inherent existence arise simultaneously and manifestly. (Note: In Guy Newland's *Compassion: A Tibetan Analysis* says that they do not arise simultaneously.) This assertion is based on their being explicitly conjoined. Because they are explicitly conjoined both compassion and wisdom occur manifestly and simultaneously, otherwise they would not be said to be explicitly conjoined. There is a difference between 'conjoined' and 'explicitly conjoined.' If it is conjoined, that which is conjoined and that which conjoins do not have to be manifest simultaneously. 'Conjoined' means to benefit and assist each other. We say, for example, "He is conjoined with misleading companions" in that sense that when one is conjoined with misleading friends one is helped to lose one's qualities and increase one's negativities. However, one can argue that this person is harmed and not helped and ask what benefit is there from misleading companions.

Is there a compassion accompanied by a conception apprehending a permanent, partless, and independent person? There is in that we think "How pitiful" with respect to sentient beings whom we

perceive as permanent, partless, and independent. Even if we do not have this compassion, we do have a compassion accompanied by a conception of a self sufficient substantially existent person.

Thursday morning, January 27, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In both the basic text and the commentary Chandrakirti explains that the latter two compassions observe sentient beings qualified by the qualities explained above and says that mere sentient beings – who are not so qualified – are the objects of observation of the first compassion. Therefore, his giving the name, 'compassion observing sentient beings', to the first compassion is a convenient contraction.
>
> It is wrong to assert that the first compassion must observe permanent, partless, and independent sentient beings. As for compassion in the continuums of those who have not found the view of selflessness, there are many instances of their generating compassion observing only sentient beings. There are also many instances of it observing sentient beings, not qualified by either of the two qualities explained above, in the continuums of those who have found the view of common personal selflessness or the view of suchness. For instance, even though someone has completely refuted the referent object of a consciousness apprehending a pot to be permanent and has understood that the pot is impermanent, not every instance of his observing it is posited as an observation of a pot that is qualified by impermanence. Also, even though someone might not have understood that a pot is impermanent, not every instance of his observing it is put as an observation of a pot that is qualified by permanence.

Someone makes the objection that the first type of compassion, the compassion observing sentient beings, observes sentient beings qualified by being permanent, partless, and independent. However, this is incorrect. This is because there are instances of observing mere sentient beings by both those who do not have the realization of the selflessness of persons and those who do have the realization of the selflessness of persons. In other words, there are instances of compassion observing mere sentient beings without their being qualified by being permanent, partless, and independent. An example of this is the exalted wisdom of meditative equipoise of the path of seeing. In the continua of this person there is compassion observing mere sentient beings but not compassion observing sentient beings qualified by impermanence or qualified by non-true existence. The compassion in the continuum of one on the uninterrupted path of the path of seeing is the first type of compassion. It is not the second type of compassion because it does not observe sentient beings qualified by impermanence. It is also not the third type of compassion because it does not observe sentient beings qualified by non-true existence. However, in subsequent attainment there can be the second and third types of compassion, that observing phenomena and that observing the unobservable, in the continuum of this person.

Q: Does conventional truth appear to a person on the mahayana uninterrupted path of the path of seeing?
A: It appears to the person but not to the mahayana uninterrupted path of the path of seeing. However, this can be debated. This above assertion accords with Jedzun Chogyi Gyeltshen who says that someone on the uninterrupted path of the mahayana path of seeing has a conventional mind generation which necessarily observes both observed objects, complete enlightenment and others' welfare. Therefore, it is said that to this person there is the appearance of conventional truth while to his meditative equipoise it does not appear. This is mentioned in Gyeltshap Je's *Essential Explanation* and in Lama Tsongkhapa's *Golden Rosary*. However, according to Panchen Sonam Drakpa a person on the mahayana uninterrupted path of path of seeing does not have the mind of enlightenment, compassion, love, and so forth. However, this means that he does not have them manifestly because

Panchen Sonam Drakpa asserts that if an awareness exists in the continuum of a person it is pervaded by being manifest. If he is asked whether this person degenerated the conventional mind generation or compassion, Panchen Sonam Drakpa answers that he has not because it is exists in a manner of non-degeneration. Then if asked does it exist, Panchen Sonam Drakpa answers that it does not.

Lama Tsongkhapa's *Illumination* then says that when a pot is observed there is no pervasion that it is observed qualified by permanence or qualified by impermanence. This means that one can observe the mere pot not qualified by any features.

Geshe Jampa Gyatso: If it is great compassion is it pervaded by being one of the three compassions indicated in this context?
Student: There is no pervasion; for example, the compassion observing sentient beings qualified by permanence.
Geshe Jampa Gyatso: Would you accept that there is a great compassion observing sentient beings qualified by permanence?
Student: Yes.
Geshe Jampa Gyatso: Then it is not any of these compassions because it is not the first compassion because the object, sentient beings, in this case is not qualified by permanence; it is not the second because the compassion observing sentient beings as permanent does not observe sentient beings qualified by impermanence or qualified by being empty of self sufficient substantial existence; and it is not the third compassion because it does not observe sentient beings qualified by non-true existence. Who is a person who observes sentient beings qualified by permanence thinking "How pitiful"?
Student: Myself!

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> No matter which of the three objects of observation these three compassions observe, each has the aspect of wishing to protect all sentient beings from all suffering. Therefore, they differ greatly from the compassion generated by hearers and solitary realizers. When [practitioners] generate such compassions, they generate an altruistic mind of enlightenment, thinking, 'For the sake of sentient beings I will definitely attain the state of a buddha.'

Compassion in this context is pervaded by the aspect of wishing to protect all sentient beings. Hearers and solitary realizers also have compassion but there are different assertions concerning this in that some scholars say that they have compassion but not great compassion while some say that they have great compassion but do not have the aspect of wishing to protect all sentient beings. If hearers and solitary realizers have great compassion what follows? It would contradict the verse in the *Ornament for Clear Realization* (v. 1.10) which says "Through knowledge, not abiding in existence, through compassion, not abiding in peace," because if they have great compassion hearers and solitary realizers would not remain in solitary peace but would arise from it. There is a text by Khedrub Dentar of Sera Me that says that although hearers and solitary realizers do have great compassion they do not have the extraordinary thought that takes upon oneself the responsibility for all sentient beings. It is said that this scholar is a manifestation of Venerable Maitreya and in previous lives was Purbuchog, the tutor of Gyelwa Jampa Gyatso, the VIII Dalai Lama, the author of *Collected Topics*, and a tutor of the XII and XIII Dalai Lamas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

The compassion to which Chandrakirti offers worship is mainly initial compassion, but it is also the other compassions of bodhisattvas. Thus, there is no contradiction in Chandrakirti's saying in his commentary at this point that bodhisattvas generate compassion.

QUESTION: Can all three types of compassion be a cause of bodhisattvas when they first enter the path?

ANSWER: Those bearing the Mahayana lineage who are followers of fact [and not just words] initially seek knowledge of the true suchness [emptiness]. Once they have ascertained the ultimate well, they generate an altruistic mind of enlightenment, which is founded on generating great compassion for sentient beings, and then train in the discipline of a Subduer – the bodhisattva deeds. Those bearing the Mahayana lineage who are followers of faith cannot realize suchness first. They generate an altruistic mind of enlightenment after which they train in the bodhisattva deeds such as searching for knowledge of the meaning of reality. Shantirakshita's *Ornament of the Middle Way (Madhyamakalamkara)* says:

> First searching to know reality
> They ascertain well the ultimate
> And then generate compassion
> For the world obscured by bad views.
> Heroes effecting migrators' welfare,
> Skilled in the vast mind of enlightenment,
> They practice the Subduer's discipline
> Adorned with wisdom and compassion.
> Followers of pure faith generate
> The mind of perfect enlightenment,
> Assume the discipline of the Subduer,
> And strive for knowledge of reality.

Thus, there are two types of practitioners, and among them there are cases of generating all three compassions prior to becoming a bodhisattva. [The followers of fact realize emptiness before becoming a bodhisattva and thus can generate compassion observing sentient beings qualified by non-inherent existence.]

Chandrakirti's expresses worship mainly to initial compassion, the first of the three practices, yet the compassion of bodhisattvas can also be posited as the object of worship of this context. However, there are different interpretations regarding this. The three practices of this context are the causes of a bodhisattva. It can be asked: "If it is a bodhisattva is he pervaded by being born from the three practices of this context?" There is no pervasion because, although sharp-facultied bodhisattvas are pervaded by being born from the three practices, there is no pervasion that dull-facultied bodhisattvas are born from the three practices. This is explained by Shantarakshita in his *Ornament of the Middle Way* which say: "First searching to know reality they ascertain well the ultimate and then generate compassion for the world obscured by bad views." In other words, sharp-facultied bodhisattvas first investigate reality and then generate compassion for sentient beings who are obscured by the cloud of bad views.

Shantarakshita then says: "Heroes effecting migrators' welfare, skilled in the vast mind of enlightenment, they practice the Subduer's discipline adorned with wisdom and compassion." "The Subduer's discipline" refers to the fact that bodhisattvas have the bodhisattva vows and abide in the conduct of a bodhisattva. Then in regard to dull-facultied bodhisattvas Shantarakshita says: "Followers of pure faith generate the mind of perfect enlightenment, assume the discipline of the Subduer, and strive for knowledge of reality." This means that dull-facultied bodhisattvas first generate compassion, then the mind of enlightenment, then take the vows of a bodhisattva and engage in the conduct of a bodhisattva, and only then strive in the knowledge of reality. In this case the wisdom realizing emptiness cannot produce this bodhisattva because it is generated after he has already become a bodhisattva.

Q: For sharp-facultied bodhisattvas it seems that Shantarakshita asserts the order in which the three practices are generated is different from how they are set out by Chandrakirti?
A: That is correct. Chandrakirti says that sharp-facultied bodhisattvas are pervaded by first searching for the knowledge of reality and then generating the mind of enlightenment, whereas dull-facultied bodhisattvas also generate the mind of enlightenment and search for the knowledge of reality and thereby realize emptiness but the order in which they do so is not definite. It can be asked: "Are the three practices of this context only posited from the point of view of sharp-facultied bodhisattvas or are they posited from the point of view of both sharp and dull-facultied bodhisattvas?" The answer is that the three practices of this context are posited from the point of view of both sharp and dull-facultied bodhisattvas. However, for those of dull-facultied there is no certainty as to the order in which they are generated.

Q: Shantarakshita seems to be saying that the main cause of the other two causes is not compassion but wisdom in that first comes wisdom and then compassion and the mind of enlightenment which would contradict what Chandrakirti says regarding compassion being the cause of the other two causes. Is that right?
A: It would seem so.

Lama Tsongkhapa's *Illumination* says: "Thus, there are two types of practitioners, and among them there are cases of generating all three compassions prior to becoming a bodhisattva." "There are cases of generating all three compassions prior to becoming a bodhisattva" is an answer to the previous question: "Can all three types of compassion be a cause of bodhisattvas when they first enter the path?"

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Even though one has previously found the view of suchness, it is not contradictory that when training in the bodhisattva deeds [which include training in wisdom] one ascertains and trains in the meaning of suchness. Not only is that not contradictory, it is the way it must be done.

Although one has previously realized emptiness and then goes on to practice the bodhisattva deeds, one still needs to ascertain and train in the meaning of suchness. In other words, a bodhisattva practices the bodhisattva deeds accompanied by an understanding of emptiness.

> Even though Chandrakirti, having offered worship, does not explicitly promise to compose his text [as is customary], there is no fault as Nagarjuna did the same in his *Treatise on the Middle Way* and *Sixty Stanzas of Reasoning (Yuktishashtika).* Similarly, there are many instances of [an author's] making a promise to write a book and not making an explicit expression of worship as, for example, in Nagarjuna's *Friendly Letter (Suhrllekha).* Still, Chandrakirti implicitly promises to write the book when, wishing to begin it, he makes an expression of worship.

In general when someone is about to compose a treatise, the author first expresses an offering of worship followed by a promise to compose the text. In his *Supplement* Chandrakirti makes an offering of worship but does not explicitly promise to compose the text. However, he makes an implicit promise to compose the text when he makes the expression of worship. This is like the case of Nagarjuna in his *Fundamental Wisdom* and *Sixty Stanzas of Reasoning*. There are also cases of an author making a promise to compose the text but not making an expression of worship, for example, Nagarjuna's *Friendly Letter* in which he did not make an offering of worship as his text was written in the form of a letter. In short, Lama Tsongkhapa says that Chandrakirti makes an explicit offering of worship in his *Supplement* and an implicit promise to compose the text.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> With respect to the factors causing others to become involved in the book, the *subject matter is* the profound and the vast. The *uncommon purpose* has been explained. The *temporary essential purpose* begins with practicing the meanings of the text that one has come to know [through hearing and thinking] and extends through progressing on the four paths [of a bodhisattva – accumulation, preparation, seeing, and meditation]. The *final essential purpose* is [the attainment of] the effect ground – buddhahood. The *relationship* of these is that the essential purposes depend on the purpose and that in turn depends on the text [the *Supplement*].

It can be asked: "Is the *Supplement* speech related to a purpose?" This can be asked because is not explicitly indicated as it is in the *Ornament*. However, it is speech related to a purpose because speech concordant with a meaning is pervaded by having the four factors:

1. subject matter,
2. purpose
3. essential purpose, and
4. relationship.

The text to be composed must have a subject matter; unlike the treatise composed to prove that crows have teeth Chandrakirti's text does possess a subject matter. The treatise composed to prove that crows have teeth was composed by a non-Buddhist scholar to defeat his daughter in a debate about this subject. The scholar maintained that when a crow bites someone a wound is left, proving that a crow has teeth. The daughter said that the crow does not have teeth and that the wound was made by the beak itself. Chandrakirti's *Supplement* has the subject matter of the profound and vast.

Chandrakirti's *Supplement* also has a purpose, in fact it has an uncommon purpose, which as Lama Tsongkhapa was explained previously. This refers to when it was said previously that the purpose is to realize the meaning of the profound and vast in dependence on the *Supplement*.

Chandrakirti's *Supplement* also has both a temporary and an ultimate essential purpose, or purpose of purpose. The temporary essential purpose is the realization of the four paths, the path of accumulation and so forth, and the ultimate essential purpose is the final attainment, buddhahood.

Chandrakirti's *Supplement* also has the fourth, relationship, which is that the essential purpose is related to the purpose and the purpose is related to the text. By hearing and studying the *Supplement* one realizes the meaning of the profound and vast. In dependence on the subject matter of the text one realizes the purpose, the meaning of the profound and vast, and as a result one attains the temporary essential purpose, the four paths, and the ultimate essential purpose, buddhahood.

Therefore, Chandrakirti's *Supplement* is speech related to a purpose possessing the four features. Therefore, this treatise is not at all like the treatise composed to prove that crows have teeth; the treatise on taking one's own mother as a bride; the treatise on taking the crown of a naga king, and the treatise on making sacrifices [which are respectively examples of texts lacking the four features.]

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B Actual body of the text
>
> This section has two parts:
> 1 Causal grounds
> 2 Effect ground
>
> 3B1 Causal grounds

This section has three parts:

A Ways of practicing the paths of this system in general
B Ways of practicing on the level of common beings in particular
C Presentation of the grounds of bodhisattva superiors

3B1A Ways of practicing the paths of this system in general

QUESTION: If here in Chandrakirti's text the profound and vast paths of bodhisattvas are arranged following the protector Nagarjuna, how are the stages of paths proceeding to buddhahood asserted in the latter's system?

ANSWER: The purpose of settling the systems of the second buddha – the honorable Nagarjuna – and so forth through hearing and thinking is to find great conviction in the ways to practice the pure path. You thereby will not be led astray by similitudes of paths. No matter how much you train in the texts of the Mahayana systems, hearing and thinking that do not develop any conviction in the ways to practice the path are cases of not properly accomplishing hearing and thinking. Though you would have made effort in the Mahayana, you would have not extracted its essence well. You should strive to know the stages of progress on the path.

In order to establish the profound and vast paths in one's continuum as set out by Nagarjuna, one has to hear about them and then think about them. Then one has to gain certainty with regard to the way to practice the path. If one has understood this well, no one will be able to cause one to stray from the right path. On the other hand, if one studies Nagarjuna's system for a long time yet does not gain conviction as to how to practice the path, it shows that one has not been able to integrate one's hearing in one's practice whereby it becomes a waste of time. The main purpose of listening to teachings and studying is to learn how to practice, if this is not understood one's study has been meaningless. In daily life it is important to gain conviction regarding the subject of one's practice. In other words, in order to meditate on, for example, the subject of compassion, one has to first recognize what compassion is and then learn the ways to develop it in one's mind. In this way one will slowly become able to generate one's own mind in the aspect of compassion.

There is a difference in the way of meditating on emptiness and the way of meditating on compassion. Meditation on compassion means to transform the entity of one's mind into compassion, the wish that sentient beings be free from sufferings. This is not the case for meditation on impermanence and emptiness. Meditation on emptiness, for example, means to take emptiness as one's object of the mode of apprehension and to analyze it; in this case one's own mind is the subject, or object-possessor, analyzing the object.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The honorable Nagarjuna made many explanations of portions of the path but wrote three books teaching the body of the path based on both the profound and the vast. As was quoted before, Nagarjuna's *Precious Garland* (174c-175) says:
>
> If you and the world wish to gain
> The highest enlightenment,
> Its roots are an altruistic aspiration
> To enlightenment firm like Meru, the king of mountains,
> Compassion reaching in all directions,
> And wisdom which relies not on duality.
>
> And (378):

Who with intelligence would deride
Deeds motivated by compassion
And the stainless wisdom as is
Taught in the Mahayana?

Nagarjuna sets forth an identification of the six perfections, their benefit, and the training in them as well as in accompanying compassion (435-9):

Briefly the virtues observed
By bodhisattvas are
Giving, ethics, patience, effort,
Concentration, wisdom, compassion, and so forth.

Giving is to give away completely
All one's wealth, ethics is to help others,
Patience is to forsake anger,
Effort, to delight in virtues;

Concentration is unafflicted one-pointedness,
Wisdom is to ascertain the meaning of the truths,
Compassion is a mind that savors only
Mercy and love for all sentient beings.

From giving there arises wealth, from ethics happiness,
From patience a good appearance, from [effort in] virtue
Brilliance, from concentration peace, from wisdom
Liberation, from compassion all aims are achieved.

From the simultaneous perfection
Of all those seven is attained
The sphere of inconceivable wisdom,
The protectorship of the world.

Nagarjuna sets forth the basis of the deeds – a preliminary generation of the mind of enlightenment – and the progress on the ten bodhisattva grounds through those deeds.

Lama Tsongkhapa indicates that, although Nagarjuna composed many texts, only three of them present the path in terms of both the profound and the vast. The first of these three texts is *Precious Garland*, which is quoted here. Nagarjuna says that in order to attain enlightenment, one must first generate the mind of enlightenment and, in order to develop that, one must generate its main causes, compassion and so forth, the three practices which are indicated saying: "Who with intelligence would deride deeds motivated by compassion and the stainless wisdom as is taught in the Mahayana?" This show that all mahayana practices are preceded by compassion.

In the following stanzas the entity of the bodhisattva practices, the six perfections, generosity, and so forth, are set out. Here the bodhisattva deeds are said to be seven: "Giving, ethics, patience, effort, concentration, wisdom, compassion, and so forth." Nagarjuna then defines these seven beginning with generosity which he says is "to give away completely all one's wealth." In the *Stages of the Path* generosity is explained to be of three types: (1) the generosity of material things, (2) the generosity of protection from fear, and (3) the generosity of Dharma. In tantra there are said to be four types of generosity by adding the generosity of love to these three.

"Ethics is to help others" and to abandon harming them. The definition of ethics is: the intention to abandon harm. There are three types of ethics: (1) the ethics of refraining from bad conduct, (2) the ethics of collecting virtuous qualities, and (3) the ethics of enacting the welfare of sentient beings.

"Patience is to forsake anger," which means to have an undisturbed mind. To have an undisturbed mind is, for example, when harmed by someone to maintain a calm mind undisturbed by anger. Patience is of three types: (1) the patience of bearing sufferings, (2) the patience of definitely thinking about Dharma, and (3) the patience of non-retaliation.

"Effort is to delight in virtue," virtue being white or positive qualities. There are many types of effort, but what is important is to develop constant effort within ourselves. We should not have strong effort at the beginning of an activity and then completely give up all effort, like a strong storm that brings much water and then suddenly and completely disappears.

"Concentration is an unafflicted one-pointedness." When cultivating concentration; one should place the mind one-pointedly without distraction on the object. Concentration is also of different types.

"Wisdom to ascertain the meaning of the truths," 'the truths' being either the two truths or the four truths. The two truths are the conventional truth and ultimate truth. Buddha said that the basis is the two truths, the path is method and wisdom, and the result is the form body and truth body. The two truths can be ascertained by way of either a valid inferential cognizer or a direct perceiver. Presently we can understand the two truths by means of a valid inferential cognizer in dependence on correct reasonings.

"Compassion is a mind that savors only mercy and love for all sentient beings."

"From giving there arises wealth, from ethics happiness," here happiness refers to rebirth in the happy migrations.

"From patience a good appearance" means that one will be born beautiful through the practice of patience. Nagarjuna then says: "From [effort in] virtue brilliance, from concentration peace, from wisdom liberation." "From compassion all aims are achieved" means that one achieves all one's aims in this life and also of future lives.

In order to understand that "from giving arises wealth" one has to rely on a correct sign of conviction. One cannot do so based on a correct sign by way of the power of the fact or a correct sign by way of renown. An appropriate syllogism is: The passage that says "from giving arises wealth," as the subject, is non-deceptive with respect to the subject it presents because it is a passage which is pure by way of the threefold analysis. A correct sign of conviction can be divided into:
(1) a correct sign of result,
(2) a correct sign of nature, and
(3) a correct sign of non-observation.

(1) An example of a correct sign of result is the syllogism: The passage that says "from giving arises wealth," as the subject, is preceded by a valid cognizer realizing that it is non-deceptive with respect to the subject it presents because it is a passage that is pure by way of the threefold analysis. Among correct signs of result this is a correct sign of result proving that a cause existed before.
(2) An example of a correct sign of nature is the syllogism: The passage that says "from giving arises wealth," as the subject, is <u>non-deceptive</u> with respect to the subject it presents because it is a passage which is pure by way of the threefold analysis. It is a correct sign of nature because the reason and the predicate are the same nature.
(3) An example of a correct sign of non-observation is the syllogism: The passage that says "from giving arises wealth," as the subject, is <u>not deceptive</u> with respect to the subject it presents because it is a passage which is pure by way of the threefold analysis. This is a correct sign of non-observation because the predicate of this syllogism is in the negative. Another example with the same subject and sign but a different predicate is: The passage that says "from giving arises wealth," as the subject, it is not that there is no valid cognizer realizing the subject it presents because it is a passage which is pure by way of the threefold analysis.

The threefold analysis is:
1. not being harmed by a valid direct perceiver and being established by it,
2. not being harmed by a valid inferential cognizer by the power of fact and being established by it, and
3. not being harmed by a valid inferential cognizer by the power of conviction and being established by it.

A pure text by Buddha presents any of the three subjects: manifest phenomena, slightly hidden phenomena, or extremely hidden phenomena. If Buddha's sutra presents manifest phenomena it is not harmed by a valid direct perceiver and is established by it; if it presents slightly hidden phenomena it is not harmed by a valid inferential cognizer by the power of fact and is established by it; if it is presents extremely hidden phenomena it is not harmed by a valid inferential cognizer by the power of conviction and is established by it.

There is debate concerning the above: "In the case of 'from giving arises wealth' is the object taught an extremely hidden phenomenon?" Some say that it is not an extremely hidden phenomenon since it is easily verified. They say that what is an extremely hidden phenomenon is when and where wealth will arise from giving. In order to understand the specific results of giving one must rely on conviction gained through scriptural authority. This is also true of the statement "from ethics happiness" and the statement "from patience a good appearance." However, in daily life one can see the immediate results of the practice of patience. For example, we can observe the expression of a person who is angry and see that due to his anger there is a change in his face and it becomes ugly. On the other hand, if that person has a relaxed mind his face changes and becomes attractive. Therefore, due to anger there is ugliness and due to patience beauty.

Then Nagarjuna says "From the simultaneous perfection of all those seven is attained the sphere of inconceivable wisdom, the protectorship of the world." In other words, one will attain the state of being able to protect other sentient beings through the practice of these seven.

"Nagarjuna sets forth the basis of the deeds – a preliminary generation of the mind of enlightenment – and the progress on the ten bodhisattva grounds through those deeds."

In regard to the second of Nagarjuna's text, *Praise of the Element of Qualities*, which sets out both the profound and vast, Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) then says:

> Nagarjuna's *Praise of the Element of Qualities (Dharmadhatustotra)* explains the generation of the altruistic mind of enlightenment – which is done after taking refuge – the enhancement of one's lineage through the ten perfections, and the ten bodhisattva grounds.

Here the *Praise of the Element of Qualities* is not actually quoted and its subject matter is only presented briefly. First one goes for refuge and then, on the basis of guarding the precepts of refuge, one generates the mind of enlightenment. Then one enhances or develops "one's lineage through the ten perfections." The lineage referred to here is the developmental lineage in that the naturally abiding lineage cannot be enhanced or diminished. One enhances the developmental lineage through the practice of the ten perfections. On the first ground, Very Joyful, a bodhisattva practices the surpassing practice of generosity, on the second ground the surpassing practice of ethics, on the third ground the surpassing practice of patience, on the fourth ground the surpassing practice of effort, on the fifth ground the surpassing practice of concentration, on the sixth ground the surpassing practice of wisdom, on the seventh ground the surpassing practice of skill in means, on the eight ground the surpassing practice of prayer, on the ninth ground the surpassing practice of power, and on the tenth ground the surpassing practice of exalted wisdom.

Friday morning, January 28, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> These rough condensations of the stages of the path are explained in detail in his *Compendium of Sutra*. There he sets forth the difficulties of attaining leisure, fortune, and faith in the teaching and the even greater difficulty of generating an altruistic mind of enlightenment. He presents the difficulty of attaining great compassion for sentient beings and the still greater one of gaining the means of abandoning the karmic obstructions [arising] from criticizing bodhisattvas, the thought to despise bodhisattvas, demonic activities, forsaking the excellent doctrine, and so forth. Many such explanations are contained in his *Compendium of Sutra*.
>
> Compared to the *Precious Garland* or the *Praise of the Element of Qualities*, the *Compendium of Sutra* is indeed clear. However, Shantideva – a great bearer of the master Nagarjuna's system presents very clearly and extensively those stages of the path still more difficult to realize in general in both his *Compendium of Instructions (Shikshasamuachchaya)* and *Engaging in the Bodhisattva Deeds (Bodhisattvacharyavatara)*. He does this in particular in his *Compendium of Instructions* which is a commentary on the meaning of Nagarjuna's *Compendium of Sutra*.

In the *Compendium of Sutras* Nagarjuna says that it is difficult to find the leisures and fortunes (endowments) of a precious human rebirth and to have faith in the Buddha's doctrine. To make life meaningful, one must meditate on how difficult it is to find this precious human rebirth again. A precious human rebirth is characterized by eight non-leisures: four states of non-leisure of non-human beings and four states of non-leisure of human beings. The four states of non-leisure of non-human beings are: (1) rebirth as a hell being, (2) hungry ghost, (3) animal, or (4) long-life god of Without Discrimination. These are said to be states of non-leisure because they are states in which there is no leisure to practice the Dharma, on the other hand being free of these states one does have the leisure to practice the Dharma. In addition, those with a precious human rebirth are free from the four states of non-leisure of human beings: (1) to be born in an eon of darkness, (2) to be born stupid and dumb, (3) to born as a barbarian in a border region, and (4) to hold wrong views. Since we are free of these non-leisures we have all eight leisures.

The ten fortunes, or ten endowments, are also composed of two groups: five personal fortunes and five circumstantial fortunes. The five personal fortunes are: (1) to be born as a human being, (2) to be born in a central land, (3) to have complete sense faculties, (4) to not have committed the five actions of immediate retribution, and (5) to have faith in the four noble truths, i.e., that the first two are to be abandoned and the latter two to be practiced, or faith in the three higher trainings, or most importantly faith in the three Dharma baskets. The five circumstantial fortunes are: (1) a buddha has arisen in the world, (2) he has taught the Dharma, (3) the Dharma still exists, (4) there are people following the Dharma, and (5) there are people who support Dharma practitioners. We have all these eighteen qualities of a precious human rebirth, therefore we should rejoice in our good fortune. However, they are not easy to find again so we should make this life meaningful.

We have a precious human rebirth which is difficult to find and faith in the Dharma which is difficult to generate, and in addition we are seeking the mind of enlightenment which is even more difficult to generate. However, we should continue to strive in it even if we are only able to generate a contrived mind of enlightenment. Nagarjuna also says that it is difficult to develop compassion for sentient beings and, even if one has generated it, it is very easy to lose it when sentient beings treat one badly. The Tibetan nomads say: "If compassion is generated quickly, hatred still remains." For example, when we see the poor we think "How pitiful" but then if they treat us badly we immediately become angry.

Nagarjuna says that it is difficult to abandon such negativities as "criticizing bodhisattvas, the thought to despise bodhisattvas, demonic activities, forsaking the excellent doctrine, and so forth."

The action of forsaking the excellent doctrine is a very heavy negativity. In fact in the *Guhyasamajatantra* it says that while the five immediate actions can be purified by practicing this tantra the action of abandoning the Dharma is very difficult to purify. We should examine whether we have the action of abandoning the Dharma in our continuum. Although we do not explicitly think "I will give up the Dharma," we do things like stepping over Dharma texts, putting saliva on them, and so forth. These are not actually actions of abandoning the Dharma but are of a similar type.

"Demonic activities" were discussed in the *Ornament for Clear Realization* saying that there are four groups of ten plus six, for a total of forty-six. To overcome these is difficult.

Then Lama Tsongkhapa says: "However, Shantideva – a great bearer of the master Nagarjuna's system presents very clearly and extensively those stages of the path still more difficult to realize in general in both his *Compendium of Instructions (Shikshasamuachchaya)* and *Engaging in the Bodhisattva Deeds (Bodhisattvacharyavatara)*. He does this in particular in his *Compendium of Instructions* which is a commentary on the meaning of Nagarjuna's *Compendium of Sutra*." Shantideva in his *Engaging in the Bodhisattva Deeds* refers readers to his text *Compendium of Instructions* for further clarification of certain points.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In explaining the *Compendium of Sutra* this book describes the initial thought on the importance of leisure and fortune and the extreme difficulty of finding both. It then sets forth helpful thought for extracting the essence of this life, generation of faith in general and of firm faith in particular through recalling the qualities of the Mahayana. It then explains generation of the aspirational mind of enlightenment, assuming vows of practice, giving away one's body, enjoyments, and roots of virtue, and the modes of maintenance, purification, and increase of these.

Shantideva says that one should first contemplate the difficulty of finding a precious human rebirth which is greatly meaningful, then extract its essence, generate faith in the doctrine in general and the mahayana in particular, then generate the aspirational mind of enlightenment, take the bodhisattva vows and practice giving away one's body, enjoyments, and roots of virtue. To indicate the aspirational mind of enlightenment and the practical mind of enlightenment Shantideva says that they are respectively like "wishing to go" and "going." These two minds of enlightenment are differentiated in terms of being conjoined or not with the bodhisattva practices. The aspirational mind of enlightenment is a mind generation that is not explicitly conjoined with the practice of any of the six perfections, generosity and so forth. On the other hand, practical mind of enlightenment is a mind generation that is explicitly conjoined with the practice of any of the six perfections, generosity and so forth.

To attain enlightenment one must practice the bodhisattva deeds, the six perfections, in order to ripen one's own continuum and engage in the four means of gathering disciples in order to ripen others' continua.

"Assuming vows of practice" refers to the bodhisattva vows. Having taken them one should safeguard them without degeneration and practice the bodhisattva deeds.

"Giving away one's body, enjoyments, and roots of virtue, and the modes of maintenance, purification, and increase of these" means that giving away one's body is to be understood in terms of maintaining, purifying, and increasing as are giving away one's enjoyments and roots of virtue. This is explained elaborately by Shantideva in his *Compendium of Instructions*. One should also refer to the *Compendium of Sutra* to which it is a commentary.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In his *Four Hundred* Aryadeva also presents the body of the profound and vast paths. Moreover, the body of the path is similar in Bhavaviveka's *Essence of the Middle Way (Madhyamakahrdaya)*, Shantirakshita's *Ornament of the Middle Way*, and Kamalashila's three *Stages of Meditation on the Middle Way (Bhavanakrama)*. Therefore, all the great bearers of the superior Nagarjuna's system agree on the structure of the path.
>
> The means for readily bestowing conviction in these paths and facilitating a beginner's entry to them can be known from the precepts found in the *Lamp for the Path to Enlightenment (Bodhipathapradipa)* by Atisha, who was skilled in the two systems of the Mahayana [of Nagarjuna and Asanga].

One should refer to the *Lamp for the Path to Enlightenment* by Atisha in that it is short and easy to understand yet includes the vast and profound teachings that come down from Nagarjuna and Asanga. For example, the textural tradition of the great masters can be likened to a refrigerator filled with food in the house of a rich family. Atisha's *Lamp for the Path to Enlightenment* can be likened to a skilled chef who takes the food from the refrigerator and prepares it well. Just as if a cook has prepared food for us it is ready to be taken and eaten, likewise the *Lamp for the Path to Enlightenment* can easily be taken up and all the teachings of the great masters put into practice. This text is said to be easy in that it is a short text yet it contains the entire meaning of the teachings of Nagarjuna and Asanga, the openers of the chariot tracks of the vast and profound.

QUESTIONS AND ANSWERS

Q: If a pot is qualified by impermanence does the pot appear as impermanent?
A: Here one has to distinguish whether it appears to a person or to a mind. When a pot qualified by impermanence appears to a person, impermanence appears to the person. On the other hand, to a conception which is an awareness apprehending a pot qualified by impermanence there is the appearance of pot but no appearance of impermanence. Why? Because a conception is an eliminative engager. However, to an eye consciousness apprehending pot, when pot appears impermanent pot appears. There is a stanza in Dharmakirti's *Commentary on [Dignaga's] 'Compendium of Valid Cognition'* which says that when a functioning thing is seen all its qualities are also seen. Therefore, when pot appears to an eye consciousness apprehending pot everything that is the same substantial establishment in terms of place, time, and nature also appears, meaning that when the pot appears impermanent pot appears, the functioning thing pot appears, the product pot appears, and so forth. This is because an eye consciousness apprehending pot is a direct perceiver and a direct perceiver is a complete engager.

There is a discussion of eliminative engager and complete engager in a text by Gyelwa Gedun Drup in which it says that an eliminative engager (or partial engager) engages its object by eliminating its parts (or engages it partially) . On the other hand, a complete engager (or collective engager) engages its object without eliminating its parts.

Q: To the compassion observing phenomena is the reason that sentient beings appear qualified by impermanence that the compassion is explicitly conjoined with a realization of impermanence?
A: Yes.
Q: If a pot appears to a sentient beings as truly existent is it because it is explicitly conjoined with an awareness conceiving true existence? Since to sentient beings phenomena appear as qualified by true existence is the compassion observing sentient beings explicitly conjoined with the conception of true existence?
A: In general, one could say that our compassion is explicitly conjoined with a conception of true existence but if this is said there follows a consequence. It is true that sentient beings appear to us as truly existent but one does not think that sentient beings are truly existent and therefore generate

compassion. Although to us pot appears as truly existent, there is no pervasion that we apprehend it to be truly existent. Although sentient beings appear to us as truly existent, there is no pervasion that we apprehend them to be truly existent.
Q: Sentient beings appear to us as truly existent but it is not necessary that we apprehend them to be truly existent?
A: Right.
Q: Then when a sentient being appears to us qualified by impermanence there is no pervasion that we apprehend that sentient being as impermanent?
A: If a sentient being appears as qualified by impermanence there is no pervasion that impermanence appears.
Q: If a sentient being qualified by impermanence appears it is not necessarily apprehended as impermanent?
A: Right. If a sentient being appears qualified by impermanence there is no pervasion that an impermanent sentient is apprehended.
Q: It seems that if it is compassion it is a compassion observing phenomena because when a sentient being appears it appears as a sentient being qualified by impermanence.
A: No pervasion.

Q: What is the difference between object of the mode of apprehension, object-aspect, appearing object, and object of engagement?
A: An object of the mode of apprehension seems to be the same as the object-aspect because the object-aspect is the object that is taken as the object of the mode of apprehension. An object of engagement and an object of the mode of apprehension with respect to a consciousness are the same. An object of engagement and an object of the mode of apprehension are different with respect to a person. With respect to a person there is an object of engagement but not an object of the mode of apprehension. An object of engagement can also be posited with respect to an expressive sound. This is because an expressive sound is an object-possessor. Because it possesses its object, that object can only be an object of engagement, I think. That with respect to a person there is an object of engagement means that a person engages in objects which are to be adopted and discarded.

Q: I think Geshe-la said yesterday that the compassion in the continuum of someone on the uninterrupted path of the path of seeing is the first of the three compassions. Is that correct?
A: It is.
Q: Then why is it not the third type because this person realizes emptiness directly? If he realizes emptiness directly why does he not have a compassion observing sentient beings as empty of true existence?
A: That person is realizing emptiness directly because his uninterrupted path of the path of seeing realizes emptiness directly. However, the compassion in his continuum is not manifest at that time. The direct realization of emptiness in the continuum of someone on the uninterrupted path of the path of seeing is not explicitly conjoined with compassion since compassion is not manifest. This compassion is not explicitly conjoined with emptiness because only the realization of emptiness is manifest. In order for something to be explicitly conjoined with something else both must be manifest. Is that compassion not conjoined with that wisdom? It is conjoined, but it is not *explicitly conjoined*. In one text it says that having attained a ground it is not possible for mind generation to be separated from practice. A bodhisattva on the mahayana uninterrupted path of the path of seeing has attained the first ground, he has compassion which cannot be apart from practice, practice meaning wisdom. In other words it is conjoined with wisdom. Yet is it explicitly conjoined? It is not.

Q: Of the three types of compassion that were presented is it enough to have one of them to enter a path or are all three necessarily present?
A: Regarding one specific person who enters the bodhisattva path there is no pervasion that this person has developed all three types of compassion in order to become a bodhisattva. He can become a bodhisattva by developing any one of the three. A person who has not entered any path can have a realization of impermanence or a realization of emptiness, yet these are not paths. For example, it is said that if one has an uncontrived experience of compassion, that compassion is not pervaded by being a path. According to Kunkyen Jamyang Shepa there can be an uncontrived experience of compassion in someone who has not entered a path. When someone has an uncontrived experience of the mahayana conventional mind generation he enters the bodhisattva path for the first time. Before the uncontrived experience of the mahayana conventional mind generation he has had an uncontrived experience of compassion.

Q: Is the direct realization of subtle impermanence a specific characteristic of buddha?
A: All superiors have this realization.
Q: Is it not true that production, abidance, and disintegration for Prasangika Madhyamikas are mutually inclusive?
A: This is true for all Buddhist schools.
Q: If they are mutually inclusive and a characteristic of subtle impermanence yet a superior still has the appearance of true existence, how does a superior realize subtle impermanence?
A: These three characteristics are equally pervasive but there is no need for them to be realized simultaneously. For example, when a form appears to eye consciousness all the qualities of form appear simultaneously. It is the same. A superior has a yogic direct perceiver realizing subtle impermanence directly, yet he has the appearance of production, abidance, and disintegration. For example, a yogic direct perceiver realizing table as impermanent in the continuum of a superior, to that yogic direct perceiver impermanence is the object of the mode of apprehension. At the same time all that which is the same substantial establishment with it also appears, product and so forth. In the first chapter of *Compendium of Valid Cognition* it says that when a functioning thing is seen all its qualities are seen. This is said in regard to a direct perceiver.

Q: It was said that for the lower schools the view of the transitory collection is a wisdom which is an object-determining mental factor. On the other hand, it was said that for the Prasangika Madhyamikas it is ignorance, yet the definition given was that it is an afflicted wisdom. This appears to be contradictory.
A: The Vaibhashikas assert that the view of the transitory collection is a wisdom. The view of the transitory collection which is wisdom cannot be ignorance because if it is wisdom it is a factor that analyzes, whereas ignorance engages in an obscured manner. If the view of the transitory collection is a wisdom it can be debated: "Is the view of the transitory collection able to discriminate phenomena properly?" According to some if it is an intelligence (*lo dro*) it must be that which is able to discriminate phenomena properly whereas it if it a wisdom (*she rab*) this is not necessary.

If it is a view of the transitory collection it is necessarily an afflicted wisdom. The lower schools posit the definition of a view of the transitory collection as: an afflicted wisdom that observing the I or mine in the continuum of the person possessing it in his continuum conceives it to be self sufficient substantially existent. The definition of the view of the transitory collection according to the Prasangika Madhyamika school is: an afflicted wisdom that observing either the I or mine in the continuum of the person possessing it in his continuum conceives it to be inherently existent. The Prasangika Madhyamikas say that such a view of the transitory collection is an ignorance because it is of a discordant class with a knower that is an exalted wisdom.

Q: Therefore for the Prasangika Madhyamika school the view of the transitory collection is both wisdom and ignorance?
A: Right. The view of the transitory collection is wisdom and it is also an ignorance.

END

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1B Ways of practicing on the level of common beings in particular
>
> QUESTION: This text presents both the vast and profound paths of bodhisattvas as well as the fruit attained through them. Therefore, the stages of paths on the level of a common being which are extremely important for a bodhisattva – should have been taught here after the expression of worship but they were not. How could it be right for Chandrakirti to begin his explanation with the grounds of a superior?
>
> ANSWER: Since Chandrakirti explained those paths on the occasion of the expression of worship, he did not explain them after it. His purpose was to indicate that one who wishes to enter the Mahayana must first practice these paths by teaching the three main causes which, when cultivated in meditation, cause one to become a bodhisattva.
>
> Not only must you practice these first but you must also do so once you have become a bodhisattva. Since the wisdom not relying on duality is the chief practice, you should understand, through its illustration, that you should train in the other deeds such as giving.

Someone says that prior to explaining the stages of the paths of bodhisattva superiors, it would have been appropriate to explain the stages of the paths of ordinary bodhisattvas and asks why Chandrakirti did not do this. The answer to this question is that Chandrakirti already explained the stages of the paths of ordinary bodhisattvas in the context of his expression of worship.

Although the three practices of this context are said to be preliminary practices that are to be done before becoming a bodhisattva, they are also to be practiced after having become a bodhisattva. Among the practices of bodhisattvas, the main practice is the six bodhisattva deeds, i.e., the six perfections, and among them the main practice is the perfection of wisdom. While Lama Tsongkhapa says that wisdom is the main practice, the remaining five perfections are also to be practiced.

In short, the paths of ordinary bodhisattvas were already explained in the context of the expression of worship and therefore there is no need to explain them again prior to the explanation of the stages of the paths of bodhisattva superiors.

> Nagarjuna's *Compendium of Sutra* says, 'A bodhisattva should not apply himself to the profound nature of phenomena bereft of skill in means. A union of method and wisdom is the right application of a bodhisattva.' You must train in a union of the two collections and not place confidence in being satisfied with a portion of method or wisdom or in a mere one-pointedness of mind that lacks special method and wisdom.

One should not teach the subject of emptiness to someone who lacks the mind generation. "A portion of method or wisdom" means that, when one practices, one should neither cultivate a path that is separated from method nor a path that is separated from wisdom, but should train in a path that is a union of both method and wisdom. In other words, one should cultivate a path that unifies the collections of method and wisdom.

"In a mere one-pointedness of mind that lacks special method and wisdom" means that one should not develop one-pointedness of mind alone but should also develop method and wisdom. This is because calm abiding alone cannot destroy the root of cyclic existence. For example, the beings who have achieved the concentrations and are separated from attachment have not cut the root of cyclic existence.

> Some do not properly identify the measure of the object of negation that is refuted by the reasoning analyzing suchness and consider that everything is refuted. They mistake all thought as conceptions of true existence and consequently assert that all presentations of conventionalities are based only on [the ignorance of] others. They say that at the time of the fruit [buddhahood] there is

> nothing else except a truth body which is mere suchness devoid of wisdom. They also assert that form bodies are included within the mental continuums of trainees. According to such people it would not be the system of Chandrakirti's *Supplement* that hearers and solitary realizers are born from Kings of Subduers and buddhas from bodhisattvas even though Chandrakirti proves these with scripture and reasoning. They would say that cultivation of the three practices is posited only for others and is not the system of the bodhisattva Madhyamikas; thereby, they deprecate all paths that must be practiced from one's own point of view. For them, the explanations that wandering sentient beings who are empty of inherent existence are like a bucket in a well in six ways would only be self-contradictory. Thus, you should know that, beginning with the expression of worship, they have explained the meaning of the text incorrectly.
>
> The ways of training in giving and so forth are also explained in connection with the grounds of superiors, but you should understand and strive now to practice the many deeds that are essential even from the level of a common being.

Those who do not properly identify the measure of the object of negation that is refuted by the reasoning analyzing suchness say that all conceptions are conceptions of true existence. Because all conceptions are conceptions of true existence, they assert that all conceptions are to be abandoned. This is the assertion of Hashang. Why does he assert that all conceptions are to be abandoned? He says that, for example, if a white dog bites somebody, that person is bitten and, similarly, if a black dog bites somebody, that person is bitten. Likewise, a white, or positive, conception is a conception and a black, or negative, conception is a conception. To prove how conceptions, both positive and negative, bind one to cyclic existence Hashang says that when someone is bound to a pole by a chain it does not matter whether the chain is made of iron or gold. In the same way, whether one has a positive thought, such as love or compassion, or a negative thought, it is a thought that binds one to cyclic existence. Therefore, he asserts that all conceptions are to be stopped. He says that it is best to not have any conceptions, that is, to not manifest any mind. He asserts that all conceptions that arise in the mind are conceptions of true existence because anything that appears to conception appears to exist truly and just as it appears the conception apprehends it to exist in that way. Thus, the meaning of saying "Some do not..." refers to Hashang.

There is a story about a debate that took place between Acharya Kamalashila and Hashang in Samye, Tibet. Samye is the place where Kamalashila founded a monastery to which he invited Padmasambhava. During the debate Hashang maintained his position that all conceptions are objects of abandonment. Kamalashila asked, "Do you yourself actually stop conceptions?" Hashang answered that he did. Then Kamalashila asked, "When you stop all conceptions do you stop thinking? Do you not have a mind thinking 'I am stopping all conceptions?'" Hashang could not answer, as he did indeed have such a thought. As he could not answer, he began to beat around the bush saying, "If you are bitten by a white dog, you are bitten" and so forth. In the end, Hashang lost the debate and Kamalashila went on to compose his text *Stages of Meditation*. Although prior to the debate they had agreed that the loser would adopt the winner's position, instead Hashang escaped from Samye so quickly that he left behind his shoes. Even now, people still say that the fact that Hashang left behind his shoes is a sign that his view will remain existent in Tibet.

Initially it is important to identify the object of negation. For this reason, in the ninth chapter of his *Engaging in the Bodhisattva Deeds*, Shantideva says that without properly identifying the imagined object its non-existence cannot be apprehended. For example, in an archery competition, in order to hit the target one must first identify it properly as otherwise there will be no possibility of hitting it. Likewise, if one does not identify the object of negation well, one will not negate the proper object. In fact, there is the risk that if one does not identify the object of negation, one will become like Hashang who says that all conceptions are to be abandoned.

Some also say that the presentations of conventionalities are posited solely for others. They also say that at the time of the result "there is nothing else except a truth body which is mere suchness devoid of wisdom." They also say that the form body is included in the mental continua of trainees.

These people do not understand what was said previously in the context of the expression of worship regarding hearers and solitary realizers being born from Kings of Subduers and buddhas being born from bodhisattvas. In short, the assertions they make do not correspond with the system of the Middle Way as set out in the *Supplement*. They also say that the cultivation of the three practices is posited only to the sight of others and is not a system of the Middle Way. From this they are forced to make many other [absurd] assertions. Because they do not understand the meaning of the *Supplement,* "they deprecate all paths that must be practiced from one's own point of view. For them, the explanations that wandering sentient beings who are empty of inherent existence are like a bucket in a well in six ways would only be self-contradictory. Thus, you should know that, beginning with the expression of worship, they have explained the meaning of the text incorrectly."

Lama Tsongkhapa says that "The ways of training in giving and so forth are also explained in connection with the grounds of superiors, but you should understand and strive now to practice the many deeds that are essential even from the level of a common being." In other words, although the six bodhisattva deeds are explained in the context of superiors, one should begin to practice them from the level of an ordinary bodhisattva and even from the level of a common being.

In short, there are people who make incorrect assertions such as that form bodies are included in the mental continua of trainees. Who says this? Although we do not know exactly who these people are, there must have existed people in Tibet who held this view and others. For example, there have been Tibetan scholars who were well versed in the side of conduct but not in the side of view, who, due to lacking the correct view, said that Chandrakirti and others had fallen into the extreme of annihilation. There have also been others who have asserted that the ultimate truth is not an object of knowledge.

In brief, what is important to understand is that the three practices of this context – great compassion, the understanding of non-duality, and the mind of enlightenment – are practices of both ordinary bodhisattvas and those who have not yet entered the mahayana path. In short, we too need to develop compassion, the understanding of non-duality, and the mind of enlightenment.

3B1C Presentation of the grounds of bodhisattva superiors

This section has three parts:

1 Presentation of the ten grounds in common
2 Presentation of the individual grounds
3 Presentation of the features of the ten grounds

3B1C-1 Presentation of the ten grounds in common

Chandrakirti's explanation here of eleven grounds – the Very Joyful and so forth – is based on Nagarjuna's rough presentation of the ten grounds and the eleventh [buddhahood]. Nagarjuna's *Precious Garland* (440) says:

> Just as the eight levels of hearers
> Are explained in their vehicle,
> So are the ten bodhisattva
> Grounds in the Mahayana.

Chandrakirti also bases his explanation on the *Sutra on the Ten Grounds (Dashabhumika)*.
When Chandrakirti describes the ten grounds – the Very joyful and so forth – as ten mind generations, he is referring to ultimate mind generations [and not conventional ones].

Nagarjuna says that just as there are eight levels, or eight grounds, of hearers, there are ten bodhisattva grounds. The eight levels of hearers are the eight inferior levels, which are:

1. the level of lineage,
2. the level of the eighth,

3. the level of seeing,
4. the level of the diminished,
5. the level of separation from attachment,
6. the level of realizing that to be done,
7. the level of hearers, and
8. the level of solitary realizers.

The path that exists in the continuum of a hearer on the path of accumulation or that which exists in the continuum of a hearer on the path of preparation is the *level of lineage*. The *level of the eighth* is an exalted wisdom existing in the continuum of an approacher to stream enterer. In Maitreya's *Ornament for Clear Realization,* this exalted wisdom is said to be called "the eighth" because when one counts the eight sangha beginning with (1) the abider in the result of foe destroyer down through (2) approacher to foe destroyer, (3) abider in the result of non-returner, (4) approacher to non-returner, (5) abider in the result of once returner, (6) approacher to once returner, (7) abider in the result of stream enterer, and (8) approacher to stream enterer, the eighth is the approacher to stream enterer.

The *level of seeing* refers to the path of seeing, which is the level of an abider in the result of stream enterer. An illustration of the *level of the diminished* is the ground, or realization, or exalted knower, of an abider in the result of once returner. An illustration of the *level of separation from attachment* is the level of an abider in the result of non-returner. An illustration of the level of *realizing that to be done* is the level of an abider in the result of foe destroyer.

The *level of hearers* includes the exalted knowers existing in the continuum of an approacher to once returner, an approacher to non-returner, and an approacher to foe destroyer. The *level of solitary realizers* includes the realizations of both the congregating and rhinoceros-like solitary realizers.

Just as there are eight levels, or grounds (the Tibetan word *sa* is the same in both cases), of hearers, there are ten grounds of bodhisattvas. The ten grounds of bodhisattvas are:

(1) Very Joyful,
(2) Stainless,
(3) Luminous,
(4) Radiant,
(5) Difficult to Overcome,
(6) Manifesting,
(7) Gone Afar,
(8) Immovable,
(9) Good Intelligence, and
(10) Cloud of Doctrine.

When eleven grounds are mentioned, the eleventh is buddhahood, which is called Universal Light. There are thirteen grounds from the point of view of tantra.

The presentation of the ten grounds in the *Supplement* is based on the *Sutra on the Ten Grounds*. Here the ten grounds are posited with respect to the ten perfections. In the *Supplement,* the ten perfections are expressed by the term 'mind generation.' The term 'mind generation' in this context refers to ultimate mind generation and not to conventional mind generation. The <u>definition of an ultimate mind generation</u> is: a distinguished mental cognizer to which the dualistic appearance with respect to complete enlightenment has vanished. In other words, ultimate mind generation is an awareness absorbed in meditative equipoise on the reality of phenomena.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> With respect to the nature of the ten grounds which are assigned to ultimate mind generations, Chandrakirti's commentary says, 'When a bodhisattva's uncontaminated wisdom, conjoined with compassion and so forth, is divided into parts, each part is called a "ground" because it is a base of qualities.' The four topics by which the grounds are explained are (1) their nature, (2) the qualities

> with which they are thoroughly conjoined, (3) the way they are called 'grounds', and (4) by etymology.

This is an explanation of the individual grounds. Lama Tsongkhapa quotes the *Supplement,* saying: "When a bodhisattva's uncontaminated wisdom, conjoined with compassion and so forth, is divided into parts, each part is called a 'ground' because it is a base of qualities." (George Churinoff's translation of the *Supplement* says: "When a bodhisattva's uncontaminated exalted wisdom, fully held by compassion and so forth, is divided into parts, it attains the name 'ground' (Skt. *bhumi*) because of being the support of good qualities."

The definition of a ground within the distinction of the two, paths and grounds (*Ocean of Sport* page 468) is: a clear realizer of one who has entered a path that acts as the basis for the various excellent qualities which are its result. This definition is also found in the text *Grounds and Paths* (Tib. *sa lam*). However, Chandrakirti gives the definition of a ground within the distinction of the two, paths and grounds as: a bodhisattva superior's uncontaminated exalted wisdom conjoined with compassion. Just as the ground, the earth, acts as a basis for plants and so forth, a ground in this context acts as a basis for the excellent qualities which are its result.

In short, Lama Tsongkhapa defines a ground as an uncontaminated wisdom conjoined with compassion, this being called a ground because it is the base of qualities.

Tuesday morning, February 1, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In accordance with Vasubandhu's *Treasury of Knowledge (Abhidharmakosha)*, some persons [Jaya-ananda and some Tibetans] explain the nature of 'uncontaminated wisdom' as uncontaminated in the sense of not being amenable to the increase of contaminations. They have not understood the uncommon meaning of 'uncontaminated' in this system. In our own system the contaminated is anything polluted by either ignorance – the conception of true existence – or its predisposing latencies. The uncontaminated is wisdom free from those pollutions; as Chandrakirti's *Clear Words* says, '...not from the viewpoint of the nature of the objects of uncontaminated wisdom in those who are *free from the obscurations of ignorance*.'
>
> Before achieving buddhahood, a mind that is not polluted by predisposing latencies of ignorance is none other than the non-conceptual wisdom of the meditative equipoise of superiors. It is 'alternating' in the sense that when superiors rise from meditative equipoise, they become polluted by pre-disposing latencies.
>
> Up to and on the seventh ground pollution can occur through ignorance. However, for bodhisattvas on the eighth ground as well as for hearer and solitary realizer foe destroyers, polluting ignorance has been extinguished; therefore, pollution occurs for them not by way of ignorance but through predisposing latencies of ignorance.

'Uncontaminated' is not to be understood in this context as it is explained in Vasubandhu's *Treasury of Knowledge* (*Abhidharmakosha*). In that text, Vasubandhu defines the contaminated as: that which is suitable to increase contaminations either by way of observation or concomitance. He defines the uncontaminated as: that which is not suitable to increase contaminations either by way of observation or concomitance. These definitions of contaminated and uncontaminated are not acceptable to the Prasangika Madhyamika school. In the *Ornament for Clear Realization,* the Svatantrika Madhyamikas' definitions of contaminated and uncontaminated are discussed in the context of the observed objects of the mahayana achievings. The Prasangika Madhyamikas define the contaminated as: that which is polluted either by the ignorance that is the conception of true existence or by its latencies. On the other hand, the uncontaminated is the exalted wisdom free from this pollution.

Lama Tsongkhapa quotes Chandrakirti's *Clear Words,* which says: "...not from the viewpoint of the nature of the objects of uncontaminated wisdom in those who are *free from the obscurations of*

ignorance. Before achieving buddhahood, a mind that is not polluted by predisposing latencies of ignorance is none other than the non-conceptual wisdom of the meditative equipoise of superiors." In other words, the only unpolluted mind of sentient beings is the meditative equipoise of a superior. This implies that the exalted wisdom of subsequent attainment is contaminated. In fact, all consciousnesses existing in the continuum of someone in subsequent attainment are contaminated because, having arisen from meditative equipoise, the latencies of ignorance once again become manifest.

Lama Tsongkhapa then says: "It is 'alternating' in the sense that when superiors rise from meditative equipoise, they become polluted by pre-disposing latencies." This means that a superior in meditative equipoise has an uncontaminated consciousness, whereas in subsequent attainment he has a contaminated consciousness. In short, a contaminated and uncontaminated consciousness cannot arise simultaneously, but arise in a manner of alternating.

Bodhisattvas on the eighth ground and above, as well as hearer and solitary realizer foe destroyers, do not have the pollution of ignorance but only have the pollution of the *latencies* of ignorance. This is because they have abandoned ignorance. This assertion is similar to the Chittamatrins' assertion that bodhisattvas on the eighth ground have abandoned all afflictive emotions. This is discussed by Lama Tsongkhapa in one of his texts, in the context of the mind-basis-of-all, in which he says: "Those who have attained power (i.e., the bodhisattvas on the eighth ground) and hearer and solitary realizer foe destroyers do not have a mind-basis-of-all. Therefore, there are no reasons for positing a mind-basis-of-all." At that point, there is no mind-basis-of-all because there is no afflicted mentality, one of the eight collections of consciousness posited by the Chittamatrins.

On the other hand, according to the Svatantrika Madhyamikas, those bodhisattvas who are definite in lineage simultaneously abandon the afflictive obstructions and knowledge obstructions. In the *Compendium of Knowledge* it says: "A foe destroyer who has abandoned the afflictive obstructions and a tathagata who has abandoned the knowledge obstructions arise simultaneously."

> In his commentary Chandrakirti says that the first ground 'is called non-dualistic wisdom'. This refers to the lack of dualistic appearance of object and subject as if distant and cut off from each other. It does not refer to a wisdom that has merely abandoned the two extremes [as does the non-dual understanding among the three practices of common beings].
>
> The books of the master Chandrakirti contain many references to 'knowledge' and 'wisdom' free from the darkness of ignorance. Therefore, it would be an extremely deprecating denial to link ignorance and the predisposing latencies of ignorance with all knowledge and propound that according to this master's system wisdom disappears when ignorance and its predispositions are extinguished. These explanations are on a par with the Forder (*Tirthika*) Mimamsakas' assertion that if the pollutions were extinguished, so would be the mind. Saying that there is no wisdom in a superior's meditative equipoise is also similar.

Someone says that Chandrakirti calls the first ground 'non-dualistic wisdom' in terms of it being a wisdom that has merely abandoned the two extremes of permanence and annihilation. However, this is not correct according to our own system.

Chandrakirti makes many references in his texts to wisdom (Tib. *shes rab*, here translated as "knowledge") and exalted wisdom (Tib. *ye shes*, here translated as "wisdom") free from the darkness of ignorance, which implies that there exists an exalted wisdom that is not pervaded by ignorance. On the other hand, others assert that ignorance and its latencies pervade wisdom and exalted wisdom. This is not correct because it would imply that ignorance and its latencies are a generality, and that wisdom and exalted wisdom are its particularities. If this were the case, it would follow that when the pervader (ignorance) is abandoned, that which is pervaded (wisdom) is also eliminated. In other words, when ignorance is removed wisdom is removed, which is similar to the assertion that when the stains are removed the mind is eliminated. This is not valid according to our system but is only asserted by the Mimamsakas. If this assertion is upheld it is a deprecation; it is like asserting the end

of the mind and the end of the Dharma. 'The end of the mind' and 'the end of the Dharma' mean that when the stains are extinguished, the mind is also extinguished.

Some assert that there is no exalted wisdom in the meditative equipoise of a superior. This, too, is a deprecation because superiors *do* have uncontaminated exalted wisdom in meditative equipoise. The former opinion is asserted by many people who think that in meditative equipoise there is nothing present and that therefore there is also no exalted wisdom.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Nagarjuna's *Precious Garland* (363d-364ab) says:
>
> > Those who see thus are liberated.
> > What sees [suchness]? By convention
> > It is said to be the mind.
>
> By what functioning of a subject is suchness directly seen? In answer to this question, Nagarjuna says that conventionally the mind sees suchness directly. Also, his *Praise of the Element of Qualities* says:
>
> > When a metal garment which has become stained with
> > Contaminations and is to be cleansed by fire
> > Is put in fire, its stains
> > Are burned but it is not.
> >
> > So, with regard to the mind of clear light
> > Which has the stains of desire and so forth
> > Its stains are burned by wisdom's fire
> > But not clear light, its suchness.
>
> When a dirty garment, woven from threads of stone, is put in a fire, its stains are burned away but not the garment. Similarly, when the stains of the mind are burned by the fire of wisdom, the stains are burned, but the mind of clear light does not become non-existent.

What sees suchness? It is the mind that sees suchness. However, there are many assertions regarding this mind. For example, some say that because the mind is mixed with the stains, when the stains are cleansed the mind is extinguished. Our system does not accord with this as, later in the *Supplement,* it says: "Due to the mind ceasing, a body is achieved." If one takes this literally it would appear that the mind is stopped and a buddha body achieved, but what it means is that when the mind *together with stains* is ceased a buddha body is achieved.

Lama Tsongkhapa says that when the stains of the mind are burned by the fire of wisdom, only the stains are consumed and not the mind. This is likened to a garment made of asbestos ("threads of stone") which, when stained, is put into a fire, whereby the stains are removed but the garment remains intact.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> A bodhisattva superior's wisdom of meditative equipoise and that belonging to hearer and solitary realizer superiors are similar since they directly cognize the nature of phenomena and are devoid of pollution by the predisposing latencies of ignorance. However, the differences that cause one, and not the other, to be described as a bodhisattva superior ground are that the one is influenced by great compassion and possesses the powers of the twelve hundred features and so forth whereas the other does not.

The exalted wisdom of meditative equipoise of hearer and solitary realizer foe destroyers and that of bodhisattva superiors are the same in terms of their realization of reality. However, the exalted wisdom of meditative equipoise of hearer and solitary realizer foe destroyers is not considered to be a ground because it is not influenced by great compassion, whereas the exalted wisdom of a bodhisattva superior *is* influenced by great compassion. In addition, the bodhisattvas on each ground have particular qualities in that a first ground bodhisattva has twelve sets of 100 qualities, a second ground bodhisattva has twelve sets of 1,000 qualities, and so forth. For example, one of the twelve sets of 100 is that a first ground bodhisattva can manifest 100 bodies. In addition, this bodhisattva can also surround each of the 100 bodies with 100 bodhisattvas.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Also, as explained earlier, there is a great difference as to whether or not direct cognition of suchness occurs from extending one's mind to the profound meaning [of emptiness] during the paths of accumulation and preparation through the use of limitless forms of reasoning pertaining to the meaning of suchness – the two selflessnesses.
>
> Chandrakirti's statement, 'When divided into parts,' refers to the individual grounds that are the earlier and later parts of the one uncontaminated wisdom – the whole – divided into individual stages. A 'ground' (*bhumi*, literally 'earth') is like the earth because it acts as a source or base of auspicious qualities.
>
> These points indicate that all ten ultimate grounds are assigned as only non-conceptual wisdoms.

Bodhisattvas on the paths of accumulation and preparation realize the meaning of suchness through the use of limitless forms of reasoning. However, this does not imply that they realize the profound meaning *directly*. Although there is an understanding of the profound meaning on these paths, it is not as fully extended as is that on the first ground.

Q: The bodhisattva's direct realization of emptiness in the meditative equipoise of the grounds is an extension of his realization of emptiness on the path of accumulation and path of preparation by means of limitless forms of reasoning. It appears that Lama Tsongkhapa says that the factor of wisdom of a bodhisattva is different from that of hearers and solitary realizers due to this and not just due to the fact that it is influenced by compassion. Is that right?
A: The exalted wisdom of hearer and solitary realizer foe destroyers and that of bodhisattva superiors are similar in not being polluted by ignorance and in directly realizing suchness. However, they are different due to the bodhisattva's exalted wisdom being influenced by compassion. In addition, what Hopkins' translation appears to be saying is also correct, i.e., that the exalted wisdom of meditative equipoise of a bodhisattva is more extended regarding the profound meaning due to having used infinite reasonings on the path of accumulation and path of preparation. On the other hand, the hearers and solitary realizers do not use such infinite reasonings. This was discussed in the context of "engaging by means of the profound and vast." Earlier on, it was said that the text *Fundamental Wisdom* cannot be a hinayana treatise, but is a mahayana treatise, since it presents infinite reasonings regarding emptiness. Bodhisattvas learn these infinite reasonings and apply them, whereby they realize emptiness.

Lama Tsongkhapa says: "Chandrakirti's statement, 'When divided into parts,' refers to the individual grounds that are the earlier and later parts of the one uncontaminated wisdom – the whole – divided into individual stages." This means that the uncontaminated exalted wisdom of a bodhisattva is divided into ten parts, i.e., the ten grounds.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Though they are similar, individual grounds such as the Very Joyful are posited, and this is done from four points of view. The first feature is that the first ground has twelve sets of a hundred qualities, the second ground has twelve sets of a thousand qualities, and so forth, and – as will be explained later – the number of qualities increases progressively.

(*Note*: The following has been added by Hopkins and does not occur here in the Tibetan.) Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [The twelve sets of a hundred qualities during one instant on the first ground after a bodhisattva has risen from meditative equipoise are:
> 1. seeing a hundred buddhas in one instant
> 2. receiving the blessings of a hundred buddhas
> 3. going to a hundred Buddha Lands
> 4. illuminating a hundred lands
> 5. vibrating a hundred worldly realms
> 6. living for a hundred eons
> 7. seeing with true wisdom the past and future of a hundred eons
> 8. entering into and rising from a hundred meditative stabilizations
> 9. opening a hundred different doors of doctrine
> 10. ripening a hundred sentient beings
> 11. emanating a hundred versions of one's own body
> 12. surrounding each of the hundred bodies with a hundred bodhisattvas
>
> The number increases with each ground:
> first: one hundred
> second: one thousand
> third: one hundred thousand
> fourth: one hundred ten million
> fifth: one thousand ten million
> sixth: one hundred thousand ten million
> seventh: one hundred thousand ten trillion
> eighth: a number equal to the particles of a billion worlds
> ninth: a number equal to the particles of ten million billion worlds
> tenth: a number equal to the particles of an inexpressible number of an inexpressible number of buddha lands.]

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The second feature is the attainment of greater and greater majesty of power. Though this is explained [by Jaya-ananda], as vibrating a hundred lands, a thousand lands, and so forth, such is included in the increase of the number of qualities [which is the first feature]. Therefore, this feature should be taken as the increase higher and higher of the power for purifying the stains of the individual grounds and the power for advancing on the paths of these grounds.
>
> The third feature is a surpassing perfection – of giving on the first ground, ethics on the second ground, and so on [patience on the third, effort on the fourth, concentration on the fifth, wisdom on the sixth, skill in means on the seventh, aspirational prayer on the eighth, power on the ninth, and supreme wisdom on the tenth].
>
> The fourth feature is the higher and higher increase of births of fruition – on the first ground birth as a king ruling Jambudvipa [this world], on the second as a king ruling the four continents, and so forth [as a king ruling the Land of the Thirty-Three on the third ground, the Land Without Combat on the fourth, the Joyous Land on the fifth, the Land of Liking Emanation on the sixth, of Controlling Others' Emanations on the seventh, as a great Brahma lord of a thousand worlds on the eighth, as

a great Brahma lord of a million worlds on the ninth, and as the Devaputra Maheshvara of the Highest Land on the tenth].

Since the non-conceptual wisdoms of the individual grounds vary greatly in terms of inferior and superior abilities – such as the number of qualities that are present – individual grounds are posited. The grounds should not be understood as just meditative equipoise because the features subsequent to meditative equipoise that exist on each ground are included in that particular ground. The mode of division into individual grounds should be understood as explained; it is impossible to divide these ultimate grounds by making a differentiation in terms of their object of observation or aspect.

The individual grounds are explained in terms of four features:

1. The first feature is that the number of qualities progressively increases higher and higher on each of the grounds.
2. The second feature is the attainment of greater and greater majesty of power.
3. The third feature is a surpassing perfection on each ground, such as the surpassing perfection of generosity on the first ground and so forth.
4. The fourth feature is the higher and higher increase of fruitional births of the bodhisattva.

Lama Tsongkhapa says: "The mode of division into individual grounds should be understood as explained; it is impossible to divide these ultimate grounds by making a differentiation in terms of their object of observation or aspect." What is the observed object of the exalted wisdom of the first ground? What is its aspect? The exalted wisdoms of the ten grounds are not differentiated from the point of view of their observed objects and aspects, that is, their observed objects and aspects are the same. If this is so, why are they posited as different? The aspects of these exalted wisdoms are non-inherent existence. In the *Ornament for Clear Realization,* it says that the exalted wisdom of the first ground observes the sphere of reality progressing everywhere, that the second observes the supreme meaning, and so forth. Therefore, in this text, which is based on the Perfection of Wisdom Sutras, it would seem that they have different observed objects. However, when it is said that the first ground observes "the sphere of reality progressing everywhere" it is means that the bodhisattva on the first ground realizes the emptiness of the great, the ten directions. On the second ground the bodhisattva is said to observe "the supreme meaning," which is ultimate truth, nirvana, because he realizes the emptiness of the ultimate. According to the *Supplement* the exalted wisdoms of the ten grounds have the same observed object, the suchness of all phenomena.

Tuesday afternoon, February 1, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

The *Sutra on the Ten Grounds* says:

Just as the wise cannot express or see
The trail of any bird across the sky,
So none of the grounds of conqueror children
Can be expressed. Then how can one listen?

Though a bird crosses the sky, the wise of the world cannot describe its trail in words, or see it in their minds. In the same way, though the ultimate grounds – like birds – progress through the sky of the nature of phenomena, even interpreters who are superiors cannot describe the mode of progress in the way that superiors themselves experience it. Thus, listeners cannot hear about the grounds the way they are perceived.

Just as when a bird flies in the sky its trail cannot be seen or explained, likewise the realization of emptiness cannot be described to others nor can it be perceived by them. In other words, bodhisattva superior's realization of emptiness can only be seen by himself and cannot be expressed to others. It is said that the exalted wisdoms of the ten grounds are not different in seeing reality (*chos nyid*), but that there is a difference in terms of their seeing the truth body (*chos sku*). For example, the ways of seeing the truth body by a bodhisattva on the first ground and by a bodhisattva on the second ground are different. After a bodhisattva attains the uninterrupted path of the mahayana path of seeing, he attains the path of release of the first ground, whereby he sees the truth body of the first ground. This is the true cessation that is the abandonment of the respective object of abandonment of the previous uninterrupted path. This bodhisattva, who has attained the path of release of the path of seeing, sees the factor that is the separation from the respective object of abandonment of the uninterrupted path of the path of seeing but does not see the factor that is the separation from the object of abandonment of the uninterrupted path of the path of meditation. However, as soon as he attains the path of release of the second ground he also sees the factor that is the separation from the respective object of abandonment of the uninterrupted path of the path of meditation. When he cultivates the uninterrupted path of the path of meditation of the second ground, he attains the path of release of the third ground and sees the factor that is the separation from the respective object of abandonment of the uninterrupted path of the path of meditation of the second ground and so forth. When he attains buddhahood, he is free from all the objects of abandonment of the uninterrupted paths. The bodhisattva's true cessations are likened to a waxing moon in that they increase until he attains the state of buddhahood, which is likened to the full moon. The Prasangika Madhyamikas therefore say that the bodhisattvas on the different grounds see true cessations differently and therefore see the truth body differently, whereas there is no difference in how these bodhisattvas see reality. However, there is a lot of debate about this subject.

Q: At the beginning, it was said that the exalted wisdoms of meditative equipoise of the bodhisattvas on the ten grounds are the same in seeing reality but different in terms of seeing the truth body. Then, at the end, it was said that the *bodhisattvas* are the same in seeing reality but different in terms of seeing the truth body. Are both correct?
A: It is correct to say both.

Chandrakirti's autocommentary makes a connection with the previous topic of paying homage to compassion, saying:

> Having finely bowed to the compassion which refers to sentient beings, refers to phenomena, and is non-referential, wishing to express the ten types of divisions of the bodhichitta of the bodhisattvas, first from the point of view of the initial bodhichitta it was mentioned:
>
> *The mind of the Conqueror's child that is under the power*
> *Of compassion in order to completely liberate migrators,* [1.4cd]
>
> *Fully dedicated through Samantabhadra's aspirations and*
> *Thoroughly abiding in joy is called 'the first.'* [1.5ab]
>
> When a bodhisattva's uncontaminated exalted wisdom, fully held by compassion and so forth, is divided into parts, it attains the name 'ground' (*bhumi*) because of being the support of good qualities.
>
> Furthermore, through particulars of
> - higher and higher numbers of qualities,
> - attainment of eminent powers,
> - surpassing generosity gone beyond and so forth, and

- increased maturation –

by dividing into the Extremely Joyous and so forth – ten types of divisions are posited. Among these, there do not exist divisions made through the differences [of the referents and aspects] of their own entities.

As taught [in the *Sutra of the Ten Grounds*, 18.5.3]:[4]

Just as the wise cannot express and do not see the trail of a bird through the sky,
So if all grounds of Conqueror's children also cannot be expressed, how can one listen?

There, the Extremely Joyous Ground of the bodhisattva is the first mind generation of the bodhisattvas – at the end the Cloud of Dharma is the tenth mind generation.

There is a difference in the order of presentation in the autocommentary and *Illumination,* but the meaning is the same.

Chandrakirti says "there do not exist divisions made through the differences of their own entities" to which is added "[of the referents and aspects]," in accordance with Lama Tsongkhapa's *Illumination*.

Among the ten grounds, the first is the Very Joyful (or Extremely Joyous) and the last is the Cloud of Doctrine (or the Cloud of Dharma).

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2 Presentation of the individual grounds

This section has three parts:

A The five grounds, the Very Joyful and so forth
B The sixth ground, the Manifest
C The four grounds, the Gone Afar and so forth

3B1C-2A The five grounds, the Very Joyful and so forth

This section has five parts:

1 First ground, the Very Joyful
2 Second ground, the Stainless
3 Third ground, the Luminous
4 Fourth ground, the Radiant
5 Fifth ground, the Difficult to Overcome

3B1C-2A1 First ground, the Very Joyful

This section has three parts:

A Entity of the ground being qualified described in brief
B Features qualifying the first ground in detail
C Conclusion by way of expressing the features of the first ground

3B1C-2A1A Entity of the ground being qualified described in brief

Chandrakirti's autocommentary says:

A bodhisattva on that [first ground], in the manner explained, sees migrators as without self-nature. That mind which finely apprehended [the absence of self-nature] as the distinction of

[4] Numeration from Poisson, p.261. note 2.

> compassion is under the influence of compassion, and through the aspirational prayers of Samantabhadra, [virtues] are fully dedicated. The exalted wisdom of non-duality possessing the name 'Extremely Joyous' – finely illustrated [by] the results which bear its cause – that is called the first.
>
> On that, those ten innumerable sets of one hundred thousand prayers, such as the ten great prayers and so forth, planted by the bodhisattva [who] generated the first mind, are included within the prayers of the bodhisattva Samantabhadra. In order to include all prayers without exception, the prayers of Samantabhadra are mentioned in particular.

With respect to this, Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *The mind of a child of a conqueror overpowered*
> *With compassion to liberate migrators,* [1.4cd]
>
> *Dedicated with Samantabhadra's aspirations,*
> *And abiding in joy is called the first.* [1.5ab]
>
> When a conqueror child abides on the first ground, his mind apprehends non-inherent existence, in the manner explained above, as a special feature of migrators who are the objects observed by his compassion. His mind has been influenced by great compassion for the purpose of liberating migrators, and his virtues are thoroughly dedicated with the aspirational prayers of the bodhisattva Samantabhadra. This ultimate mind of a bodhisattva – abiding in the non-dualistic wisdom called the 'Very Joyful' and illustrated by the number of qualities and so forth that are its effects – is called the first supramundane mind.

Here, Lama Tsongkhapa posits the entity of the first ground as the exalted wisdom to which there is no longer the appearance of non-duality and which is influenced by the compassion observing sentient beings qualified by non-inherent existence. The qualities of the first ground were mentioned earlier.

The ultimate mind generation of this context is called the first supramundane mind because those abiding on the first two paths, the path of accumulation and path of preparation, are mundane while those on the higher paths are supramundane. If it is a mahayana mundane being, however, it is not pervaded by being a mundane being. If someone says "posit [an example]," we can give the example of a person on the mahayana path of preparation who previously completed the hinayana path and attained the state of a hearer foe destroyer. He is a mahayana mundane being because he is on a mahayana path and is on one of the two mundane paths, the path of accumulation or path of preparation, but he is also a supramundane being because he is a foe destroyer and a superior. Ordinary beings are called mundane beings, while superiors are called supramundane beings.

With respect to one on the mahayana path of seeing who previously attained hearer foe destroyer, is there a difference between the uninterrupted path and the path of release in his continuum? Since this person has already abandoned the afflictive emotions, he does not have any objects of abandonment until he attains the eighth ground but he needs to accumulate merit by exerting effort in the six bodhisattva deeds. If he has overcome all afflictive obstructions, why does he enter the path of accumulation and not the eighth ground? He enters the path of accumulation because he must still accumulate the collection of merit needed for the attainment of enlightenment, i.e., the merit accumulated over three great countless eons. The first of these three eons is spent on the paths of accumulation and preparation, the second on the seven impure grounds, and the third on the last three pure grounds. Although the bodhisattva does not necessarily remain on these grounds for this amount of time, he must accumulate the merit equivalent to that accumulated over three countless great eons.

Who is faster in attaining buddhahood, one who previously became a hearer foe destroyer and is about to enter the bodhisattva vehicle or one who is definite in the mahayana lineage and is about to enter the bodhisattva vehicle? Although it might appear that one who previously became a hearer foe destroyer would be faster, as he has already abandoned the afflictive obstructions, in fact the one who is definite in the bodhisattva lineage is faster. Why? This is because he is of sharp faculty, whereas the other is of dull faculty. Generally, those who are sharp-facultied progress faster than those who are dull-facultied. In addition, one who previously became a hearer foe destroyer is habituated to the hinayana path and still has the tendency to work for his own welfare, even when he becomes a bodhisattva.

> The ten innumerable hundred thousands of prayer petitions planted by a first grounder – such as the ten great petitions in the *Sutra on the Ten Grounds* – are included in Samantabhadra's aspirational prayers, to which Chandrakirti refers in his root text in order to include all such prayers. These are the *Aspirational Prayers for Auspicious Deeds (Bhadracharyapranidhana)*, and among them two stanzas are said by Shantideva in his *Compendium of Instructions* to be unsurpassed dedications:
>
> I dedicate all these virtues
> To my training in accordance
> With the knowledge of the hero Manjushri
> And likewise of Samantabhadra as well.
>
> With the dedications so highly praised
> By all the Conquerors of the three times
> To auspicious deeds I dedicate
> In all ways these roots of virtue.

These two stanzas are excerpted from the *King of Prayers*, which is also called Samantabhadra's Prayer. Lama Tsongkhapa quotes them here from the *Compendium of Instructions* in which Shantideva says that they are unsurpassed dedications. In the *Sutra on the Ten Grounds* it mentions ten great prayers, whereas other texts mention ten innumerable hundreds of thousands of prayers. There is also a discussion of five sets of prayers. These prayers are discussed in the eighth chapter of the *Supplement*.

What is a prayer? What is the difference between a prayer and a dedication? If it is a dedication, it is pervaded by being a prayer but if it is a prayer, it is not pervaded by being a dedication. The difference is that a prayer is not necessarily dependent on a substance, whereas a dedication is dependent on a substance, the substance being one's roots of virtue. What is something that is a prayer but not a dedication? It is, for example, "May I be reborn in Sukhavati." On the other hand, if one says, "*Due to this virtue* may I be reborn in Sukhavati," then it is both a dedication and a prayer. This is explained in the second chapter of the *Ornament for Clear Realization* in the context of the path of meditation of dedication.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's commentary says that just as hearers on the path of preparation are not said to be approaching the first fruit [of a stream enterer], so the great of the great bodhisattvas practicing with belief who are just about to become first grounders are on a level where the mind of enlightenment has not yet been generated. Chandrakirti is referring to the non-generation of an ultimate mind of enlightenment. It has already been explained that in general the aspiration to highest enlightenment has been generated even before this time and that such persons are also accepted by this system as bodhisattvas.

Here, Lama Tsongkhapa explains that according to the Prasangika Madhyamika system hearers on the path of preparation are not approachers to the first result because they are not superiors. However, for the Svatantrika Madhyamika system there is no pervasion. They assert that because hearers on the path of preparation will, on the same seat, become approachers to stream enterer, they are approachers to the first result, yet they are not superiors. The Prasangika Madhyamikas do not agree with this and assert that approachers to stream enterer must be superiors. Later in the *Supplement,* it says that persons on the eighth level are presented to be superiors.

"The great of the great bodhisattvas practicing with belief" refers to bodhisattvas on the mahayana paths of accumulation and preparation which together are called "the ground of practicing through belief." "The ground of special thought" refers to the first seven grounds, "the ground of fruition" refers to the last three pure grounds, and "the ground of the abandonment of obstructions" refers to the buddha ground. These four grounds are mentioned in the context of "bodhisattvas practicing with belief." The ground of practicing through belief is the ground on which the bodhisattva realizes emptiness by way of belief, that is, not directly.

Chandrakirti's autocommentary says:

> There, just as in the hearers' vehicle, eight types of hearers' grounds are posited through the division of entering and abiding on the resultant paths; similarly, also in the mahayana, there are ten bodhisattva grounds of the bodhisattvas.
>
> Further, just as generating the state of the hearers' similitude of definite separation (path of preparation) is not accepted as being the state which enters into the first result, similarly the bodhisattva who will become [a first grounder] is also.
>
> As taught in the *Cloud of Jewels Sutra*:[5]
>
> > With a nature of practice by the great of the great appreciation, situated to immediately attain the first ground – this is a level which has not generated the bodhisattva's [ultimate] bodhichitta.

"This is a level which has not generated the bodhisattva's bodhichitta" means that a bodhisattva on the supreme mundane quality level of the path of preparation has not yet generated ultimate bodhichitta, the ultimate mind of enlightenment. This bodhisattva, however, has generated the mind of enlightenment, as have those on the heat, peak, and tolerance levels of the path of preparation and those on the path of accumulation. Here, if a "bodhisattva's bodhichitta" is interpreted to mean the *conventional* mind of enlightenment, it is incorrect.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In his *Compendium of Instructions* Shantideva also establishes through many sutras that ordinary beings can generate a mind of enlightenment. Therefore, the assertion that [those on the paths of accumulation and preparation] are 'imputed bodhisattvas' is wrong.

In short, saying that bodhisattvas on the path of accumulation and path of preparation are merely designated is not correct, because they do have the conventional mind of enlightenment although they do not the ultimate mind of enlightenment.

[5] Poisson, p. 262, note 2, cites *Shiksasammuchchaya*, 7.13, where it is also quoted.

What do we need to do? We should try to cultivate the paths of bodhisattvas, beginning with the heat, peak, tolerance, and supreme mundane quality levels of the path of preparation, and then the ten grounds. If we cannot do so presently we should at least aspire to do so in the future. In short, we should train in the three practices of this context: (1) great compassion, (2) the understanding of non-duality, and (3) the mind of enlightenment. If one cannot cultivate an uncontrived mind of enlightenment, one should at least cultivate a contrived mind of enlightenment. One should be happy to have this opportunity to study the *Supplement*. In the *Jataka Tales,* it says that hearing the Dharma is the best lamp among all types of lamps dispelling darkness and the best wealth among all types of wealth, as it cannot be stolen by anyone. The only thief that can steal our knowledge is forgetfulness! Therefore, we should be careful not to generate this afflictive emotion by developing mindfulness.

Wednesday morning, February 2, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: In his *Compendium of Knowledge (Abhidharmasamuchchaya)* Asanga explains that when one becomes a hearer on the path of preparation [who will attain the fruit of stream enterer] in a single session and until one attains the first fruit, one is an approacher to the fruit of stream enterer. Therefore, Chandrakirti's example is not established.
>
> ANSWER: Vasubandhu's *Treasury of Knowledge* explains that those approaching the fruit of stream enterer have attained a superior path; however, Asanga's *Compendium of Knowledge* does agree with the objector. These two discordant systems arose, and the master Chandrakirti is in agreement with the *Treasury of Knowledge*. This accords with Nagarjuna's *Compendium of Sutra* where it is said that giving one meal for one day to a follower of doctrine [a person on the path of preparation] generates immeasurably greater merit than giving a hundred divine tastes of food and divine clothing each day for as many eons as there are sands in the banks of the Ganges to as many followers of faith [persons on the path of accumulation] as there are particles in all the realms of the world. Further, giving one meal for one day to a person on the eighth level [an approacher to the fruit of stream enterer] generates immeasurably greater merit than giving as before to as many followers of doctrine as described above.
>
> A follower of faith is clearly on the path of accumulation, and a follower of doctrine is clearly on that of preparation [therefore, a person on the eighth level is on the path of seeing, a superior path].

There are two different presentations of approachers to stream enterer. In Vasubandhu's *Treasury of Knowledge* (*Abhidharmakosha*), it says that approachers to stream enterer are necessarily superiors whereas according to Nagarjuna's *Compendium of Sutra,* this is not so. Chandrakirti's assertion accords with the presentation in *Treasury of Knowledge*.

An approacher to stream enterer is a person who is in the process of exerting effort for the attainment of the result of the virtuous endeavor which is the abandonment of the three thorough entanglements, objects of abandonment of the path of seeing. In the *Ornament for Clear Realization,* an approacher to stream enterer is said to be one of the four approachers who is in the process of exerting effort for the attainment of the result of the virtuous endeavor which is the abandonment of the three thorough entanglements, which are objects of abandonment of the path of seeing. The three thorough entanglements are:

1. the acquired view of the transitory collection,
2. the acquired view holding bad ethics and bad conduct as supreme, and
3. afflicted doubt.

Vasubandhu says:

> Not wishing to go, mistaking
> The path, and doubting the path
> Obstruct progress to liberation.
> Therefore the three are indicated.

The three thorough entanglements are respectively likened to not wanting to go, mistaking the path, and doubting the path. These three thorough entanglements are posited as obstacles to liberation. "Not wanting to go" illustrates the acquired view of the transitory collection, "mistaking the path" illustrates the acquired view holding bad ethics and bad conduct as supreme, and "doubting the path" illustrates afflicted doubt. As an illustration of the three thorough entanglements, we could say they are like someone who has to go to a particular city but does not want to go, someone who although wanting to go mistakes the way, and someone who although wanting to go doubts the way.

The result of stream enterer is the result of virtuous endeavor attained through abandoning the three thorough entanglements.

In short, there are these two systems. Lama Tsongkhapa quotes Nagarjuna's *Compendium of Sutras* [, which mentions followers of faith and followers of doctrine]. Followers of faith and followers of doctrine are respectively posited as those on the path of accumulation and those on path of preparation. Persons on the eighth level are approachers to stream enterer. As each of these is respectively superior to the previous one, one gains respectively more merit by making offerings to them. For example, the merit created by making offerings to a follow of doctrine is greater than the merit of making offerings to the followers of faith. Likewise, there is more merit from making offerings to one on the eighth level than to followers of doctrine. In the *Ornament for Clear Realization,* it is said that if it is a trainee intent upon the *Ornament,* it is pervaded by being either a follower of faith or a follower of doctrine and, therefore, being either a bodhisattva abiding on the path of accumulation or one abiding on the path of preparation. In other words, this trainee is not a superior. In the *Ornament for Clear Realization,* [Maitreya] says that he composed this text in order for the wise to see.

The path of accumulation is a clear realization of the doctrine. 'Doctrine' refers to the words of the scriptures. In the context of the path of accumulation, the word 'accumulation' refers to accumulating much hearing of doctrine. The path of preparation is a clear realization of the meaning. 'Meaning' refers to the fact that those on the path of preparation realize the truth by means of a meaning generality.

Chandrakirti's autocommentary says:

> Thoroughly explained in that [Sutra] itself:
>
> > Even situated on the instant which practices appreciation, son of good lineage, it is like this: for example: a *chakravartin* king has passed beyond the complexion of a human, yet he has not attained the complexion of a *deva*. Similarly, the bodhisattva too has completely passed all the levels of levels of the worlds, the hearers and the solitary realizers, yet he has not attained the ground of the ultimate bodhisattva.

(*Note:* In the Tibetan, it says "he <u>has</u> attained the ground of the ultimate bodhisattva," which is incorrect).

"The bodhisattva too" refers to bodhisattvas on the paths of accumulation and preparation. These bodhisattvas are superior to ordinary beings, hearers, and solitary realizers, but have not yet attained the ground of the ultimate bodhisattva. They have passed "all the levels of levels of the worlds, the hearers and the solitary realizers" because of being superior to them in terms of their lineage. In other

words, since these bodhisattvas have the conventional mind generation, they are superior to hearers and solitary realizers. However, t this level, they are not superior to them in terms of their intelligence.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B Features qualifying the first ground in detail

This section has three parts:
1 Features beautifying one's own continuum
2 Features outshining others' continuums
3 Surpassing feature on the first ground

3B1C-2A1B-1 Features beautifying one's own continuum

This section has two parts:
A Individual features beautifying one's own continuum on the first ground
B Features beautifying one's own continuum in brief

3B1C-2A1B-1A Individual features beautifying one's own continuum on the first ground

This section has three parts:
1 Feature of attaining a meaningful name
2 Four features of birth in the lineage and so forth on the first ground
3 Three features of advancing to higher grounds and so forth

3B1C-2A1B-1A1 Feature of attaining a meaningful name on the first ground

Chandrakirti's autocommentary says:

> Further, when he has entered into the first ground called the Extremely Joyous:
>
> *From then onwards, having attained that, he*
> *Is addressed by the very term 'bodhisattva.'* [1.5cd]

(*Note:* In the Tibetan text of the autocommentary, there is an extra particle *te* in the root text which should not be there.)

Having attained that, he becomes an ultimate bodhisattva.

> The attainment of that mind, in a state passed beyond the level of ordinary beings in all ways, is to be expressed by only the term 'bodhisattva' and not other types, because at that time he is an exalted one (*arya*).

When the bodhisattva attains the first ground, he becomes an 'ultimate bodhisattva.' However, he became a bodhisattva.

> As was taught in the *Blessed Mother of Two Thousand Five Hundred Verses*:[6]
>
> > 'Bodhisattva' is an epithet of the brave-minded beings (*sattva*) who have realized, by whom all phenomena have been realized and known. How are they known? [As] not arisen, unreal, false and not as they are imagined by childish, ordinary beings and not as found by childish, ordinary beings. Therefore, they are called bodhisattvas.

[6] 2,500 Verse Bhagavati Prajñaparamita, also called *Questions of Suvikrantavikramin Wisdom Gone Beyond Sutra.*

> Why is that? Enlightenment is not imagined. Enlightenment is not achieved. Enlightenment is without referent. Suvikrantavikramin, the Tathagata did not acquire enlightenment because he has not acquired all phenomena. Because of not referring to all phenomena, one says enlightenment. Like that, one says the enlightenment of buddha [yet] what was expressed is not so.
>
> Suvikrantavikramin, those generating the mind toward enlightenment and producing a mind adhering to enlightenment, saying "we will generate this mind toward enlightenment. The enlightenment to which we will generate the mind, exists" – are not called bodhisattvas. They are called growing brave-minded beings.[7]
>
> Why is that? Like this: strongly settling upon generation; strongly settling upon mind; strongly settling upon enlightenment.[8]

– and so forth.

It is taught:

> Further, enlightenment (*bodhi*) is without characteristics, since it is separated from the nature of characteristics. That, realized by someone like this, is called 'enlightenment,' but what was expressed is not so.
>
> Suvikrantavikramin, because of completely realizing those phenomena, one speaks of bodhisattvas. Suvikrantavikramin, someone, while not knowing and not completely realizing these phenomena, perceiving in his thought 'bodhisattva' to himself – that bodhisattva is far from the bodhisattva grounds and he is far from the bodhisattva's dharmas. Similarly, by the name of 'bodhisattva,' he is deceiving the worlds of the devas, humans and *asuras*.
>
> Suvikrantavikramin, if by the mere word he became a bodhisattva, then all sentient beings would become bodhisattvas also.
>
> Suvikrantavikramin, this is not a mere action of speech. Like this: [it is] the ground of the bodhisattva.[9]

– and so forth.

(*Note:* The Tibetan text does not say "this is not a mere action of *speech*," but says "this is not a mere action of *anyone*." Perhaps this needs to be checked against other printings of the Tibetan.)

In the *Supplement,* when it says "From then onwards, having attained that, he is addressed by the very term 'bodhisattva,'" (v. 1.5cd) this refers to the fact that a bodhisattva who attains the first ground has an ultimate mind of enlightenment and is called an ultimate bodhisattva. He attains the first of the eight qualities, that of a meaningful name. The remaining seven qualities are the four:

- birth in the tathagata lineage,
- abandoning the three thorough entanglements,
- maintaining supreme joy, and
- vibrating a hundred world systems,

and the three:

- advancing to higher grounds,

[7] Tibetan: sKye.bar sems.dPa'.

[8] See Conze, *The Questions of Suvikrantavikramin*, p. 15, lines 16-42. Also Hopkins, *Compassion in Tibetan Buddhism*, p. 140, for the portion of the quotation mentioned by Lama Tsongkhapa.

[9] Ibid, p. 13, lines 23-34.

- ceasing the paths of the bad migrations, and
- extinguishing the levels of ordinary beings.

Chandrakirti says: "'Bodhisattva' is an epithet of the brave-minded beings (*sattva*) who have realized, by whom all phenomena have been realized and known. How are they known? [As] not arisen, unreal, false and not as they are imagined by childish ordinary beings and not as found by childish ordinary beings. Therefore, they are called bodhisattvas." To childish, ordinary beings, phenomena appear as truly existent; however, they are not established as they appear. A bodhisattva who realizes this is an ultimate bodhisattva.

Chandrakirti continues: "Why is that? Enlightenment is not imagined. Enlightenment is not achieved. Enlightenment is without referent." "Enlightenment is not imagined" means that enlightenment is thoroughly analyzed. Enlightenment exists as it is found by superiors, i.e., to not exist ultimately or truly.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> > *Then, having thus attained that mind*
> > *He is called a 'bodhisattva'.* [1.5cd]
>
> From the time of entering the first ground, the bodhisattva, because of having attained that ultimate mind, is called an 'ultimate bodhisattva'. Once having passed beyond the level of an ordinary being he is not called by any other name discordant with this term because he has become a bodhisattva superior. The *Cloud of Jewels Sutra (Ratnamegha)*, which Chandrakirti quotes in his commentary, says, 'One having the great supreme qualities, [the fourth and last level] of the path of preparation, has not attained the ground of an ultimate bodhisattva.' Thereby, it is known that [on the first ground] one is called a 'bodhisattva' with the qualification 'ultimate'.
>
> The *Two Thousand Five Hundred Stanza Perfection of Wisdom Sutra (Sardhadvisahasrikaprajnaparamita)* says, 'In what way does he know [all phenomena]? As non-arisen, non-produced, and false, not in accordance with the imputations by or findings of childish common beings. Therefore, he is called a bodhisattva.' This implicitly indicates that one who understands the suchness of phenomena in the way that a superior does is called a bodhisattva. This also refers to an ultimate bodhisattva and does not indicate that among common beings there are no qualified bodhisattvas.

One should realize things not as they are found by childish, ordinary beings, but as they are realized by superiors. When childish, ordinary beings realize the final mode of subsistence of phenomena, they realize it by means of a meaning generality and not directly. They realize it within the appearance of true existence, whereas to a superior in meditative equipoise, there is no appearance of true existence and the appearance of duality has vanished.

When does a bodhisattva receive the meaningful name 'ultimate bodhisattva'? Only upon attaining the first ground. From this, one should indirectly understand that ordinary bodhisattvas do not receive this meaningful name, yet they are bodhisattvas. In other words, a bodhisattva receives the meaningful name from the path of seeing onward. The text says that at this time one is born in the tathagata lineage. One can ask, are those bodhisattvas on the path of accumulation and path of preparation not born in the tathagata lineage? Are they not children of the conquerors? Are bodhisattvas on the path of accumulation and path of preparation not sons and daughters of good lineage? If someone says that they are not born in the tathagata lineage but are born in the buddha lineage, one can ask is there a difference between tathagata and buddha?

This subject of the *Questions of Suvikrantavikramin Sutra* will be discussed later on in more detail. In the *Ornament for Clear Realization,* in the context of the seventeen texts (the six mothers and eleven sons), the *Questions of Suvikrantavikramin Sutra* was said to be included in the eleven sons, as is the *Two Thousand Five Hundred Stanza Perfection of Wisdom Sutra*. This topic is discussed in Jedzun Chogyi Gyeltshen's *Ocean of Sport,* in which it says that the mothers are sutras that present all eight categories whereas the sons are sutras that present only part of the eight categories.

Wednesday afternoon, February 2, 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-1A2 Four features of birth in the lineage and so forth on the first ground

Chandrakirti's autocommentary says:

> The attainment of bodhichitta which has been explained is not only expressed by just the term bodhisattva on that occasion – moreover:
>
> *He is also born in the lineage of the tathagatas,*
> *All his three fetters are abandoned,*
> *The bodhisattva retains a supreme joy and*
> *Is able to vibrate one hundred world systems.* [1.6]
>
> Because he has passed beyond all levels of ordinary beings, hearers, and solitary realizers, and because he has generated a path which pursues the tathagata ground called Universal Light (*Samantaprabha*), the bodhisattva is born in the tathagata lineage.
>
> Then, through directly seeing the selflessness of persons, he is separated also from the three fetters called viewing the transitory collection, doubt, and holding morality and codes of behavior as supreme, because they will not grow again.
>
> Not seeing suchness, through superimposing a self the view of the transitory collection arises and, similarly, due to doubt there is a possibility to proceed also on other paths – otherwise not.
>
> Since he has entered into certainty [of mahayana lineage], he attains the qualities caused by that and separates from the faults of the ground's discordant class. Thereby, because of a multitude of extreme joys due to special growth of extraordinary joy, the bodhisattva also maintains a supreme joy. Because of having especially distinguished extreme joy, this ground obtains the name 'Extremely Joyous.'
>
> He is also able to move one hundred world systems.

(1) The first of the four qualities mentioned here is to be born in the tathagata lineage because, due to having attained the path of seeing, the bodhisattva is definite to attaining the tathagata ground, Universal Light.

(2)The second quality is to have abandoned the three thorough entanglements – the view of the transitory collection, the view holding bad ethics and conduct as supreme, and afflicted view – by attaining the path of seeing. Through generating the uninterrupted path of the mahayana path of seeing, one generates the antidotes to the entanglements, whereby one abandons the objects of abandonment and attains a path of release. In this way one abandons the three thorough entanglements such that they will not return. On the other hand, in the case of cultivating a mundane path, although one abandons the objects of abandonment it is not in a manner of their not returning

again, meaning that they can return again. Shantideva, in his text *Bodhisattvacharyavatara,* says that although a mundane path can abandon attachment, attachment will return. This is the case with the absorption without discrimination. When the absorption without discrimination is present in one's continuum, gross feelings and gross discriminations are ceased; however, they will return. In short, the bodhisattva on the uninterrupted path of the path of seeing abandons the objects of abandonment in a manner of their not returning again.

(3)The third quality is holding supreme joy. The bodhisattva possesses supreme joy because he attains the qualities of that ground and separates from the faults of the its discordant class.

The fourth quality, mentioned in both the autocommentary and *Illumination,* is the ability to move 100 world systems. This means to make the earth quake or make the world shake.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *Born in the tathagata lineage*
> *He completely forsakes the three links.*
> *The bodhisattva attains an excellent joy*
> *And can vibrate a hundred world-systems.* [1.6]
>
> He is born into the lineage of the tathagatas because, abiding on the first ground, he has passed beyond all levels of ordinary beings, hearers, and solitary realizers and has generated in his continuum the paths certain to proceed to buddhahood. He will not go to other paths and is of definite lineage with respect to his own path. This 'first ground bodhisattva directly sees personal selflessness – that a person does not exist of his own nature. Thereby, he abandons all three links – the [artificial] view of the transitory, the [afflicted] doubt which is a subtle increaser [of contamination], and holding [bad] ethics and codes of behavior as superior. He abandons them in the sense that they will not arise again – meaning that the seeds of these three are abandoned.
>
> The path of seeing abandons the artificial but not the innate form of the view of the transitory collection as a real 'I' and 'mine'.
>
> QUESTION: Why does Chandrakirti mention only these three? Other afflictions to be abandoned by the path of seeing are also abandoned.
>
> ANSWER: There are two ways of interpreting the thought of sutras setting forth this topic, but the superior one accords with the explanation given in Vasubandhu's *Treasury of Knowledge*:
>
> Not wishing to go, mistaking
> The path, and doubting the path
> Obstruct progress to liberation.
> Therefore the three are indicated.
>
> For example, three main obstacles confront one who intends to go to another area – not wishing to go, mistaking the path, and having doubts about it. Similarly, there are three main obstacles to progressing toward liberation. The first [the view of the transitory collection as real 'I' and 'mine'] causes fear with respect to liberation as a result of which one does not wish to proceed there. The second [holding bad ethics and codes of behavior as superior] is a case of mistaking the path through relying on another one. The third [doubt] causes hesitation with respect to the path. Therefore, Chandrakirti mentions these three.
>
> A first ground bodhisattva has, as was explained before, entered a definite lineage. He has attained the qualities of its fruits and is free from the faults abandoned by this ground. Therefore, extraordinary joys are generated. On account of his many great joys, the conqueror child maintains an excellent joy, and because of his superior joys this ground is called the Very Joyful.
>
> He also becomes able to vibrate a hundred different world systems.

This is how Lama Tsongkhapa sets out the four qualities mentioned in the *Supplement*.

Lama Tsongkhapa says, "He also becomes able to vibrate a hundred different world systems." When someone first generates the mind generation it causes the ground to shake. This is a sign that occurs when the bodhisattva first generates mind generation; as he increases his mind generation he becomes able to shake 100 different world systems. This is not a negative thing, but a positive sign of the bodhisattva's qualities.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-1A3 Three features of advancing to higher grounds and so forth

Chandrakirti's autocommentary says:

He advances from ground to ground and fully progresses upwards –
Then, all his paths of bad migration are ceased –
Then, all his levels of an ordinary being are exhausted –
His is indicated to be like the eighth arya. [1.7]

Regarding the aforesaid, because of familiarizing with the doctrine just as it was borne in mind and because of great delight in advancing to the second ground and so forth, when advancing from ground to ground he will fully progress upwards.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

Advancing from ground to ground he ascends,
Now all his paths to bad migrations have ceased,
All the levels of ordinary beings are ended. [1.7abc]

He is very enthusiastic to advance from the first to the second ground, and he will ascend to higher grounds. As soon as he attains the first ground, all paths going to a bad migration cease for the bodhisattva.

OBJECTION: Once one attains forbearance [which is the third of four levels] on the path of preparation, is it not impossible to go to a bad migration by the power of former actions (*karma*)? What need is there to say that paths to bad migrations cease for one who has attained the first ground?

ANSWER: The impossibility of going to a bad migration once one attains forbearance on the path of preparation is not a case of having overcome the seeds leading to a bad migration through their antidotes but through an incompleteness of their causes. Here on the first ground, the seeds are overcome by means of their antidotes. Furthermore, Asanga's *Compendium of Knowledge* explains that the mental and physical aggregates (*skandha*), constituents (*dhatu*), and so forth of bad migrations are abandoned by the path of seeing.

When a bodhisattva attains the first ground, all levels of a common being end for him.

In short, the three qualities here are:
1. one advances to higher grounds,
2. ceases the paths to bad migrations, and
3. ends the levels of ordinary beings.

The bodhisattva progresses or transfers from one ground to another. He does so as presented in *Grounds and Paths* (Tib. *sa lam*), which says that when a bodhisattva goes from ground to ground he does so by going from meditative equipoise to meditative equipoise, not from subsequent attainment to subsequent attainment or from subsequent attainment to meditative equipoise. When one attains a

path of release one attains a ground. On the other hand, at the end of a ground one attains an uninterrupted path. For example, at the end of the first ground the bodhisattva generates an uninterrupted path; then when he generates the path of release that is its result, he attains the second ground. Both grounds are paths of meditation. In the same way, at the end of the second ground the bodhisattva generates an uninterrupted path of the path of meditation of the second ground and when he generates a path of release he attains the third ground.

Lama Tsongkhapa says, "Furthermore, Asanga's *Compendium of Knowledge* explains that the mental and physical aggregates (*skandha*), constituents (*dhatu*), and so forth of bad migrations are abandoned by the path of seeing." Based on this statement, the question can arise: "Are the aggregates and constituents of the bad migrations acquired objects of abandonment of the path of seeing?" It follows that they are, because they are objects of abandonment of the path of seeing. If someone replies that they are not acquired objects of abandonment of the path of seeing, one can refer to the definition of an object of abandonment of the path of seeing as: that which is observed to be an acquired object of abandonment of the path of seeing and an object to be eradicated by the uninterrupted path of the path of seeing. However, the response is that the aggregates and constituents of the bad migrations are not conceptions and therefore cannot be acquired objects of abandonment of the path of seeing. The aggregates and constituents of the bad migrations are matter, whereas an acquired object of abandonment of the path of seeing is necessarily a consciousness.

When the text says that "the mental and physical aggregates (*skandha*), constituents (*dhatu*), and so forth of bad migrations are abandoned by the path of seeing," perhaps it means that because they derive from the afflictive emotions they are abandoned. There is debate concerning this: "Are the afflictive emotions that are the cause of rebirth in the bad migrations innate or acquired objects of abandonment of the path of seeing?" If someone says that they are acquired objects of abandonment of the path of seeing, then one says: "Is the ignorance that is a cause of bad migrations that is the first link of the twelve links of dependent-arising not the root of cyclic existence? It is not the root of cyclic existence because it is an acquired object of abandonment." If someone says that there is no pervasion, one says: "In Lama Tsongkhapa's *Definitive and Interpretive Meanings* (Tib. *Drang nges legs bshad snying po)* it says that the acquired view of the transitory collection cannot be the root of cyclic existence because it does not exist in the continua of beings, such as birds, antelopes, and so forth, whose minds have not been influenced by tenets." Birds and so forth have the root of cyclic existence, afflictive emotions which cause rebirth in the bad migrations, but their ignorance cannot be an *acquired* afflictive emotion.

When the text says that the aggregates and constituents are objects of abandonment of the path of seeing, this is a case of merely giving the aggregates and constituents the *name* 'object of abandonment of the path of seeing' because at this point a bodhisattva no longer has the non-virtuous karma to be reborn in the bad migrations. If it is abandoned by the path of seeing it is not pervaded by being an object of abandonment of the path of seeing.

The third quality mentioned in the text is that of reaching the end of the level of an ordinary being, which occurs when one attains the level of a superior. In other words, when one attains the first ground the state of a common being is extinguished.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-1B Features beautifying one's own continuum in brief

Chandrakirti's autocommentary says:

> In brief, just as for the arya stream enterer, faults are separated from and qualities arise through realizing the arya's doctrine concordant with him, similarly for this bodhisattva too, qualities arise and faults are exhausted appropriate to him through realizing a ground. That is made completely clear by means of the example of the stream enterer.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *He is shown to be like the eighth superior.* [7d]
>
> When the four abiders in and four approachers to the fruit are counted downwards from foe destroyer, the eighth superior is an approacher to the fruit of stream enterer. The features of abandonment and realization concordant with this approacher's level arise by virtue of his having attained the superior doctrine [or path]. A bodhisattva's extinguishing of faults and arising of auspicious qualities – which are due to his having attained the first ground – are shown in a similar manner to those of an eighth superior.

The four abiders and four approachers were explained in the context of the twenty sangha in the *Ornament for Clear Realization*.

The main objects of abandonment of an approacher to stream enterer are the three thorough entanglements. An abider in the result of stream enterer is one who has abandoned these three thorough entanglements. The main objects of abandonment of an approacher to once returner are most of the five partial concordances with the lower. An abider in the result of once returner is one who has abandoned most of the five partial concordances with the lower.

Why is it said "*most* of the five partial concordances with the lower"? The <u>five partial concordances with the lower</u> are:
(1-3) the three thorough entanglements,
(4) aspiration for the desire realm, and
(5) harmful intent.

Aspiration for the desire realm can be divided into nine: the three great, three middling, and three small, which are each further divided into great, middling, and small. One abiding in the result of once returner has definitely separated from the first six degrees of attachment to the desire realm. However, it is not definite that they have abandoned the seventh and eighth degrees, in that there are some who have abandoned them and others who have not. For this reason it says "most." On the other hand, it is definite that the ninth degree has not been abandoned.

The objects of abandonment of an approacher to non-returner are all five partial concordances with the lower. An abider in the result of non-returner is one who has abandoned all five partial concordances with the lower. He is called a non-returner because he will never again be born in the desire realm due to having abandoned all nine degrees of attachment to the desire realm.

The objects of abandonment of an approacher to foe destroyer are the five partial concordances with the upper. An abider in the result of foe destroyer is one who has abandoned the five partial concordances with the upper. What are the five partial concordances with the upper? There are two ways of counting them: one in the commentary on the *Ornament for Clear Realization* and one in the *Treasury of Knowledge*.
One way of counting the <u>five partial concordances with the upper</u> is:
1. aspiration for the upper realms (i.e., the form and formless realms),
2. sleep,

3. excitement,
4. ignorance, and
5. pride.

This is a brief presentation of the eight persons: the four approachers and four abiders. Just as these eight progress higher and higher, also the bodhisattvas of the ten grounds progress higher and higher. The eighth person, the approacher to stream enterer, it taken as an illustration of this fact.

Thursday morning, February 3, 2000

3B1C-2A1B-2 Features outshining others' continuums

This section has three parts:

A On the first ground outshining hearers and solitary realizers by way of lineage
B On the seventh ground outshining hearers and solitary realizers by way of intelligence
C The meaning established by these teachings

3B1C-2A1B-2A On the first ground outshining hearers and solitary realizers by way of lineage

This bodhisattva:

Even abiding in the mind of complete enlightenment's initial view,
The solitary realizers, along with those born from the Mighty Subduer's speech,
Are outshone and exceeded by the power of merits. [1.8abc]

That which was just said is another distinction, since it was taught in the *Liberation of Maitreya Sutra*:

> Son of good lineage, it is like this: for example, a prince, not long after birth, possesses a royal name outshining even all the principal elder assembly of ministers by the power of the great natural essence of lineage. Similarly, a novice bodhisattva, not long after having generated the mind toward enlightenment, also due to birth in the lineage of the Tathagata, the King of Doctrine, by the power of bodhichitta and great compassion outshines the hearers and solitary realizers who have practiced purity for a long time.
>
> Son of good lineage, it is like this: for example, whatever force there is of thrust of wing and whatever immaculate quality of eye there is not long after birth of the offspring of the great lord of garudas, they do not exist with any of the elders of all the assemblies of birds other than that. Similarly, the bodhisattva generating the initial mind of enlightenment, the offspring of the great lord of garudas, has perfectly arisen in the continuum of the lineage of the tathagatas, the great lord of garudas – whatever advancing beyond there is due to the strength of the wing of generating the mind toward omniscience and whatever quality there is of the immaculate eye, the special thought – none of the hearers and solitary realizers who have definitely emerged (practiced renunciation) over one hundred thousand eons have them.

– and so forth.

A bodhisattva who has just generated the ultimate mind of enlightenment for the first time outshines those of the hearer and solitary realizer lineages. The *Liberation of Maitreya Sutra* gives the analogy of a prince, saying that as soon as the son of a king is born he is given the title "prince" whereby he is paid respect by the king's ministers and so forth. Although the newborn prince outshines the assembly of ministers in terms of his lineage, the ministers outshine him in terms of their intelligence. Likewise, a bodhisattva who has just generated the ultimate mind of enlightenment outshines hearers and solitary

realizers by way of his lineage and not by way of his intelligence. In terms of intelligence, the hearers and solitary realizers outshine him.

In this sutra there is also the analogy of the garuda: a newborn garuda possesses a strength of wing greater than that of other birds and thereby outshines them due to possessing the garuda lineage . In short, bodhisattvas, from the time of first generating the ultimate mind of enlightenment through the seventh ground, outshine hearers and solitary realizers by the power of their great compassion and by their mind generation of special pure thought. Maitreya, in his *Ornament for the Mahayana Sutras,* sets out four types of mind generation: the mind generation of using belief, the mind generation of special thought, the mind generation of fruition, and the mind generation of the abandonment of obstructions.

Q: Can hearers and solitary realizers see when a bodhisattva generates the mind of enlightenment or attains the path of seeing?
A: In general, those with an inferior realization do not see the higher realizations of others. In the *Treasury of Knowledge* Vasubandhu says that the realizations of someone who is superior, or has gone beyond, in terms of ground, faculty, person, and time cannot be seen by another person of inferior realizations. In short, one of dull faculties cannot see the realizations of the sharp-facultied. Therefore, because the hearers and solitary realizers are considered to be of duller faculties than bodhisattvas, they do not see the realizations of bodhisattvas. "Gone beyond" in this context means something that is hidden, something that cannot be accessed.

Q: It would seem then that the ministers would not see when the prince is born?
A: This is usually announced to all! Such an event is accessible to all. All aspects of an analogy do not have to fit the case.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> > *Even those abiding in the first mind of complete enlightenment*
> > *Overcome those born from the speech of the Subduer Kings*
> > *And solitary realizers through their own merit's increase.* [1.8abc]
>
> Not only those abiding in the second mind of complete enlightenment and so forth but even those in the first mind of enlightenment, the Very Joyful, overcome or outshine hearers – who are born from the speech of Subduer Kings – and solitary realizers through the force of the merit of their conventional mind of enlightenment and compassion. Their merit exceeds that of the hearers and solitary realizers. This feature is different from those explained earlier.
>
> The *Liberation of Maitreya Sutra (Maitreyavimoksha)* says, 'O child of good lineage, it is like this: For instance, because of the great nature of his lineage a prince with the royal name outshines all the principal elder ministers soon after his birth. In the same way, a novice bodhisattva generates an [ultimate] mind of enlightenment and is born in the lineage of a tathagata King of Doctrine. Soon thereafter, through the force of his altruistic mind of enlightenment and compassion he outshines hearers and solitary realizers, who have maintained pure behavior for a long time. Child of good lineage, it is like this: For example, soon after its birth, the offspring of a great king of eagles has power in his wing and clarity of eye that none of the older birds have. Similarly, a bodhisattva who has generated the first [ultimate] mind of enlightenment has taken birth in the lineage of a great tathagata king of eagles. As an offspring of the king of eagles he overpowers others through the strength of his wings to generate an aspiration to omniscience, and he has the pure eye of a special thought. These features do not occur in any of the hearers and solitary realizers who have practiced renunciation for a hundred thousand eons.'

(*Note*: In the example here, the word translated as 'eagle' is actually 'garuda.')

Here the first mind of enlightenment, i.e., the first mind generation, refers to the generation of the ultimate mind of enlightenment for the first time. The conventional mind generation at this time is called the 'mind generation of special pure thought.' One born in the tathagata lineage outshines the hearer and solitary realizer foe destroyers due to his great compassion, mind of enlightenment, and collection of merit. The bodhisattva outshines the hearer and solitary realizer foe destroyers just as a newborn with the royal title of prince outshines even the elder ministers.

> In his commentary [Jaya-ananda] explains these two passages [in the *Liberation of Maitreya Sutra*] as referring to conceptual mind generation. However, the references to a 'novice bodhisattva' and 'soon after generating a mind of enlightenment' are made in terms of an ultimate mind generation. Previously (verse 6a) Chandrakirti explained that birth in the tathagata lineage takes place on the first ground [using the example of an eighth superior (7d)], but aside from the use of different examples [those of a prince and an eagle's offspring and of an eighth superior], both passages [the explanations of birth in the tathagata lineage in the root text and in the *Liberation of Maitreya Sutra*] mean the same. Furthermore, the meaning of these three lines in the root text appears to be an abridgment of that in the sutra. Many texts such as Maitreya's *Ornament for the Mahayana Sutras (Mahayanasutralamkara)* explain that mind generation of special pure thought [mentioned above in the *Liberation of Maitreya Sutra* as 'special thought'] refers to generating a mind of the first ground.

There are two types of mind generation: (1) a mind generation arisen from appellation and (2) a mind generation arisen from the attainment of subtle reality (*dharmata*). Jayananda says that the two passages refer to a mind generation arisen from appellation. A mind generation arisen from appellation is a conventional mind generation produced either through verbal instructions received from a master, such as "Now, generate the mind of enlightenment," or from conception, such as thinking, "I will attain enlightenment for the benefit of all sentient beings." Thus, a mind generation produced from appellation can arise either from terms, expressive sounds, or conception. In the context of appellation Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*' gives the example of a moving object having a dewlap which is given the name 'cow.'

In this case, the mind generation of the first ground is not a mind generation arisen from appellation but is an ultimate mind generation.

Lama Tsongkhapa says: "Furthermore, the meaning of these three lines in the root text appears to be an abridgment of that in the sutra." The mind generation of special pure thought is the mind generation of the first ground. This is mentioned in many texts, including the *Ornament for the Mahayana Sutras*. When the *Illumination* mentions the *Ornament for the Mahayana Sutras,* it refers to the context in which this text says: "Mind generation is of four types: using belief, special thought, fruition, and of the abandonment of obstructions."

> OBJECTION: Then, you do not assert that hearers and solitary realizers are outshone when a bodhisattva who is a common being generates the conventional mind of enlightenment?
>
> ANSWER: It is not so; we do assert such. The *Liberation of Maitreya Sutra* says, 'O child of good lineage, it is like this: Even though a diamond has been broken, it outshines all excellent golden ornaments; it does not lose the name "diamond", and it banishes all poverty. In the same way, O child of good lineage, even though the diamond-like generation of an aspiration to omniscience lacks urgency, it overpowers all golden adornments of the qualities of hearers and solitary realizers. [With this aspiration] one will not lose the name 'bodhisattva', and all poverty of cyclic existence is overcome.' Shantideva quotes this sutra in his *Compendium of Instructions* as a source for the unsuitability of looking down on a bodhisattva who lacks the bodhisattva deeds, and it never happens that one who has attained a ground has a mind of enlightenment bereft of the bodhisattva deeds. [Therefore, this Sutra refers not to an ultimate but to a conventional mind generation.]

Once a bodhisattva has attained a ground, his mind generation cannot be separated from the bodhisattva deeds. The meaning of this is in relation to his conventional mind generation, which is illustrated by a diamond. Just as even a fragment of a diamond outshines all gold ornaments, likewise even the conventional mind generation outshines the qualities of hearers and solitary realizers. Just as a diamond is so valuable that it dispels poverty; likewise, the conventional mind generation dispels the poverty of cyclic existence. In his text *Bodhisattvacharyavatara,* Shantideva says that in the second moment of mind generation, one's impure body is transformed and becomes priceless. This text also says (in the context of the benefits of the mind of enlightenment): "The very instant that a miserable being bound in the prison of cyclic existence generates the mind of enlightenment, he becomes 'a child of those gone to bliss' and an object of the veneration of worldly gods and human beings." One should therefore uphold mind generation.

In short, one with even the conventional mind generation outshines hearer and solitary realizer foe destroyers.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-2B On the seventh ground outshining hearers and solitary realizers by way of intelligence

Chandrakirti's autocommentary says:

> *On the Gone Afar, he will also surpass intelligence.* [1.8d]
>
> As was taught in the *Exalted Sutra on the Ten Grounds*:
>
> > O children of the Conqueror, it is like this: for example, a prince born in a royal lineage bearing a royal name, outshines all the assembly of ministers by the magnificence of royalty through mere birth, not by analysis through the strength of his own intelligence. When he has matured, then he will greatly surpass all the activities of the ministers through generating the strength of his intelligence.
> >
> > O children of the Conqueror, similarly, as soon as a bodhisattva generates the mind, he too outshines all hearers and solitary realizers through greatness of the special thought, not by analysis through the strength of his own intelligence. The bodhisattva who abides on this seventh bodhisattva ground will greatly surpass all activities of the hearers and solitary realizers through abiding in the greatness of knowing his own sphere.
>
> One should know "therefore, indeed only from the Gone Afar (the seventh ground) onwards does a bodhisattva also outshine the hearers and solitary realizers due to the generation of the strength of his own intelligence, not on the lower grounds."

A bodhisattva on the seventh ground outshines hearer and solitary realizer foe destroyers not just by the strength of his lineage, but also by the strength of his intelligence. This is because a bodhisattva on the seventh ground is able to enter into and rise from meditative equipoise on cessation – the perfect end – even within the short instant of a complete action. The bodhisattva gains this ability beginning on the seventh ground, while hearers and solitary realizers do not have it. This is discussed in the sixth chapter of the *Supplement,* (v. 6.1) where Chandrakirti says: "Abiding in the mind equipoised on the approach, he approaches the features of complete buddhahood and sees the thusness of this arising in dependence – he will attain cessation through abiding in wisdom. In short, the bodhisattva on the seventh ground is able to enter into and rise from meditative equipoise on cessation in the short instant of a complete action. Also in Gyelwa Gendun Drub's commentary, *Mirror of the Clarification of*

the Thought (translated by Martin Willson)it says: "Abiding with concentrated mind on 'Become Manifest,' he comes in sight of the perfect buddhas' dharmas, and seeing the reality of dependent-arising, by dwelling in wisdom, he achieves cessation." 'Cessation' here refers to the uncommon absorption of cessation which is attained by a bodhisattva on the seventh ground.

The Prasangika Madhyamika school presents the absorption of cessation differently from the lower schools. For the Prasangika Madhyamika school, a true cessation is an emptiness and an ultimate truth. A true cessation is the reality of the mind free from stains. This is called the cessation that is the perfect end (translated by Hopkins as "limit of reality"). According to the Prasangika Madhyamikas, a bodhisattva is able to absorb into meditative equipoise on the reality of an object from the first ground (common absorption of cessation), but not until the seventh ground does he attain an *uncommon* absorption of cessation in which he is able to enter into and rise from meditative equipoise on cessation – the perfect end – even within the short instant of a complete action. A common absorption of cessation exists from the first through the tenth ground; an uncommon absorption of cessation exists from the seventh ground through the tenth ground.

The absorption of cessation can also be posited as common and uncommon as follows: that explained by the lower schools is the common and that explained by the Prasangika Madhyamikas is the uncommon. For the lower schools an absorption of cessation is a non-associated compositional factor that is the mere stopping of coarse feelings and discriminations, whereas it is not so for the Prasangika Madhyamikas.

Thursday afternoon, February 3, 2000

When a bodhisattva reaches the seventh ground, he outshines hearer and solitary realizer foe destroyers not only by the strength of his lineage but also by the strength of his mind, or intelligence. An illustration of this is the analogy of a prince who, at the time of his birth, outshines the ministers by the strength of his lineage and then later on also outshines them by the strength of his mind.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> > *On the Gone Afar he surpasses them with his intelligence.* [1.8d]
>
> When a bodhisattva arrives at the seventh ground, the Gone Afar, he outshines hearers and solitary realizers not only by way of his conventional mind of enlightenment but also through the power of his intelligence – his ultimate mind generation.
>
> The *Sutra on the Ten Grounds* says, 'O conqueror children, it is like this: For example, merely through being born in a royal lineage, a prince having the royal name outshines all the groups of ministers because of the king's magnificence but not by the force of his own mind. When he matures, his power of intelligence is generated, and he greatly surpasses all the ministers' activities. In the same way, O conqueror children, as soon as they generate an [ultimate] mind of enlightenment, bodhisattvas outshine all hearers and solitary realizers by the greatness of their special thought but not by the power of their intelligence. However, a bodhisattva on the seventh ground greatly surpasses all the activities of hearers and solitary realizers through abiding in the greatness that is knowledge of his own sphere.'
>
> 'As soon as they generate an [ultimate] mind of enlightenment' refers to the time of [attaining] the first ground. This is the mind generation of special pure thought.
>
> A bodhisattva outshines hearers and solitary realizers through the generation of his power of intelligence only on the seventh ground, the Gone Afar, and above. On the sixth ground and below he does not outshine them through his power of intelligence.

In the *Sutra on the Ten Grounds,* it says: "As soon as they generate an [ultimate] mind of enlightenment' refers to the time of [attaining] the first ground. This is the mind generation of special

pure thought." The mind generation of special pure thought is a conventional mind generation. When a bodhisattva attains the mind generation of special pure thought, he outshines the hearer and solitary realizer foe destroyers by the strength of his lineage. Then, when he attains the seventh ground he outshines them by the strength of his intelligence. The Tibetan word (*blo*) translated as "intelligence" actually means "awareness" or "mind." Therefore, the seventh ground bodhisattva outshines the hearer and solitary realizers foe destroyers by the power of his mind.

In the sixth chapter of the *Supplement* (v. 6.1), it says: "Abiding in the mind equipoised on the approach, he approaches the features of complete buddhahood and sees the thusness of this arising in dependence – he will attain cessation through abiding in wisdom." The power of mind arises through abiding in the wisdom which is the surpassing perfection of wisdom achieved on the sixth ground.

Among the three higher trainings, the first is the higher training of ethics. The bodhisattva achieves the surpassing perfection of ethics on the second ground. The second higher training is the higher training of the mind. The bodhisattva attains this through the surpassing perfection of tolerance, which is achieved on the third ground. On the fourth, fifth, and sixth grounds the bodhisattva develops the perfection of wisdom.

Wisdom is divided into three:

(1) wisdom skilled in the coarse and subtle thirty-seven harmonies with enlightenment,
(2) wisdom skilled in the coarse and subtle four noble truths, and
(3) wisdom skilled in coarse and subtle dependent-arising in the forward and reverse orders.

These wisdoms are fully developed respectively on the fourth, fifth, and sixth grounds.

"Sees the thusness of this arising in dependence" (v.6.1) means that the bodhisattva attains the wisdom skilled in coarse and subtle dependent-arising in the forward and reverse orders on the sixth ground. Thus, on the sixth ground there is the surpassing perfection of wisdom.

On the seventh ground, one cultivates the surpassing perfection of method; on the eighth, the surpassing perfection of prayer; on the ninth, the surpassing perfection of power; and on the tenth, the surpassing perfection of exalted wisdom. This is an ancillary explanation of the three higher trainings.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's condensed commentary on this shows that 'surpassing all the activities of hearers and solitary realizers' means surpassing them through intelligence. [The sutra] explains 'the power of intelligence' as 'abiding in the greatness that is knowledge of his own sphere'. This is the greatness of knowing cessation, the limit of reality, the sphere of a bodhisattva.

This corresponds with Chandrakirti's commentary:

> One should know "therefore, indeed only from the Gone Afar (the seventh ground) onwards does a bodhisattva also outshine the hearers and solitary realizers due to the generation of the strength of his own intelligence, not on the lower grounds."

In the phrase in *Illumination* "This is the greatness of knowing cessation, the limit of reality, the sphere of a bodhisattva," "limit of reality" refers to the perfect end.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> With regard to the meaning of this:
> 1. Some say that although there is no difference between the wisdom entities of the seventh and the sixth grounds and below, the wisdoms of the earlier grounds are incapable of abandoning obstructions to omniscience, whereas the wisdom of the seventh ground has this capacity.

> Thus, the latter can outshine hearers and solitary realizers from the viewpoint of intelligence and the former cannot.
> 2. Others explain that on the seventh ground and above a bodhisattva is capable of leaping over [certain levels of] meditative stabilization.
> 3. Others say that a seventh ground bodhisattva outshines hearers and solitary realizers through intelligence because the wisdom of the seventh ground approaches the irreversible eighth ground.
>
> The first of these three interpretations is not correct. The [Prasangika] system asserts that all conceptions that persons truly exist are instances of afflicted ignorance, and to abandon these conceptions in such a way that they will not be produced again, it is necessary to extinguish their seeds. Since this abandonment is common to hearer and solitary realizer foe destroyers, abandoning the seeds of the conception of true existence is not the same as abandoning obstructions to omniscience.
>
> Obstructions in the form of predisposing latencies – to be distinguished from seeds of the conception of true existence – are posited by the Prasangika system as the obstructions to omniscience. These are not abandoned until one attains the eighth ground.

1. The first person says that a bodhisattva on the seventh ground has the ability to overcome the knowledge obstructions, whereas those on the lower grounds do not. For this reason, the seventh ground bodhisattva outshines hearer and solitary realizer foe destroyers through the power of mind (intelligence).
2. The second person says that the seventh ground bodhisattva outshines hearer and solitary realizer foe destroyers through the power of mind (p intelligence) because he is able to leap over meditative stabilizations, whereas lower bodhisattvas are not able to do this.
3. The third person says that the seventh ground bodhisattva outshines hearer and solitary realizer foe destroyers through the power of mind (intelligence) because he is approaching the attainment of the irreversible eighth ground.

According to the Prasangika Madhyamikas, the seventh ground bodhisattva does not have the ability to overcome the knowledge obstructions because, until he has finished abandoning the afflictive obstructions, he does not begin to abandon the knowledge obstructions. The conception of true existence is not a knowledge obstruction but an afflictive obstruction.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Therefore, the [Svatantrika] presentation which posits conceptions of true existence as obstructions to omniscience is not asserted by the Prasangika system. The Svatantrikas also divide obstructions to omniscience into nine segments – small, middling, and great [with small, middling, and great of each of these three]. These are in turn abandoned by nine paths of meditation, the second ground and so forth [according to Svatantrika but not Prasangika]. I will elaborate on this later.

The Svatantrika Madhyamikas say that conceptions of true existence are knowledge obstructions, which are divided into nine. This is not accepted by the Prasangika Madhyamikas. If the seeds of the conceptions of true existence are not knowledge obstructions, what is posited as a knowledge obstruction? The Prasangika Madhyamikas posit the factor of mistaken dualistic appearance as a knowledge obstruction. Some of them say that the appearance of true existence is a knowledge obstruction. Lama Tsongkhapa will elaborate on this topic later.

According to the Svatantrika Madhyamika school, the conception of true existence is posited as a knowledge obstruction. This is divided into nine, the first of which is divided into two, whereby there are ten types of conceptions of true existence corresponding to the ten grounds.

Q: Is the appearance of true existence abandoned on the tenth ground?
A: The tenth ground is composed of a path of release, an exalted wisdom of subsequent attainment, and an uninterrupted path. During subsequent attainment, the bodhisattva has the appearance of true existence. At the last moment of the tenth ground, the uninterrupted path that is the end of the continuum of the sentient being, there is no appearance of true existence. One can say that on this uninterrupted path the appearance of true existence has ceased, but only on the buddha ground is it actually *abandoned*.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The second position, that a bodhisattva gains the ability to leap over certain levels of meditative stabilization on the seventh ground, is also incorrect. 'Leaping over' signifies a disordering of stages, and there is no source showing that such a leap-over does not occur in meditative stabilization on the sixth ground and below but does on the seventh.

According to the *Ornament for Clear Realization,* the ability to leap over certain levels of meditative stabilization is present from the first ground. This is also accepted by the Prasangika Madhyamika school and, therefore, saying that this ability does not exist on the lower grounds is incorrect.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The third position, that a bodhisattva outshines hearers and solitary realizers through intelligence because the wisdom of the seventh ground approaches the irreversible eighth ground, is also incorrect. This still does not eliminate the doubt as to the reason for saying that although bodhisattvas cannot outshine hearers and solitary realizers on the sixth ground and below through their realization, they can outshine them on the seventh ground. Therefore, this is like making the disputed subject itself into the reason.

This person says that the exalted wisdom of the seventh ground, as the subject, outshines hearer and solitary realizer foe destroyers because the exalted wisdom of the seventh ground approaches the irreversible eighth ground. This syllogism does not clarify, but is a case of the subject being used as a reason, or sign. It is like the following syllogism: sound as the subject, is impermanent because it is sound. Here, too, the subject is used as a reason. Likewise, in the previous syllogism the sign is "because the exalted wisdom of the seventh ground approaches the irreversible eighth ground."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In his commentary [Jaya-ananda] explains that on the seventh ground a bodhisattva thinks, 'I will engage in the paths,' and therefore exerts himself, but because the signs of doctrine, such as sutras, are not manifest [in the sense of his not needing to use words of doctrine], he has attained a path of signlessness. [Jaya-ananda] explains that since sixth grounders and below and hearers and solitary realizers do not have this signlessness, bodhisattvas outshine them in intelligence. However, the feature of outshining them here appears to be posited in terms of cognition of suchness.

Jayananda says that the bodhisattva on the seventh ground outshines hearer and solitary realizer foe destroyers because of having attained signlessness. However, the reason should be that he outshines them because of his realization of suchness or emptiness.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> My excellent lamas have said that this feature should be posited from the viewpoint of entering into and arising from suchness – the limit of reality. It will be explained in connection with the seventh ground that from there a bodhisattva is able to enter into and rise from cessation – the limit of reality – in each mental instant whereas those on the lower grounds are unable to do so. This explanation is good because while practicing with belief [on the paths of accumulation and preparation] it is not difficult in quick succession to enter into and rise from the meditative stabilization on emptiness in which the mind and suchness have not become of one taste. However, when one is a superior – when the mind and suchness have become like water placed in water – this type of entering and rising is extremely difficult to accomplish.

Lama Tsongkhapa says that in accordance with what is said by his excellent lamas, seventh ground bodhisattvas outshine hearer and solitary realizer foe destroyers because they are able to enter into and rise from cessation, the perfect end, in the shortest moment of a complete action, whereas bodhisattvas on the lower grounds are not able to do so. Why are bodhisattvas on the sixth ground and below not able to do so? Bodhisattvas on the sixth ground and below do not have the ability to enter into the absorption of cessation in the shortest moment of a complete action because their minds have become one taste with emptiness, like water poured into water, whereby it is not easy enter into and rise from meditative stabilization on emptiness quickly. On the other hand, on the paths of accumulation and preparation, the mind has not become of one taste with the object, emptiness, like water poured into water, and Therefore, [on those paths] it is easy enter into and rise from meditative stabilization on emptiness quickly. "The ground of practicing belief" refers to the paths of accumulation and preparation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: When the features of the *first* ground are being explained, it is inappropriate to say that on the *seventh* ground bodhisattvas outshine hearers and solitary realizers through their intelligence.
>
> ANSWER: The fault of confusing subject matter is not incurred because Chandrakirti's explanation of the first ground and so forth is based on the *Sutra on the Ten Grounds*, which clearly discriminates between a first grounder's outshining hearers and solitary realizers through his conventional mind generation but not through an ultimate mind generation. In order to clear away doubts on what ground a bodhisattva outshines them through his realization, the sutra says that it is on the seventh ground. Since Chandrakirti states this explanation here in his *Supplement*, it should be known that [his procedure] is very appropriate.

Here, someone objects that in the context of discussing the first ground it is inappropriate to discuss the seventh ground. The response is that this discussion is appropriate because when it is said that on the first ground a bodhisattva outshines hearers and solitary realizers due to attaining the tathagata lineage, this discussion eliminates qualms regarding when this bodhisattva outshines them by way of their mind or intelligence.

This concludes a discussion of the features outshining others' continua. In short, bodhisattvas outshine hearers and solitary realizers in two ways:
(1) by the power of their lineage and
(2) by the power of their mind.

Wednesday morning, 23 February 2000

(MP correspondence course participants please note that there were no teachings from Friday, February 4 through Tuesday, February 22, 2000 due to the Tibetan new year study break and an Amitayus retreat)

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-2C The meaning established by these teachings

This section has three parts:

1 The teaching in the *Sutra on the Ten Grounds* that hearers and solitary realizers cognize the non-inherent existence of phenomena
2 Sources proving hearers' and solitary realizers' cognition of the non-inherent existence of phenomena
3 Dispelling objections to the teaching that hearers and solitary realizers cognize the non-inherent existence of phenomena

3B1C-2A1B-2C1 The teaching in the *Sutra on the Ten Grounds* that hearers and solitary realizers cognize the non-inherent existence of phenomena

This section has two parts:

A Clarification of the thought of the commentator, Chandrakirti
B This is also the system of Shantideva's *Engaging in the Bodhisattva Deeds*

Hearer and solitary realizer superiors and foe destroyers do have the realization of the non-inherent existence of phenomena. Therefore, because they have the same realization of the non-inherent existence of phenomena as do bodhisattvas on the sixth ground and below, these bodhisattvas do not outshine hearer and solitary realizer foe destroyers by way of the power of their intelligence.

Chandrakirti then sets out three lines of reasonings as to why hearers and solitary realizers also have the realization of the non-inherent existence, or selflessness, of phenomena.

3B1C-2A1B-2C1A Clarification of the thought of the commentator, Chandrakirti

Chandrakirti's autocommentary says:

> From this citation one can clearly ascertain that "hearers and solitary realizers also have the knowledge that all phenomena do not inherently exist." If it were not like that, because [they would be] separated from the thorough knowledge that things do not inherently exist, (1) like those separated from mundane attachment, they too would be outshone even by bodhisattvas who had generated the initial mind even through analysis by their own intelligence, (2) like the outsiders (non-Buddhists), they too would not abandon all subtle increasers which are activated in the three realms, and (3) because of erring as a result of referring to a self-entity of forms and so forth, they would not even realize the selflessness of persons because of referring to [a self entity of] the aggregates, the cause of imputing the self.

"From this citation" refers to the passages in the *Exalted Sutra on the Ten Grounds* which were cited above:

> O children of the Conqueror, it is like this: for example, a prince born in a royal lineage, bearing a royal name, outshines all the assembly of ministers by the magnificence of royalty through mere birth, not by analysis through the strength of his own intelligence. When he has

> matured, then he will greatly surpass all the activities of the ministers through generating the strength of his intelligence.
>
> O children of the Conqueror, similarly, as soon as a bodhisattva generates the mind, he too outshines all hearers and solitary realizers through the greatness of the special thought, not by analysis through the strength of his own intelligence. The bodhisattva who abides on the seventh bodhisattva ground greatly surpasses all activities of the hearers and solitary realizers through abiding in the greatness of knowing his own sphere.

These passages show that hearer and solitary realizer foe destroyers also have the realization of the non-inherent existence of phenomena. For this reason, bodhisattvas abiding on the sixth ground and below outshine hearer and solitary realizer foe destroyers merely by way of their lineage and not by way of their intelligence.

Chandrakirti sets out the first line of reasoning proving that hearer and solitary realizer foe destroyers also have the realization of the non-inherent existence of phenomena, saying: "If it were not like that, because [they would be] separated from the thorough knowledge that things do not inherently exist, (1) like those separated from mundane attachment, they too would be outshone even by bodhisattvas who had generated the initial mind even through analysis by their own intelligence." On the other hand, if hearer and solitary realizer foe destroyers did not have the wisdom realizing the non-inherent existence of phenomena, one could set out the following consequence: bodhisattvas abiding on the first ground, as the subject, it follows that they outshine hearer and solitary realizer foe destroyers by way of their intelligence because hearer and solitary realizer foe destroyers lack the realization of the non-inherent existence of phenomena.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The *Sutra on the Ten Grounds* explains that on the sixth ground and below bodhisattvas are unable to outshine hearers and solitary realizers by way of their realization. Through this passage one can clearly ascertain that there are also [some] hearers and solitary realizers who know that phenomena do not inherently exist.
>
> If hearers and solitary realizers did not have this wisdom, then even those bodhisattvas who generate the first ultimate mind [the first ground] would outshine them from the viewpoint of their realization. Hearers and solitary realizers would be like sages who depend on worldly paths, which have the aspect of [considering lower levels to be] gross and [higher levels to be] peaceful, and thereby become free from desire, with the exception of that for the level called 'Peak of Cyclic Existence'. This absurd similarity would follow from holding that hearers and solitary realizers lack the knowledge that phenomena do not inherently exist.

(1) The first of the three lines of reasonings proving that hearer and solitary realizer foe destroyers also realize the selflessness of phenomena is:
If hearer and solitary realizer foe destroyers did not possess the realization of the non-inherent existence of phenomena then first ground bodhisattvas would also outshine them by way of their intelligence, but they do not. If hearer and solitary realizer foe destroyers did not have the realization of the non-inherent existence of phenomena, they would be like those who are separated from attachment by means of a mundane path. A mundane path that separates from attachment is a path that views a lower level as coarse due to seeing its faults and a higher level as peaceful due to seeing its qualities. On the contrary, if a lower level were seen as having excellent qualities one would not be able to overcome attachment to it. Such a mundane path acts to separate one from attachment to a lower level, but only abandons this attachment temporarily and not forever. The realizations of hearer and solitary realizer foe destroyers are not like this path.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) then sets out the second line of reasoning saying:

> In that case, Chandrakirti says, hearers and solitary realizers – like the non-Buddhist Forders – would not have abandoned all afflictions related to the three realms as well as their seeds. This indicates that if one has not understood emptiness well and become familiar with it, one cannot remove the seeds of the afflictions. This is like the situation of those cultivating worldly paths, which have the aspect of grossness and peacefulness, [but are unable to remove the seeds of afflictions].

(2) The second of the three lines of reasonings proving that hearer and solitary realizer foe destroyers also realize the selflessness of phenomena is:
If hearer and solitary realizers did not familiarize well with the realization of emptiness they would be like the non-Buddhist Forders who cultivate a path that views a lower level as coarse and a higher level as peaceful. This line of reasoning set out in the form of a consequence is: hearer and solitary realizer foe destroyers, as the subject; it follows that they have not abandoned the afflictions of the three realms together with their seeds because they lack the wisdom realizing emptiness; therefore, they are like the non-Buddhist Forders who are temporally separated from attachment. Non-Buddhist Forders are posited as an example because although they are temporally separated from mundane attachment through to the level of Nothingness, they are unable to separate from the attachment of the Peak of Existence.

The second line of reasoning is set out by Chandrakirti as follows: "Like the outsiders (non-Buddhists), they too would not abandon all subtle increasers which are activated in the three realms." Subtle increasers are of ten types which are divided into two groups of five:

- five views and
- five non-views.

The <u>five non-views</u> are:
(1) attachment, (2) anger, (3) ignorance, (4) pride, and (5) doubt.
The <u>five views</u> are:
(1) the view of the transitory collection, (2) the view holding to an extreme, (3) the view holding a bad view as supreme, (4) the view holding bad ethics and modes of conduct as supreme, and (5) perverse view.

These were explained before in the *Ornament for Clear Realizations*. The objects of abandonment are mainly these ten subtle increasers. The word 'subtle increaser' has different etymologies, one of which is: the increase of contaminations due to observing a subtle observed object.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> If you lack cognition of suchness, you will conceive the aggregates, such as forms, to exist truly. Your mind will thereby err, and you will consequently not cognize a fully qualified selflessness of persons. This is because you will not have overcome belief in the referent object of a mind misapprehending true existence in the aggregates that are themselves the bases of designating a self, or person.
>
> Chandrakirti's statement of this indicates that if the referent object of the conception of true existence with regard to the aggregates – the bases of designation of a person – is not disbelieved, then the referent object of the conception of the true existence of the person – the phenomenon designated – will not be disbelieved. Because the person will not be cognized as lacking true existence, a fully qualified selflessness of the person will not be realized.

(3) The third of the three lines of reasonings proving that hearer and solitary realizer foe destroyers also realize the selflessness of phenomena is:

Hearer and solitary realizer foe destroyers, as the subject, it follows that they do not have a fully qualified realization of the selflessness of persons because they lack the realization of the non-inherent existence of phenomena (*or* because they superimpose a self on the aggregates, which are the basis of imputation). This implies that if one has not realized the selflessness of phenomena, one cannot have a fully qualified realization of the selflessness of persons. This is said here in relation to hearer and solitary realizer foe destroyers. One can ask: "If someone has not realized the selflessness of phenomena is he pervaded by not realizing the selflessness of persons?" If someone says that there is no pervasion, one says: "Is there not a person who first realizes the selflessness of persons and then later the selflessness of phenomena?" If someone answers that there is no such person, one says: "This contradicts Lama Tsongkhapa's *Middling Stages of the Path,* which says that due to the basis of attributes one first realizes the selflessness of persons and then later the selflessness of phenomena." This is set out by Jedzun Chogyi Gyeltshen in *General Meaning* (*dBu ma'i spyi don;* page 113), which quotes the special insight section of the *Small Stages of the Path*: "Although there is no difference in degrees of subtlety regarding the selflessness that is ascertained with respect to persons and that which is ascertained with respect to phenomena, due to the fact of the basis of attributes, it is easier to ascertain it with respect to persons and more difficult to ascertain it with respect to phenomena." In addition, this text says: "Regarding the order of the production of the two conceptions of a self, the conception of a self of phenomena produces the conception of a self of persons. However, when engaging in the realization of selflessness, one first generates the view of the selflessness of persons and then later necessarily generates the view realizing the selflessness of phenomena." One should think about why the selflessness of persons is realized before the selflessness of phenomena and so forth.

In regard to the third line of reasoning, Chandrakirti says: "Because of erring as a result of referring to a self-entity of forms and so forth, they would not even realize the selflessness of persons because of referring to [a self entity of] the aggregates, the cause of imputing the self."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> It is very difficult to understand the meaning of these statements, and it appears that those relying on this system and on Shantideva's texts have not explained them well. Therefore, in order to come to a final interpretation, let us examine a doubt raised about this and discover how it is dispelled.
>
> DOUBT: Valid cognition establishes the sixteen attributes of the four noble truths, such as impermanence, emptiness, and selflessness – with the latter two referring to a substantially existent or self-sufficient person's lack of being either the same as or a different entity from the mental and physical aggregates. One definitely can ascertain these with valid cognition, and when that happens, the main trainees of these paths will familiarize with them intensely. The reasoning proving yogic direct perception establishes that when this happens, the selflessness of the person will be directly cognized. Thus, it is established that a path of seeing, a consciousness cognizing the selflessness of the person, abandons the artificial afflictions. When this is established, a path of meditation that is a familiarization with the selflessness of the person, which has already been directly seen, is established. Since the innate afflictions are also abandoned through the path of meditation, an extinction of all the contaminations of the afflictions is established. Therefore, even though emptiness is not cognized, all the subtle increasers of contaminations with respect to the three realms, as well as their seeds, can be abandoned. This is because the abandonment by the paths of seeing and meditation as just explained is the manner by which a supramundane path achieves abandonment. Therefore, paths that are meditations on the sixteen attributes of the four noble truths – impermanence and so forth – are capable of removing all afflictions.

This doubt is an assertion made by the lower schools, which hold that the realization of the emptiness of persons as being self-sufficient substantially existent is the realization of the selflessness of persons. More precisely, they say that the realization of the selflessness of persons is a yogic direct perceiver

realizing the emptiness of the person as self-sufficient substantially existent. Since such a yogic direct perceiver is first a path of seeing and then a path of meditation, it abandons all afflictions. Therefore, according to them one abandons all afflictions by means of the realization of the selflessness of persons. The Prasangika Madhyamikas do not concord with this assertion. They say that the realization of the person as empty of self-sufficient substantial existence is not a fully qualified realization of the selflessness of persons. They say that due to the realization of the emptiness of the person being self-sufficient and substantially existent, there is a temporary stopping of afflictions. The Prasangika Madhyamikas hold that such a true cessation is the true cessation explained in the two *Knowledges* (Abhidharma texts), the *Treasury of Knowledge* (*Abhidharmakosha*) and *Compendium of Knowledge* (*Abhidharmasamucchaya*). They also hold that the foe destroyers who have such a true cessation are the foe destroyers explained by these texts.

Q: Are these true cessations or merely cessations?
A: The true cessations explained in the two Abhidharma texts are not fully qualified true cessations. Likewise, the foe destroyers explained in these two texts are not fully qualified foe destroyers. In other words, the lower Abhidharma text, the *Abhidharmakosha*, and the upper Abhidharma text, the *Abhidharmasamucchaya*, both set out true cessations and foe destroyers but the true cessations existing in the continua of hearer and solitary realizer foe destroyers as explained in these two texts are not fully qualified true cessations and, likewise, the foe destroyers explained in these texts are not fully qualified foe destroyers. This is because these two texts posit a foe destroyer who has become a foe destroyer through realizing and familiarizing with the emptiness of persons of self-sufficient substantial existence.

In short, the Svatantrika Madhyamikas and the other lower schools assert that one can become a foe destroyer by realizing the emptiness of persons of self-sufficient substantial existence and without realizing the selflessness of phenomena. The lower schools, including the Svatantrika Madhyamikas, say that if it is a person definite in the solitary realizer lineage it is pervaded by not realizing the selflessness of phenomena. Thus, according to the Svatantrika Madhyamika school and below, a person can become a foe destroyer by merely realizing the selflessness of persons.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> ANSWER: I will explain. We do not deny that even though one has not found the view of suchness, one can ascertain the sixteen attributes, impermanence and so forth, with valid cognition. We also do not deny that the trainees of this path meditate on the meaning of the sixteen with great effort, or that through having done so they directly see the coarse selflessness of the person, or that familiarization with what has been seen is impossible.
>
> QUESTION: Then what do you say?
>
> ANSWER: Such a path is not a fully qualified cognition of the personal selflessness. Therefore, we do not assert that such paths are paths of seeing or supramundane paths of meditation. These paths cannot abandon the seeds to be abandoned either through the path of seeing or through the path of meditation.
>
> Explanations that these are paths of seeing and of meditation, that these abandon the artificial and innate afflictions as well as their seeds, and that at their end one attains the state of a foe destroyer are systems that require interpretation. For instance, the Chittamatrins establish through valid cognition a refutation of partless particles, an external world composed of them, and a subject that is a different entity from such an external world. When the trainees who are to be tamed by this teaching familiarize with it over a long time, they see it directly and then engage in further familiarization with what they have seen. However, the Madhyamikas explain that when progress on the ten grounds and on the latter three paths [seeing, meditation, and no more learning] is presented in terms of such teaching, the presentation must be interpreted.

The answer to the above doubt is that although [such a path is not a] realization of suchness, it is a realization of the sixteen attributes by means of a valid cognizer. "We do not deny that even though one has not found the view of suchness, one can ascertain the sixteen attributes" indicates that through establishing the sixteen attributes one attains a realization of the coarse selflessness of persons and then familiarizes with it. However, the Prasangika Madhyamikas say that the realization of the coarse selflessness of persons is not a fully qualified realization of the selflessness of persons. The realization of the coarse selflessness of persons – the realization of the emptiness of persons of self-sufficient substantial existence – is not a fully qualified realization of the selflessness of persons. In order for it to be a fully qualified realization of the selflessness of persons, it must realize the non-inherent existence of a self of persons.

The Prasangika Madhyamikas differentiate the selflessness of persons and the selflessness of phenomena in terms of the basis of emptiness and not the object of negation. The selflessness of persons has the person as the basis of emptiness, whereas the selflessness of phenomena has as its basis of emptiness that which is other than the person, i.e., the aggregates. For the Prasangika Madhyamika school there is a subtle self of persons and a subtle self of phenomena. When inherent existence is negated on the basis of the person the subtle selflessness of persons is established, whereas when it is negated on the basis of phenomena the subtle selflessness of phenomena is established.

For the Svatantrika Madhyamika school, the two selflessnesses are instead differentiated not from the point of view of the basis of emptiness but from the point of view of the object of negation. Thus, they say that the object of negation that is a self of persons is a self-sufficient substantially existent self of persons, and that when this is negated the selflessness of persons is established. On the other hand, in the case of a self of phenomena the object of negation is the true existence of phenomena, from forms through the exalted knower of all aspects. [When this is negated the selflessness of phenomena is established.] Therefore, for the Svatantrika Madhyamikas the two selflessnesses are established in terms of two different objects of negation: self-sufficient substantial existence and true existence.

Wednesday afternoon, 23 February 2000

There is a phrase in one text that says that with the realization of the coarse selflessness of persons one can cultivate the path of seeing and path of meditation, whereby one will attain the state of a foe destroyer. However, this statement is not literally acceptable but is to be interpreted. Buddha said this to guide those sentient beings who are inclined toward the teachings on the emptiness of persons of self-sufficient substantial existence and thereby lead them through the path of seeing and the path of meditation to the path of no more learning, the state of foe destroyer. In other words, Buddha said this in order to guide these particular sentient beings to the path of no more learning. In fact, Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) said before: "For instance, the Chittamatrins establish through valid cognition a refutation of partless particles, an external world composed of them, and a subject that is a different entity from such an external world. When the trainees who are to be tamed by this teaching familiarize with it over a long time, they see it directly and then engage in further familiarization with what they have seen." The statement that by meditating on the emptiness of apprehendeds and apprehenders as different substances one cultivates the path of seeing, path of meditation, and path of no more learning is to be interpreted. The Chittamatrins assert that there are no external objects, but that if they did exist there would be agglomerations of partless particles, but this is not the case. The Chittamatrins therefore say that all existents arise due to the activation of latencies on the consciousness.

The Prasangika Madhyamika school, on the other hand, says that there do exist coarse external objects composed of particles. Because external objects do exist, there are valid cognizers

apprehending them. Are the external object and the valid cognizer apprehending it one substance? The Prasangika Madhyamikas reply that external objects are different substances from the consciousness apprehending them. Are the object and subject empty of being different substances? The Prasangika Madhyamika school replies that since they exist as different substances, they are not empty of being different substances. Therefore, the statement that by cultivating the realization of forms and the valid cognizer apprehending them as different substances on the path of seeing and path of meditation one achieves the path of no more learning is interpretable.

According to the Prasangika Madhyamika school, although there are no partless particles there are *directionally* partless particles. This is because the most subtle particle is asserted to be without directions. This is one way in which the Prasangika Madhyamika school's assertion regarding partless particles is interpreted by some scholars.

The Chittamatrins refute the lower schools assertions regarding the existence of partless particles, saying that particles do have parts because they have directions. For example, a partless particle is posited as existing on the table in front of oneself and around it are posited other particles. In this case there is one part of an outer particle that touches the eastern part of the central particle but does not touch the western part. Likewise, there is one part of an outer particle that touches the western part of the central particle but does not touch the eastern part. It is the same for particles touching the northern and southern parts of the central particle. From this example, one can understand that the central particle has these four parts in the four directions, as well as upper and lower parts. This is how the Chittamatrins refute the existence of partless particles. This is set out in the text *Twenty Stanzas on Refuting Partless Particles* by Dignaga.

In short, for the Chittamatra school, the Svatantrika Madhyamika school, and the Prasangika Madhyamika school there do not exist partless particles. In fact, they assert that if it is an established base it is pervaded by having parts.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Even if one meditates on the sixteen aspects of the four noble truths, such as impermanence, only cognition of the [subtle] personal selflessness as explained above is asserted as a path freeing one from the afflictions.
>
> Asanga's *Compendium of Knowledge* explains that afflictions are abandoned through mental application of selflessness and that the remaining attributes are means of training the mind. Dharmakirti's *Commentary on (Dignaga's) 'Compendium on Valid Cognition' (Pramanavarttika)* explains it similarly:
>
> > One is liberated through the view of emptiness
> > The other meditations are for the sake of that.
>
> Some Indians [Shantirakshita, Kamalashila, Jetari, Prajnakaragupta, and so forth] mistook the term 'the view of emptiness' and asserted it to be a viewing consciousness cognizing suchness, but this is not so. It refers to the [coarse] view of emptiness of a substantially existent, or self-sufficient, person. Although such a path cannot abandon the seeds of the afflictions, it can temporarily stop manifest afflictions.
>
> Our assertion must accord with the statement in the *Knowledges* [the Hinayana and Mahayana *Abhidharmas*] that meditation having the aspect of grossness and peacefulness, which is common to Buddhists and non-Buddhists, abandons the manifest afflictions of Nothingness [the next to highest level within cyclic existence] and below. Therefore, it goes without saying that a path consciousness realizing the non-substantial existence of the person can temporarily abandon manifest afflictions.
>
> The afflictions referred to in the phrase 'abandon manifest afflictions' are those whose objects of observation and subjective aspects are explained in the Hinayana and Mahayana *Knowledges* [and not those involving the conception of inherent existence]. These paths cannot [even temporarily] abandon the manifest conception of true existence which the Prasangikas explain as an afflicted

> ignorance. These paths also cannot abandon view and non-view afflictions that accord with the conception of true existence and differ from the mode of explanation in the Hinayana and Mahayana *Knowledges*.
>
> Furthermore, although meditation having the aspect of grossness and peacefulness cannot abandon the manifest afflictions included within the level of the Peak of Cyclic Existence as explained in the *Knowledges*, these can be abandoned through familiarization with the paths cognizing the coarse selflessness of the person explained above.
>
> These points clarify Chandrakirti's statements in his commentary that paths which are said to be antidotes abandoning the afflictions but which lack a cognition of suchness are like paths having the aspect of grossness and peacefulness and incapable of abandoning all afflictions, as in the case of the non-Buddhists.

The selflessness set forth in the two Abhidharma texts is the emptiness of persons of self-sufficient substantial existence. When these texts say that one is liberated through the view of emptiness, it refers to the emptiness of persons of self-sufficient substantial existence, by means of meditating on which one attains liberation. In other words, emptiness in this context is not a fully qualified emptiness, this being the emptiness of inherent existence.

The path, or consciousness, realizing the emptiness of persons of self-sufficient substantial existence is able to abandon manifest afflictions because even the mundane path can abandon the manifest afflictions through Nothingness. Although it can abandon manifest afflictions, it cannot abandon the afflictions that are conceptions of true existence. Lama Tsongkhapa says: "The afflictions referred to in the phrase 'abandon manifest afflictions' are those whose objects of observation and subjective aspects are explained in the Hinayana and Mahayana *Knowledges*." A path realizing the emptiness of persons of self-sufficient substantial existence is not able to abandon the five manifest views and five manifest non-views that accord with the conception of true existence.

In short, for the Prasangika Madhyamika school the conception of true existence is an afflictive obstruction, whereas for the lower schools it is not an afflictive obstruction but a knowledge obstruction. This is one difference between the assertions of the Svatantrika Madhyamika school and those of the Prasangika Madhyamika school.

Q: What is a correct consequence for each of the three lines of reasonings proving that hearers and solitary realizers also realize the selflessness of phenomena?
A: These are set forth in *General Meaning* by Jedzun Chogyi Gyeltshen (page 112):
(1) Just as first ground bodhisattvas outshine those free of mundane attachment by way of intelligence, likewise it follows that they are able to outshine hearers and solitary realizer foe destroyers by way of intelligence because first ground bodhisattvas directly realize the selflessness of phenomena [while] hearer and solitary realizer foe destroyers do not directly realize the selflessness of phenomena. Isn't this your reason? If you accept this, it would contradict what is stated in the *Exalted Sutra on the Ten Grounds*: "Similarly, as soon as the bodhisattvas generate the [ultimate] mind, they outshine all hearers and solitary realizers by the greatness of their special thought, but not by the power of their intelligence."
(2) Hearer and solitary realizer foe destroyers as the subject, they do not abandon the subtle increasers of the three realms because they lack the wisdom that directly realizes the selflessness of phenomena like, for example, the non-Buddhist sages.
(3) Hearer and solitary realizer foe destroyers as the subject, it follows that they are not people who realize the selflessness of persons by way of a valid cognizer because they superimpose true existence on the aggregates – which are the basis of imputation of the person – due to not realizing the selflessness of the aggregates, which are the basis of imputation of the person. This follows because they have not realized the selflessness of phenomena. Aren't these in turn your reasons? If you assert the root [reason that hearers and solitary realizers do not realize the selflessness of the aggregates:

hearers and solitary realizer foe destroyers] as the subject, they do not have a fully qualified realization of the selfless of persons because of your assertions.

Q: But to each of these consequences cannot the opponent say 'no pervasion'?
A: If he says no pervasion then he has to explain why there is no pervasion, which is rather complicated. The third of these consequences is the most complex. To attain certainty with regard to this consequence see *General Meaning* (page 112-3): "The meaning of the third line of reasoning needs to be explained. It is said in [Je Tsongkhapa's] *Treatise Discriminating What is to be Interpreted and the Definitive* that, 'if one holds to the tenet of a self of phenomena the realization of the selflessness of persons is not possible.' Also, it says in his commentary to the *Supplement* that, 'if one does not give up conceiving a self of phenomena, one will not realize the selflessness of persons. Therefore, it is necessary that even hearers and solitary realizers realize both selflessnesses.' This peerless insight was rarely seen by others earlier. Also, the meaning of the [passage] from [Chandrakirti's] *Autocommentary*, 'because of erring in observing a self-entity of form and so forth,' is just this."

In short, the *Treatise Discriminating What is to be Interpreted and the Definitive* says that if one conceives of a self of phenomena, one cannot realize the selflessness of persons because as long as one conceives phenomena to exist truly or to have a self, then one will also conceive of persons to be truly existent and to have a self. According to the Prasangika Madhyamikas, in order to realize the selflessness of persons one must realize that the person does not exist truly or does not exist inherently. If, due to tenets, one conceives a self of phenomena then one will also conceive the person based on the aggregates to exist truly, whereby one cannot realize the selflessness of persons.

The four noble truths can be explained in terms of both coarse and subtle attributes. However, when they are explained in the two *Knowledges,* they are explained in terms of sixteen coarse attributes. The four truths are themselves divided into the coarse and subtle, whereby there are coarse and subtle true sufferings, coarse and subtle true origins, and so forth. Similarly, their sixteen attributes are divided into coarse and subtle. However, some people say that among the sixteen attributes the first, impermanence, does not have coarse and subtle aspects whereas the remaining fifteen do. This is because impermanence is explained in the same way by the higher and lower schools. Just as the lower schools define impermanence as 'momentariness,' so do the higher schools; for this reason impermanence is not divided into coarse and subtle. One such scholar who asserts this is Jedzun Chogyi Gyeltshen.

However, another scholar, Kunkyen Jamyang Shepa, does not agree with this assertion and instead says that impermanence can also be divided into coarse and subtle just as can the remaining fifteen attributes. He says that the four truths themselves are divided into coarse and subtle, meaning that true sufferings and so forth are both coarse and subtle. Jedzun Chogyi Gyeltshen and Kunkyen Jamyang Shepa posit the coarse and subtle four noble truths in the same way. For example, Kunkyen Jamyang Shepa posits coarse true sufferings as the contaminated aggregates produced by the cause that is the conception of a self-sufficient substantially existent person. He posits subtle true sufferings as the contaminated appropriated aggregates caused by the conception of a naturally existent person. Due to coarse and subtle causes, there are coarse and subtle results. These two divisions of true sufferings are posited in terms of it being easier to realize the contaminated aggregates produced by the cause that is the conception of a self-sufficient substantially existent person than it is to realize the contaminated appropriated aggregates caused by the conception of a naturally existent person. In this way, Kunkyen Jamyang Shepa sets out the definitions of each of the subtle four noble truths.

Kunkyen Jamyang Shepa also sets out reasons for there being both coarse and subtle impermanences saying that the impermanence existing upon the aggregates that is produced by the conception of a self-sufficient substantially existent person is coarse, whereas the impermanence

existing upon the aggregates which is produced by the conception of a naturally existent person is subtle.

Jedzunpa does not agree with this assertion but says that when one realizes the impermanence of the aggregates that is produced by the conception of a self-sufficient substantially existent person, one realizes that the aggregates are momentary and, likewise, when one realizes the impermanence of the aggregates that is produced by the conception of a naturally existent person, one realizes that the aggregates are momentary. Therefore, impermanence in both cases is momentariness and there is no difference in subtle and coarse. However, the remaining fifteen attributes can be divided into coarse and subtle. (See the translation of *General Meaning,* page 131, in review class handout, Feb. 24, 2000.)

When Lama Tsongkhapa gave a commentary on the *Supplement to the 'Middle Way,'* among his listeners there were Kunrig Gyeltshen Sangpo and Khedrub Je. Kunrig Gyeltshen Sangpo heard the commentary in accordance with the Chittamatra school and later on composed a commentary on it, explaining the views of the Chittamatrins. Later, Khedrub Je scolded him, saying that Lama Tsongkhapa had explained it in accordance with the view of the Middle Way school. Kunrig Gyeltshen Sangpo then wrote some pages saying that Lama Tsongkhapa had gone to a pure land leaving him alone, belittled by others. In short, listeners hear the teachings in accordance with the latencies on their mental continua.

Thursday morning, 24 February 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A1B-2C1B This is also the system of Shantideva's *Engaging in the Bodhisattva Deeds*
>
> The great conqueror child Shantideva also asserts this. His *Engaging in the Bodhisattva Deeds* (IX. 41ab) says [citing an objector's opinion]:
>
> > One is liberated through seeing the truths,
> > What then is the use of seeing emptiness?
>
> Someone asks, 'Since one is liberated from the afflictions through the paths perceiving the sixteen attributes of the four noble truths, impermanence and so forth, one does not need to perceive the emptiness of inherent existence in order to extinguish the afflictions.' In answer to this, Shantideva says (IX. 41cd):
>
> > Scripture says that without this path
> > There can be no enlightenment.
>
> It is said in scripture that without the path perceiving the emptiness of inherent existence one cannot attain any of the three enlightenments [of a hearer, solitary realizer, or buddha]. With respect to how this is taught in scripture, Prajnakaramati's great commentary on *Engaging in the Bodhisattva Deeds* quotes a mother sutra (*Perfection of Wisdom Sutra*) which explains that one who discriminates true existence is not liberated and that all [levels of the path] from stream enterer to solitary realizer – in the past, present, and future – are attained in dependence on just this perfection of wisdom.
>
> Thus, Shantideva is not just referring to the highest enlightenment.

The lower schools hold that by means of seeing the truths, i.e., the sixteen attributes of the four noble truths, one can achieve liberation and that it is therefore not necessary to realize the emptiness of inherent existence. In response to this, Shantideva says that without the realization of the emptiness of inherent existence one cannot attain enlightenment. To prove this, Prajnakaramati's commentary on *Engaging in the Bodhisattva Deeds* quotes the Perfection of Wisdom Sutras.

The Prasangika Madhyamikas say that one must realize the emptiness of inherent existence in order to attain enlightenment because without this one cannot abandon the conception of true existence through negating its referent object. In short, without abandoning the conception of true existence one cannot abandon afflictions, whereby one cannot achieve liberation. The word enlightenment is *byang chub* in Tibetan, *byang* meaning the purification of the obstructions and *chub* meaning the full realization of the meaning of reality. In the Perfection of Wisdom Sutras it says that "one who discriminates true existence is not liberated." This means that one who holds phenomena to exist truly cannot attain liberation. Only in dependence on the wisdom realizing non-inherent existence can one attain the path of stream enterer through the path of solitary realizer 'Enlightenment' in this context refers to the enlightenment of all three vehicles.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Shantideva, says (IX.45):
>
> > The root of the teaching is monkhood, but even
> > It is difficult, for those whose minds apprehend

> [Inherent existence] find it hard
> To pass away from suffering.
>
> [The roots of the teaching are monks who have abandoned the afflictions, that is, foe destroyers. Not to mention buddhahood, even such monkhood is difficult, that is, impossible, if the wisdom realizing emptiness is not cultivated, because the conception of inherent existence prevents nirvana. The teaching is both the verbal and the realized doctrine. Foe destroyers such as Kashyapa, Upali, Ananda, the sixteen elders (*sthavira*), and the foe destroyers present during the collections of the word are called the roots of the teaching because they undertook, sustained, and increased the doctrine.] These four lines teach that nirvana cannot be attained by means of a path having the observed object of a mind conceiving true existence.

The annotation by Jeffrey Hopkins already explains Shantideva's root text! When Shantideva says that "the root of the teaching is monkhood," the word 'monkhood' refers not to just any monks but to those particular foe destroyer monks who collected the Buddha's teachings together. Without the wisdom realizing non-true existence, the attainment of the state of foe destroyer is impossible because in order to attain this state one has to overcome the foes, which are the afflictions, by means of the wisdom realizing non-true existence. Here the foe is specifically the conception of true existence or the conception of a self of phenomena. In order to abandon the conception of a self of phenomena, one must realize the non-existence of the object conceived by the conception of true existence. Lama Tsongkhapa's *Illumination* (page 49) says: "nirvana cannot be attained by means of a path having the observed object of a mind conceiving true existence."

One on the learner path strives to abandon the observed object of the conception of true existence, without which liberation cannot be attained. In one text it says: "When the analysis is concluded, one attains enlightenment." This means that when the observed object of the conception of true existence is eliminated one attains enlightenment.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Then, Shantideva says (IX.46ab):
>
> > 'Through abandoning the afflictions there is liberation.'
> > Then, immediately thereafter [extinguishment] would occur.
>
> The first line states the opponent's position which is that through cultivating the paths of the sixteen attributes of the four truths, impermanence and so forth, the afflictions are abandoned and liberation is attained. At this point the debate concerns whether liberation from the afflictions can be attained by means of only the paths of the sixteen attributes of the four noble truths, impermanence and so forth. That this is the meaning here is also very clear from the earlier debate (IX.41):
>
> > One is liberated through seeing the truths,
> > What then is the use of seeing emptiness?
> > Scripture says that without this path
> > There can be no enlightenment.
>
> Therefore, the former passage should in no way be interpreted to mean, 'We assert that the paths of merely the sixteen attributes of the four noble truths, impermanence and so forth, can extinguish the afflictions, but they do not liberate one from all suffering.'
>
> The thought of Shantideva's refutation is: The opponent maintains that a liberation extinguishing the afflictions has been attained when the afflictions that are also posited by the two hearer schools are not manifestly active due to generating in the mental continuum the paths of the four truths. If so, then immediately after having temporarily abandoned only the manifest afflictions, a liberation extinguishing all contamination would be attained.

The debate here is that if the afflictions posited by the two lower schools are eliminated, whereby liberation is attained, it follows that a liberation that is the extinguishment of all contaminations is attained immediately after having temporarily abandoned the manifest afflictions. "The two hearer schools" are the two lower schools, the Vaibhashikas and Sautrantikas. If we ask: "Is it possible to attain enlightenment by means of the understanding of the sixteen attributes of the four noble truths alone?," our position is that liberation cannot be attained by meditating on the sixteen attributes as they are asserted by the lower schools. On the other hand, liberation can be attained by meditating on the sixteen attributes as they are asserted by the Prasangika Madhyamikas. This is because instead of meditating on the person as empty of self-sufficient substantial existence, one meditates on the person as empty of inherent existence, whereby one can indeed attain liberation. In short, one can attain liberation, or nirvana, and enlightenment by means of a path that meditates on the sixteen subtle attributes of the four noble truths.

Kunkyen Jamyang Shepa, in his *Great Middle Way* (page 337) in a section entitled "Our Own System," says: "The definition of a subtle true suffering is: suffering/misery or a contaminated appropriated aggregate produced by its cause, a subtle true origin such as the conception of true existence. In that it is such, the impermanence that is the disintegration in the shortest instant of a complete action and therefore misery, empty of true existence, and the lack of an independent self are posited as subtle attributes of true sufferings.

The definition of a subtle true origin is: the cause of its result, true sufferings, which is included in either a karma or an affliction that is uncommonly induced by the conception of true existence. Such karma and afflictions which act as cause, origin, condition, and strong production are the subtle attributes of true origins.

The definition of a subtle true cessation is: a reality (dharmata) that is the abandonment of either of the two obstructions by the force of a true path. In that it is such, the four features are the cessation of its respective object of abandonment, the pacification of that, auspicious highness, and a definite emergence that will not return from that. These are the subtle attributes of true cessation.

The definition of a subtle true path is: a superior's path possessing the four attributes, such as path. In order to illustrate such a true path, the four – path, suitability, achievement, and deliverance, which are related to the occasion of directly realizing non-true existence – are the subtle attributes of true paths."

On the other hand, the coarse attributes of the four noble truths are those that are usually posited. The definitions of the four noble truths according to the Svatantrika Madhyamika school are set out by Jedzun Chogyi Gyeltshen in *Ocean of Sport* as follows. The definition of a true suffering is: a truth of the thoroughly afflicted class distinguished by being qualified by the four attributes of impermanence, misery, empty, and selfless. The definition of a true origin is: a truth of the thoroughly afflicted class distinguished by being qualified by the four attributes of cause, origin, strong production, and condition. The definition of a true cessation is: a truth of the completely pure class distinguished by being qualified by the four attributes of cessation, pacification, auspicious highness, and definite emergence. The definition of a true path is: a truth of the completely pure class distinguished by being qualified by the four attributes of path, suitability, achievement, and deliverance. The Chittamatra school would give a similar definition of the four noble truths, whereas they are defined slightly differently by the Vaibhashikas and Sautrantikas.

Thus, the four noble truths are the essence of the Buddha's teachings and must be understood well. The four noble truths are likened to an onion in that one can peel away more and more layers.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Shantideva indicates that this cannot be asserted (IX.46cd):

> Though [manifest] afflictions are [temporarily] absent
> They are seen to have [rebirth by] the power of actions.
>
> Though the manifest afflictions are temporarily absent, [such persons] are seen to have the power impelling a future rebirth through the force of contaminated actions (*karma*).
>
> These passages should be explained in this way and not as other commentators and some Tibetans have done, saying, 'Though they had no afflictions Maudgalyayana, Angulimala, and so forth were seen to have suffered from the effects of contaminated actions accumulated earlier when they were common beings; therefore, they were not immediately liberated.' Shantideva is not referring to [karmic] power that generates suffering in this lifetime. His passage must be understood as indicating that since the power of impelling a future rebirth through the force of contaminated actions has not been overcome, there is no liberation.

In his *Engaging in the Bodhisattva Deeds,* Shantideva says: "Though [manifest] afflictions are [temporarily] absent they are seen to have [rebirth by] the power of actions." There are people who lack afflictions and yet experience the power of actions. Who are they? Think about it.

Through cultivating the path asserted by the two *Knowledges* afflictions are abandoned, yet such a person still has the karma that has the power to impel rebirth. This is because such a path is only able to overcome manifest afflictions temporarily, and therefore one still has the projecting karma to be reborn in cyclic existence and does not attain liberation. In one text it says: "One who sees the truth has no more projecting karma, one who is free from craving is not reborn." This means that one who sees the truth does not accumulate any more projecting karma.

Lama Tsongkhapa says: "These passages should be explained in this way and not as other commentators and some Tibetans have done, saying, 'Though they had no afflictions Maudgalyayana, Angulimala, and so forth were seen to have suffered from the effects of contaminated actions accumulated earlier when they were common beings; therefore, they were not immediately liberated.'" These commentators did not understand the meaning of these passages correctly.

Maudgalyayana and Angulimala are mentioned here as examples of people who, although they no longer had afflictions, were seen to suffer the effects of actions accumulated in the past. It is recounted that when Shariputra's mother died she took rebirth in a hell located below the northern land of Light Rays. Shariputra and Maudgalyayana went to visit her there by the force of magical emanation. There they also met some teachers of the non-Buddhist Forder school who had been reborn there. The non-Buddhist teachers asked Shariputra and Maudgalyayana to relay a message to their previous followers in the human realm to stop sacrificing animals, as every time an animal sacrifice took place they experienced intense suffering. Shariputra did not pass on this message upon returning to the human realm for fear of angering their followers, but Maudgalyayana did so. As a result he was severely beaten by their followers. Although Maudgalyayana possessed magical powers he did not escape from this beating. When he was asked by others as to why he had not used his magical powers at that time he explained that while he was being beaten he had not even been able to think to use these powers. When Buddha was asked why this was so, Buddha explained that when Maudgalyayana was a child he had hit his own mother with a stick and had not confessed this negative action. Due to this, Maudgalyayana had experienced the suffering of being beaten by the followers of the non-Buddhist teachers. This is why Maudgalyayana is mentioned by Lama Tsongkhapa in this context.

When Angulimala was a young child he had very sharp faculties and was sent by his family to a non-Buddhist teacher in order to learn the various sciences. This teacher was a layman with a family. When Angulimala grew up he became very handsome, whereupon his teacher's wife fell in love with him and urged him to have sexual intercourse with her. Angulimala refused saying that he could not do so as she was the wife of his teacher. The woman became so upset that she pulled out her hair, scratched her face, and so forth. When later the teacher asked her what had happened she said that Angulimala had done this to her when he tried to rape her. The teacher believed his wife and

called Angulimala to him. He told Angulimala that he had created a serious negativity, but Angulimala responded that he had not done what the wife accused him of. The teacher did not believe him and said that he had created a heavy negativity which needed to be purified by killing a thousand human beings. Angulimala was to return to him with a rosary made of a thousand thumbs to prove that this had been carried out. Angulimala set out to do as he had been instructed and succeeded in killing 999 people. Upon looking for the thousandth person, he saw his mother approaching him with food in her hands and thought to kill her but upon seeing a saffron-robed monk nearby he changed his mind and decided to kill the monk instead. Angulimala began to run toward the monk, who was the Buddha, but was unable to catch up to him. He called to the monk to stop whereupon the Buddha said to him, "I have been waiting for you all the time." Angulimala wondered what this response meant and thought deeply upon its meaning. As a consequence his intention to kill the monk diminished, whereupon he clearly saw Shakyamuni Buddha. The Buddha ordered him to accompany him to his monastery and to take ordination. Angulimala did so and began to meditate on the four noble truths whereby he eventually became a foe destroyer. However, even then when begging for alms people would escape from him, as he was known to have killed many people, and he would go hungry. He tried to explain to people that he had changed and become one who had entered the path to liberation but they found it difficult to believe him. In this way Angulimala experienced the result of killing those 999 people in that very life. It is also said that when Angulimala was alone in his room he experienced the sufferings of the hot hells, although he was a human being. Through experiencing these sufferings he was able to purify the heavy negative karma that he had created. This story shows the way in which karma functions. Therefore, it is very important for us to purify our negative karma. Shantideva, in his *Engaging in the Bodhisattva Deeds,* says that even those with strong attachment like Nanda and those with strong hatred like Angulimala can purify their karma and attain liberation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> For, Shantideva says (IX. 49abc):
>
> > Though an [afflicted] mind lacking [meditation on]
> > Emptiness is halted, it is again produced as in
> > The case of the absorption of non-discrimination.
>
> If one lacks cognition of emptiness, then even though afflicted minds are temporarily halted through cultivating other paths, they cannot be totally overcome. Manifest afflictions are again produced, and thereby wandering in cyclic existence under the power of contaminated actions is not eliminated. That afflicted minds can be halted temporarily means, as was explained before, that manifest afflictions can be temporarily abandoned.

The afflictions can be temporarily abandoned by cultivating a path lacking the wisdom realizing emptiness, but they will return. This fact is likened to the absorption without discrimination. The definition of an absorption without discrimination is: a non-associated compositional factor that is the stopping of coarse feelings and coarse discriminations on the basis of the form aggregate. The absorption without discrimination is cultivated in order to take rebirth in a division of the fourth form realm called Without Discrimination. One does so on the basis of understanding that due to feelings and discrimination, many problems arise such as attachment, hatred, and so forth.

When it is said that through the cultivation of a path lacking the wisdom realizing emptiness the afflictions are abandoned temporarily it refers to a consciousness realizing the emptiness of persons of self-sufficient substantial existence. Since the manifest afflictions will return, one will again

be reborn in cyclic existence. Therefore, because the afflictions have not been completely eradicated, wandering in cyclic existence under the power of contaminated actions is not eliminated.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In answer to the statement, 'They are seen to have [rebirth by] the power of actions,' the opponent says (IX.47ab):
>
> > The absence of attachment
> > To rebirth is definite.
>
> 'Since these paths extinguish attachment that causes rebirth, it is certain that they will not be reborn again through the power of actions.' In answer to this, Shantideva says (IX.47cd):
>
> > This attachment is not afflicted but
> > Why is it not like obscuration?
>
> The opponent asserts two types of ignorant obscuration – an afflicted and an unafflicted, one as explained in the *Knowledges*. Why not also assert afflicted and unafflicted attachment to accord with the explanation in the *Knowledges* [of those obscurations]? This indicates the existence of an 'unafflicted attachment' as it is commonly known in the two hearer schools and in the Mahayana, but in our own [uncommon] system this attachment is said to be afflicted [because it is induced by the conception of inherent existence which is asserted as the chief affliction].

Shantideva was quoted previously as saying: "Though [manifest] afflictions are [temporarily] absent they are seen to have [rebirth by] the power of actions." To this the opponent says: "The absence of attachment to rebirth is definite." This means that when craving (here translated as 'attachment'), the eighth link, is abandoned then the subsequent links including birth are also abandoned. The objection here is made by the lower schools. To them the Prasangika Madhyamikas say that since you lower schools assert two types of ignorance, an afflicted and an unafflicted, why do you not assert two types of craving (attachment), an afflicted and unafflicted?

Q: Do the Prasangika Madhyamikas not also assert afflicted and unafflicted ignorances?
A: The Prasangika Madhyamikas do not accept an unafflicted ignorance. For the Prasangika Madhyamikas ignorance is pervaded by being afflicted because the two types of conceptions of a self, the conception of a self of persons and the conception of a self of phenomena, are both ignorances. On the other hand, according to the lower schools only the conception of a self of persons is an affliction, whereas the conception of a self of phenomena is not. This discussion can be found in the commentary on *Engaging in the Bodhisattva Deeds*.

Lama Tsongkhapa says: "The opponent asserts two types of ignorant obscuration – an afflicted and an unafflicted, one as explained in the *Knowledges*." In this context, 'the opponent' is the lower schools in that they assert two types of ignorance, an afflicted and an unafflicted, as is explained in the *Knowledges*. Therefore, the Prasangika Madhyamikas say to them why do you not also accept an afflicted craving and an unafflicted craving?

Lama Tsongkhapa then says: "This indicates the existence of an 'unafflicted attachment' as it is commonly known in the two hearer schools and in the Mahayana, but in our own [uncommon] system this attachment is said to be afflicted." This statement means that for the Prasangika Madhyamika school craving (or attachment) is necessarily afflicted, whereas according to the other schools, including the Chittamatra and Svatantrika Madhyamika schools, there is also an unafflicted craving. In other words, according to the Prasangika Madhyamika school the craving that is a

conception of true existence is afflicted, whereas for the lowers schools this craving is not known to be afflicted because they do not assert a craving that is a conception of true existence.

It is said that just as when the body is destroyed the body sense power is destroyed, likewise when the ignorance of true existence is destroyed all other afflictions are destroyed. This will be discussed again in the context of the two truths.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Therefore, the meaning of this passage is: Although the manifest [coarse] attachment induced by the conception of the person as substantially existent or self-sufficient has been temporarily abandoned, why is there no [subtle] attachment induced by the [subtle] view of the transitory collection – the conception that the person inherently exists?
>
> One who has abandoned such [coarse] manifest afflictions has not even overcome the manifest [subtle] view of the transitory and manifest [subtle] attachment. If one has abandoned [only] the manifest afflictions of both these systems [Prasangika and non-Prasangika], the seeds of both [the coarse and subtle afflictions] have similarly not been abandoned, and if the manifest and non-manifest do not differ [as to whether or not their seeds have been abandoned], then it is senseless to differentiate attachments [by calling one afflicted and the other not because the afflictions have to be abandoned, both in manifest and seed form, for a person to become a foe destroyer].

In brief, there are two types of craving: one induced by the conception of persons as self-sufficient substantially existent and one induced by the conception of the view of the transitory collection, or the conception of a naturally existent person.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Shantideva gives the reason why one who has abandoned other manifest [coarse] afflictions through other paths has not overcome [subtle] attachment (IX.48ab):
>
> > Attachment occurs through the cause
> > Of feeling, and they have feeling.
>
> If one lacks the view cognizing suchness, then ignorance – the conception that feelings truly exist – is not in the least abandoned. Thus, when a feeling of pleasure is produced, why would attachment to not being separated from it not be generated? Also, when a feeling of suffering is produced, why would attachment wishing to separate from it not be generated? An effect is necessarily produced from causes with respect to which the favorable circumstances are complete and the unfavorable ones are absent.

Feelings give rise to afflictions, which then nourish the conception of true existence. Through cultivating other paths, one can temporarily abandon manifest afflictions, as is explained in the *Knowledges*. However, these other paths do not even slightly harm the conception of true existence of feelings. When the conception of true existence of feelings is present it acts to produce afflictions such as attachment. When there is a pleasant feeling, due to the condition of the conception of true existence of this feeling one develops attachment to not being separated from the pleasant object. Likewise, when there is an unpleasant feeling, due to the condition of the conception of true existence of this feeling one develops attachment to being separated from the unpleasant object. In this way, all favorable conditions are present for the arisal of attachment. In *Compendium of Valid Cognition* it says: "When a cause contains all of the conducive conditions and lacks all of the opposing conditions (for ripening], it is certain to give rise to its effect."

In his *Treasury of Knowledge,* Vasubandhu gives the reasons for classifying feelings and discriminations as separate aggregates as the fact that they are a basis for disputes and the cause of cyclic existence. He says that lay people dispute with others due to feelings, whereas the ordained

dispute with others due to discriminating different views. In short, because of feelings, afflictions arise, and due to afflictions, one circles in cyclic existence. When Vasubandhu says that both these mental factors are the cause of cyclic existence it means that due to liking pleasant feelings lay people produce attachment and due to disliking unpleasant feelings they produce anger, whereby they create actions and circle in cyclic existence. On the other hand, due to liking particular views and disliking others the ordained create actions whereby they circle in cyclic existence.

Shantideva says: " Attachment occurs through the cause of feeling, and they have feeling."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> According to our own system, the way to overcome attachment to feeling is expressed by Shantideva in his *Engaging in the Bodhisattva Deeds* (IX.99):
>
> > When [it is seen] that there is no
> > Feeler and feeling, why would
> > Attachment not be overcome
> > Through seeing this situation?
>
> If one cultivates the perception that feeler and feeling do not at all inherently exist, one will overcome attachment. Shantideva is also indicating, 'If one does not have such a path, how could all attachment be overcome? This is what Nagarjuna means when he says in his *Sixty Stanzas of Reasoning*:
>
> > How could the great poison of the afflictions
> > Not arise for one whose mind has a base?

If one sees that feeler and feelings do not exist inherently then is craving (attachment) not overcome? And, if one does not see this, how can craving (attachment) be overcome?

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Cha-ba (Rigs-pa'i-dbang-phyug Cha-pa-chos-kyi-seng-ge) and Tsek-wang-chuk-seng-gay (rTsegs-dbang-phyug-seng-ge) refute Shantideva's *Engaging in the Bodhisattva Deeds*: 'Shantideva's explanation that attachment exists because feeling does is not good because the presence of a cause cannot prove that of an effect.'

It is true that in general the existence of the cause does not establish the existence of the effect. However, Shantideva does not say this but rather says that when the causes are complete the effect will definitely arise

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [ANSWER:] Of the two positions, that hearers cognize the selflessness of phenomena and that they do not, the latter is well known in Tibet [even though it is wrong]. Being more accustomed to that system and not having trained decisively in the scriptures and reasonings of the former position, these commentators have not discerned the detailed meaning of the complete reasoning. They err greatly in rushing to impute fault to the great wise Shantideva.
>
> Similarly, some Tibetans [Bu-ton, Pan-chen Jom-rel, and so forth] find fault with the honorable Chandrakirti; they express spurious faults without having any detailed understanding of their opponent's position [that is, Chandrakirti's position that hearers cognize the selflessness of phenomena]. Thus, when the wise see them illustrating their own nature, it is only a source of extreme embarrassment.

Here Lama Tsongkhapa mentions that there are commentators who find fault with Shantideva and Chandrakirti. In this context there are two positions: (1) that hearers and solitary realizers realize the selflessness of phenomena and (2) that hearers and solitary realizers do not realize the selflessness of phenomena. The latter position is more well known in Tibet. However, Lama Tsongkhapa says that those who refute the first position have not studied the texts well whereby they assert that Chandrakirti has fallen into the nihilistic view. In this way they demonstrate their own nature.

In Tibet there were eight great scholars who were called the eight great lions, one of whom was Chapa Chokyi Sengge. In general, Chapa Chokyi Sengge is renowned as a great scholar, but he had some mistaken conceptions about the view. He was the author of many texts, one of which was a commentary on the *Compendium of Valid Cognition* and another on *Collected Topics*. In *Collected Topics* there is a section on isolate and substantial phenomena. Chapa Chokyi Sengge composed a commentary on this section called the *Forty-eight Isolates and Substantials,* which he taught to his students. At that time in the province of Sangpo there was a monastery and a nunnery, which often debated against each other. However, the nuns would always win the debates. In order for the monks to win the debate Chapa Chokyi Sengge gave them his text, which the nuns had never even seen before. In this way the monks won the next debate. This shows that in the past nuns also used to study and debate. Only later on was this tradition lost and nuns came to only engage in meditation practice and the performance of rituals. Presently study and debate is being brought back into the Tibetan nunneries in India.

Chapa Chokyi Sengge asserts that ultimate truth is not an object of knowlege because it bears reasoned analysis. If it bears reasoned analysis it is truly existent, whereby it does not exist. To prove that ultimate truth is not an object of knowledge he quotes the ninth chapter of *Engaging in the Bodhisattva Deeds,* which says that the ultimate is not an object of awareness because awareness is a conventionality. Chapa Chokyi Sengge takes this to mean that ultimate truth cannot be an object of a mind which is a conventionality. However, Shantideva means that ultimate truth is not a direct object of a conceptual mind because conception is a concealer.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In his commentary [Jaya-ananda] says that the artificial afflictions can be abandoned through the sixteen paths of the four noble truths, impermanence and so forth, but not the innate afflictions. This difference is not correct. With respect to temporarily abandoning only the manifest [coarse] afflictions commonly spoken of in the vehicles, both the artificial and the innate [coarse] afflictions are similar [in that the manifest forms of both can be temporarily abandoned through the paths of the sixteen attributes of the four noble truths]. These afflictions are also similar in that their seeds cannot be abandoned [by the paths of the four noble truths]. Here [Jaya-ananda] does not know how to explain that Chandrakirti and Shantideva are in agreement.
>
> If one does not cognize the mental and physical aggregates as not truly existing, then one will not cognize the person as not truly existing and, thereby, will not cognize the selflessness of the person. Just as the emptiness of true existence with respect to phenomena such as the mental and physical aggregates is posited as the selflessness of phenomena, so the non-true existence of the person should be put as the selflessness of the person because the reasons [for doing so] are completely similar [since non-true existence is the mode of being of both].
>
> Because a conception that the person truly exists must be posited as a conception of a self of persons, it is impossible to extinguish all afflictions until that has been extinguished. Thus, conceptions of the true existence of persons and phenomena must be posited as afflictions. This very position must also be presented in connection with Shantideva's system.

Lama Tsongkhapa says that Shantideva and Chandrakirti are in agreement. The afflictions explained in the *Knowledges*, whether acquired or innate, are both abandoned by the path of the sixteen attributes of the four noble truths. On the other hand, the seeds are not abandoned by the path of the sixteen attributes of the four noble truths.

The Prasangika Madhyamikas say that just as the non-true existence of persons is posited as the selflessness of persons and the non-true existence of phenomena is posited as the selflessness of phenomena, likewise, the conception of true existence of persons is the conception of a self of persons and the conception of true existence of phenomena is the conception of a self of phenomena. Thus, the conception of true existence of persons, which is the conception of a self of persons, is an afflictive obstruction. As long as it is not abandoned, the afflictions will not be abandoned. This uncommon assertion of the Prasangika Madhyamikas contradicts the lower schools, which say that although the conception of true existence of persons is not abandoned the afflictions can be abandoned. This is because they assert that the conception of true existence is not an affliction.

In short, the main point here is to prove that hearers and solitary realizers do have the realization of the selflessness of phenomena. In order to prove this there are three lines of reasonings. In addition, this will be proved by scriptural authority, which is yet to be presented. There are three reasonings and seven scriptures that establish that the realization of the selflessness of phenomena exists in the continua of hearer and solitary realizer foe destroyers. Scriptures include the mahayana sutras, hinayana sutras, and treatises. The seven scriptures are difficult to identify but, in short, there are: two mahayana sutras, one hinayana sutra, and four treatises.

Friday morning, 25 February 2000

3B1C-2A1B-2C2 Sources proving hearers' and solitary realizers' cognition of the non-inherent existence of phenomena

This section has two parts:

A Sources in Mahayana sutras proving hearers' and solitary realizers' cognition of the non-inherent existence of phenomena
B Sources in treatises and in Hinayana sutras

3B1C-2A1B-2C2A Sources in Mahayana sutras proving hearers' and solitary realizers' cognition of the non-inherent existence of phenomena

Chandrakirti quotes the *Questions of Adhyashaya Sutra* in his *Clear Words* [commenting on Nagarjuna's *Treatise on the Middle Way*, XXIII.14]:

> 'For example, during a magical display, a man sees a woman created by a magician and desire arises in him. His mind becomes ensnared with desire, and he is frightened and ashamed in front of his companions. Rising from his seat he leaves and later considers the woman to be ugly, impermanent, miserable, empty, and selfless. O child of good lineage, what do you think? Is that man behaving correctly or wrongly?'
>
> 'Blessed One, he who strives to consider a non-existent woman to be ugly, impermanent, miserable, empty, and selfless is wrong.'
>
> The Blessed One said, 'O child of good lineage, you should view similarly those monks, nuns, laymen, and laywomen who consider unproduced and unarisen phenomena to be ugly, impermanent, miserable, empty, and selfless. I do not say that these stupid persons are cultivating the path, they are practicing wrongly.'

The Buddha questions one of his disciples as to whether, in the case that a magician creates a woman during a magical show, it would be right for one of the spectators who, having generated desire for her, to then contemplate that woman as ugly, impermanent, misery, empty, and selfless. The disciple responds that this would be wrong and the Buddha reiterates that this is not the correct way to practice. Likewise, when someone holds the aggregates to be truly existent and then meditates on them as impermanent, misery, empty, and selfless this too is incorrect because there is no such truly

existent object. Hearer and solitary realizer foe destroyers do not meditate in this way because they have realized emptiness. This is the condensed meaning of this sutra passage.

When Buddha taught the Perfection of Wisdom Sutras there were four types of listeners: fully ordained monks, fully ordained nuns, laymen, and laywomen. These four groups of people are mentioned here in the sutra.

It has happened in that past that a man becomes attached to woman created by a magician. This is discussed in detail in the text *Refutation of Objections Regarding the Middle Way*. In this text there is story about a brahma and his son who went to see a magic show during which the magician created a woman with whom the son fell in love. He asked his father to arrange a marriage with her, although she was a mere illusion.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Thus, it was said very clearly [that those who conceive true existence are not liberated]. The example is the taking of a woman created by a magician as real and the subsequent consideration of her as impermanent and so forth. This should be understood as referring to conceiving that the aggregates truly exist and subsequently considering them to have the five qualities of impermanence and so forth.
>
> This is a case of observing truly existent aggregates and considering them to be impermanent and so forth, and such consideration is only a wrong consciousness, mistaken with respect to its referent object [truly existent impermanent aggregates which actually do not exist]. Therefore, such is not validly established.
>
> However, in the mental continuum of one who has not found the view overcoming belief in the object of the conception of true existence, there are many cases of observing aggregates that are not qualified by either truth or falsity and of establishing by conventional valid cognition that the aggregates have an impermanence and so forth which are not qualified by either truth or falsity. Also, paths, as explained before [in connection with the sixteen attributes of the four noble truths], are generated in the mental continuum during meditation through having meditated on the meaning [of impermanence and so forth without understanding non-true existence or positing true existence].

If one holds a beautiful woman to truly exist, one will not be able to abandon attachment to her. Also if one takes truly existent aggregates as one's object of meditation and then meditates on them as impermanent, misery, empty, and selfless, the afflictions cannot be abandoned. On the other hand, if one takes aggregates which are not qualified by either true existence or non-true existence as one's object of meditation and meditates on them as impermanent, misery, empty, and selfless, this is a correct way to meditate. By means of this meditation the impermanence of the aggregates can be established by means of a valid cognizer. In this way the person will generate a path cultivating impermanence in his continuum.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Also, in the *Sutra on the Miserliness of One in Trance (Dhyayitamushti)*, which is quoted in [the twenty-fourth chapter of] Chandrakirti's *Clear Words*, Buddha says, 'Manjushri, sentient beings, whose minds are mistaken due to four errors through not seeing the noble truths correctly as they are in reality, do not pass beyond this unreal cyclic existence.' Manjushri responds, 'Blessed One, please indicate what is apprehended by sentient beings that causes them not to pass beyond cyclic existence.'
>
> The Teacher said that sentient beings are not liberated because they do not know the four truths as they are in reality, and Manjushri requested Buddha to explain what is misconceived by sentient beings that causes them not to be liberated from cyclic existence. In answer to this, Buddha says that they think, 'I will pass beyond cyclic existence, and I will attain nirvana,' with a sense of adhering to the true existence of these. Therefore, when they have meditated on impermanence and so forth, they think, 'I know suffering, I have abandoned its sources, I have actualized its

> cessation, I have cultivated the path.' They then think, 'I have become a foe destroyer.' When they have temporarily abandoned the manifest afflictions explained above, they think, 'I have extinguished all contaminations.'

It is incorrect to consider true sufferings and so forth to truly exist and then think, "I know suffering, I have abandoned its sources, I have actualized its cessation, I have cultivated the path." It is also incorrect to think in relation to the temporary abandonment of manifest afflictions, "I have extinguished all contaminations." In short, due to conceiving each of the four noble truths to be truly existent sentient beings do not pass beyond sorrow.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> It is said that at the time of death they perceive that they will be reborn; thereby, they doubt Buddha, and this fault causes them to fall into a great hell. This applies to some who abide on such a path but not to all.

There are some people who having attained an actual a concentration think that they have attained liberation. However, when they are about to die, by means of their clairvoyance they see that they will be reborn again and thereby come to doubt Buddha. For example, there are some Hindu followers of Vishnu who have faith in the Buddha because they think that Shakyamuni Buddha is a manifestation of Vishnu. Vishnu is said to have had twenty emanations, ten pure and ten impure, of which Shakyamuni Buddha is said to be the eighth pure emanation. In this way for them Buddhism is a branch of Hinduism.

QUESTIONS AND ANSWERS

Student: I have a question about the meaning of 'explicitly conjoined.' For example, the compassion observing phenomena seems to have in its retinue a mental factor of compassion and a mental factor of wisdom that, however, have different aspects. Yet a main mind cannot have two accompanying mental factors with different aspects.
Geshe Jampa Gyatso: The compassion observing phenomena takes sentient beings qualified by impermanence as its object and wishes them to be free from suffering. You are saying that it would appear that both wisdom and compassion are therefore manifest, while a main mind and its mental factors cannot have two different aspects. There would appear to be one mental factor having the aspect of impermanence and another mental factor having the aspect wishing sentient beings to be free from suffering. What is the aspect of compassion observing phenomena?
Student: Its aspect is the wish that sentient beings qualified by impermanence be free from suffering.
Geshe Jampa Gyatso: Does compassion have an object of the mode of apprehension? Some say that it does have an object of the mode of apprehension, whereas others say that it does not. If it does not have an object of the mode of apprehension what aspect does it have? In this case one has to be clear about the difference between object-aspect and subject-aspect. Some say that compassion does not apprehend the aspect of the observed object.

In relation to this discussion the question about the meaning of 'explicitly conjoined' arises. It sometimes seems that there are two mental factors having different substances in the retinue of one main mind. However, is it possible to have two manifest mental factors having different substances in the retinue of a single main mind? To negate such a possibility it says in sutra that a continuity of consciousness of a sentient being is only one. Dharmakirti also says that two conceptions cannot arise simultaneously. This contradicts the possibility of a mind realizing impermanence and a mind of compassion being manifest simultaneously. The mind realizing impermanence is a conception as is the mind of compassion, that they can exist simultaneously is negated by Dharmakirti. When sutra

says that the continuity of consciousness is only one this means that there cannot exist simultaneously two minds of the same type but different substances.

Q: If I see someone suffering although I do not know him I can generate compassion wishing him to be free from suffering. Later, when I come to know that he is a thief I can still think, "May this thief be free from suffering." Lama Tsongkhapa says that when there is a compassion observing phenomena one is not meditating on the attributes of the observed object, but that this compassion arises due to perceiving the observed object qualified by the attribute of impermanence due to having realized impermanence previously.
A: Bravo! What you say is how things actually happen. For example, we can meditate on compassion for someone we do not know. Later on when we come to know that he is a thief we can still generate compassion for him. In this way we have both the thought "He is a thief" and the thought of compassion. This is how things happen in reality.

Q: In the case of the compassion observing the unobservable what actually appears to the meditator?
A: What appears to that person, or to that compassion, is sentient beings qualified by suffering.
Q: Do the sentient beings appear to this compassion clearly or like an illusion?
A: To that compassion there is no appearance of emptiness. In other words, there is no appearance of sentient beings as empty of true existence. In fact, sentient beings appear as truly existent since this compassion is conception. If it is conception it is pervaded by having the appearance of true existence. Is this compassion mistaken with respect to its appearing object? It is not mistaken because, although it has the appearance of true existence, it is not mistaken with respect to its appearing object. However, according to the lower schools this compassion *is* mistaken with respect to its appearing object. On the other hand, according to the Prasangika Madhyamikas it is not mistaken with respect to its appearing object. In other words, it is not mistaken with respect to its appearance. The Prasangika Madhyamikas say that if it is a consciousness it is pervaded by being a valid cognizer with respect to its appearance. Is it pervaded by being a valid cognizer? It is not. In short, the Prasangika Madhyamikas say that if it is a knower it must know an object. Therefore, if it is a consciousness it is pervaded by being a valid cognizer with respect to its appearance.

In short, is there the appearance of illusory-like sentient beings to the compassion observing the unobservable? Illusory-like sentient beings do not appear to this compassion.

Q: What does this compassion lead to? Is it to be overcome because the appearance of illusory-like sentient beings is to be overcome?
A: It is very good to have the appearance of illusory-like sentient beings, but to us sentient beings appear as truly existent .

Q: Can sentient beings appear as illusory-like to compassion?
A: It depends on what kind of compassion it is in that to buddhas sentient beings appear as illusory.
Q: If we exclude buddhas?
A: At the level of sentient beings there is no appearance of illusory-like sentient beings to compassion.

Q: Can a scholar of sharp faculties who has not entered a path and does not have any kind of compassion realize emptiness by means of an inferential cognizer through hearing teachings on, for example, dependent-arising?
A: For those of dull faculties it is possible, whereas in the case of those of sharp faculties it has to be examined. Although those of sharp faculties can realize emptiness without generating compassion, in general due to being sharp-facultied one does have some compassion. This person can generate a realization of emptiness by means of an inferential cognizer through first generating correct

assumption followed later by a valid inferential cognizer. It is possible to have a realization of emptiness without having any of the three types of compassion, as in the case of hearers and solitary realizers. However, in general if it is a human being he is pervaded by having some slight degree of compassion.

Q: Taking compassion as an example, it can be either manifest or non-manifest. How does non-manifest compassion exist in the continuum?
A: It exists in the continuum in a manner of being dormant. For example, when we sleep we continue to maintain our general knowledge of the world but it is dormant. For example, if someone has a container full of jewelry which is closed and locked, does that person possess jewelry? Yes, he does although it is hidden away. He does not have to be wearing jewelry in order to possess it.

Another example is the anger in our continua that is presently not manifest, but as soon as the conditions arise becomes manifest.

Q: How is the unmanifest, or dormant, anger different from the seed of anger?
A: There are different interpretations. My own understanding is that dormant anger is also a consciousness, or a mentality, which due to improper mental attention superimposes unpleasantness or ugliness on a contaminated object. On the other hand, a seed is a potential that is a non-associated compositional factor able to give rise to its result, anger. In this context there can also be a discussion of latencies. If it is a latency it is not pervaded by being a seed, whereas if it is a seed it is pervaded by being a latency.

One of the MP students asked me a question a few days ago about ignorance, the first link of the twelve links of dependent-arising, and consciousness, the third link. In general it is said that due to ignorance one creates karmic formations that are deposited on a consciousness. However, if the Prasangika Madhyamikas do not assert that the latencies are deposited on a consciousness, how do they assert the third link of consciousness? The Prasangika Madhyamikas say that karmic formations are not stored on the consciousness which is the third link but are stored on the mere I. According to the Prasangika Madhyamikas, the third link is the consciousness that is the continuity of the consciousness existing at the time of the creation of the karmic formations.

This same student also asked me whether latencies are non-associated compositional factors. She posited that the latencies are non-associated compositional factors and asked whether, when a latency which is a non-associated compositional factor is nourished by the eighth and ninth links, does it return to being a consciousness at the time of the tenth link?

Student: Those latencies do not become consciousness.
Geshe Jampa Gyatso: The tenth link, existence, is said to be karma. But then there arises a question as to whether existence is the mental factor intention, which is generally the definition of karma. The lower schools say that the definition of karma is the mental factor intention. However, the Prasangika Madhyamikas say that karma is of three types: physical, verbal, and mental. Among these three, they say that only mental action is the mental factor intention. What are physical and verbal actions? They are form. What type of form are they? They are non-revelatory form. In fact, in Lama Tsongkhapa's great commentary on *Fundamental Wisdom* it says that the Prasangika Madhyamikas assert physical and verbal karma to be form. Later on in the *Supplement* there is a discussion of form in terms of five divisions, such as form which is a vow, form which is a non-vow, form having a strong occasion, form which is a phenomena source, and so forth.

How do the Prasangika Madhyamikas define the link of existence? Think about it.

Q: If mental factors are dormant during sleep, how can sleep yoga make sleep virtuous?

A: By means of a virtuous motivation. Is the mental factor sleep manifest or dormant during sleep? Sleep is a changeable mental factor. Thus, it can be changed into virtue by means of generating a virtuous motivation prior to going to sleep, such as by practicing deity yoga and so forth. In this way the period of sleep becomes virtuous. Sleep can also be changed into non-virtue by generating a motivation thinking to harm others and so forth prior to going to sleep. Is the mental factor sleep manifest or unmanifest? Perhaps it can be said that because sleep is manifest all other mental factors are withdrawn, meaning that they do not function. Sleep is defined as a mental factor having the function of involuntarily withdrawing activities of body and mind.

END

Monday afternoon, 28 February 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Then Manjushri asks how the four noble truths should be cognized since Buddha said that in order to liberate oneself from cyclic existence these truths must be known as they are in reality. In answer to this, Buddha says, 'Manjushri, he who sees all products as not produced knows suffering thoroughly. He who sees all phenomena as sourceless has abandoned the sources of suffering. He who sees them as utterly passed beyond sorrow has actualized cessation. He who sees all phenomena as totally unproduced has cultivated the path.' Then Buddha says that through this path one passes beyond sorrow without taking [rebirth].
>
> This shows very clearly that one who sees the non-inherent existence of the four truths is liberated from cyclic existence and that one cannot be freed through a path unless it is devoid of the conception of true existence. This thereby indicates that the seeds of the afflictions cannot be abandoned through a path of only the sixteen attributes of the four noble truths, impermanence and so forth. It also shows that in order to abandon the seeds of the afflictions one must cognize the mode of being [of persons and other phenomena] and meditate on it.

When one generates the wisdom seeing the reality of the four noble truths, one will be liberated from cyclic existence. This means one needs to realize that the four noble truths and their sixteen attributes do not exist inherently. On the other hand, if one only realizes the four noble truths as they are set out in the *Knowledges,* one will not be liberated from cyclic existence.

Lama Tsongkhapa says: "In answer to this, Buddha says, 'Manjushri, he who sees all products as not produced knows suffering thoroughly. He who sees all phenomena as sourceless has abandoned the sources of suffering. He who sees them as utterly passed beyond sorrow has actualized cessation. He who sees all phenomena as totally unproduced has cultivated the path.'" 'Product' can be understood either as phenomena produced from causes and conditions, or as pervasive compounded suffering. Buddha says that seeing such phenomena as unproduced, one knows suffering thoroughly. "Sees all phenomena as sourceless" means that by understanding that there are no results – happiness and pain – which arise inherently from their causes – karma and afflictions – one abandons true origins. "Sees them as utterly passed beyond sorrow" means that by understanding that all phenomena have passed beyond sorrow, one actualizes, or achieves, true cessations. It can also be said that utterly passed beyond sorrow means that all phenomena are naturally passed beyond sorrow. Utterly passed beyond sorrow means to have passed beyond sorrow from the root, i.e., completely. "Sees all phenomena as totally unproduced" means that by seeing that phenomena are not produced inherently, one cultivates a path.

Lama Tsongkhapa says : "This thereby indicates that the seeds of the afflictions cannot be abandoned through a path of only the sixteen attributes of the four noble truths, impermanence and so forth. It also shows that in order to abandon the seeds of the afflictions one must cognize the mode of being [of persons and other phenomena] and meditate on it." In short, through realizing the sixteen attributes of the four noble truths alone, one cannot eliminate the seeds of the afflictions. To do so one must realize the meaning of reality (the mode of being) and meditate on it.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> If you do not distinguish these points well, you will hold that hearers' paths for abandoning afflictions consist merely of meditation on the sixteen attributes of impermanence and so forth and that, therefore, hearer superiors and foe destroyers could not actually function as superiors and foe destroyers. You would accumulate the great taint of deprecating superiors, and if you have taken the bodhisattva vow, this will produce a basic infraction. Shantideva's *Compendium of Instructions* sets forth this basic infraction:

> Holding that the vehicle of learners
> Does not abandon desire and so forth
> And causing others to believe the same....

If one holds that hearers and solitary realizers meditate on a path that merely realizes the sixteen attributes of the four noble truths as explained in the two *Knowledges*, one will deprecate them, thinking that they are not actual superiors. If one does so, one commits a basic infraction of the bodhisattva vows. However, hearer and solitary realizer superiors realize the sixteen attributes of the four noble truths as non-inherently existent and are therefore actual superiors.

Among the bodhisattva vows there are sixteen that must have four binding factors complete in order to be broken, and two that do not need these to be complete. The latter two are (1) giving up the mind of enlightenment and (2) holding wrong views.

The *Diamond Cutter Sutra* is the second of the seven scriptural authorities proving that hearer and solitary realizer foe destroyers realize the non-inherent existence of phenomena. Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) quotes this sutra, saying:

> This meaning is also clearly set forth in the *Diamond Cutter Sutra (Vajrachchhedika)*, '"Subhuti, does a stream enterer think, 'I have attained the fruit of a stream enterer?'" Subhuti answers, "Blessed One, it is not so. Why? Blessed One, he is called a stream enterer because he has not entered anything."' Also, "Blessed One, if a stream enterer thought, 'I have attained the fruit of a stream enterer,' he would be conceiving a self of [himself and the fruit attained]. He would be conceiving a sentient being, a living being, and a person." Subhuti speaks likewise with respect to the latter three abiders in the fruits [of a once returner, never returner, and foe destroyer].
>
> If through conceiving the attainer of the level of stream enterer and the fruit attained to exist truly, he thought, 'I have attained stream enterer,' he would be conceiving a self of those. Thus, it is said that conceptions of the true existence of the person and of the fruit are both conceptions of self – the first being a conception of a self of persons and the second of a self of phenomena.

If a stream enterer were to think, "I have attained the fruit of stream enterer," because this would be a conception of a [truly existent] self, he would not attain anything. However, if a stream enterer thinks "I have attained the fruit of stream enterer" but does not have a conception of a truly existent self, then this is correct. Therefore, the *Diamond Cutter Sutra* says that hearer and solitary realizer foe destroyers have the realization of the non-inherent existence of phenomena.

In short, as long as a stream enterer thinks "I have attained the fruit of stream enterer" free from the conception of true existence, this is correct. If it is asked whether this stream enterer has a conception of true existence, the answer is that he does. However, although he has a conception of true existence, he does not necessarily conceive the fruit of stream enterer to exist truly because he [only] has an innate conception of true existence. A stream enterer who has an innate conception of true existence does not necessarily conceive the fruit of stream enterer to be truly existent. The person does not have to assert that the fruit of stream enterer exists truly in order to have an innate conception of true existence. On the other hand, when it is said that the person conceives phenomena to exist truly, it means that the person *accepts* that phenomena exist truly. However, if Sherab, for example, has an innate conception of true existence he does not necessarily accept that phenomena truly exist. Thus, although a stream enterer has a conception of true existence in his continuum, he does not conceive the fruit of stream enterer to exist truly. In short, hearer and solitary realizer foe destroyers have the realization of the selflessness of phenomena.

Lama Tsongkhapa sets out two selves: a self of persons and a self of phenomena. A conception of a self of persons is present when, for example, a stream enterer conceives himself to exist truly,

whereas if he conceives the fruit of stream enterer to exist truly, this is a conception of a self of phenomena.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> That an [actual] stream enterer does not conceive the true existence of these and thereby think, 'I have attained the fruit,' refers to his having come to disbelieve the object of the conception of true existence. Thus, this statement does not indicate that [at this early point in the path] he has no innate conception of true existence. On the basis of this it can be understood with respect to the later levels [that once returners, never returners, and foe destroyers do not conceive the true existence of themselves as attainers or the fruits attained].

(In Jedzun Chogyi Gyeltshen's *General Meaning,* there is an extra negative particle that should not be there.)

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) continues:

> Some Svatantrika Madhyamikas explain this passage differently, but Prajnakaramati quotes it as a source showing that it is necessary to cognize emptiness to progress to the hearer and solitary realizer enlightenment. His interpretation is good.
>
> These scriptures only teach that if you lack the view of suchness, you cannot be freed from cyclic existence and that to be free this view is needed. No scholar asserts that hearer and solitary realizer foe destroyers are not liberated from the fetters of cyclic existence; and furthermore, such an assertion is not feasible. Thus, these scriptures clearly teach that hearers and solitary realizers cognize the non-inherent existence of phenomena.
>
> There are many other sources such as the great mother *Perfection of Wisdom Sutras* and so forth, but fearing too many words, I will not cite them.

In short, the meaning of this passage is that hearer and solitary realizer foe destroyers realize the non-inherent existence of phenomena. Although some Svatantrika Madhyamikas explain this passage differently, Prajnakaramati's interpretation is correct. In *General Meaning* there is a discussion as to whether this Prajnakaramati is the person who composed a commentary on the *Ornament* and is a Svatantrika Madhyamika, or whether he is the person who composed a commentary on *Engaging in the Bodhisattva Deeds* and is a Prasangika Madhyamika.

According to the *Great Middle Way* by Kunkyen Jamyang Shepa, one can cite five, seven, or nine scriptural authorities in order to prove that hearers and solitary realizers have the realization of the non-inherent existence of phenomena. However, others, in accordance with Chandrakirti's autocommentary, say that in order to prove that hearers and solitary realizers have this realization there are three lines of reasoning and seven scriptural authorities.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A1B-2C2B Sources in treatises and in Hinayana sutras

Chandrakirti's autocommentary says:

> As was taught in the *Precious Garland* [35-37]:
>
> > As long as grasping to the aggregates exists, so long grasping to the I exists, due to it. When grasping to I exists, [there is] also action; from that, also, there is rebirth.

> Having three paths in mutual causation, without a beginning, middle or end – this wheel of samsara will revolve like the wheel of a firebrand.[10]
>
> Because that is not [born from] self, other or both, nor seen in the three times, grasping to I will be exhausted; then action and rebirth and...

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) also quotes the *Precious Garland*:

> Nagarjuna's *Precious Garland* (35-37) says:
>
> As long as the aggregates are [mis]conceived,
> So long is there [mis]conception of an 'I'.
> When this conception of an 'I' exists,
> There is action which results in birth.
>
> With these three pathways in mutual causation
> Without a beginning, middle, or an end
> This wheel of cyclic existence
> Turns like the 'wheel' of a firebrand.
>
> Because this wheel is not obtained from self, other,
> Or from both in the past, the present, or the future,
> The conception of an 'I' ceases
> And thereby action and rebirth.

Nagarjuna says that as long as one conceives of the aggregates, one conceives of an 'I' and that due to this conception one creates actions. In other words, the way in which the conception of a self arises is that from the conception of the true existence of the aggregates arises the conception of a truly existent 'I.' Then, from this conception of a truly existent 'I,' one conceives a truly existent 'mine.' 'Mine' refers to 'my friends,' 'my enemies,' 'my strangers,' and so forth. Due to this conception of mine, one creates actions that project one's future rebirths. In this way there are said to be three paths that circle with no beginning, no middle, and no end. The "three paths" are:

(1) the thoroughly afflicted path of afflictions,
(2) the thoroughly afflicted path of actions, and
(3) the thoroughly afflicted path of rebirth, or path of suffering.

These three paths can be explained in connection with the twelve links of dependent-arising. The path of afflictions is the three links of ignorance, craving, and grasping. The path of actions is the links of karmic formations and existence. The path of suffering is the remaining seven links: consciousness, name and form, the sense spheres, contact, feeling, birth, aging and death. The subject of the twelve links is quite complex in that, while a set of causes is being created, the results of other sets of causes are being experienced.

The twelve links that comprise the three paths are likened to a circling firebrand. Due to this continuous circling it is called "cyclic existence."

Nagarjuna says: "Because this wheel is not obtained from self, other, or from both in the past, the present, or the future, the conception of an 'I' ceases and thereby action and rebirth." When one realizes that the 'I' does not exist truly, the conception of an 'I' ceases, whereby action and rebirth also cease. As long as one accepts that the aggregates, which are the basis of imputation, exist truly, one will also accept that the 'I,' which is imputed on those aggregates, exists truly. This is the conception of a self. Due to asserting the aggregates to truly exist, one does not abandon the referent object of the conception of true existence and as a result continues to create actions.

[10] The Tibetan text here has dKyil.'kor – mandala, whereas the Tibetan of the next verses have 'khor.lo – wheel.

In short, hearer and solitary realizer foe destroyers have abandoned the conception of a self through realizing that past, present, and future [phenomena] do not exist inherently.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The first two lines teach that as long as there is a conception of the true existence of mental and physical aggregates, a view arises of the transitory collection which conceives a truly existent 'I'. This indicates that in order to extinguish the view of the transitory completely, it is necessary to extinguish the conception that the mental and physical aggregates truly exist. On this basis it can be known that hearer and solitary realizer foe destroyers also totally abandon the conception that the aggregates truly exist.
>
> Since the referent object of the view of the transitory is not disbelieved until the referent object of the conception of true existence is disbelieved, the personal selflessness known in both Hinayana and Mahayana schools of tenets is a refutation of only a coarse self of persons. It should be understood that this is not the subtle selflessness of persons.

The two hinayana schools – the Vaibhashika and Sautrantika – and the two [lower] mahayana schools – the Chittamatra and Svatantrika Madhyamika – posit a subtle selflessness of persons that is the absence of a self-sufficient substantially existent person. However, according to the Prasangika Madhyamikas this is a coarse selflessness of persons. The Svatantrika Madhyamikas and the lower schools negate a self-sufficient substantially existent person, whereby they establish the subtle selflessness of persons. They posit the coarse selflessness of persons to be the emptiness of a permanent, unitary, and independent person because such a self is posited as a coarse object of negation. On the other hand, non-Buddhist schools, such as the Samkyas, posit the existence of a permanent, unitary, and independent person. Our own school does not posit a person who is separate from the aggregates.

In conclusion, when hearers and solitary realizers abandon the conception of a self of phenomena, they become fully qualified foe destroyers.

Tuesday morning, 29 February 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Some hold that in the master Chandrakirti's system hearers and solitary realizers cognize a selflessness of persons which is similar to that of the other schools. They thereupon propound a difference between hearers and solitary realizers in that hearers do not cognize the [coarse] selflessness of phenomena whereas solitary realizers do. They have not understood Chandrakirti's system well because his commentary says that those who lack the view of suchness could not even realize the selflessness of persons.
>
> The next two lines of Nagarjuna's *Precious Garland* teach that due to the presence of the view of the transitory as real 'I' and 'mine', actions binding one to cyclic existence are accumulated and through the force of these actions one is born in cyclic existence. This is said in terms of someone who has not come to disbelieve the referent object of the conception that the mental and physical aggregates truly exist. This is not applicable in general to one who merely possesses the view of the transitory as real 'I' and 'mine' because this view is present through the seventh ground, but from the first ground a bodhisattva does not take rebirth by the power of contaminated actions.

The lower schools assert the selflessness of persons to be the emptiness of the person of self-sufficient substantial existence, but this is not how it is asserted by the Prasangika Madhyamika school. Therefore, if one thinks that the selflessness of persons of the Prasangika Madhyamikas is that which

is asserted by the lower schools one has not understood Chandrakirti's view, which is that the selflessness of persons is the emptiness of the person of inherent existence. Chandrakirti's view is that in one who lacks the view of suchness there is no realization of the selflessness of persons. Here "the selflessness of persons" refers to the *subtle* selflessness of persons in that a person can have a realization of the emptiness of the person of self-sufficient substantial existence (i.e., the coarse selflessness of persons) without having the view of suchness.

Lama Tsongkhapa says that "The next two lines of Nagarjuna's *Precious Garland* teach that due to the presence of the view of the transitory as real 'I' and 'mine', actions binding one to cyclic existence are accumulated and through the force of these actions one is born in cyclic existence." Nagarjuna says this regarding one who has not repudiated the referent object of the conception of true existence and not regarding one in whom the view of the transitory collection is present. Lama Tsongkhapa says that this is because the view of the transitory collection is present through the seventh ground, whereas from the first ground a bodhisattva does not take rebirth by the power of contaminated actions. Because bodhisattvas have the view of the transitory collection through the seventh ground, according to the Prasangika Madhyamikas the afflictions exist through this ground. Only when bodhisattvas attain the eighth ground have they abandoned all afflictions. Are eighth ground bodhisattvas foe destroyers? They are not. Therefore, if one has abandoned the afflictive obstructions there is no pervasion that one is a foe destroyer. However, according to the Svatantrika Madhyamikas, bodhisattvas who are definite in lineage simultaneously attain the abandonment of the afflictive obstructions, the state of a foe destroyer, and the abandonment of the knowledge obstructions, the state of a tathagata. Therefore, their assertion differs from that of the Prasangika Madhyamikas, who assert that only when the afflictive obstructions have been abandoned do bodhisattvas begin to abandon the knowledge obstructions.

Q: What is the reason that a bodhisattva on the eighth ground is not a foe destroyer, since he has abandoned all the afflictive obstructions?

A: This is a point of debate. If someone asserts that a bodhisattva on the eighth ground is a foe destroyer, one asks: "Is he an actual foe destroyer?" If someone accepts this, then one asks: "Has he fulfilled the object of training of his path? Does he abide on the path of no more learning? Has he culminated all the learning on his path?" If someone accepts this, then one asks: "Does he not still have to cultivate the eighth ground and so forth? Are the eighth, ninth, and tenth grounds not paths of meditation?" If someone accepts that they are paths of meditation, one says: "It follows that they are *not* paths of meditation because you have just asserted that they are paths of no more learning since this bodhisattva has culminated the learning of his respective path." One can continue the debate, saying: "The realization existing in the continuum of a bodhisattva on the eighth ground is not a path of no more learning because it is not an exalted knower of a foe destroyer."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> These passages indicate that if you lack cultivation of the view of suchness, you cannot extinguish the view of the transitory as real 'I' and 'mine'. If you have no [practices] other than the paths of the sixteen attributes of the four truths, impermanence and so forth, the afflictions cannot be completely abandoned. Thus, once an uncommon selflessness of persons [their non-inherent existence] is posited, it would be a great mistake to leave as it is the presentation of the afflictions – identifying the view of the transitory as real 'I' and 'mine' and so forth in accordance with only the common selflessness of persons [their non-substantial existence]. One would not have delineated this uncommon system of tenets. How could this king of wise men [Chandrakirti] be mistaken about this?
>
> Some of Chandrakirti's followers do not understand that he established this [Prasangika] system explaining that hearers and solitary realizers cognize the selflessness of phenomena. Such followers do not even generate a thought wondering whether or not he has an uncommon way of

> positing the afflictions; they merely have faith in his 'system'. Using this as an example, you should examine well many other such occurrences.

If one lacks the cultivation of the view of suchness, one cannot extinguish the view of the transitory collection. If one only has the realization of the sixteen attributes of the four noble truths as they are explained in the *Knowledges*, one cannot abandon all the afflictions. According to the Prasangika Madhyamikas there are two ways of positing the selflessness of persons: one that is common to the lower schools and one that is not shared by them. If one does not understand these two presentations of the selflessness of persons, one will not be able to identify the self of persons. In addition, one will not understand the Prasangika Madhyamikas' presentation of the afflictions.

In conclusion, the Prasangika Madhyamika school has its own unshared way of positing the afflictions and the selflessness of persons. If one is ignorant of this presentation yet thinks that one is a follower of Chandrakirti, this would be like those who have mere faith without real understanding. Lama Tsongkhapa says that there are many such cases.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The three pathways [mentioned in the quote from the *Precious Garland*] are the three sets of thorough afflictions – affliction [ignorance, attachment, and grasping], action [compositional action and 'existence'] and production [the other seven of the twelve links of dependent-arising: consciousness, name and form, six sources, contact, feeling, birth, and aging and death]. These three pathways have no beginning, middle, or end. Actions arise from afflictions, and sufferings from actions; from sufferings arise sufferings similar in type as well as afflictions and so forth. Because these mutually produce each other, their order is indefinite. This is the meaning of their mutually causing each other.
>
> This dependent arising [of cyclic existence] is not produced from itself, from other, or from both self and other. Furthermore, inherently existent production is not obtained – that is to say, is not seen – in the past, present, or future. For this reason, wandering in cyclic existence is overcome through extinguishing the view of the transitory which conceives a real 'I'.

Here Lama Tsongkhapa explains the meaning of the stanza from the *Precious Garland*: "With these three pathways in mutual causation without a beginning, middle, or an end, this wheel of cyclic existence turns like the 'wheel' of a firebrand."

Q: What is the cause of the ignorance that is the first of the twelve links?
A: Are you saying that although ignorance is the first of the twelve links it too must have a cause?
Q: Yes.
A: A previous set of twelve links acts as the condition for the ignorance that is the first link of a second set of twelve links.
Q: Does this mean that a suffering from the first set causes the ignorance of the second set? Or is the cause the afflictions of the first set?
A: The cause can be posited as the feeling which belongs to the previous set of twelve links. Due to feeling, ignorance arises. Although it may appear that only two sets of links occur at one time, in reality each day hundreds of sets begin. This is because in one day we create hundreds of projecting karmas, by the power of each of which there is an entire set of twelve links.

Lama Tsongkhapa says: "This dependent arising [of cyclic existence] is not produced from itself, from other, or from both self and other." This shows that dependent-arising is not produced inherently; by understanding this, the view of the transitory collection is extinguished. When the view of the transitory collection is extinguished, the cause of rebirth in cyclic existence is extinguished.

Chandrakirti's autocommentary says:

> It was taught further [in the *Precious Garland*, 357-365]:
>
> > Just as the eye, by mistake, apprehends the wheel of a firebrand, similarly, the sense faculties perceive present objects.
> >
> > Sense faculties and sense objects are asserted as the nature of the five elements – since an individual element is meaningless, they are meaningless as objects.
> >
> > If individual elements are different, fire without fuel would follow. If assembled they would be without character, and that is also certain of the rest.
> >
> > Thus, since elements are meaningless also in two ways, the assembled is meaningless. Because the assembled is meaningless, also form is meaningless as an object.
> >
> > Also consciousness, feeling, discrimination, and compositional factors individually, because lacking a meaningful essence in any way, are meaningless as ultimate objects.
> >
> > Just as the relieving of suffering is fancied happiness in the object, likewise the suppression of happiness is also fancied as suffering.
> >
> > Thus, because lacking entitiness, abandon craving of meeting with pleasure and the craving of separation from pain. Therefore, liberate, seeing like that.
> >
> > If asked: "what sees?" Conventionally, one says the mind. Without mental factors, mind does not exist because meaningless, so it is not accepted to exist.
> >
> > Thus, perfectly and properly, having known migrators as meaningless, like a fire without causes, without abiding, without grasping, pass beyond sorrow.

These verses in *Precious Garland* establish the selflessness of phenomena. Likewise, Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*), by quoting merely the last of these verses, says that Nagarjuna establishes the selflessness of the aggregates, constituents, and so forth:

> After that passage, Nagarjuna settles the selflessness of the aggregates, constituents, and so forth, at the end of which he says (365):
>
> > Knowing thus truly and correctly
> > That animate beings are unreal,
> > Not being subject [to rebirth] and without grasping,
> > One passes [from pain] like a fire without its cause.
>
> Having seen suchness, one passes beyond suffering.

The *Precious Garland* sets out the non-inherent existence of the aggregates, constituents, and so forth. Due to a error in the eyes one apprehends the 'wheel' of a firebrand. What is the cause of this error? Is the cause of the error inside or outside?
Student: Inside. Perhaps seeing a moving point of fire as a wheel of fire is due to a mistake in the meaning generality that appears to the consciousness.
Geshe Jampa Gyatso: Does that mean that the cause of the error exists in the eye consciousness?
Student: I did not say exactly that, but that is probably correct.
Geshe Jampa Gyatso: Another example is when we are in a moving vehicle and other objects appear to us to be moving although they are not. What is the cause of this error? Also, if one puts pressure on one's eyes and then looks at the moon, one sees two moons. What is the cause of this error? One can say that the mistake can be on the subject's side: the immediate condition which is, for example, a

mental consciousness or the empowering condition which is, for example, the eye sense power. In addition, there is the external condition, the object condition, which is the whirling firebrand. In this way the cause of the error can be said to be all three conditions.

Q: Is it actually correct to say that all three conditions are the cause of the error?
A: All three conditions can act as the cause of error. This is discussed in *Awarenesses and Knowers* (*blo rik*). In this text the definition of a facsimile of a direct perceiver is given as: a cognizer that is mistaken with respect to its object. It and a mistaken consciousness are mutually inclusive. There are seven types of facsimiles of a direct perceiver, six of which are conceptual and one of which is non-conceptual [According to Lati Rinpoche in *Mind in Tibetan Buddhism*, the seven are: wrong consciousnesses mistaken with respect to (1) shape, (2) color, (3) activity, (4) entity, (5) number, (6) time and (7) size]. A conceptual facsimile of a direct perceiver has six types of causes: those that are based on the object, those that are based on the subject, and so forth.

Chandrakirti's autocommentary says:

> In case it is said: only bodhisattvas see the lack of self-nature like that.
> That too is not so because that was taught from the viewpoint of hearers and solitary realizers.
> If said: how is this known?
> Response: Because just afterwards, from the viewpoint of the bodhisattvas, it is said [in the *Precious Garland*, 366]:
>
> > Also bodhisattvas, having seen thus, definitely desire enlightenment. Yet, due to compassion, they maintain a becoming until enlightenment.
>
> – and so forth.

This citation also appears in Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: Nagarjuna is speaking of seeing suchness only in terms of bodhisattvas.
> ANSWER: Nagarjuna is speaking in terms of hearers and solitary realizers because right after that he says (366):
>
> > Bodhisattvas also who have seen it thus,
> > Seek perfect enlightenment with certainty,
> > They maintain a continuity of existence
> > Until enlightenment only through their compassion.

Bodhisattvas definitely attain enlightenment through seeing non-inherent existence. However, they remain in cyclic existence due to their compassion.

Great Exposition of the Middle Way, a Gomang College textbook by Kunkyen Jamyang Shepa, sets forth the scriptural references that prove that hearer and solitary realizer foe destroyers have indeed realized the non-inherent existence of phenomena. In this text it says that Chandrakirti's autocommentary posits only five scriptural authorities, whereas his *Clear Words* posits four additional ones for a total of nine. Two of these four are the *Hundred Thousand Stanzas on the Perfection of Wisdom Sutra* and the *Compendium of Sutras* which, when added to the first five, are the seven scriptural authorities mentioned earlier. When the *Stable Special Thought Sutra* (*Questions of Adhyashaya Sutra*) and the *Miserliness Concentration Sutra* (*Sutra on the Miserliness of One in a Trance*) are also added, there is a total of nine.

In short, although bodhisattvas realize the non-inherent existence of phenomena they remain in cyclic existence out of compassion. On the other hand, hearer and solitary realizer superiors leave cyclic existence as soon as they realize the selflessness of phenomena.

In short, for the Prasangika Madhyamikas the selflessness of persons is the emptiness of the person of inherent existence and the selflessness of phenomena is the emptiness of the aggregates, constituents, and so forth of inherent existence.

Tuesday afternoon, 29 February 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The passages from Nagarjuna's *Precious Garland* quoted by Chandrakirti in his commentary were not rendered well in the old translations.

Some of the old translations of these passages in *Precious Garland* were not very accurate.

Chandrakirti's autocommentary then sets out the third scriptural authority, which is a hinayana sutra, saying:

> In order to abandon the hearers' deluded obscurations, it is even stated in *Sutras* revealed to the hearers that:
>
> > Form is like a mass of foam, feeling like a water bubble, discrimination like a mirage, compositional factors like the plantain tree, and consciousness like an illusion, the Solar-kinsman declared.
>
> – and so forth. Hence, through the example of a mass of foam, a water bubble, mirage water, the parts of a plantain tree, illusions and so forth, compounded phenomena are definitely analyzed.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) likewise says:

> In a sutra for hearers, products are analyzed as not existing inherently by means of five examples in order that hearers might abandon the obstructions to liberation:
>
> Forms are like balls of foam,
> Feelings are like bubbles,
> Discriminations are like mirages,
> Compositional factors are like banana trees,
> Consciousnesses are like magical illusions.
> Thus [the Buddha] the Sun-Friend said.

In sutra, the five aggregates are established as non-inherently existent by means of five examples, which are clearly set out in the quotation above. Since this is specifically a sutra for hearers, it is clear that the Buddha did in fact teach them the non-inherent existence of phenomena. In this verse the Buddha is called by the name Solar-Kinsman, or Sun-Friend, which together with the "Sugar Cane One" are epithets reserved for the Buddha (the Buddha's various names can be found in the *Small Collected Topics*).

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In his *Essay on the Mind of Enlightenment (Bodhichittavivarana)* Nagarjuna distinguishes between hearers and bodhisattvas: 'The Teacher taught the five aggregates for hearers and the five similarities – that forms are like balls of foam and so forth – for bodhisattvas.' His distinction is based on hearers who are temporarily unable to cognize suchness and does not refer to all hearers. The same text says:
>
> > Those who know not emptiness
> > Are not bases for liberation.
> > The obscured wander in the six migrations
> > In the prison of cyclic existence.
>
> Just this meaning of the non-inherent existence of phenomena is taught in the Hinayana scriptural divisions.

According to the *Essay on the Mind of Enlightenment,* not all hearers are suitable vessels for the teachings on emptiness. On the other hand, bodhisattvas are taught the emptiness of inherent existence, without the realization of which they cannot attain liberation. The above passage indicates that hearers also have the realization of the non-inherent existence of phenomena. If I remember well, this text, *Essay on the Mind of Enlightenment*, can be found in the *Guhyasamajatantra*. It clearly says that in order to attain enlightenment one must realize emptiness and that without this, one will continue to wander in cyclic existence.

Chandrakirti's autocommentary says:

> To indicate this very meaning, in the holy words of the Acharya [Nagarjuna], it is said [in the *Precious Garland*, 386]:
>
> > Non-generation taught in the mahayana and the exhaustion by the other [are] emptiness. Exhaustion and non-generation mean the same. Accept just that.
>
> Similarly, it was taught [in the *Treatise on the Middle Way*, 15.7]:
>
> > In the *Precepts of Katyayana*, the Bhagavan, through exalted knowledge of things and non-things, refuted both existence and non-existence.

The hinayana teaches exhaustion, or extinguishment, in terms of the exhaustion of compounded phenomena, whereas the mahayana teaches non-generation in terms of non-inherently existent production. In the end, the meaning is the same.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Nagarjuna's *Precious Garland* (386) says:
>
> > The teaching in the Mahayana of non-production
> > And of extinction in the Hinayana are the same
> > Emptiness [since they show that inherent existence] is extinguished
> > And that nothing [inherently existent] is produced;
> > Thus let the Mahayana be accepted [as Buddha's word].
>
> Mahayana sutras teach an emptiness that is the non-existence of inherently existent production whereas when Hinayana sutras speak of emptiness, they teach an extinguishment of products. Both mean the same thing. Thus, do not be impatient with the teaching of emptiness in the Mahayana.

Some scholars use this verse from *Precious Garland* as evidence that the mahayana teachings are in fact the Buddha's words. This is in response to the followers of the lower schools who assert that the

mahayana teachings are not the Buddha's words but were invented later on by Nagarjuna and others. Thus, they assert that only the hinayana teachings are the Buddha's words. To refute this, the mahayanists quote this verse from *Precious Garland,* which says that although the mahayana teaches non-production and the hinayana teaches the exhaustion, or extinguishment, of compounded phenomena, in the end they mean the same.

If the hinayanists are asked, "How can it be proved that the hinayana teachings are the Buddha's words?," they answer that the fact that the Buddha taught the three baskets is proven by his having engaged in the *Sutras*, having given permission in the *Discipline*, and not having contradicted reality in the *Abhidharma*. The mahayanists respond: "Since Buddha did the same in the mahayana teachings, why do you not accept these as Buddha's words?" They then quote this passage from *Precious Garland* to prove that the mahayana teachings are in fact the Buddha's words.

Regarding the proof that the mahayana teachings are indeed the Buddha's words in Maitreya's *Ornament for the Mahayana Sutras,* it says: "Because of engaging in his own and appearing in his discipline, and because of the profound and the extensive not contradicting reality (dharmata)." In Pelmen Konchog Gyeltshen's commentary on the *Ornament for the Mahayana Sutras,* a discussion takes place between the two lower schools, the Vaibhashikas and Sautrantikas, and our own tradition. This text (page 16) says:

> At that time, the two realists of the Arya Land (India) said that the mahayana sutra basket was not the Buddha's words because it was composed by the Tirthikas after the Buddha had passed away in order to harm the Buddha's doctrine; because it arose after the Buddha had taught the hearer vehicle and had passed away; and because, due to not teaching the antidotes to the afflictions and having such faults as teaching everything as non-existent it does not engage the sutra basket, does not appear in the discipline, and contradicts reality, whereby it does not possess the characteristics of Buddha's words.

In short, the hinayanists say that the mahayana is not the Buddha's words because by engaging in it the Buddha's doctrine is harmed. In fact, they think that the non-Buddhist Tirthikas invented the mahayana in order to harm the Buddha's teachings. Pelmen Konchog Gyeltshen's commentary on the *Ornament for the Mahayana Sutras* then says (page 21):

> In answer to [the accusation] "The other sutra basket (the mahayana) does not engage, does not appear in the discipline, and contradicts reality," [our own tradition says] "The mahayana, as the subject, does not have such faults because (1) it engages the Buddha's sutra basket since it is concordant with the sutra basket in teaching the extensive points of the bodhisattva trainings, (2) it appears in the Buddha's discipline since it tames the afflictions and either the conceptions which are their roots or the knowledge obstructions, and (3) it does not contradict reality since it depends upon the profound view and extensive conduct, its subject matter."

The extinguishment of products that is explained by the hinayana is asserted by the Prasangika Madhyamikas to refer to extinguishment from the start, meaning that products are free from the object of negation, which is true existence, from the start. However, the lower schools assert the extinguishment of products to mean the extinguishment of the suffering aggregates, that is, a nirvana without remainder in which the basis is extinguished. The Vaibhashikas assert the extinguishment of products to be the extinguishment of both the person and the aggregates. True Aspectarian Chittamatrins likewise assert that when someone with a nirvana with remainder attains a nirvana without remainder both the person and the aggregates are extinguished. On the other hand, the

Svatantrika Madhyamikas assert a nirvana without remainder that is the extinguishment of the suffering aggregates, but not the extinguishment of the being.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In what way do these two teachings have the same meaning? Some say, 'hearers assert an extinguishment of products, but if products inherently existed, then that would not be feasible. Therefore, when an extinguishment of products is asserted, it is necessary to assert non-inherent existence from the beginning. Thus, these two teachings have the same meaning.'
>
> This is very wrong. If that were so, then a sprout or any other phenomenon which the Madhyamikas assert to exist would have that reason; and, therefore, it would absurdly follow that sprouts, as well as all other products, and emptiness would be synonymous.

Lama Tsongkhapa says: "Some say, 'hearers assert an extinguishment of products, but if products inherently existed, then that would not be feasible.'" This assertion of hearers is made by the followers of the two realist schools, the Vaibhashikas and Sautrantikas. These two lower schools say that things are in fact extinguished but they also exist inherently. Thus, the teaching on the extinguishment of products is addressed to hearers. 'Hearer' can be understood from the point of view of path and from the point of view of tenets. From the point of view of tenets, hearers are Vaibhashikas and Sautrantikas. From the point of view of path, hearers are those who have entered the hearer path.

Are products extinguished? How is the extinguishment of products related to emptiness? For example, if I drink the tea in this cup, when the cup is empty the tea is extinguished, but is this the meaning of emptiness? In this context, the extinguishment of products refers to an extinguishment by the power of antidotes. Here 'product' is taken to mean the aggregates that are true sufferings, which are extinguished by the power of antidotes.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Also [Ajitamitra's] *Commentary on the Precious Garland (Ratnavalitika)* says that there is no difference in meaning at all between non-production and momentariness. However, this is the explanation of one who has not understood the meaning of the text.

It is not correct to understand non-production as momentariness, as does Ajitamitri. In the *Perfection of Wisdom Sutras,* the Buddha taught: 1) non-existence, 2) non-production, 3) isolated, and 4) not oppressed. Can non-existence be posited as the meaning of momentariness? Is non-existence not used to indicate the first attribute of true sufferings?

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> A Hinayana sutra [set forth by Shariputra after actualizing nirvana] quoted in Chandrakirti's *Commentary* on *(Nagarjuna's) 'Sixty Stanzas of Reasoning' (Yuktishashtikavrtti)* says, 'Complete abandonment of these sufferings, definite abandonment, purification, extinguishment free from desire, cessation, thorough pacification, disappearance, non-connection to other suffering, non-arising, and non-production – this is peace, this is auspiciousness. It is like this: the definite abandonment of all the aggregates, the extinction of cyclic existence, freedom from desire, cessation, nirvana.' Commenting on this, Chandrakirti says that because the phrase 'these sufferings' uses the term of proximity 'these', the passage, 'Complete abandonment of all these sufferings... disappearance' refers only to the sufferings of aggregates that exist presently in one's own continuum. The passage 'non-connection to other suffering... nirvana' refers to future suffering. [Since this sutra clearly refers to the extinguishment of present suffering, or the present mental and physical aggregates, it does not refer to an extinguishment brought about by the path but to the

natural extinguishment which these phenomena have always had and which is seen in meditative equipoise.]

OBJECTION: 'Sufferings' and 'aggregates' are general terms used here for their instances, the afflictions. [Therefore, this sutra does not refer to an extinguishment of the aggregates in general.]

ANSWER: This also is not feasible. If general terms are not amenable to explanation with a general meaning, they must be explained as referring to their instances; here, however, this can be explained in the context of a generality. Otherwise, according to the proponents of true existence, a passage such as, 'The afflictions are primordially extinguished,' in Maitreya's *Sublime Science (Uttaratantra)* cannot be explained as primordial extinguishment in the sense that the aggregates have been primordially without inherently existent production. They must [incorrectly] explain this as a total abandonment by means of the path. Then, when the nirvana that is to be actualized exists, the actualizer would not [and thus could not report on the extinguishment that was realized, as was done in the sutra]. Also, when the actualizer exists, the nirvana to be actualized would not because the aggregates have not been extinguished. Thereby, they are unable to explain this sutra.

According to us, it is permissible to explain extinguishment here in accordance with the statement:

> Extinguishment [in this case] is not [caused] by means of an antidote;
> It is so called because of primordial extinguishment.

We are able to explain well the meaning of the sutra [as referring to a natural or primordial absence of inherent existence in phenomena].

A nirvana that is a cessation of suffering in the sense of a [primordial] extinguishment is taught in sutra, as well as a cessation in the sense of an absence of inherently existent production. The superior Nagarjuna indicates that these are the same, and because his statement appears not to have been understood, I have explained it in detail.

Also, Nagarjuna's *Treatise* on *the Middle Way* (XV.7) says:

> In the *Advice to Katyayana*
> 'Exists', 'not exists', and 'both'
> Are rejected by the Blessed One
> Knowing [the nature of] things and non-things.

Thus, Nagarjuna teaches that a refutation of the two extremes is set forth in a Hinayana sutra, which appears in the *Brief Scriptures on Discipline (Vinayakshudravastu).*

These are just illustrations. There are many [sources] in Nagarjuna's *Precious Garland* not quoted here, and many are also set forth in his *Sixty Stanzas of Reasoning* and *Collection of Praises.*

The first part of the phrase in sutra, "Complete abandonment of these sufferings, definite abandonment, purification, extinguishment free from desire, cessation, thorough pacification, disappearance," is taught with respect to the *present aggregates*, using the seven terms: (1) complete abandonment of these sufferings, (2) definite abandonment, (3) purification, (4) extinguishment free from desire, (5) cessation, (6) thorough pacification, and (7) disappearance. The second part of the phrase, "non-connection to other suffering, non-arising, and non-production – this is peace, this is auspiciousness. It is like this: the definite abandonment of all the aggregates, the extinction of cyclic existence, freedom from desire, cessation, nirvana," is taught with respect to *future sufferings*.

Lama Tsongkhapa says: "OBJECTION: 'Sufferings' and 'aggregates' are general terms used here for their instances, the afflictions." Then the answer is set out: "ANSWER: This also is not feasible. If general terms are not amenable to explanation with a general meaning, they must be explained as referring to their instances; here, however, this can be explained in the context of a generality."

The Vaibhashikas say that when a nirvana without remainder is attained, all products cease. The Prasangika Madhyamikas refute the Vaibhashikas, saying that it follows that when a nirvana without remainder is actualized, there is no actualizer and that when there is the actualizer, there is nothing actualized. According to the Vaibhashikas, when a nirvana with remainder is attained and later a

nirvana without remainder is attained, does the extinguishment of the aggregates take place naturally or by the power of antidotes? According to the Prasangika Madhyamikas, since the extinguishment of the actualizer is not natural or primordial, the Vaibhashikas would have to say that it takes place by the power of antidotes. The Vaibhashikas define a nirvana without remainder as: a hinayana nirvana that is the extinguishment of the continuation of products. On the other hand, they define a nirvana with remainder as: a hinayana nirvana that is together with suffering aggregates. The presentation of the Svatantrika Madhyamikas is similar, in that they assert that a nirvana without remainder is a nirvana that is without the remainder of suffering aggregates, whereas a nirvana with remainder is a nirvana that is together with the remainder of suffering aggregates. On the other hand, for the Prasangika Madhyamikas, 'with remainder' and 'without remainder' do not refer to the presence and absence of suffering aggregates.

According to Jedzun Chogyi Gyeltshen's *General Meaning*, (page 147):

> Therefore, the definition of a hinayana nirvana without remainder is: a hinayana nirvana qualified by the vanishing of the manifest appearance of true existence; for example, a true cessation in the continuum of a hinayana foe destroyer who is single-pointedly absorbed on emptiness. The definition of a hinayana nirvana with remainder is: a hinayana nirvana that is together with the manifest appearance of true existence; for example, a true cessation in the continuum of a hinayana foe destroyer abiding in subsequent attainment. The meaning of this is clearly explained in the root text, which says: 'It is not like that existing in those foe destroyers who enter peace after abandoning the aggregates.' This is because it is taught that when abiding in a nirvana without remainder, there is no appearance of conventionalities to the face of the meditative equipoise of that foe destroyer.

(1) Complete abandonment of these sufferings, (2) definite abandonment, (3) purification, (4) extinguishment free from desire, (5) cessation, (6) thorough pacification, and (7) disappearance do not appear to one absorbed in meditative equipoise because there is no appearance of true existence and, therefore, there is no appearance of conventionalities. According to the Svatantrika Madhyamikas, the extinguishment of products is a natural, or primordial, extinguishment. According to the Prasangika Madhyamikas, it can be understood both in terms of natural extinguishment and extinguishment by the power of antidotes.

Wednesday morning, 1 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) previously said:

> Extinguishment [in this case] is not [caused] by means of an antidote;
> It is so called because of primordial extinguishment.

This extinguishment is as explained in Lama Tsongkhapa's *Treatise Differentiating Interpretable and Definitive Meanings: The Essence of Eloquence:* "Also, the Supramundane Victor said [in the middle wheel of the teaching], 'All phenomena are natureless; all phenomena are unproduced, unceasing, quiescent from the start, and naturally thoroughly passed beyond sorrow.'" "Quiescent from the start" means that the object of negation, which is true existence, has been pacified, or extinguished, from the very beginning.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) previously said:

> We are able to explain well the meaning of the sutra [as referring to a natural or primordial absence of inherent existence in phenomena].
>
> A nirvana that is a cessation of suffering in the sense of a [primordial] extinguishment is taught in sutra, as well as a cessation in the sense of an absence of inherently existent production. The superior Nagarjuna indicates that these are the same, and because his statement appears not to have been understood, I have explained it in detail.
>
> Also, Nagarjuna's *Treatise* on *the Middle Way* (XV.7) says:
>
> > In the *Advice to Katyayana*
> > 'Exists', 'not exists', and 'both'
> > Are rejected by the Blessed One
> > Knowing [the nature of] things and non-things.
>
> Thus, Nagarjuna teaches that a refutation of the two extremes is set forth in a Hinayana sutra, which appears in the *Brief Scriptures on Discipline (Vinayakshudravastu).*
>
> These are just illustrations. There are many [sources] in Nagarjuna's *Precious Garland* not quoted here, and many are also set forth in his *Sixty Stanzas of Reasoning* and *Collection of Praises.*

There are many texts in which it is explained that hearers and solitary realizers *do* realize the non-inherent existence of phenomena. One such text is *Advice to Katyayana,* in which, by negating the two extremes, the Buddha presents the middle way to Katyayana in particular, and to hearers and solitary realizers in general.

In regard to the extinguishment of products that occurs either naturally or by the power of antidotes, the Vaibhashikas say that when a hearer superior attains a nirvana without remainder, his aggregates are extinguished naturally and not by the power of antidotes. The Chittamatrins say that when a foe destroyer who has a nirvana with remainder attains a nirvana without remainder, the two obstructions are extinguished, not by the power of antidotes but by the extinguishment of his basis (i.e., his mental and physical aggregates). Similarly, the Vaibhashikas say that when a foe destroyer with a nirvana with remainder attains a nirvana without remainder (i.e., dies), since all products are extinguished, his aggregates and obstructions (specifically, the non-afflicted obstructions) are also naturally extinguished.

The *Great Exposition of the Middle Way* (page 202) by Kunkyen Jamyang Shepa sets out scriptural quotations proving that hearers and solitary realizers do realize the selflessness of phenomena:

> In *Advice to Katyayana,* it says: "Katyayana, why do worldly beings for the most part strongly adhere to existence and non-existence? In this way they are not thoroughly free from birth, aging, sickness, death, sorrow, lamentation, suffering, mental unhappiness, and conflict. Migrators are not free from cyclic existence. They are not free from the suffering of death." There are many such hinayana sutras that establish that [hearers and solitary realizers realize the non-inherent existence of phenomena].

The text continues (page 213) regarding the nine scriptural authorities that establish that hearers and solitary realizers have the realization of the non-inherent existence of phenomena, saying:

> Glorious Chandrakirti establishes that hearers and solitary realizers have the realization of the non-inherent existence of phenomena by means of seven and nine scriptures. The first scripture, *Precious Garland*, says: "As long as grasping to the aggregates exists...," meaning that if one does not realize the non-true existence of the aggregates one will not realize a

> fully qualified selflessness of persons. In addition, the second scriptural reference says: "Just as the eye, by mistake..." by which it is explained that all three – the hearers, solitary realizers, and bodhisattvas – realize non-inherent existence. The third scriptural reference says: "Non-generation taught in the mahayana..." by which the two teachings, the non-production explained in the mahayana sutras and the extinguishment of all sufferings and the aggregates in the hinayana sutras, are ultimately similar. The fourth scriptural reference, *Advice to Hearers*, in which the five aggregates are explained to be like foes and so forth, explains the [Buddha's] intention regarding non-true existence. The fifth scriptural reference, the *Sutra of Katyayana*, explains the abandonment of the two extremes. This sets out the five scriptural references [mentioned] here [in the autocommentary]. In *Clear Words* [it says that those five, along with] the *Hundred Thousand Stanza Perfection of Wisdom Sutra*, which says that those of all three vehicles train in the perfection of wisdom, and the *Compendium of Sutras* are the seven. Furthermore, *Clear Words* [mentions] the two, the *Stable Special Thought Sutra* (*Questions of Adhyashaya Sutra*) and the *Miserliness Concentration Sutra* (*Sutra on the Miserliness of One in a Trance*) [, making nine]. By way of these nine, it is established that [hearers and solitary realizers do realize the non-inherent existence of phenomena].

Here, in the *Great Exposition of the Middle Way,* the quotations from the nine scriptures are only indicated briefly. However, some of them appear in their entirety in Chandrakirti's autocommentary and Lama Tsongkhapa's *Illumination*.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) then has the following outlines:

3B1C-2A1B-2C3 Dispelling objections to the teaching that hearers and solitary realizers cognize the non-inherent existence of phenomena

This section has two parts:

A Dispelling objections set forth in Chandrakirti's commentary
B Dispelling others not set forth in Chandrakirti's commentary

3B1C-2A1B-2C3A Dispelling objections set forth in Chandrakirti's commentary

In this context Chandrakirti's autocommentary says:

> There is one, [namely Bhavaviveka], who considered in mind: "if the selflessness of phenomena was also indicated in the hearers' vehicle, then it would become meaningless to teach the mahayana." His system also is realized like this: as contradictory with reasoning and scripture.
>
> Teaching the mahayana is not done solely to indicate the mere selflessness in phenomena. If asked: "what then?" It is also [done to indicate] the bodhisattvas' grounds, [practices] gone beyond, prayers, compassion and so forth, thorough dedications, the two collections, and the unimaginable nature.
>
> As was taught in the *Precious Garland* [390 and 393]:
>
> > In the hearers' vehicle the bodhisattvas' prayers, activities and thorough dedications are not explained. How could one become a bodhisattva through that?
> >
> > The meaning of abiding in the bodhisattva deeds was not declared in the Sutras – it was declared in the mahayana, therefore [it is to be] upheld by the wise.

> The mahayana teachings are appropriate in order to clarify the selflessness of phenomena, because [they are] asserted to express the teaching extensively. In the hearers' vehicle, the selflessness of phenomena is exhausted through a brief indication. As was taught by the holy speech of the Acharya [Nagarjuna in the *Praise of the Supramundane*]:
>
> > You taught that not realizing the signless is without liberation. Therefore you finely revealed it completely in the mahayana.
>
> Enough by treating the ancillary topics!

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's commentary sets forth [and then refutes] the position of the opponent, the [Svatantrika Madhyamika] master Bhavaviveka, 'There is one who thinks, "If the selflessness of phenomena were taught in the hearers' vehicle, then the teaching of Mahayana would be senseless." His system is to be understood as contradictory to reasoning and scripture.'
>
> Buddhapalita, in his commentary on the seventh chapter of Nagarjuna's *Treatise on the Middle Way*, explains that Nagarjuna's statement that the selflessness of all phenomena is taught in Hinayana sutras refers to the non-inherent existence of phenomena. Bhavaviveka refutes this in his *Lamp for Wisdom*, 'If that were so, the Mahayana teaching would be senseless.'
>
> Does Bhavaviveka mean that in general the Mahayana teaching would be senseless or that the Mahayana teaching on the selflessness of phenomena would be senseless? In the first case, if his consequence that the Mahayana teaching would be senseless follows from the reason that the selflessness of phenomena is taught in the Hinayana, then the Mahayana teaching would be limited to teaching only the selflessness of phenomena. However, this is not so because the Mahayana also teaches the bodhisattva grounds, the practice of the perfections – giving and so forth – the great waves of aspirational prayers and dedications, great compassion as well as its accompanying topics, the great waves of the two collections, the marvelous power of the altruistic mind of enlightenment, and a reality inconceivable to common beings, hearers, and solitary realizers (a buddha's truth body). Nagarjuna's *Precious Garland* (390, 393) says:
>
> > Since all the aspirations, practices,
> > And dedications of bodhisattvas
> > Were not explained in the hearers' vehicle, how then
> > Could one become a bodhisattva through its path?
> >
> > The subjects based on the deeds of bodhisattvas
> > Were not mentioned in the [Hinayana] sutras
> > But were explained in the Mahayana, thus
> > The clear-sighted should accept it [as Buddha's word].
>
> These stanzas were set forth to clear away the wrong idea: 'One can progress to buddhahood through just the paths explained in the scriptural divisions of the hearers; therefore, the Mahayana is not needed.'

The main point here is that Bhavaviveka says that the mahayana teachings are senseless because the selflessness of phenomena was already explained in the hinayana.

Lama Tsongkhapa says: "Does Bhavaviveka mean that in general the Mahayana teachings would be senseless or that the Mahayana teaching on the selflessness of phenomena would be senseless? In the first case, if his consequence that the Mahayana teaching would be senseless follows from the reason that the selflessness of phenomena is taught in the Hinayana, then the Mahayana teaching would be limited to teaching only the selflessness of phenomena." However, this is not the case because in the mahayana many other subjects are explained aside from the selflessness of phenomena; for example, the bodhisattva grounds, the practices of the perfections, the great waves of aspirational prayers and dedications, and so forth. In short, because the mahayana presents these

subjects, it is not senseless in that there is no presentation of the grounds and the perfections in the hinayana.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti is saying that, according to Bhavaviveka, Nagarjuna should have said, 'Because the selflessness of phenomena is set forth in the Mahayana, the explanations in the Hinayana scriptures are not sufficient [for the attainment of buddhahood].' However, Nagarjuna did not say this but referred to other factors of the vast [methods of the Mahayana]. Bhavaviveka may mean that it would be senseless for the Mahayana to teach the selflessness of phenomena because it is taught in the Hinayana. This does not follow, however, because the selflessness of phenomena is taught no more than briefly in the scriptural collections of the hearers whereas it is taught very extensively from many viewpoints in the Mahayana.

On the other hand, if Bhavaviveka meant that the mahayana presentation of the selflessness of phenomena in particular is senseless, this too is not correct because the hinayana only presents the selflessness of phenomena briefly while the mahayana presents it extensively, with many reasonings. While Bhavaviveka accepts that there is a presentation of the selflessness of phenomena in the uncommon hinayana sutras, he is poking fun at Buddhapalita. Bhavaviveka, in his *Lamp of Wisdom,* finds many faults with Buddhapalita's assertions. Bhavaviveka is a Svatantrika Madhyamika, while Buddhapalita is a Prasangika Madhyamika. Although the hinayana sutra basket in general presents the selflessness of phenomena, an uncommon hinayana sutra basket does not present the selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> This also is the thought of the superior Nagarjuna, whose *Praise of the Supramundane (Lokatitastava)* says:
>
> > You have said that without cognizing
> > Signlessness, liberation does not occur.
> > Thus you taught it fully
> > In the Mahayana.
>
> The first two lines indicate that without cognizing suchness – signlessness – the afflictions cannot be extinguished and, therefore, liberation cannot be attained. The next two lines indicate that Buddha taught the selflessness of phenomena – signlessness – fully or completely in the Mahayana. Therefore, you should understand that the selflessness of phenomena was not fully taught in the Hinayana.
>
> QUESTION: How does the reason given in [the first two lines of] that stanza explain why the selflessness of phenomena was taught fully in the Mahayana?
>
> ANSWER: The liberation that is an extinguishment of the afflictions cannot be attained without cognizing signlessness; therefore, the selflessness of phenomena must also be taught in the hearers' vehicle. For this reason, a difference between Hinayana and Mahayana [is that the selflessness of phenomena is set forth fully in the Mahayana]. This is how the reason should be interpreted.

The first two lines of the stanza in Nagarjuna's *Praise of the Supramundane* indicate that the hinayana sutra basket does present the selflessness of phenomena because if hearers and solitary realizers did not realize the selflessness of phenomena they would not attain liberation, whereas they do. The next two lines say that the mahayana presents the selflessness of phenomena fully, whereas the hinayana does not. Thus, there is this difference between the mahayana and hinayana. It can be asked: "If the mahayana fully presents the selflessness of phenomena whereas the hinayana does not, what is it that

is not fully presented in the hinayana? In other words, what is it that is presented fully in the mahayana and is not fully presented in the hinayana?" Think about it.

Wednesday afternoon, 1 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Bhavaviveka's consequence [that the Mahayana teaching would be senseless], stated for the sake of refutation, and the opposite implied by that consequence [that the Hinayana does not teach the selflessness of phenomena] are thus shown to be facsimiles of refutation in which the pervasion is indefinite. In this way Bhavaviveka's refutation contradicts reasoning. The contradiction with scripture has been explained in detail above.
>
> QUESTION: What is the meaning of the master Nagarjuna's explanation that the selflessness of phenomena is taught fully in the Mahayana but not in the Hinayana scriptures? Also, what is the meaning of his explanation that the selflessness of phenomena is fully cultivated on the Mahayana but not on the Hinayana path?
>
> ANSWER: In no way does Nagarjuna teach that hearers and solitary realizers do not, like the Mahayanists, cognize that all objects of knowledge are without inherent existence, but rather cognize that just a portion of objects of knowledge are without inherent existence. If a selflessness of phenomena is established by valid cognition in terms of one phenomenon, then when you analyze whether or not another phenomenon inherently exists, you can realize its non-inherent existence on the basis of your previous reasoning.

Bhavaviveka previously stated the consequence: the Buddha, as the subject, it follows that it is meaningless for him to have taught the mahayana because he presented the selflessness of phenomena in the hinayana. This consequence is a facsimile of a refutation. The opposite consequence is: the Buddha, as the subject, it follows that the hinayana basket does not teach the selflessness of phenomena because the mahayana teachings are meaningful. Such an implied consequence contradicts reason and has already been shown to contradict the scriptures in that there are many hinayana scriptures that are sources for the teachings on the selflessness of phenomena.

Lama Tsongkhapa then poses the questions: "What is the meaning of the master Nagarjuna's explanation that the selflessness of phenomena is taught fully in the mahayana but not in the hinayana scriptures? Also, what is the meaning of his explanation that the selflessness of phenomena is fully cultivated on the mahayana but not on the hinayana path?" The answer is: "In no way does Nagarjuna teach that hearers and solitary realizers do not, like the Mahayanists, cognize that all objects of knowledge are without inherent existence, but rather cognize that just a portion of objects of knowledge are without inherent existence."

The hinayana teaches the selflessness of phenomena, as mentioned in the following quote from Lama Tsongkhapa's *Treatise Differentiating Interpretable and Definitive Meanings: The Essence of Eloquence* (see Hopkins, *Emptiness in the Mind-Only School of Buddhism*):

> [In the "Questions of Paramarthasamudgata Chapter" of] the *Sutra Unraveling the Thought,* [Paramarthasamudgata] says:
>
> > The Supramundane Victor, [initially] spoke, in many ways, of the own-character of the aggregates [of forms, feelings, discriminations, compositional factors, and consciousnesses, these being that in which one travels in cyclic existence]. He also spoke of their character of production [through the force of contaminated actions and afflictive emotions, their] character of disintegration, abandonment, [of the contaminated actions and afflictive emotions that are the causes of the contaminated aggregates], and thorough knowledge [that the

> entities of the aggregates are like a disease or are not established as a substantially existent self]. Just as he did with respect to the aggregates, so he also spoke with respect to [the mode of suffering of] the sense-spheres [the six objects — visible forms, sounds, odors, tastes, tangible objects, and other phenomena — and the six senses — eye, ear, nose, tongue, body, and mental sense powers], dependent-arising, and the [four] foods [that is, morsels of food, contact, intention, and consciousness]. In a similar fashion, he also spoke of the own-character of the [four] truths, thorough knowledge [of true sufferings as impermanent and miserable], abandonment [of the sources of suffering, contaminated actions and afflictive emotions], actualization [of true cessations], and meditation [cultivating true paths, which are the means for attaining true cessation of suffering] as well as the own-character of the constituents, the various [eighteen] constituents, and manifold [six] constituents, their abandonment, and thorough knowledge as well as the own-character of the thirty-seven harmonies with enlightenment [which are the antidotes to those objects of abandonment, their] discordances [that is, what is to be abandoned], the antidotes [to those objects of abandonment], production of [virtues or antidotes] that have not been produced, the abiding of those that have been produced, non-loss [of antidotes that have been produced, their] arising again [when one has familiarized with them again and again], and increasing [those antidotes through the power of familiarity] and extending [them limitlessly].

It is incorrect to assert that the non-inherent existence of all 108 phenomena, ranging from forms through the exalted knower of all aspects, is not fully presented in the hinayana while it is fully presented in the mahayana. One might think, for example, that in the hinayana only a limited number of phenomena, those ranging from forms through the thirty-seven harmonies with enlightenment, are taught as lacking inherent existence. To prove that this is not so, Lama Tsongkhapa then says: "If a selflessness of phenomena is established by valid cognition in terms of one phenomenon, then when you analyze whether or not another phenomenon inherently exists, you can realize its non-inherent existence on the basis of your previous reasoning."

Therefore, in what way is the presentation of the selflessness of phenomena not complete in the hinayana teachings, whereas it is complete in the mahayana? Also, what is the meaning of saying that the selflessness of phenomena is fully cultivated in the mahayana but not in the hinayana? The Buddha did not teach the selflessness of phenomena in a complete way in the hinayana teachings in the sense that he did not set out limitless reasons establishing it, whereas he did this in the mahayana. For this reason, when hinayanists meditate on the selflessness of phenomena they do so using a limited number of reasonings to establish the selflessness of phenomena, whereas mahayanists use limitless reasonings to establish it. In short, due to the different aptitudes of these people Buddha taught extensive reasonings in the mahayana for establishing the selflessness of phenomena, whereas he only taught some reasons in the hinayana.

With respect to the cultivation of the realization of the selflessness of phenomena, it can be said that hinayanists do not fully cultivate the realization of the selflessness of phenomena in the sense that they do not meditate on it for the sake of abandoning both the afflictive and knowledge obstructions, whereas mahayanists do. Therefore, the full cultivation of the realization of the selflessness of phenomena means that it becomes an antidote to both obstructions.

Lama Tsongkhapa says that it is not correct to say that a bodhisattva realizes all objects of knowledge as non-inherently existent, whereas hearers and solitary realizers only realize some phenomena as non-inherently existent. This is because when hinayanists establish non-inherent existence on one phenomenon, they can then extend this realization to other phenomena. This is

because the reasoning used for establishing the non-inherent existence of one phenomenon can be applied in a similar fashion to establish the non-inherent existence of other phenomena. Aryadeva, in his *Four Hundred Stanzas,* says: " He who sees the suchness of one phenomenon sees the suchness of all phenomena." This means that when, in dependence on reasoning, someone sees that a single phenomenon is non-inherently existent, using the same reasoning he can also see that other phenomena do not inherently exist.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Some who wish to be Madhyamikas assert a system refuting the true existence of phenomena but maintain that the emptiness of true existence truly exists, while others assert that a positive independent nature of phenomena truly exists. The former appears to have the fault of not delimiting well the measure of true existence and thereby of refuting only a coarse form of it. The latter claims to refute the true existence of phenomena but appears not to have done so through valid cognition and instead abides in a view that is a denial of phenomena. Therefore, these [two wrong interpretations] cannot challenge [our position that if the emptiness of one phenomenon is realized, the emptiness of any phenomenon can be realized based on the previous reasoning].
>
> To establish that even a single phenomenon does not truly exist, Mahayanists use limitless different reasonings as set forth in the *Treatise on the Middle Way*. Hence their minds become greatly broadened with respect to suchness. Hinayanists use only brief reasoning to establish suchness by valid cognition, and since they do not establish emptiness the way Mahayanists do, do not have a mind broadened with respect to suchness. Therefore, Nagarjuna sets forth a difference of vastness or abbreviation and of fully or not fully meditating on selflessness. This difference arises because hearers and solitary realizers strive to abandon only the afflictions (the obstructions to liberation), and cognizing a mere abbreviation of the meaning of suchness is sufficient for that. Mahayanists are intent on abandoning the obstructions to omniscience, and for that it is necessary to have a very broadened mind of wisdom opened to suchness.

Someone asserts that while phenomena are empty of true existence, true existence itself exists truly. This person's reasoning is that because emptiness bears reasoned analysis, the emptiness of true existence is truly existent. Someone else, Jonangpa, says that a positive, independent nature of phenomena (i.e., an affirmative, independent reality) truly exists. The first person does not understand well the nature of true existence in that he is able to refute true existence with respect to things but does not delimit well the measure of true existence. The second person thinks that phenomena do not truly exist but has not realized this with a valid cognizer and therefore deprecates them. A similar objection is found in Lama Tsongkhapa's *Essence of Eloquence* in the context of thoroughly established phenomena. In this text, someone says that thoroughly established phenomena are affirmative, independent phenomena. This is incorrect, as reality is a negative phenomenon, specifically a non-affirming negative that is the negation of the object of negation.

In order to prove that even a single basis lacks true existence, Nagarjuna sets forth infinite reasonings in *Fundamental Wisdom*. Those who apply these reasonings have a mind that is greatly broadened with respect to suchness. At the beginning of *Fundamental Wisdom*, in the context of the expression of worship, it says that there is no production ultimately from self, other, both, or causelessly. For example, a sprout, as the subject, is not ultimately produced because it is not produced from self, other, both, or causelessly. The sign is composed of four parts – (1) not produced from self, (2) other, (3) both, or (4) causelessly – which are further elaborated by setting out many proofs for each of them. Therefore, in order to establish even one single phenomenon as non-truly existent, the mahayana scriptures set forth many reasonings. However, this is not the case in the hinayana scriptures.

Q: Lama Tsongkhapa says that if the emptiness of one phenomenon is realized, the emptiness of all phenomena can be realized. Does this refer to a realization by an inferential cognizer or by a direct perceiver?
A: It refers to a realization by way of a valid inferential cognizer because there is no direct perceiver that depends upon reasoning [while this realization relies upon reasoning]. The Prasangika Madhyamikas assert that even ordinary beings can have a yogic direct perceiver. The directly perceivable and manifest phenomena are mutually inclusive.

Q: According to the Prasangika Madhyamikas, when one achieves a direct realization of emptiness do the realizations of the selflessness of persons and the selflessness of phenomena arise simultaneously or serially?
A: If the realization of emptiness is direct, then the realizations arise simultaneously. A direct realization of the selflessness of persons and a direct realization of the selflessness of phenomena arise only on the path of seeing. However, the Prasangika Madhyamikas say that a direct perception of impermanence can exist in the continuum of an ordinary being, whereby a yogic direct perceiver can exist in the continuum of an ordinary being. One should examine whether a direct perceiver is pervaded by being free from conceptuality. The lower schools posit the definition of a direct perceiver as: an unmistaken knower free from conceptuality. But in the Prasangika Madhyamika school this definition does not apply. Kunkyen Jamyang Shepa presents the Prasangika Madhyamikas' assertions regarding valid cognizers. Although usually there is a presentation of three types of valid inferential cognizers, Kunkyen Jamyang Shepa presents a fourth, an inferential cognizer of comprehension through an example (*dpe nyer 'jal gyi rjes dpag*).

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-2C3B Dispelling objections not set forth in Chandrakirti's commentary

OBJECTION: Maitreya's *Ornament for Clear Realizations* says:

Know that the paths of the rhinoceros-like
Are included completely within
Abandonment of the thought of an object,
Non-abandonment of a subject, and the base.

Thus, Maitreya says that through the paths of a solitary realizer one is able to abandon thought adhering to the truth of an object but not adherence to the truth of a subject. Maitreya also says:

Due to diminishment of the afflictions,
Objects of knowledge, and the three paths
There are purities of the students,
The rhinoceros-like, and conqueror children.

(Note: These verses were previously translated in the *Ornament for Clear Realizations* as respectively:

2.8 *Because it abandons conceptions of apprehendeds as objects,*
Because it does not abandon apprehending, and
By the support, the path of the rhinoceros-like
Is to be known as perfectly summarized.

2.29 *Because of the afflictive, the knowledge, and having diminished*
Those to the three paths, there are the purities of learners,
Rhinoceroses, and children of the victors.
The buddhas' is utterly in all ways.)

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) continues:

> How do you interpret Maitreya's saying that adherence to the truth of objects is an obstruction to omniscience?
>
> ANSWER: The meaning of solitary realizers' abandoning adherence to external objects must be interpreted in one of two ways:
>
> 1. Though external objects are established by valid cognition, solitary realizers meditate on the meaning of a reasoned refutation of the true existence of external objects, as laid down by the Madhyamikas. They thereby abandon adherence to the truth of external objects.
> 2. On the basis of having meditated on the meaning of a reasoned refutation of external objects in accordance with Chittamatra, solitary realizers abandon the conception that external objects exist.
>
> The first interpretation is wrong. If one who can posit the general existence of external objects refutes their true existence through a reasoning analyzing suchness, then, when he analyzes whether subjects truly exist, he can – based on the force of the former reasoning – realize that subjects do not truly exist. Aryadeva's *Four Hundred* says:
>
> > He who sees the suchness of one phenomenon
> > Sees the suchness of all phenomena.
>
> [Therefore, it would be impossible to abandon the conception that objects truly exist without forsaking the conception that subjects so exist.]
>
> Commentaries by [Svatantrika Madhyamika] masters such as Haribhadra assert the meaning of this passage from Maitreya's *Ornament for Clear Realizations* in accordance with the second interpretation. For them valid cognition establishes that external objects do not exist. Once this has been established, then anyone – even with dull faculties – would understand that a consciousness apprehending an object is not a different entity from its object. Therefore, Maitreya's statement that solitary realizers do not abandon adherence to the truth of subjects should be understood as the [solitary realizers'] general assertion that minds truly exist. In no way could they refute [the true existence of] one half of subject and object which are different entities and conceive of the truth of the other half. Therefore, the statement that it would be amazing to have a similarity of tenet between the solitary realizers who compound the truth of subjects and the Chittamatrins who teach the ultimate existence of a consciousness without the duality of subject and object is laughable even for the non-Buddhist Dipakas.

The main point here is that in the second chapter of the *Ornament for Clear Realizations,* it is said that solitary realizers abandon the conceptions of true existence of objects but not the conceptions of true existence of subjects. How do solitary realizers abandon adherence to the true existence of objects without abandoning adherence to the true existence of subjects? According to the Svatantrika Madhyamikas, solitary realizers do not abandon the conceptions of true existence of subjects because they realize the emptiness of objects in terms of the emptiness of objects existing as external phenomena. When solitary realizers realize that apprehendeds do not exist as external objects, they abandon the conception of them as truly existent. They do not abandon the conceptions of true existence of subjects, or apprehenders, because apprehenders do in fact exist and therefore the conceptions of true existence of apprehenders cannot be abandoned.

On the other hand, the Prasangika Madhyamikas interpret these verses to mean that solitary realizers' abandonment of the conceptions of true existence of objects is itself the realization of the selflessness of phenomena, whereby they prove that solitary realizers do realize the selflessness of phenomena.

Debate in this regard arises: "It is incorrect to say that only a conception of true existence of one object is abandoned and not a conception of true existence of all objects, because if the conception of true existence is abandoned with respect to one basis it can be abandoned with respect to all bases." The Prasangika Madhyamikas assert the existence of external objects. They say that the inner

consciousness and external objects are different substances. Their manner of asserting external objects is an uncommon assertion of this school. According to the Prasangika Madhyamikas, there is no need for an object to exist in dependence on the activation of latencies on the mind. This means that objects can exist externally as an agglomeration of particles.

Thursday morning, 2 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [In the Yogachara Svatantrika system] the path of a solitary realizer is said to be middling from the viewpoint of his abandoning adherence to the truth of objects [which are different entities from their subjects] and his not abandoning adherence to the true existence of subjects. Through abandoning adherence to the truth of objects he is superior to a hearer, and through not abandoning adherence to the truth of subjects he is inferior to a Mahayanist [who realizes the non-true existence of all phenomena]; therefore, he is middling.
>
> [For the Yogachara Svatantrikas] the three persons of the three vehicles – great, middling, and small – have sharp, middling, and dull faculties, and thus they posit stages of faculties in relation to selflessness. They posit the best, the Madhyamika view, for the great vehicle. They posit the middling view of Chittamatra for the middling vehicle, and the lowest view, the common one of the selflessness of the person, for the small vehicle. However, it is not definite [that this is the only way of positing a difference in faculty according to Haribhadra and so forth]. Even according to [a system propounding that] all three have the view of suchness, it is not contradictory that there be three stages of faculties from the viewpoint of [trainees'] quickly or not so quickly penetrating suchness, and so forth.

The Yogachara Svatantrika Madhyamika system posits the three vehicles as explained above. Followers of the hearer vehicle cultivate the realization of the selflessness of persons, whereby they abandon the conception of a self of persons. Followers of the solitary realizer vehicle cultivate the realization of the emptiness of objects and their subjects being different substances, whereby they abandon the conception of external objects and thereby abandon the coarse knowledge obstructions. Followers of the mahayana cultivate the realization of the subtle selflessness of phenomena, whereby they abandon the conception of a self of phenomena. The Yogachara Svatantrika Madhyamikas assert that *some* hearers and solitary realizers realize the selflessness of phenomena. There are two sets of fathers and sons of the Yogachara Svatantrika Madhyamikas who uphold this assertion: one set consists of Arya Vimuktisena as the father and Haribhadra as the son and another set consists of Shantarakshita as the father and Kamalashila as the son. According to other scholars, Shantarakshita has two sons: Haribhadra, as the main son, and Kamalashila. The father and son of the Sautrantika Svatantrika Madhyamikas are respectively Bhavaviveka and Jnanagarbha.

The Sautrantika Svatantrika Madhyamikas assert that although some hearers and solitary realizers realize the selflessness of phenomena, those hearers and solitary realizers who are definite in lineage are pervaded by not realizing the selflessness of phenomena. Likewise, although the hinayana sutra basket does present the selflessness of phenomena, the uncommon hinayana sutra basket is pervaded by not presenting the selflessness of phenomena. Who are the hinayanists who realize the selflessness of phenomena? The Svatantrika Madhyamikas say that they are those who enter the mahayana and realize the selflessness of phenomena but then give up the mind of enlightenment and fall to the lower vehicle. Because such persons have realized the selflessness of phenomena, there do exist hearers who have the realization of the selflessness of phenomena. Kensur Pema Gyeltshen of Drepung Loseling Monastery, who follows Panchen Sonam Dragpa, wrote a commentary on the Middle Way which discusses this. On the advice of His Holiness the Dalai Lama, Kensur Pema Gyeltshen also wrote commentaries on the Perfection of Wisdom and the *Compendium of Valid Cognition* in order to clarify doubts within the context of Panchen Sonam Dragpa's texts. There is an

expression that Drepung Loseling Monastery has two *gyeltshens* (victory banners): Kensur Pema Gyeltshen and Kensur Nyima Gyeltshen.

Bhavaviveka (of the Sautrantika Svatantrika Madhyamikas) debated Buddhapalita (of the Prasangika Madhyamikas) regarding Buddhapalita's commentary on the seventh chapter of *Fundamental Wisdom,* saying: "It follows that the mahayana teachings are meaningless because the hinayana teachings present the selflessness of phenomena." In response, Lama Tsongkhapa asked Bhavaviveka: "Do you mean that in general the presentation of the mahayana is meaningless or that in particular the presentation of the selflessness of phenomena in the mahayana is meaningless? If you say that in general the presentation of the mahayana is meaningless, it follows that it is meaningful because the mahayana does not present only the selflessness of phenomena but also presents the grounds, perfections, prayers, dedications, and so forth. On the other hand, if you say that in particular the presentation of the selflessness of phenomena in the mahayana is meaningless, it follows that it *is* meaningful because there is a difference in the way selflessness is taught in these two vehicles. This is because the mahayana basket presents the selflessness of phenomena using limitless reasonings, whereas the hinayana basket presents it using only a limited variety of reasonings. Furthermore, mahayanists establish the selflessness of phenomena using many reasonings and cultivate the realization of the selflessness of phenomena as an antidote to both the afflictive obstructions and the knowledge obstructions, whereas hinayanists establish the selflessness of phenomena using limited reasonings and cultivate the realization of the selflessness of phenomena only as an antidote to the afflictive obstructions."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Maitreya teaches that the inability to abandon adherence to the truth of the subject – consciousness – is a distinguishing feature of the low vehicle. Therefore, it is not suitable to interpret the view of selflessness explained in his *Ornament for Clear Realizations* as Chittamatra, as is the case with his *Ornament for the Mahayana Sutras*, *Discrimination of the Middle Way and the Extremes (Madhyantavibhanga)*, and *Discrimination of Phenomena and the Nature of Phenomena (Dharmadharmatavibhanga)*. Even Indian [scholars] interpreted Maitreya's *Ornament for Clear Realizations* [variously] as Madhyamika and as Chittamatra, and their many reasons regarding this should be explained; however, fearing too many words I will not write about it now.

Maitreya's *Ornament for the Mahayana Sutras*, *Discrimination of the Middle Way and the Extremes*, and *Discrimination of Phenomena and the Nature of Phenomena* mainly present the Chittamatra view. Even Indian scholars interpreted the *Ornament for Clear Realizations* according to the Madhayamika and the Chittamatra. There are a total of twenty-one commentaries on the *Ornament for Clear Realizations*. Among them is the *Pure Possessor of the Twenty Thousand* by Shantipa, who wrote this commentary – which connects the *Ornament* to the *Twenty-Five Thousand Stanza Perfection of Wisdom Sutra* – in accordance with the views of the Mind-Only (Chittamatra) school. On the other hand, Haribhadra and Arya Vimuktisena wrote their commentaries on the *Ornament for Clear Realizations* – respectively *Eight Chapters on the Twenty-Five Thousand* and *Illumination of the Twenty-Five* – in accordance with the views of the Middle Way (Madhyamika) school.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Furthermore, Maitreya's *Ornament for Clear Realizations* says:

> The element of qualities has no divisions
> Therefore the lineages cannot be different.
> Divisions of lineage are thoroughly imputed
> Through differences in the dependent phenomena.

(Note: This verse was previously translated in the context of *Ornament for Clear Realizations* as:

1.39 *Because indivisible in the sphere of reality,*
The lineages are not suitable to be different.
By way of instances of qualities supported,
The division of that is thoroughly described.)

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) continues:

> This indicates that hearers and solitary realizers also cognize the nature of phenomena. With respect to the term 'element of qualities' (*dharmadhatu*) Aryavimuktisena's *Illumination of the Twenty-Five Thousand Stanza Perfection of Wisdom (Pañchavimshatisahasrika-prajñaparamitopadeshashastrabhisamayalamkaravrtti)* says, '"Thought" and "conception" are an adherence to phenomena and their signs. Because these do not exist, desire is to be known as just non-existent. This non-existence is the suchness of all phenomena. This indicates that the element of qualities itself is the cause of the qualities of superiors, and it is thus the basis of achieving the natural lineage.' The element of qualities is explained as the emptiness of true existence that is the non-existence of phenomena and their signs as they are apprehended by desire, which here refers to a consciousness adhering to the true existence of phenomena and their signs.
>
> An objection is stated: 'If the element of qualities were the lineage, then all sentient beings would abide in the lineage because the element of qualities in general would abide in all.' The objector thinks that abiding in the lineage refers to the lineage on the occasion of the path.

Maitreya's *Ornament for Clear Realizations* (v. 1.39ab) says: "The element of qualities has no divisions therefore the lineages cannot be different." This means that the naturally abiding lineage existing in the continua of the followers of the three vehicles cannot be divided because it is of a single nature.

Maitreya's *Ornament for Clear Realizations* (v. 1.39cd) then says: "Divisions of lineage are thoroughly imputed through differences in the dependent phenomena." Although the basis, which is the sphere of reality, cannot be divided, that which is based on it can be divided; in this sense lineage can be divided. This too is taken as proof that hearers and solitary realizers do realize the selflessness of phenomena. Just as mahayanists purify negativities by meditating on the sphere of reality, likewise hearers and solitary realizers purify negativities by meditating on the sphere of reality.

Arya Vimuktisena's *Illumination of the Twenty-Five Thousand Stanza Perfection of Wisdom* comments on the sphere of reality, saying: "This indicates that the element of qualities itself is the cause of the qualities of superiors, and it is thus the basis of achieving the natural lineage." (This can also be translated as: "This work, the *Ornament for Clear Realizations*, teaches that the sphere of reality, being the cause of superiors, is the 'naturally abiding lineage,' the basis of mahayana achievings.") Arya Vimuktisena thus says that the sphere of reality is the cause of a superior's realization and is therefore the basis that is the naturally abiding lineage.

Lama Tsongkhapa then says: "The element of qualities is explained as the emptiness of true existence that is the non-existence of phenomena and their signs as they are apprehended by desire, which here refers to a consciousness adhering to the true existence of phenomena and their signs." An objection is made to this: "If the element of qualities were the lineage, then all sentient beings would abide in the lineage because the element of qualities in general would abide in all." This objection arises because all sentient beings have a mind that is empty of true existence. Lama Tsongkhapa says: "The objector thinks that abiding in the lineage refers to the lineage on the occasion of the path." In

other words, it follows that all sentient beings abide in lineage because they abide in the sphere of reality (and the sphere of reality is lineage).

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In answer to this it is said, 'The lineage is that which serves as the cause of superiors' qualities when observed; thus, here the absurd consequence [that all sentient beings would have the qualities of superiors] is not entailed.' The mere presence of the nature of phenomena does not mean that one abides in the lineage in terms of the path. When one observes and meditates on the nature of phenomena through the path, it comes to serve as the special cause of superiors' qualities. At that time one's lineage is regarded as special.
>
> An objection is raised, 'Still, since the element of qualities has no divisions, the lineages of the three vehicles could not be different.' In answer, it is said that because there are divisions in the paths, which are dependent phenomena observing [the element of qualities], the lineages are asserted to be different.

In short, just by *having* the sphere of reality (the element of qualities) one does not *abide* in the lineage of the occasion of the path. Only by observing the sphere of reality does that sphere of reality act as a cause of the realizations of a superior. Observing and meditating on the sphere of reality acts to purify obstructions and achieve realizations. Lama Tsongkhapa says: "At that time one's lineage is regarded as special." This special lineage is 'a naturally abiding lineage which is the basis of the mahayana achievings.' A 'naturally abiding lineage' exists in all sentient beings because all sentient beings *have* a mind that is empty of true existence, this being the naturally abiding lineage. All sentient beings are said to abide in the tathagata essence. In order to prove that all sentient beings have the tathagata essence, Maitreya's *Sublime Continuum* sets out three reasons saying (Gyatso, *The Doctrine of Buddhism-I*): "Because the [activities] of the buddha body radiate forth, because suchness is undifferentiated, because all sentient beings have lineage, they always possess the buddha essence." In other words, all sentient beings have the tathagata essence because: (1) the enlightened activities of the buddhas radiate to all sentient beings, (2) the minds of buddhas and the minds of sentient beings are the same in being empty of true existence, and (3) sentient beings possess lineage. In short, sentient beings have the tathagata essence because they possess that which is suitable to transform into a buddha body. The <u>definition of lineage</u> is: that which is suitable to transform into a buddha body. This is in turn posited as: (1) a naturally abiding lineage and (2) a developmental lineage.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The basis (the element of qualities) is what is observed, and the dependent are the consciousnesses observing it. With respect to the observers, there are also the two vehicles of hearers and solitary realizers. In order for the element of qualities to be observed, it must be established for that mind, and unless true existence is eliminated for that mind, an emptiness of true existence is not established for it. If emptiness is not established for it, then neither is the nature of phenomena.
>
> The fact that the nature of phenomena must be initially ascertained in relation to one [particular] base qualified by emptiness shows that hearers and solitary realizers take cognizance of either an external or internal phenomenon qualified by emptiness and observe its nature – its non-true existence.

The *basis* is the naturally abiding lineage; *that which is based on it* is the mind that observes and meditates on that basis. Hearers and solitary realizers observe that basis, the naturally abiding lineage. In order for a mind to observe that basis, the sphere of reality, true existence must be eliminated for that mind. This is because if true existence is not eliminated for that mind, an emptiness of true existence cannot be established for it. If the emptiness of true existence is established for a mind, that

mind will not conceive of true existence. When true existence is eliminated for the minds of hearers and solitary realizers, the selflessness of phenomena is established. Thus, hearers and solitary realizers also have the realization of the selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Thus, there are solitary realizers who cognize the meaning of suchness, and it does not follow that no solitary realizer can abandon adherence to the truth of consciousnesses.

The Prasangika Madhyamikas pose the question: "If solitary realizers abandon the conception of true existence, why do they not abandon the conception of true existence of consciousnesses?" The conclusion is that solitary realizers can abandon adherence to the true existence of consciousnesses. The stanza from the *Ornament for Clear Realizations* (v. 2.8) regarding the third topic of the second chapter (a knower of paths knowing solitary realizers' paths), which says: "Know that the paths of the rhinoceros-like are included completely within abandonment of the thought of an object, non-abandonment of a subject, and the base" (*or* "Because it abandons conceptions of apprehendeds as objects, because it does not abandon apprehending, and by the support, the path of the rhinoceros-like is to be known as perfectly summarized") is, according to the Prasangika Madhyamikas, interpretive and not definitive because it is incorrect to assert that solitary realizers abandon the conceptions of true existence of apprehendeds but not the conceptions of true existence of apprehenders. Thus, the Prasangika Madhyamikas say that when the adherence to true existence of objects is abandoned the adherence to the true existence of subjects is also abandoned.

In short, Lama Tsongkhapa quotes three verses from the *Ornament for Clear Realizations*: one in relation to the third topic of the second chapter (a knower of paths knowing solitary realizers' paths, v. 2.8), one in relation to the eleventh topic of the second chapter (the completely, pure path of meditation, v. 2.29), and one in relation to the fourth topic of the first chapter (naturally abiding lineage, the basis of mahayana achievings, v. 1.39), in order to show that hearers and solitary realizers do have the realization of the selflessness of phenomena.

Thursday afternoon, 2 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Also, hearers must be divided into those who do and do not realize suchness, and for this reason two Hinayana modes were set forth in Maitreya's *Ornament for Clear Realizations*. You must ascertain that [in Maitreya's *Ornament for Clear Realizations* which contains two systems] conceptions of a true difference in entity of subject and object are both assigned and denied as obstructions to omniscience.
>
> OBJECTION: The objection here is not that the lineages of the three vehicles could not be different but that a division into thirteen lineages is not feasible.
>
> ANSWER: This is not correct. On this subject Maitreya's *Ornament for Clear Realizations* is similar to the statement of a hypothetical objection in Aryavimuktisena's *Illumination of the Twenty-Five Thousand Stanza Perfection of Wisdom Sutra*: 'As it is said in sutra, "Manjushri, if the element of qualities is one, if suchness is one, and if the limit of reality is one, then how could receptacles and non-receptacles be designated?"' The question is that since it is said in other sutras that the element of qualities has no divisions, how could persons be designated as receptacles and non-receptacles of Mahayana? Since the objection in Maitreya's *Ornament for Clear Realizations* is similar to this, it is that the lineages of the greater and lesser vehicles could not be different. It does not refer to ascribing receptacles and non-receptacles in terms of thirteen lineages.

In the *Ornament,* it is said that there are two types of hinayanists: (1) those who realize the selflessness of phenomena and (2) those who do not realize it. Because of this, there are two interpretations regarding knowledge obstructions: one according to the Svatantrika Madhyamikas and one according

to the Prasangika Madhyamikas. The Svatantrika Madhyamikas say that conceptions apprehending apprehendeds and apprehenders as truly existent different substances are knowledge obstructions, whereas the Prasangika Madhyamikas say that they are not. For the [Yogachara] Svatantrika Madhyamikas such conceptions are coarse knowledge obstructions, whereas for the Prasangika Madhyamikas they are not knowledge obstructions but afflictive obstructions. For the Prasangika Madhyamika school conceptions of true existence are afflictive obstructions, while apprehendeds and apprehenders do exist as different substances. Since apprehendeds and apprehenders are in fact different substances, conceptions of them as truly existent different substances are conceptions of true existence, which are afflictive obstructions. On the other hand, according to the Yogachara Svatantrika Madhyamikas, apprehendeds and apprehenders are *not* different substances and, therefore, the conceptions apprehending them to be truly existent different substances are not subtle knowledge obstructions [because they are coarse knowledge obstructions].

An objection is then made: "The objection here is not that the lineages of the three vehicles could not be different but that a division into thirteen lineages is not feasible." The answer is that this is not correct. The thirteen naturally abiding lineages that are the basis of the mahayana achievings are feasible in that they are related to the thirteen bases, the thirteen achievings.

In Arya Vimuktisena's *Illumination of the Twenty-Five Thousand Stanza Perfection of Wisdom Sutra* it says: "As it is said in sutra, 'Manjushri, if the element of qualities is one, if suchness is one, and if the limit of reality is one, then how could receptacles and non-receptacles be designated?'" Lama Tsongkhapa says: "The question is that since it is said in other sutras that the element of qualities has no divisions, how could persons be designated as receptacles and non-receptacles of mahayana? Since the objection in Maitreya's *Ornament for Clear Realizations* is similar to this, it is that the lineages of the greater and lesser vehicles could not be different. It does not refer to ascribing receptacles and non-receptacles in terms of thirteen lineages." Regarding the thirteen divisions of lineage, there is no debate as to whether those persons who possess them are receptacles or not for the mahayana teachings, because all thirteen divisions are the bases of the *mahayana* achievings. There are thirteen naturally abiding lineages that are the bases of the mahayana achievings. The basis, or support, is the lineage; the supported is the mahayana achievings. What is under discussion here is the naturally abiding lineage that is the basis of the mahayana achievings. With respect to these thirteen naturally abiding lineages there is no debate regarding receptacles or non-receptacles.

Q: Does being a receptacle or non-receptacle refer to having or not having the thirteen naturally abiding lineages?
A: Persons who possess the thirteen naturally abiding lineages in their continua are pervaded by being receptacles of the mahayana.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The assertions of the master Haribhadra also are similar to those of Aryavimuktisena. Likewise, Maitreya's *Sublime Science* and Asanga's commentary on it explain that among hearers and solitary realizers there are some who have cognized the nature of phenomena and others who have not. Fearing it would be too much, I will not cite them.
>
> How do we know there are these two types [Hinayanists who have and have not cognized emptiness]? Maitreya's *Ornament for Clear Realizations* teaches [a bodhisattva's] knower of paths which involves understanding the paths of hearers and solitary realizers so that a bodhisattva can accommodate [trainees] with those lineages. There are two types, those who are and are not vessels of the profound (emptiness), and since hearers and solitary realizers are predominantly not vessels of the profound, their paths were most frequently presented. Just as with respect to Mahayana it sometimes happens that unless one is taught Chittamatra first, one cannot find the Madhyamika view, this is also the case with solitary realizers and even hearers. [Therefore, they

> are often not taught the profound emptiness initially even though realization of it is the only path of liberation.]

In the *Ornament for Clear Realizations,* Maitreya says that there are two types of knowers of paths: (1) knowers of paths knowing hearers' paths and (2) knowers of paths knowing solitary realizers' paths. These were taught in order to care for trainees who are hearers and trainees who are solitary realizers. Hearers and solitary realizers are of two types: (1) those who are correct vessels for the profound and (2) those who are not. Among these two, those who are not suitable for profound emptiness are more numerous. Because of this, their paths are taught more often, meaning that the paths that are the realization of the selflessness of persons and those that are the realization of non-duality, the emptiness of objects and subjects being different substances, are taught more often. The *Ornament for Clear Realizations* presents three paths: hearers' paths, solitary realizers' paths, and buddhas' paths, which are respectively the realization of the selflessness of persons, the realization of non-duality, and the realization of the non-true existence of phenomena. Even among mahayanists there are many who first need to be led in the Chittamatra view and only later on in the Madhyamika. Similarly, those following the hearers' vehicle are first taught the selflessness of persons and then the non-inherent existence of phenomena, while those following the solitary realizers' vehicle are first taught non-duality and then the non-inherent existence of phenomena.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In both Aryavimuktisena's *Illumination of the Twenty-Five Thousand Stanza Perfection of Wisdom Sutra* and Haribhadra's *Great Commentary on the Eight Thousand Stanza Perfection of Wisdom Sutra* (*Ashtasahasrikaprajñaparamitivyakhyanabhisamaya-lamkaraloka*) the element of qualities is assigned as the lineage of all three vehicles. As a source for this they quote the teaching that all superior persons are distinguished by the non-product (the element of qualities, emptiness). As a proof for the statement, 'The qualities of an enlightened one and all the doctrines taught by him do not exist,' the *Diamond Cutter* says, 'Superior persons are distinguished by the non-produced.' This means that all superiors of the greater and lesser vehicles are posited by way of their having actualized the non-produced ultimate which is the non-establishment of phenomena in reality.
>
> Therefore, this [Prasangika] system and Maitreya's *Ornament for Clear Realizations* are not contradictory. You should understand that the systems of the commentators on Maitreya's *Ornament for Clear Realizations* also contain two modes.
>
> Enough elaboration.

The sphere of reality (element of qualities) can be posited as the lineage of all three vehicles. This requires interpretation: the sphere of reality of the mind of a hearer is the hearer lineage, the sphere of reality of the mind of a solitary realizer is the solitary realizer lineage, and the sphere of reality of the mind of a bodhisattva is the mahayana lineage. Lineage is that which is suitable to transform into enlightenment. Enlightenment is of three types: (1) hearer enlightenment, (2) solitary realizer enlightenment, and (3) mahayana enlightenment. These are referred to in *Tenets (grub mtha')* as respectively the small, middling, and great enlightenments. On the basis of understanding these three enlightenments, one can define the three lineages as follows:

(1) the hearer lineage is that which is suitable to transform into a hearer's enlightenment,
(2) the solitary realizer lineage is that which is suitable to transform into a solitary realizer's enlightenment, and
(3) the mahayana lineage is that which is suitable to transform into great enlightenment.

Enlightenment can be divided into (1) enlightenment in terms of abandonments and (2) enlightenment in terms of realizations. The enlightenment that is abandonment and the enlightenment that is realization can be applied to all three vehicles. For example, a hearer enlightenment that is realization is a hearers' path of no more learning, while a hearer enlightenment

that is abandonment is nirvana. Or the hearer enlightenment can be said to be the state of a hearer foe destroyer.

Lama Tsongkhapa says: "This means that all superiors of the greater and lesser vehicles are posited by way of their having actualized the non-produced ultimate which is the non-establishment of phenomena in reality." In short, all superiors realize emptiness.

Lama Tsongkhapa then says: "Therefore, this [Prasangika] system and Maitreya's *Ornament for Clear Realizations* are not contradictory. You should understand that the systems of the commentators on Maitreya's *Ornament for Clear Realizations* also contain two modes." In brief, hearers and solitary realizers are of two types: those who realize emptiness and those who do not.

This concludes the difficult part of the first chapter in terms of understanding. Instead, the remaining part is hard to practice!

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-3 Surpassing feature on the first ground

This section has four parts:

A The giving of abiders on the first ground
B The giving of those with a lower basis
C Bodhisattvas' giving
D Divisions of the perfection of giving

3B1C-2A1B-3A The giving of abiders on the first ground

Chandrakirti's autocommentary says:

Therefore, since those with undistracted intelligence will be able to understand the thusness of the meaning by themselves, I shall explain the principal part.

Because the intelligent are able to understand thusness by themselves Chandrakirti continues with his explanation as follows:

Then for him, the first cause of a completed buddha's
Enlightenment – just giving – becomes surpassing. [1.9ab]

For the bodhisattva who attained the Extremely Joyous Ground, from among the ten called

1. giving,
2. morality,
3. patience,
4. joyous effort,
5. concentration,
6. wisdom,
7. method,
8. prayer,
9. strength, and
10. exalted wisdom,

only giving gone beyond will become greatly surpassing. It is not that he does not have the others.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti says in his root text:

> *Then for him the first cause of perfect*
> *Enlightenment – giving – becomes surpassing.* [1.9ab]

When a bodhisattva attains the Very Joyful Ground, the perfection of giving among the ten perfections becomes greatly surpassing for him. However, this does not mean that he does not have the other perfections.

The only difference between the autocommentary and the *Illumination* is that Chandrakirti lists all ten perfections.

Chandrakirti's autocommentary says:

> Also, that giving is the first cause of the omniscient state.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The supramundane perfection of giving is the first supramundane cause of complete enlightenment.

When the Prasangika Madhyamikas set out the ten perfections they assert two different types of perfections: the mundane and the supramundane. The perfections on the level of the first ground are supramundane, whereas those on the paths of accumulation and preparation are mundane.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In general the latter perfections exceed the former ones, but on the first ground it is said that giving is surpassing. This means that here a bodhisattva has not developed the measure of force with respect to the practice of ethics and so forth that he has with respect to the practice of giving. As it is said, on the first ground he is able to practice it by giving away his own body and external belongings such that even the slightest attachment – which would be contrary to the perfection of giving – does not arise. On the second ground a bodhisattva is able to refrain totally from faulty ethics – the contraries of proper ethics – even in dreams, but on the first ground he is not able to do so.

Bodhisattvas on the first ground are able to give away all their belongings and their body without the slightest miserliness. However, first ground bodhisattvas do not have the ability to keep ethics as well as bodhisattvas on the second ground, who are able to keep proper ethics even in a dream.

Chandrakirti's autocommentary says:

> *Since even giving away his flesh is done with devotion,*
> *It also is the cause of inferring the unsuitable to appear.* [1.9cd]

At that time, the qualities of the bodhisattva are not suitable to appear, yet whatever they are – such as realizing a ground and so forth – they are clearly inferred through the inference of the distinction of giving away material of outer and inner essence, like smoke and so forth [are inferred] from fire and so forth.

As the bodhisattva's giving is the first cause of buddhahood and the sign of definite qualities which are unmanifest.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Through his giving, one can infer the presence of unimaginable realizations on the first ground;

Chandrakirti's root text says:

His devotion to giving even his own flesh
Is reason for inferring the unimaginable. [1.9cd]

Not only does the bodhisattva give external articles with enthusiasm, but he even has great enthusiasm for giving his own flesh to one who asks for it. This quality serves as the cause for inferring internal realizations – such as attaining a ground – which most other persons cannot imagine. The inference is similar to fire being inferred due to the presence of smoke, etc.

This indicates that the bodhisattva has no taints of attachment with respect to giving away his body, life, and resources. Even though he gives these away, his continuum remains firm without changing its aspect.

When a bodhisattva attains the first ground, he has the ability to give away his belongings and body without difficulty and without any sense of loss, even if he has to cut his flesh in order to do so. Although the special inner realizations of bodhisattvas on the first ground are not suitable to appear, they can be inferred on the basis of their generosity. 'Suitable to appear' is discussed in *Signs and Reasons* in the context of two types of signs: (1) a correct sign of non-observation of that which is suitable to appear and (2) a correct sign of non-observation of that which is not suitable to appear. An example of a correct sign of non-observation of that which is not suitable to appear are flesh-eating spirits *(pishasa*) who, although present in front of oneself, cannot be seen. A syllogism regarding this is: a person for whom the flesh-eating spirits in the place in front of him are extrasensory, as the subject; it is not feasible for him to assert the existence of flesh-eating spirits because he does not observe flesh-eating spirits by way of a valid cognizer. Likewise, the realizations of bodhisattvas are not suitable to appear to others because they are extrasensory and therefore cannot be asserted to exist since there is no valid cognizer observing them. One can only know that bodhisattvas have these realization in dependence on the sign "because they practice generosity perfectly and thoroughly."

QUESTIONS AND ANSWERS

Q: In the *Illumination* (Tib. page 58) it says:

The next two lines of Nagarjuna's *Precious Garland* teach that due to the presence of the view of the transitory as real 'I' and 'mine', actions binding one to cyclic existence are accumulated and through the force of these actions one is born in cyclic existence. This is said in terms of someone who has not come to disbelieve the referent object of the conception that the mental and physical aggregates truly exist. This is not applicable in general to one who merely possesses the view of the transitory as real 'I' and 'mine' because this view is present through the seventh ground, but from the first ground a bodhisattva does not take rebirth by the power of contaminated actions.

This seems to be saying that first ground bodhisattvas no longer take rebirth in cyclic existence because they disbelieve the referent object of the view of the transitory collection. Hinayana stream enterers also disbelieve the referent object of the view of the transitory collection yet still take rebirth by the force of karma and afflictions; for example, stream enterers who will be liberated in seven lives. Yet they have the same realization of emptiness as do first ground bodhisattvas and, according to Jedzunpa, also have no projecting karma. This fact seems to contradict what it says in *Ocean of Sport* and *Illumination*.

A: In the *Illumination* it does not say that someone does not take rebirth by the force of karma and afflictions due to merely disbelieving the referent object of the view of the transitory collection. It is important to understand that there is a difference between the tenets of the Prasangika Madhyamikas

and those of the Svatantrika Madhyamikas regarding this point. What is said in the *Ocean of Sport* regarding the stream enterers who take rebirth for twenty-eight more lives is based on the *Treasury of Knowledge* and is also found in sutra. It is important to note that stream enterers, for example, those who take rebirth for twenty-eight more lives, are also to be applied to the meaning sangha (the bodhisattvas). Thus, there are also bodhisattvas who take rebirth in cyclic existence twenty-eight times out of their compassion and prayers and not by the force of karma and afflictions.

I think that your point is that stream enterers who take rebirth for twenty-eight more lives disbelieve the referent object of the view of the transitory collection as do first ground bodhisattvas. Therefore, it seem contradictory that such bodhisattvas do not take rebirth yet stream enterers do. So why is this so? First ground bodhisattvas do not take rebirth merely due to disbelieving the referent object of the view of the transitory collection. In addition, they have completed the equivalent of the collection of merit of the first countless great eon. These bodhisattvas now begin the collection of merit of the second countless great eon, due to which they do not take rebirth by the force of karma and afflictions. However, others give the reason that when a bodhisattva attains the first ground he attains a body that is the nature of mind. In other words, his body composed of flesh and bones transforms into a body that is the nature of mind. Such a body is not a true suffering. How does a body that is the nature of the mind arise? The usual answer is that it is created by uncontaminated karma and a subtle cause, a motivation which is caused by a knowledge obstruction. In other words, that body arises from uncontaminated karma and the level of the latency of ignorance. What is the level of the latency of ignorance? It is a subtle effort motivated by a knowledge obstruction.

Stream enterers who take rebirth for twenty-eight lives take rebirth by the force of karma, in spite of the fact that they no longer create new projecting karma. When it is said that such a stream enterer takes rebirth, it necessarily refers to rebirth as a human or god. On the basis of this good rebirth, they then benefit others.

Q: In the *Illumination* (Tib. page 60) it says:

> In what way do these two teachings have the same meaning? Some say, 'hearers assert an extinguishment of products, but if products inherently existed, then that would not be feasible. Therefore, when an extinguishment of products is asserted, it is necessary to assert non-inherent existence from the beginning. Thus, these two teachings have the same meaning.'
>
> This is very wrong.

Could Geshe-la please explain this paragraph?

A: 'Hearers' in this context refers to the lower schools, the Vaibhashikas and Sautrantikas, who assert that compounded phenomena, translated here as products, which are the aggregates and so forth, are extinguished, yet they also exist inherently. The proponent makes the objection that if it is accepted that the aggregates are extinguished, it should also be accepted that they are non-inherently existent from the beginning. From this, he goes on to assert that the hinayana extinguishment of products and the mahayana non-production are equivalent in terms of indicating emptiness. However, Lama Tsongkhapa says that this way of explaining the equivalence of 'extinguishment' and 'non-production' is incorrect.

Lama Tsongkhapa continues:

> If that were so, then a sprout or any other phenomenon which the Madhyamikas assert to exist would have that reason; and, therefore, it would absurdly follow that sprouts, as well as all other products, and emptiness would be synonymous.

The presentation of extinguishment in the hinayana does not depend on other schools, as does the objection made by the opponent who relies on the Prasangika Madhyamika tenets.

In general the Vaibhashikas and Sautrantikas are not correct vessels for the teachings on emptiness because they do not accept the selflessness of phenomena. When it is said that the selflessness of phenomena is presented in the hinayana it means that it is presented to those hinayanists who are hinayanists in the sense of having entered the hinayana path, i.e., hearers and solitary realizers, and not those who are hinayanists in the sense of hinayana tenet holders, the Vaibhashikas and Sautrantikas. Lama Tsongkhapa says that Buddha's teachings on the extinguishment of the five aggregates are based on the intention that the aggregates do not exist inherently from the beginning. Therefore, the extinguishment of the aggregates is extinguishment in the sense of pacification of inherent existence from the beginning, and not extinguishment by the power of the antidotes.

Q: Are these aggregates the contaminated appropriated aggregates or aggregates in general?
A: These aggregates are specifically the contaminated appropriated aggregates, this being mentioned explicitly in sutra.

Q: Geshe-la just explained the point of view of the objector, but then Lama Tsongkhapa says that what he asserts is very wrong although it appears to be right.
A: The objection here is made in terms of those who are hearers by way of tenets (i.e., those who do not accept emptiness). Lama Tsongkhapa says that the objector's assertion is incorrect because it follows that for hearers products and emptiness (or any other phenomena whatsoever) are mutually inclusive. The word translated here as 'synonymous' is not to be understood in terms of two different names for one thing, but as mutually inclusive or having the same meaning.

The presentation of the extinguishment of products implies emptiness. The presentation of non-production also implies emptiness. Therefore, according to our own system, both presentations are the same in terms of presenting emptiness.

In *General Meaning* (page 146) Jedzunpa says:

> Someone says: "The way these two are mutually inclusive is that in the mahayana basket 'compounded phenomena are not produced inherently' and 'compounded phenomena are extinguished' are mutually inclusive. If compounded phenomena exist inherently, they are necessarily not extinguished." This is very wrong. If that were the case, it follows that all resultant things, such as sprouts and so forth, would be mutually inclusive with emptiness because if they exist inherently this is incompatible with them being results in that if they exist inherently this is incompatible with them depending on causes.
>
> Then, [Ajitamitra's] commentary on the *Precious Garland* says: 'There is no difference in meaning between non-production and momentariness.' This too is the explanation of someone who has not understood the meaning of the text because it has the fault that it follows that all the sutras and treatises that teach compounded phenomena as momentary teach emptiness.

The objector says: "Hearers assert an extinguishment of products, as well as the inherent existence of products. However, if products inherently existed, then their extinguishment would not be feasible. Therefore, when an extinguishment of products is asserted, it is necessary to assert non-inherent existence from the beginning." Thus, the objector is saying that the presentation of emptiness and the presentation of the extinguishment of products mean the same because if things exist inherently they could not be extinguished. Our own tradition says that this reasoning is not correct because it follows that things, such as sprouts, would be mutually inclusive with emptiness because if sprouts exist

inherently they are not feasible as results in that if they exist inherently they contradict depending on causes.

Q: How does a consciousness progress from a nirvana with remainder to a nirvana without remainder?
A: According to which school?
Q: The Svatantrika Madhyamika school.
A: According to the Svatantrika Madhyamika school a superior first attains a nirvana with remainder. Then, in order to pacify the contaminated aggregates, he continues to meditate on the selflessness of persons and then one day dies and attains a nirvana without remainder. According to the two lower schools, when that nirvana without remainder is attained the actualizer no longer exists because the continuum of the aggregates ceases.

This reminds me of Thich Nhat Hanh and Master Muhen who do not assert rebirth because they say that when one dies everything ceases to exist. Perhaps they say this in relation to the assertions of the Svatantrika Madhyamikas regarding the extinguishment of the aggregates at the time of a nirvana without remainder.

According to the Prasangika Madhyamika school, one can attain a nirvana without remainder and then a nirvana with remainder. For example, they posit a foe destroyer absorbed in meditative equipoise on emptiness as having a nirvana without remainder. When that foe destroyer arises from meditative equipoise, he has a nirvana with remainder in subsequent attainment. They assert this in relation to the fact that in subsequent attainment this foe destroyer once again has the appearance of true existence. Then, when he later returns to meditative equipoise on emptiness, he once again has a nirvana without remainder.

Q: The Buddha said that a man who falls in love with a woman created by a magician and then returns home to meditate on her impermanence and so forth is foolish in that he should meditate on her lack of true existence. On the other hand, if someone prostrates to Buddha while conceiving him to be truly existent is he foolish or is he wise in that he is creating merit? There are two positions: (1) someone prostrating to Buddha without adhering to true existence but without realizing his emptiness of true existence is creating merit and (2) someone prostrating to Buddha adhering to true existence is a fool.
A: The example of a woman created by the magician and someone doing prostrations are two different things. Someone who falls in love with a woman created by a magician is foolish because there is no such woman. Even if he returns home to meditate on that woman as impermanent, misery, empty, and selfless, this is of little value. However, such meditation is in general positive. To think that the woman is impermanent is ineffective in that this woman is not impermanent. It is like meditating on the impermanence of the horns of a rabbit, in that the horns of a rabbit are not impermanent.

When someone makes prostrations to the Buddha, conceiving him to be truly existent, is he foolish? He is not. If someone asserts that he is foolish, then also all the scholars of the Vaibhashika school, such as Vasubandhu, Dignaga, etc., are foolish in that they assert Buddha to be truly existent. In the third chapter of the *Ornament for Clear Realizations,* Maitreya says that attachment to the conquerors and so forth is subtle. In this context, there is a discussion of whether prostrating and so forth to a conqueror while conceiving him to be truly existent is virtuous or not. The answer is that it *is* virtuous. On the other hand, if someone prostrates to Buddha without adhering to true existence this is definitely virtuous.

Q: Please explain the relation between the conception of a self of persons and the conception of a self of phenomena, the root of cyclic existence, the view of the transitory collection, the first link of

dependent-arising, and the view of the transitory collection which is innate and that which is acquired.

A: The first link of dependent-arising is, in general, said to be the ignorance which is an innate conception of a self of persons. The conception of a self of persons and conception of a self of phenomena differ only in terms of their observed objects or their bases. For example, the basis of the conception of true existence or inherent existence of the person is the person, while the basis of the conception of the true existence of phenomena is any phenomena other than the person. According to the Prasangika Madhyamikas, the view of the transitory collection is a view that, observing one's own 'I' or 'mine,' conceives it to exist inherently. Such a view of the transitory collection is the root of cyclic existence. The root of cyclic existence is also a conception of a self of persons. Therefore, according to the Prasangika Madhyamikas, if it is a view of the transitory collection it is pervaded by being a conception of the true existence of the person. Therefore, the first of the twelve links, ignorance, is pervaded by being a conception of a self of persons.

According to the Prasangika Madhyamikas, an acquired view of the transitory collection is terminologically a view of the transitory collection but is not an *actual* view of the transitory collection. There are twenty types of views of the transitory collection, four being posited in relation to each of the five aggregates. When the four divisions are posited in relation to form, they are (see Hopkins, *Meditation on Emptiness*, page 687):

(1) form is not the self,
(2) self does not possess from,
(3) a self is not in form, and
(4) form is not in the self.

Likewise, these four can be posited in relation to the remaining four aggregates. The twenty views of the transitory collection are listed in the *Supplement to the 'Middle Way'* (v. 6.144):

> *Form is not the self, the self does not possess form,*
> *The self is non-existent on form, nor does form exist on the self.*
> *Thus in four aspects should all the aggregates be known –*
> *These are asserted as the twenty viewing the self.* [6.144]

Commentary to this verse can be found in the *Illumination* (Tib. page 371).

Q: If the first link of dependent-arising is the *innate* conception of a self of persons, why is there no contaminated karma created on the first ground after only the *acquired* conception of a self of persons has been abandoned?

A: A first ground bodhisattva does not create any more karma, [but this is] not merely due to having abandoned the acquired conception of a self of persons.

END

Monday afternoon, 6 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-3B The giving of those with a lower basis

This section has two parts:

1 Attaining the happiness of cyclic existence through giving
2 Attaining the happiness of nirvana through giving

3B1C-2A1B-3B1 Attaining the happiness of cyclic existence through giving

Chandrakirti's autocommentary says:

> Likewise, desiring to show that "it is the cause of both relieving the suffering and of attaining the continual happiness of ordinary beings, hearers, and solitary realizers" [the root text] mentions:
>
> *All beings strongly desire happiness and*
> *Yet there is no human happiness without resources.*
> *Having known that resources also arise from giving,*
> *The Subduer at first gave discourse on giving.* [1.10]
>
> The antidotes of hunger and thirst, sickness, cold, and so forth are mere remedies of suffering and causes for the pleasure of existence to occur. Through judging the continuity of essence with mere mistaken bondage, the world very strongly adheres to pleasure whose essence is not free of harm. Such pleasure, the pleasure of that strong desire, is of the nature of the mere remedy of suffering. It is not observed to be produced without an enjoyment of resources: [the enjoyment] having a mistaken essence [and the resources], the objects of strong desire, being the antidotes of suffering.
>
> Having known that "also the objects which are the cause of relieving suffering do not arise with those who did not accumulate the material which produces the merit arisen from giving", the Bhagavan, through knowing the nature of the thoughts of each and every migrator, from among the discourses on morality and so forth, gave just the discourse on giving at the very beginning.

Ordinary beings engage in generosity for the sake of this life, whereas hearers and solitary realizers do so in order to eliminate the sufferings of cyclic existence and attain everlasting peace. Yet, in reality, all beings are the same in desiring everlasting happiness; for example, human beings desire happiness and in order to obtain it they need resources, the cause of which is generosity. Understanding this, Buddha taught generosity first among the six perfections.

Chandrakirti mentions "hunger and thirst, sickness, cold, and so forth," all of which are relieved by having sufficient resources. For example, hunger is relieved by food, thirst by drink, sickness by medicines and the necessities of life, and cold by clothes, shoes, shelter, and so forth. In order to obtain such resources as food, drink, medicines, shelter, and so forth one needs to have created their cause – generosity. Therefore, one should practice generosity, specifically the generosity of giving material things.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

> *All these beings want happiness, but human*
> *Happiness does not occur without resources.*
> *Knowing that resources arise from giving,*
> *The Subduer first discoursed on that.* [1.10]

> All these beings want to attain the happiness that is a diminishment of sufferings such as hunger, thirst, sickness, heat, and cold. However, the happiness of humans and so forth is not produced without their enjoying desired objects or resources, such as food, drink, means of curing sickness, clothing, and shelter. The Subduer, understanding the thought of all migrators and knowing that these resources arise from merit accumulated by previous giving, discoursed on giving from the very first for it is easy to engage in this method.

Lama Tsongkhapa says: "The Subduer... discoursed on giving from the very first for it is easy to engage in this method." Among the six perfections, generosity is the easiest to practice. Generosity is defined as the intention to give. This intention needs to be developed.

Chandrakirti's autocommentary says:

> Now, even though donor sentient beings are not in accord with proper ways, in order to express the great essence of giving harmonious with their actions, [the root text] mentions:
>
> *Who have inferior compassion, very crude minds*
> *And are only intent on their own aims,*
> *Even their desired resources,*
> *The causes that pacify suffering, arise from giving.* [1.11]
>
> Some, like merchants, desiring the result of a very vast mass of wealth from giving away very little wealth, strive even more than those who strive (i.e., beggars) and are devoted in the wish to give. Unlike the Tathagata's children who are under the influence of compassion, they do not act to strongly increase the fervor which desires to give solely without seeking the results of giving. They turn away from the fault of giving, grasping [to resources, but] are anxious to hold on to the mere qualities. Even for them, that [giving] acts to destroy the unappealing sufferings of body such as hunger and thirst, by means of issuing the excellent and eminent resources, becoming the cause of pacifying suffering.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: Must a giver accord with proper ways in order to attain marvelous resources from giving gifts?
> ANSWER: That is not necessary; Chandrakirti's root text says:
>
> *Even for beings with little compassion,*
> *Brutal and intent on their own aim,*
> *Desired resources arise from giving,*
> *Causing extinguishment of suffering.* [1.11]
>
> There are those who, like merchants, seek to gain an enormous mass of wealth by giving away very little. Wanting far vaster resources than do even beggars, they are enthusiastic in giving.
>
> As givers their compassion is low, and, unlike bodhisattvas under the influence of compassion, they do not seek to increase the joy of wanting to give without seeking the fruits of giving. Moreover, intent on only their own welfare – the happiness of high status – their minds are extremely brutal toward sentient beings. They have turned away from the fault of holding on to resources and of not giving them away but anxiously hold on to their sole hope which is for reward. Even for them, giving serves as a cause of extinguishing the sufferings of hunger, thirst, and so forth by bringing marvelous resources.

Does one who gives need to behave properly in order to experience the result of generosity, perfect resources? Even someone who does not behave properly, in the sense that he lacks ethics, will still experience the result of giving. The example given here is that of merchants who give away only a little with the hope of receiving much in return.

Lama Tsongkhapa says: "Wanting far vaster resources than do even beggars, they are enthusiastic in giving." The wording of the Tibetan is not very clear here but this probably means that someone wanting great resources gives something small, such as some rice, to beggars with the hope of gaining much more. One wanting a vast amount of resources should engage in generosity.

When bodhisattvas practice generosity they do so out of compassion and not out of the hope of reward. In other words, they give sincerely without any ulterior motive. Ordinary beings have inferior compassion, crude minds, and seek reward, yet the result of their giving is still resources. In short, although they give in order to attain happiness in this life, they will still reap the result, wealth, in a future life.

In general it is said that to be born as a human being is a fortunate rebirth, yet there are many human beings who are poor and who experience much suffering as a result of their poverty. This is the result of not having practiced generosity, i.e., miserliness.

It may appear easy to practice generosity, but in reality it only happens in dependence on valid scriptural authority such as: "From generosity, wealth; from morality, high rebirth." This statement is correct with respect to its main subject because it is a scripture that is established as pure by means of the three-fold analysis.

Q: Is it not that the time and manner in which the result of generosity will be experienced is an extremely hidden phenomenon, while the fact that wealth comes from generosity is only a slightly hidden phenomenon?
A: That is correct. The conclusion of debate regarding this is that the fact that wealth comes from generosity is a slightly hidden phenomenon, but when, where, and in what way the result will be experienced is a hidden phenomenon.

In brief, even if one gives with the thought of reward in this life, one will still experience the result, wealth. In general, the cause of higher rebirth as a human or god is to protect ethics. If, in addition, one practices generosity one will definitely experience resources in a future life in the upper realms. The practice of patience results in beauty. The practice of effort brings the result of magnificence, in the sense that one will be respected and looked up to by others. The practice of concentration brings a stable mind. The practice of wisdom leads to intelligence. Buddha said that the six perfections should be practiced in conjunction with each other as in this way one will develop more and more qualities. On the other hand, if one practices only some of the perfections one will not be able to progress as one will always lack some of the necessary conditions.

The next outline in Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) is:

3B1C-2A1B-3B2 Attaining the happiness of nirvana through giving

In this regard Chandrakirti's autocommentary says:

> Also he, who is devoted to the desire to give merely in relation to relieving his own suffering since devoid of compassion:
>
> *He too, through the context of giving,*
> *Will sometime soon encounter an arya being;*
> *Then, correctly severing the continuity of existence,*
> *As a result of that, will progress to peace.* [1.12]
>
> – is mentioned,

Because it was set forth that "the holy ones will come in the presence of donor-patrons", one with great appreciation for giving will meet an arya being through the context of giving. Hence, from his thorough teachings, he will understand the lack of qualities in samsara and actualize the stainless arya path. Thereby, having abandoned ignorance of pacifying suffering, casting off the continuity of samsara, engaged from beginningless time in succession of birth and death one after another, he will completely pass beyond sorrow through the vehicles of the hearers and solitary realizers.

Hence, to some extent, the giving of those who are not bodhisattvas is the cause of attaining the happiness of samsara and nirvana.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

Through giving even they will quickly attain
A meeting with a superior being.
Then they will cut the continuum of cyclic existence,
Going to the peace caused by meeting a superior. [1.12]

Even those bereft of compassion but intent on giving – looking after only their own happiness in the sense of diminishing suffering – quickly attain a meeting with a superior being while they give. This is because the excellent are said to associate with patrons, to whom they then teach doctrine. Through this, the patrons come to understand cyclic existence as being without any good features. Through actualizing uncontaminated superior paths, they abandon ignorance and completely sever the continuum of cyclic existence – the passage from birth to death again and again since beginningless time. They pass to the peace of a hearer's or solitary realizer's nirvana which is caused by meeting with the excellent.

Those who lack compassion engage in generosity in order to attain their own happiness and be free from suffering. Even so, as a result they will meet with a superior who will ask them for something, whereby this superior will engage his patron in conversation. In this way, while thanking the patron the superior will go on to indirectly teach him Dharma by explaining that cyclic existence is without any qualities. In this way patrons are led to develop the wish to leave cyclic existence and to attain the superiors' paths. Thereby, they progress to the attainment of a hearer's nirvana or a solitary realizer's nirvana.

In short, the practice of generosity acts as a basis for developing all excellent qualities. Due to generosity one meets with a superior, receives teachings, comes to understand the faults of cyclic existence and the advantages of liberation, and goes on to achieve nirvana. Therefore, due to generosity one can sever the continuity of cyclic existence.

In this way there are two results of giving: the happiness of cyclic existence and the pacification of suffering, nirvana. In addition, one can even achieve a bodhisattva's enlightenment as will be explained next.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-3C Bodhisattvas' giving

This section has four parts:

1 Extraordinary benefits of bodhisattvas' giving
2 Importance of discourse on giving for both the compassionate and the non-compassionate
3 The joy attained by bodhisattvas when giving
4 Whether or not suffering occurs when a bodhisattva gives away his body

3B1C-2A1B-3C1 Extraordinary benefits of bodhisattvas' giving

Chandrakirti's autocommentary says:

> *Those with the mind which promised to benefit migrators*
> *Through giving, attain joy not long delayed.* [1.13ab]
>
> Those who are not bodhisattvas will not definitely enjoy the result explained at the same time as giving and hence, because the result of giving is unmanifest, it is even possible they will not engage in giving. Yet, the bodhisattvas, at the very same time as giving, through completely satisfying the mind of the seeker, attain the strongly desired excellent result of giving [and] thus retain a supreme joy and thoroughly enjoy the result of giving at that time. Because of that, they take joy in giving at all times.

Bodhisattvas engage in generosity knowing they will experience the result in the future and, in addition, when the recipient experiences satisfaction they themselves experience the immediate result of joy.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *Those bearing in mind a promise to help beings*
> *Attain happiness from giving before too long.* [1.13ab]
>
> When non-bodhisattvas satisfy a beggar through giving, it is not definite that they at the time or immediately afterwards enjoy the happiness that is the fruit of their giving. Because non-bodhisattvas do not at once see the fruit of their giving, it even happens that [for this reason] they do not engage in giving. However, bodhisattvas, who bear in mind their promise to help all migrators in the long run and to achieve happiness for them temporarily, attain the fruit of their giving – a supreme joy – as soon as they see a beggar's satisfaction. Enjoying the fruits of giving, bodhisattvas take joy in giving at all times.

Bodhisattvas, when they give, experience joy due to the satisfaction of the beggar who received. The result of their giving occurs at the time of giving or immediately after. On the other hand, non-bodhisattvas do not experience the result of giving immediately, whereupon they may even stop engaging in generosity. Bodhisattva donors understand that there is happiness both immediately and in the long term and therefore they continually practice generosity.

Tuesday morning, 7 March 2000

The next outline in Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) is:

3B1C-2A1B-3C2 Importance of discourse on giving for both the compassionate and the non-compassionate

Chandrakirti's autocommentary says:

> Therefore, in the manner which was explained:
>
> *Because…*
> giving is the cause of the high status and definite goodness of all...
>
> *the merciful and non-merciful,*
> *Therefore, only the discourse on giving is foremost.* [1.13cd]

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *For those merciful and those not so*
> *Only discourse on giving is therefore chief.* [13cd]
>
> Giving induces the happiness of high status and definite goodness in the way explained above for all whose nature is mercy – bodhisattvas – and for all who do not have a nature of mercy. Therefore, just discourse on giving is chief, that is to say, very important.
> Nagarjuna's *Friendly Letter* says:
>
> There is no better friend for the future
> Than giving – bestowing gifts properly
> On monks, brahmins, the poor, and friends – knowing
> Resources as evanescent and pithless.

Generosity is important for bodhisattvas and non-bodhisattvas in that it brings about the attainment of both high status and definite goodness. For this reason, Buddha taught generosity first among the perfections.

Nagarjuna mentions in his *Letter to a Friend* that resources are evanescent (literally, movable or fluctuating) and pithless (essenceless). This is because they can be destroyed by the animate, i.e., various kinds of beings, and the inanimate, the four elements and so forth. Knowing this, one should practice giving to monks, brahmins, the poor, and so forth. If one practices generosity properly one will have the necessary conditions to study and practice the Dharma in the future.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A1B-3C3 The joy attained by bodhisattvas when giving

Chandrakirti's autocommentary says:

> If asked: when they satisfy the minds of those who seek by means of distributing resources, what kind of special joy is itself generated in bodhisattvas as a result of which they are devoted to giving at all times?
>
> That is expressed:
>
> *If happiness arises in a Conqueror's child from hearing*
> *And contemplating the term 'give,' whereas such happiness*
> *Is not produced in subduers due to abiding in peace,*
> *What need is there to mention by giving all away?* [1.14]
>
> When they first take to mind the very term 'give,' heard from those who seek [resources], having understood "they are begging from me", bliss arises in the bodhisattvas again and again. If that itself has greater eminence than even the bliss of nirvana, why mention [the bliss] of those who satisfy the beings who seek by giving away external and internal things.

Bodhisattvas on the first ground experience great joy from the practice of generosity; in fact just by hearing someone say the word "Give" they experience pleasure.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: When bodhisattvas satisfy beggars with enjoyments, what kind of joy is generated in them that causes their enthusiasm for giving?

ANSWER: Chandrakirti's root text says:

Whereas when a conqueror child hears and thinks
Of the word 'give', happiness arises,
The subduers abiding in peace have no [such] happiness.
What need is there to mention [the joy of] giving all? [1.14]

When a bodhisattva thinks of the meaning of the words heard from beggars saying, 'Give,' he thinks, 'They are begging from me,' and from this a happiness arises again and again in his mind. Such happiness is not generated in the subduer foe destroyers by abiding in the element of peace – nirvana. What need is there to mention that happiness surpassing this peace is generated by satisfying beggars through giving away all external and internal phenomena?

If the mind is captivated by the peace of nirvana, one forgets others' welfare. However, the captivation of a bodhisattva's mind by the happiness explained earlier causes him to strive even harder for the welfare of others; therefore, this is a different type of happiness.

First ground bodhisattvas experience joy merely from someone asking them to give. This joy is even greater than that of foe destroyers who abide in peace. Foe destroyers are captivated by peace and abide in it, whereby this acts as a hindrance to accomplishing the welfare of others in that they have no thought to practice generosity. On the contrary, although bodhisattvas are captivated by the joy of giving, it only enhances their practice of generosity.

The next outline in Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) is:

3B1C-2A1B-3C4 Whether or not suffering occurs when a bodhisattva gives away his body

Chandrakirti's autocommentary says:

If asked: does physical suffering not arise in bodhisattvas who give away external and internal things as a result of which, how could it be said [that they are devoted to giving at all times]?

Explanation: It is just impossible for physical suffering to arise in great beings (mahasattvas), like the cutting of mindless things.

As was taught in the *Exalted Meditative Stabilization of Gaganaganja* [*Sutra*]:[11]

> Like this: for example, there exists a grove of great *shala* trees. When someone comes there and cuts down one *shala*, the remaining *shala* trees do not think "It was cut down, we were not cut down", and they have no subsequent attachment or anger. They have no thought or conceptualization. The patience of the bodhisattva which is like that is supreme, fully purified patience, equal to space.

It is also taught in the *Precious Garland* [226]:

> He has no physical suffering, how could he have mental suffering? Through compassion he laments the world and he himself remains a long time.

Physical suffering undoubtedly arises in someone who has not attained a state without attachment, since objects contrary to sustaining the body duly befall it. However, at that time, it abides as the very cause of far more involvement in actions for the welfare of sentient beings.

This is explained, saying:

By giving away the severed body and by his suffering,
Having seen in his very cognition the suffering
Of the hells and so forth of others,
He quickly strives with diligence to eliminate it. [1.15]

[11] Poisson, p. 276, note 3, cites *Shikshasammucchaya*, p. 272, 5-8.

> With regard to those who are subjected to the unbearable migrations of hell, the animal rebirth states, the world of the Lord of Death and so forth, physically overcome by very fierce sufferings without pause, those who have unendurable suffering very much greater than a thousand times the suffering from cutting his own body, when a bodhisattva views as his very own suffering experience, he discounts the suffering of cutting his own body and very quickly strives with diligence in order to eliminate the sufferings of sentient beings, such as hell and so forth.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: Is physical suffering experienced by bodhisattvas who give away external and internal phenomena and who are said to generate wonderful happiness from any giving?
> ANSWER: If this question is asked in terms of great beings who have attained a ground, no physical suffering occurs, as is the case when mindless things are cut. T*he Questions of Gaganaganja Sutra (Gaganaganjapariprchchha)* says, 'It is this way: There is, for instance, a grove of great *shala* trees, and when someone enters it and cuts down a tree, the remaining trees do not become desirous or angry thinking, "It was cut down, not us." They have no thought or imagination. Such patience in a bodhisattva is the supreme thoroughly purified patience, equal to space.'
> Also Nagarjuna's *Precious Garland* (226) says:
>
> If his body does not suffer,
> How can he suffer in mind?
> Through great compassion he feels pain
> For the world and so stays in it long.
>
> Nagarjuna says this about those who have attained a ground.

Bodhisattvas who have not attained a ground experience physical suffering when giving away their body. However, since those who have attained a ground do not experience physical suffering, what need is there to mention that they do not experience mental suffering? Is it possible for a bodhisattva to actually cut off a part of his body? It is. Then why does he not experience suffering? Is it because he does not have suffering feeling? As an analogy, if one tree among a grove of trees is cut, the remaining trees do not think, "I was not cut." This is analogous to the lack of attachment and anger in a bodhisattva who has attained a ground; it occurs as a result of a lack of conceptuality. This example is easy to understand in that obviously trees do not have either feelings or conceptions. Are first ground bodhisattvas similar? Think about it.

Bodhisattvas who have not attained a ground do experience physical suffering when their bodies are cut. This is because their bodies are a contaminated suffering aggregate. Does this mean that the bodies of bodhisattvas who have attained a ground are not contaminated suffering aggregates? Previously it was said that when a bodhisattva attains the first ground he attains a body that is the nature of mind. Perhaps this is one possible explanation as to why they do not experience suffering.

Nagarjuna says: "Through great compassion he feels pain for the world and so stays in it long." Bodhisattvas abide in cyclic existence for a long time with great tolerance in order to benefit sentient beings. In the *Guru Puja,* with regard to the perfection of joyous effort it says: "Even if it is necessary to remain for an ocean of eons in the fire of Unceasing Torment for the sake of each sentient being, please bless me to complete the perfection of effort which, out of compassion, strives for supreme enlightenment without despondency."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> If the question is asked in terms of those who have not attained the Very Joyful Ground in which there is no attachment to body and resources, then physical suffering definitely does arise since

conditions contrary to sustaining the body befall it. However, suffering at that time only causes one to become more involved in the welfare of sentient beings. Chandrakirti's root text says:

> *Through his own suffering in cutting and giving*
> *Away his body, he sees with knowledge others' pain*
> *In hells and so forth, and strives quickly*
> *To eliminate their suffering.* [1.15]

A bodhisattva understands the frightful state of migrators such as hell-beings, animals, and hungry ghosts. He sees that physically they are overwhelmed with great suffering which is without a break and thousands of times more unbearable than that of mutilating his own body. Through his own suffering – not considering what he suffered when he cut his body and gave it to a beggar, but because of that painful experience – he very quickly begins striving to eliminate the sufferings of other sentient beings in the hells and so forth.

Bodhisattvas who have not achieved a ground experience suffering as a result of giving away their bodies, but this is not due to miserliness. The pain comes about due to the risk of dying. If the body of a bodhisattva who has not attained a ground is cut this acts a condition placing his life at risk. There is a right moment and a wrong moment for the practice of the generosity of giving away one's body and belongings. In the *Great Exposition of the Stages of the Path of Enlightenment* by Lama Tsongkhapa it says that in terms of the practice of generosity one needs to know when to give, what to give and what not to give, and so forth. In general it is said that, for example, one should not give away rotten or poisonous food as this will not bring about benefit but only harm. One should also not give away weapons, such as guns, as this too will harm others. If, for example, one gives a gun to someone who then uses it to kill others there is harm to oneself, the killer, and those killed.

When the body of a bodhisattva who has not attained a ground is cut, although he experiences pain, he thinks that his pain is nothing compared to the sufferings of many other sentient beings whereby his practice is enhanced even more. Bodhisattvas, knowing that others suffer, exert themselves to practice generosity even more.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Nak-tso's translation of this stanza is:

> Through the suffering of cutting and giving away his body
> He views the pain of others in the hells and so forth,
> And from his own experience
> He strives to eliminate it.

My explanation depends on both translations.

If such power of thought is possessed, one can give away one's body. Since it is not contradictory for that thought to be present in bodhisattvas who have not attained a ground, it is said that they also give away their bodies.

Bodhisattvas who have not attained a ground can give away parts of their bodies as long as there is no risk to their lives. Even one who is not a bodhisattva can do this. However, to be able to do so one has to overcome miserliness, which is the cause of poverty in future lives. For this reason, both Chandrakirti and Lama Tsongkhapa advise us to practice generosity.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1B-3D Divisions of the perfection of giving

Chandrakirti's autocommentary says:

With regard to the giving which was explained, in order to indicate the classifications of the [giving] gone beyond, it is mentioned:

Giving, emptied by gift, recipient, and donor
Is called the supramundane gone beyond. [1.16ab]

There, what is 'beyond'? The far shore or bank of the ocean of samsara – buddhahood – which has the nature of having abandoned without exception the obscurations of delusions and objects of knowledge.

To reach beyond is called "gone beyond", [by] the rule which says "omission [of a syllable] is not made when a latter word exists." Since omission of the case of the object is not made, it is formed; or, because of being *prishodara* and so forth, it is left with the later ending itself.

It is explained in particular, having specified the wisdom, and since giving and so forth are similar to the [practices] gone beyond, they are [practices] gone beyond.

There are <u>two divisions of the perfection of generosity</u>: (1) supramundane generosity and (2) mundane generosity. Supramundane generosity is a generosity conjoined with the wisdom realizing the non-true existence of the three spheres: the object given, the donor, and the recipient.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

Giving void of gift, giver, and receiver
Is called a supramundane perfection. [1.16ab]

The giving of one whose thought to give away is conjoined with the uncontaminated wisdom empty of observing gift, giver, and receiver as truly existent is called a supramundane perfection. This is said in *The Great Perfection of Wisdom*.

The unapprehendable meditative equipoise of a superior is supramundane; therefore, giving conjoined with it is assigned as such a perfection. Giving that is not conjoined with this unapprehendability is mundane. The difference between them cannot be directly ascertained by those who have not attained an ultimate mind of enlightenment.

The two divisions of the perfection of generosity – the supramundane and mundane – cannot be directly ascertained by bodhisattvas who have not attained a ground. On the other hand, those who have attained a ground can ascertain the difference. These two divisions of the perfection of generosity are only asserted by the Prasangika Madhyamikas; the Svatantrika Madhyamikas and the Chittamatrins do not make this distinction in that they do not assert a mundane perfection of generosity. However, they do assert mere generosity.

The Prasangika Madhyamikas say that the word 'perfection,' literally 'gone beyond' (*phar phyin*), can be applied to (1) the means of attaining a non-abiding nirvana and (2) the state of having gone beyond, omniscience or non-abiding nirvana. Because these are both 'perfections' or 'gone beyonds,' the Prasangika Madhyamikas assert both a supramundane and a mundane perfection of generosity. In this way, a mundane perfection of generosity is posited as the means to attain omniscience or non-abiding nirvana.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

With respect to the term 'perfection' [or 'transcendence'], the beyond is the far shore or port of the ocean of cyclic existence – buddhahood, the state of having abandoned the two obstructions without remainder. 'Transcend' means go beyond.

> In his commentary Chandrakirti says, 'By the rule, "The elision does not take place before the second member of the compound," the case of the object is not elided and therefore is manifest. Or, because [the compound is classed with] *prishodara* and so forth, [which are exceptional compounds, the word *parama*] is left with just an *m* ending.' The pandit Jaya-ananda explains the meaning of this as follows: In the language of India [Sanskrit] *para* means 'the farther side', and *ita* means 'gone'. When these two words are compounded, the accusative singular *am* is added to *para*, and the nominative ending *su* is added after *ita*; then, *param-ita* is compounded as *paramita*. Even though *am* and *su* are to be elided, *su* is elided but *am* is not because of the rule in the root grammar, 'The elision does not take place before the second compound [in some situations].'
>
> Chandrakirti's reference to the 'case of the object' is to the accusative singular *am*. Since it is not elided, it is included in the final form of the term *paramita*. In [this case of] '*prishodara* and so forth' the word *parama* [is left] with an *m* ending. Because *parama* is said, [the rule of] non-elision is cited. The *a* of *ma* is erased, leaving *m* to which *i* is added, making *mita*. *Su* seems wrong as the nominative ending; thus, analysis is needed as to whether it should be *si*.

For example, we can look at the Sanskrit words *rup* (form) and *dhatu* [which when combined become *rupadhatu*]. There are eight cases of *rup* in relation to each of three, the singular, dual, and plural. Singular is, for example, one cup, dual a pair of cups, and the plural three or more cups, each of these being indicated by the addition of particular syllables. The word *dhatu* is in turn related to three levels of beings: inferior beings, middling beings, and superior beings. In short, when a compounded word is constructed, syllables may either be omitted or added to the original words.

Lama Tsongkhapa says: "*Su* seems wrong as the nominative ending; thus, analysis is needed as to whether it should be *si*." The reason for mentioning *si* is that in Sanskrit this syllable indicates the first of the eight cases, the singular.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> There appear to be many explanations by Tibetans which are fabrications of darkness such as 'In the language of India "perfection" is *paramita* (*param ita*); the *anusvara* is placed in file, and it becomes *param-ita*. When it is compounded, the vowel sign of *i* [over *a* as it is written in Tibetan] is added to *m*, and *a* is erased leaving *mita*.' However, the pandit's explanation is that stated above.

"The pandit" here is Jayananda.

Tuesday afternoon, 7 March 2000

Chandrakirti's autocommentary says:

> Through the distinction of thorough dedication, having posited as definite to go beyond, it will attain the name, giving gone beyond. Also, morality and so forth, to be explained, should be understood similarly.
>
> It was taught in the *Blessed Mother of the Wisdom Gone Beyond*:[12]
>
> > If this giving called "gone beyond" is separated from referring to the object to be given, the recipient, and the giver, it is a supramundane gone beyond because the non-referential [meditative equipoise] is supramundane [and] because the referential is just mundane since included in conventional truth. That cannot be understood by those who have not attained the bodhisattva state.

[12] Bhagavati Prajñaparamita.

A supramundane perfection of generosity is a generosity conjoined with the wisdom realizing the non-inherent existence of the three spheres, for example in the case of the perfection of generosity, the object to be given, the recipient, and the giver.

The remaining perfections are also of two types, supramundane and mundane. For example, a mundane perfection of ethics is ethics not conjoined with the wisdom realizing the non-inherent existence of the three spheres related to ethics. On the other hand, a supramundane perfection of ethics is ethics conjoined with the wisdom realizing the non-inherent existence of the three spheres related to ethics. This was taught by Buddha in the *Blessed Mother of the Wisdom Gone Beyond* (*Bhagavati Perfection of Wisdom)*. In this text it says: "because the non-referential [meditative equipoise] is supramundane [and] because the referential is just mundane since included in conventional truth." If, when ethics is practiced, the object is observed to be truly existent, it is a mundane perfection of ethics whereas if practiced without observing the object to truly exist, it is a supramundane perfection of ethics.

Supramundane and mundane perfections could be interpreted in terms of whether the object is a conventional truth or an ultimate truth, but this interpretation is incorrect. The correct interpretation is that whether it is supramundane or mundane depends on whether or not it is conjoined with the wisdom realizing the non-inherent existence of the three spheres.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) then says:

> These two lines in Chandrakirti's root text specify the wisdom cognizing the three spheres [of giver, gift, and receiver] to be unapprehendable [as inherently existent entities] and explain the specific perfection of giving which is conjoined with that wisdom. Giving and so forth that are not conjoined with this wisdom are similar to a perfection conjoined with wisdom and, therefore, are called 'perfections'. Although they are not conjoined with wisdom, they are conjoined with dedication to great enlightenment and, therefore, are posited as definite to go beyond. Thus, they gain the name of a perfection of giving.

When generosity is practiced without being conjoined with the wisdom realizing the non-inherent existence of the three spheres it is still called a perfection, or gone beyond, because it is dedicated to enlightenment and will thereby definitely bring about the actual perfection, omniscience. This is a case of giving the name of the result to the cause in that the generosity that is the means for attaining a non-abiding nirvana is also given the name "perfection." Chandrakirti said previously: "Through the distinction of thorough dedication, having posited as definite to go beyond, it will attain the name, giving gone beyond."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> When the meaning of 'perfection' is applied to the object – the beyond to which one goes – it refers to the buddhahood to which one progresses. When it is taken as the means by which one goes beyond, perfections occur even on paths of learning. Through this explanation of giving, it should be understood that ethics and so forth can be conjoined with an altruistic mind of enlightenment, dedication, and wisdom – individually and collectively.

If generosity and so forth are conjoined with all three, the mind of enlightenment, dedication, and wisdom, these would be the best forms of generosity and so forth. However, if they are only conjoined with one or two of the three, this is still good. Either way they can still be called perfections.

Chandrakirti's autocommentary says:

Furthermore:

> *That, through generating clinging to the three*
> *Is taught as the "mundane gone beyond."* [1.16cd]

If that very giving has reference to the three, it is mentioned as a mundane gone beyond.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> > *When attachment to these three is produced,*
> > *It is called a mundane perfection.* [1.16cd]
>
> Sutra teaches that giving is called a mundane perfection when one is bound through having generated attachment, which is an adherence to the true existence of the three spheres of giving.
>
> With respect to putting into practice now the features explained above, you should, through imagination, train in giving your own body to others and in the special ways of generating joy. You should continuously amass other forms of giving articles by giving away anything – from water on up – to lower and higher fields of giving. At that time your giving should be conjoined with the wisdom realizing the unapprehendability of the three spheres [as inherently existent]. Furthermore, you should again and again give away in thought your own body, resources, and roots of virtue for the sake of sentient beings. You should consider that even if you do not give these away, they will disintegrate; thereby, you will have to lose them, and thus it would be better to give them first through your own thought as if you were actually giving them. Shantideva's *Engaging in the Bodhisattva Deeds* (III.10) says:
>
> > To accomplish all sentient beings'
> > Welfare, give away without regret
> > Body as well as resources and all
> > Virtues of past, present, and future.
>
> Also (III.11):
>
> > Through giving away all one passes beyond sorrow,
> > And one's intention is to achieve nirvana.
> > Similar to losing all [at death], the best
> > Is to give to sentient beings [now].

If the practice of generosity is done while conceiving the three spheres to be truly existent, it is a mundane perfection of generosity.

Lama Tsongkhapa says: "You should, through imagination, train in giving your own body to others and in the special ways of generating joy." One should emulate the bodhisattvas and train in giving away one's body, resources, and roots of virtues. In addition, just as first ground bodhisattvas experience joy just by hearing the word "Give," we too should practice developing such joy in order to increase our practice of generosity.

There are different types of objects of our generosity, here referred to as "lower and higher fields of giving." The higher fields are the Three Jewels and so forth, while the lower fields are the poor and needy. We should practice giving both of them various kinds of objects, beginning even with water. Lama Tsongkhapa mentions offering water as one possibility because by merely offering water to the Three Jewels or to the thirsty, one can create merit. Atisha rejoiced in the practice of offering water, which was common in Tibet, as it is a practice of generosity that can be done free of miserliness. However, perhaps this is more difficult in the West, where one has to pay for water and where procuring good water may involve difficulties!

Lama Tsongkhapa says: "You should again and again give away in thought your own body, resources, and roots of virtue for the sake of sentient beings." Even though one does not actually give away all these things to sentient beings, one should practice doing so in thought. Even if one cannot give away one's body, since one day it will disintegrate, we should make use of it now by thinking to give it away. Otherwise, we will die regretting that we did not use this opportunity to practice generosity.

In short, generosity is very important and we should practice it right now. This is because presently we have favorable circumstances to do so, these being the results of our previous practice of generosity. In order to experience such favorable conditions again in the future we should engage in the practice of generosity now. We all know that without resources we become unable to do many things. For example, in order to study and practice we need resources. Due to having practiced generosity in the past we now have the material things we need to study and so forth. If we had not practiced generosity we would not have enough money for our rent, food, books, and so forth. If we want to avoid having such difficulties in the future we should create the causes for resources by practicing generosity in this life.

Lama Tsongkhapa says: "You should consider that even if you do not give these away, they will disintegrate; therefore, you will have to lose them, and thus it would be better to give them first through your own thought as if you were actually giving them." Before one dies one should practice giving away one's body, resources, and roots of virtue. Shantideva likewise says: "To accomplish all sentient beings' welfare, give away without regret body as well as resources and all virtues of the past, present, and future." One can practice giving conjoined with the practice of "taking-and-giving" (*tong len*). When practicing giving we imagine giving away our body, resources, roots of virtue, and so forth to all sentient beings out of love, and when we practice taking, we imagine taking their sufferings upon ourselves out of compassion.

Shantideva also says: "Through giving away all, one passes beyond sorrow, and one's intention is to achieve nirvana. Similar to losing all [at death], the best is to give to sentient beings [now]." Since we will lose everything at death it is best to practice generosity toward other sentient beings right now.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A1C Conclusion by way of expressing the features of the first ground

Chandrakirti's autocommentary says:

> Now, in order to indicate the so-called 'ground' which was explained, by means of subsequently explaining the eminent qualities of the distinction of knowledge (wisdom), [the root text] mentions:
>
> *Firmly abiding thus in the mind of the Conqueror's child and*
> *Acquiring brilliant beauty in the holy support,*
> *The joyous one is like the water-crystal jewel:*
> *Victorious, having dispelled all darkness.* [1.17]
>
> The term *thus* is in order to indicate the aspects which were explained. Saying *the joyous one*, perfectly proclaims the name of the ground. Saying *victorious* means "having defeated discordancies, to abide."
>
> That [first ground] which is the nature of consciousness is abiding on high because of abiding in the mind of a Conqueror's child. The Extremely Joyous Ground, in the manner which was explained, dispels also all heavy darkness, becoming victorious. In order to clarify through an example, the very meaning which was explained, it is mentioned saying *like the water-crystal jewe*l.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti now sets forth the Very Joyful Ground, which was explained above, by summarizing the features of that ground as qualities of uncontaminated wisdom. His root text says:
>
> *Abiding thus in the mind of a child of a conqueror*
> *Beautifying with light this excellent base,*
> *The Joyful [Ground] like a water crystal jewel*
> *Destroys and overcomes all heavy darkness.* [1.17]
>
> The Very Joyful Ground abides like the orb of the moon – the water crystal jewel.
>
> The first ground is similar to the moon in three ways. One is its abiding in a high place. Because the first ground abides in the mind of a first grounder – a conqueror child who has attained the features of that ground as explained earlier – it abides on a high path and thereby is similar to the moon high up in the sky. Since the first ground is part of a bodhisattva's mind, it is said to abide in his mind, like an eye in the head.
>
> His mind – the excellent or superior base in which the ultimate mind of the first ground abides – is made beautiful by the light of wisdom; therefore, the first ground is similar to the moon beautifying the sky – its base – with white light. Also, because the first ground abides overcoming what is unfavorable to it – that which is to be abandoned through the path of seeing – it is like the moon destroying all heavy darkness.

The Very Joyful Ground is likened to the moon in three ways. The first way in which they are similar is that just as the moon abides high in the sky, likewise the Joyful abides in the continuum of a first ground bodhisattva who is on a high path. The second way in which they are similar is that just as the moon beautifies the sky, likewise the exalted wisdom of a first ground bodhisattva beautifies his continuum. The third way in which they are similar is that just as the moon dispels darkness, likewise the first ground dispels the objects of abandonment of the path of seeing.

Q: What is a water crystal jewel?
A: In the past there was a king in India called Nyecho Sangpo who owned a wish-fulfilling gem. One of his ministers once suggested to him that it was a waste to keep the wish-fulfilling gem unseen in his room whereas if he were to put it on an open shore it would shine in all directions, reminding the people of their king. The king thought this was a good idea and gave the minister the gem. However, instead of doing what he had suggested the minister hid the gem and placed large pieces of ice on the sand whereby the sun reflected off it sending out light. The minister pointed this out to the king who was delighted. However, with time the ice melted and the shine diminished. The king sent his minister to see what had happened and to bring back the gem. He returned with the news that the wish-fulfilling gem had urinated and disappeared! This story is well known and used in the monastery to give advice to others to not be like this king who was cheated by his minister.

Chandrakirti's autocommentary says:

> From the *Explanation of the 'Supplement to the "Middle Way,"'* the First Mind Generation called 'Extremely Joyous.'

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Such is the explanation of the first ultimate mind generation in the *Illumination of the Thought, an Extensive Explanation of Chandrakirti's 'Supplement to the Middle Way.'*

This chapter on the first mind generation explains the three practices of ordinary beings and the Very Joyful Ground of bodhisattvas. In addition, the chapter sets out the qualities of the first ground, such as beautifying one's own continuum, outshining others, and so forth.

We too need to develop compassion, the awareness of non-duality, and the mind of enlightenment. The cultivation of these three is extremely important. This is because the root of cyclic existence is the conception of a self. Knowing this, one should examine whether this conception can be eliminated, and then, having understood that it can, one should develop the wisdom realizing selflessness. In this way one should generate the mind of enlightenment and enter the path of accumulation and so forth.

Wednesday morning, 8 March 2000

THE SECOND MIND GENERATION

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A2 Second ground, the Stainless

This section has five parts:

A Thorough purification of ethics on the second ground
B Praise of ethics
C Example of non-mixture with what is not conducive to ethics
D Divisions of the perfection of ethics
E Conclusion by way of expressing the features of the second ground

3B1C-2A2A Thorough purification of ethics on the second ground

This section has four parts,

1 Sublimity of ethics on the second ground
2 Thorough purification of features in dependence on ethics
3 Superiority of ethics on the second ground over the first ground
4 Another cause of the thorough purification of ethics

3B1C-2A2A-1 Sublimity of ethics on the second ground

Chandrakirti's autocommentary says:

The explanation of the bodhisattva's first mind generation is finished. Now, in terms of the second:

Because he has sublime morality and pure qualities,
Even in dreams, the stains of broken morality are forsaken. [2.1ab]

was mentioned.

Because all the distinctive knowledges (wisdoms) of the so-called grounds are the very same nature, the qualities which do not arise without that – such as morality gone beyond and so forth – by their mere excellences act to indicate the distinctions of the second mind generation and so forth.

'Morality' (Sanskrit: *shila*) [is so-called] because of coolness due to extinguishing the fire of mental discouragement, because not willingly assuming deluded [motivations], and because of not

> giving rise to negativities on that [ground], or due to merely being the cause of happiness, because of [being] the very object to be relied upon by the holy.
>
> In addition, it has the character of the seven abandonments. The three practices – non-attachment, non-hatred and right view – are the motivators. Therefore, in terms of morality together with motivators, it is thoroughly explained as ten paths of actions.

On the second ground the bodhisattva has sublime, or perfect, ethics in the sense that his ethics are pure. Because of this he does not have faulty ethics even in a dream. In other words, a bodhisattva does not engage in the seven negative actions of body and speech even in his dreams.

The definition of ground within the distinction of the two, paths and grounds is: a clear realizer engaged in a path that serves as the basis for the various excellent qualities that are its result. Ground, path, clear realizer, and exalted knower are mutually inclusive.

The exalted wisdom of the second ground is distinguished by the perfection of ethics.

In the autocommentary, it says that ethics is so-called due to one's not voluntarily accepting the afflictions, not giving rise to negativities, and extinguishing the fire of mental discouragement. The latter is in terms of the Sanskrit word for ethics being *shila,* which literally means coolness. In addition, ethics is the cause of happiness and is relied on by the holy.

Ethics has the character of the seven abandonments – the three abandonments of negative actions of body and the four abandonments of negative actions of speech. The vows of fully ordained monks are characterized by the seven abandonments, whereas the vows of novice monks and nuns and the lay vows are characterized by four abandonments. A fully ordained monk willingly accepts to abandon the seven negative actions of body and speech. The four root abandonments of novice monks and nuns and lay people are: the three of body – not killing, not stealing, and not engaging in sexual conduct or sexual misconduct – and one of speech, not lying. When the three non-virtuous paths of action of mind are added to these seven, there are a total of ten. The ten virtuous paths of action are the acts of refraining from these. The three virtuous paths of action of mind are non-attachment, non-hatred, and right view.

In Vasubandhu's *Treasury of Knowledge,* it says that the first seven actions of body and speech are both paths of actions and actions, whereas the last three of mind are paths of actions but not actions. The other schools would make a similar assertion. The Prasangika Madhyamikas assert that the abandonments of the first seven are form, whereas the remaining three of mind are their motivators.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> > *Because his ethics are sublime and have pure qualities,*
> > *He forsakes the stains of faulty ethics even while he dreams.* [2.1ab]
>
> Because one who abides on the second ground possesses very sublime ethics and pure qualities, he forsakes, or is not polluted by, the stains of faulty ethics not only when awake but also when dreaming.
>
> This does not refer merely to faulty ethics in the sense of root infractions and transgressions of natural codes but signifies that he has abandoned the stains of all faulty ethics, even those which are transgressions of formulated codes.
>
> [Having] 'proper ethics' (*shila*) means that one does not assume afflictions which motivate faulty ethics and that sinful actions discordant with formulated codes do not arise. Thereby, one has extinguished the fire of contrition for the arising of infractions discordant with formulated codes and has thus attained a coolness. The Sanskrit original of 'proper ethics' is *shila*. *Shila* means 'cool'; *lati* means 'attained'. Another explanation is that proper ethics (*shila*) is so called because, due to its

> being a cause of happiness, it is taught by the excellent. These are contextual etymologies [with letters added].
>
> From the viewpoint of its entity, proper ethics has the character of seven abandonments – abandoning the seven faulty modes of body and speech [killing, stealing, sexual misconduct, lying, divisive talk, harsh speech, and senseless chatter]. The motivators of the seven abandonments are non-covetousness which is non-desire, non-harmfulness which is non-hatred, and right view which is freedom from wrong views. Therefore, in terms of its entities as well as its motivators, proper ethics is comprised of the ten abandonments – the paths of wholesome actions abandoning the ten paths of unwholesome actions.

The abandonment of the stains of faulty ethics includes not only the abandonment of root infractions (root downfalls) and transgressions of natural codes (natural infractions) but also the abandonment of the transgressions of formulated codes (formulated infractions). Natural infractions are faults incurred whether or not one has taken a vow and formulated infractions are faults incurred by breaking a vow or promise. Therefore, someone who commits an action but who has not taken a vow to abandon that particular action does not incur the fault of breaking a vow.

Killing, stealing, sexual misconduct, and lying are both root infractions and natural infractions. In the context of the individual liberation vows, divisive talk, harsh words, and idle talk are both simple lapses (the breaking or degenerating of a lesser type of vow) and natural infractions. Therefore, all seven negative actions of body and speech are natural infractions.

If one who has the individual liberation vows commits the actions of killing, stealing, sexual misconduct, or lying these are both root downfalls and natural infractions. If he commits one of the remaining three negative actions, he does not commit a root infraction but only creates a natural infraction. For example, if a fully ordained monk or a novice monk engages in divisive speech, he creates a natural infraction but not a root downfall. The same is true of speaking harsh words and engaging in idle talk. On the other hand, if a monk kills a human being, steals something owned by someone else, or engages in sexual conduct – the joining of the two organs resulting in pleasure – he also creates both a root downfall and a natural infraction.

Q: Why is the last a natural infraction?
A: He also engages in sexual misconduct.
Q: But if the woman is not married, etc. why is this sexual misconduct?
A: We will leave that aside for the moment.

Q: Are all root downfalls also natural infractions?
A: They are.

The ordained are permitted to transgress a formulated code by asking Buddha for permission to do so through a particular ritual ("remembering the time"). However, they must ask for permission for the sake of others' welfare or for a Dharma purpose and not merely for their own sake. For example, fully ordained monks are not permitted to make fire, sing, or play music but they can ask permission to do so for others' welfare or for a Dharma purpose. [In this way they will not transgress their vows by engaging in such actions.]

This explanation so far has been in terms of the vows of individual liberation, but in the context of the bodhisattva grounds the explanation must also be from the point of view of the bodhisattva vows. The

bodhisattva vows consist of eighteen root vows and forty-six secondary vows, as well as the seven abandonments of body and speech, which are also common to the individual liberation vows. The individual liberation vows are posited from the point of view of abstaining from the seven non-virtuous actions of body and speech. They do not include vows of mind in that many thoughts arise in the mind without one's control. On the other hand, one can restrain one's actions of body and speech. Bodhisattvas vows do, however, include restraints of mind. For example, among the eighteen root infractions there are those related to the mind, such as giving up the mind of enlightenment and giving up love for sentient beings. By breaking these, one commits a root infraction. These vows can be transgressed by the mind since they involve mental promises to avoid such actions; for example, the taking of the aspirational mind of enlightenment by means of ritual. The promise to abandon the four unwholesome, or black, deeds implies engagement in the four wholesome, or white, deeds. Giving up love for even one sentient being is included among the four black actions; if one does so one loses the aspirational mind of enlightenment taken by means of ritual.

Unlike the individual liberation vows and tantra vows, one is permitted to study the bodhisattva vows before receiving them.

Lama Tsongkhapa says: The Sanskrit original of "proper ethics" is *shila*. *Shila* means "cool;" *lati* means "attained." One of the Sanskrit vowels is *li,* which is divided into eight. The word *lati* is related to this. The short vowel *li* and the long vowel *li* are not used very often in Buddhist scriptures. On the other hand, the short vowel *ri* is often used, whereas the long vowel *ri* is not, although it is used often in Hindu philosophical texts; for example, the word *rishi* (sage).

Lama Tsongkhapa says: "From the viewpoint of its entity, proper ethics has the character of seven abandonments – abandoning the seven faulty modes of body and speech." The three faulty paths of actions of mind are covetousness, harmful intent, and wrong view. Covetousness is, for example, to see something in someone else's home and wish to have it. Harmful intent, or malice, is the thought to harm someone. Wrong view is to hold the law of actions and results to not exist and so forth. Freedom from covetousness, harmful intent, and wrong view are respectively non-attachment, non-hatred, and right view.

Q: In deep sleep one is without attachment but this is not said to be non-attachment. Is it enough to be free of covetousness and so forth to have non-attachment and so forth?
A: When one is in deep sleep both attachment and non-attachment are present but they are unmanifest. If Lama Tsongkhapa is discussing non-attachment, non-hatred, and right view in terms of the three roots of virtue, non-attachment, non-hatred, and non-ignorance, freedom from covetousness alone is not non-attachment and so forth. Attachment, hatred, and ignorance give rise to non-virtue. On the contrary, non-attachment, non-hatred, and non-ignorance give rise to virtue. Lama Tsongkhapa says: "non-covetousness which is non-desire, non-harmfulness which is non-hatred, and right view which is freedom from wrong views." [This would be better translated as: "non-desire which is non-covetousness, non-hatred which is non-harmfulness, and right view which is freedom from wrong views."] Since hatred is not pervaded by being harmful intent, the text says "non-hatred which is non-harmfulness."

Lama Tsongkhapa says: "The paths of wholesome actions abandoning the ten paths of unwholesome actions." Literally this says "the paths of white actions" and "the ten paths of black actions." In general someone is said to be positive, or white, in terms of his acting in accordance with the rules whereas someone is said to be negative, or black, in terms of his not acting in accordance with the rules.

Wednesday afternoon, 8 March 2000

Chandrakirti's autocommentary says:

> Sublime morality is fully developed morality. Very purified qualities are pure qualities, hence joining the words by saying "fully purified sublime morality." Because its qualities are fully purified, morality is highly distinguished. Because of possessing that, the bodhisattva is not polluted by the stains of broken morality even at the time of dreams.

The ethics in the continuum of a second ground bodhisattva are sublime. In addition, the qualities of this ground are fully purified. Faulty ethics is *duhshila* in Sanskrit, which translated literally is "suffering ethics" in that *duh* derives from *duhkha* (suffering). The reason that it is so-called is that faulty ethics lead to suffering.

Are natural infractions and formulated infractions pervaded by being faulty ethics? In other words, when a bodhisattva commits a natural or formulated infraction is the ethics in his continuum faulty ethics? If someone says that it is, one asks: "Is there not someone who is stained by fault, such as striking someone with a stick, yet has perfect ethics?" The answer is complex, but the conclusion is that the delineation of a fully ordained monk with pure ethics is that he is one who is unstained by any of the four defeats and is abstaining from natural infractions. This conclusion is reached because ordinary beings constantly commit faults. For example, one who has the bodhisattva vows is most likely stained by faults. Atisha said: "Faults regarding the bodhisattva vows and tantra vows shower down like rain, whereas the individual liberation vows can for the most part can be observed well. It would be good to train well in the bodhisattva vows."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A2A-2 Thorough purification of features in dependence on ethics

Chandrakirti's autocommentary says:

> If asked: further, how do the qualities of the [bodhisattva] become completely purified [through] sublime morality like that?
>
> *Since movements of body, speech and mind are pure,*
> *He accumulates the ten paths of holy actions.* [2.1cd]

When one's actions of body, speech, and mind are pure one's ethics become pure.

> As was taught in the *Second Bodhisattva Ground* [of the *Sutra on the Ten Grounds*]:
>
> > O children of the Conqueror, the bodhisattva who abides on the Stainless Ground of the bodhisattva has naturally abandoned killing. Having abandoned clubs, abandoned weapons, abandoned resentment – since possessing abstention and having engaged in compassion he has a beneficial, happy, merciful and loving mind toward all animate beings and spirits. If he does not produce harmfulness to animate beings even through mere imagination, leave alone mentioning recognizing sentient beings as sentient beings and purposely enacting evil deeds physically.

The second ground bodhisattva naturally refrains from killing. Buddha says that this is because this bodhisattva has "abandoned clubs, abandoned weapons, abandoned resentment." Saying that he has

"abandoned clubs" means that he does not touch clubs. In addition, he has abandoned other weapons and resentment. On the other hand, if one has resentment one waits for an opportunity to harm others.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has abandoned taking without being given. Since satisfied with his own resources and having mercy, as he cares for others' resources, if he recognizes those things fully owned by others as owned by others and having given up the mind to steal, does not take what is not given even so much as mere grass and leaves, leave alone mentioning other articles of livelihood.

The second ground bodhisattva has naturally abandoned stealing "since satisfied with his own resources and having mercy." Since this bodhisattva is satisfied with his own resources, he does not think to take others' belongings. In addition, the second ground bodhisattva has mercy and care for others, therefore he refrains from harming them by taking their belongings. Such a bodhisattva gives up "the mind to steal, does not take what is not given, even so much as mere grass and leaves, leave alone mentioning other articles of livelihood." "Other articles of livelihood" include bedding, food, and so forth.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has abandoned sexual misconduct with regard to desire. Since he is satisfied with his own wife and is without desire for others' wives, he does not generate even a thought longing for women owned by others, others' wives and those protected by family, sex, and Dharma, leave alone mentioning revealing which is not a limb or the meeting of the two organs of a couple.

Buddha taught this in relation to male bodhisattvas, but it can be adapted also to female bodhisattvas, saying "since she is satisfied with her own husband" and so forth. Most people tend not to be satisfied with their husbands or wives and seek to change them; second ground bodhisattvas do not do this. These bodhisattvas clearly recognize the wives of others as the wives of others and so forth. "Those protected by family" could refer to those who are cared for by their parents (however, it could perhaps more correctly be translated as "protected by a blood relationship"). Protected by sex (perhaps 'gender' in that it is literally 'mark') could mean to be protected by those of the same gender. Protected by Dharma refers to those who have vows. Second ground bodhisattvas have no mind of attachment toward such men or women.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has abandoned speaking falsely (lying). In speaking truly and speaking justly, he speaks at the [proper] time, acting in accordance with what was said. If even so much as in dreams he does not speak false words with the thought of deceiving through changing [others'] views, patience, desires, and thorough understanding, leave alone mentioning speaking [falsehoods] purposely.

Lying is expressing words motivated by the desire to deceive others. Second ground bodhisattvas abandon lying and instead speak truly and justly. In short, these bodhisattvas speak the truth, speak

justly, and speak at the proper time. They also act in accordance with what they say. These bodhisattvas do not speak false words even in a dream, therefore what need is there to mention that they do not do so when awake? For example, since such bodhisattvas do not try to change others' views through speaking false words even in a dream, what need is there to mention that they do not do so when awake?

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has abandoned divisive words. Since not creating disunity among sentient beings and engaged in non-harmfulness, having heard from this side, it is not told to the other side in order to divide them; and having heard from the other side, it is not told to this side in order to divide them. If not disuniting those reconciled and not further separating those divided, he does not speak words which are to make discord, either truly or falsely, being glad about discord and appreciative about discord.

"Divisive words" involves dividing two or more people by, for example, further dividing those who are already divided or dividing those who are not divided through talking to one person and then repeating his words to the other else and then vice versa with the intention to create disharmony.

Q: Sometimes, as skillful means, bodhisattvas do not tell the truth. For example, when asked whether or not they are bodhisattvas they might reply that they are not. Could Geshe-la please explain this?
A: From the point of view of vinaya, saying that one has high qualities that one does not have is "lying about supreme attainments," which is one of the four defeats. However, if one does have such qualities as having realized the right view, having achieved clairvoyance, and so forth then, from the point of view of vinaya, a monk is not permitted to say that he has such qualities. If a monk says that he has these qualities, even though he speaks truly he commits one of the ninety simple offenses.

If a fully ordained monk speaks divisive words, this too is a simple offense, whereas if a novice monk does so it is a ?fault of concordant class/fault to be abstained from. In sutra there is a story about a lioness and a tigress who lived together harmoniously until they became pregnant. Having given birth to their cubs, they continued to live together harmoniously. One day, one of the mothers died and the other found herself having to take care of the others' cub but, soon afterward, she too died. However, there continued to be harmony between the two cubs until one day a hyena said to the lion cub that the tiger cub was planning to kill him, and then said to the tiger cub that the lion cub was planning to kill him. Due to this, they began to suspect each other and their relationship began to change until they actually came to believe that it was true. One day while fighting in the cave where they were living, they rolled off a cliff together and were killed. Based on this event, the Buddha formulated the vow to refrain from divisive speech.

Thursday morning, 9 March 2000

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has abandoned harsh words. Types of words that threaten, abuse, harm others, expose others' faults, are words of country people, express directly and endeavor to express directly vulgarities, are falsities, unpleasant to the ear, arisen from anger and abuse, and offensive, since disagreeable they produce grief in the heart, produce torment, and make the continuum of ones' own consciousness and the continua of others' consciousnesses unworkable – like that are abandoned.

Harsh words are, for example, those that threaten and abuse. To threaten is to intimidate others with one's words. Abuse is similar. Since threats and abuse also harm others perhaps the subsequent term "harm others" refers to other types of bad words that cause harm to others. To "expose others' faults" is to indicate others' faults. "Words of country people" refers to [the uneducated] way of speaking of country people. Harsh words also involves speaking "vulgarities." Speaking words that "are falsities, unpleasant to the ear" also makes other people unhappy. "Arisen from anger and abuse" means, for example, to shout at others out of anger. "Since disagreeable they produce grief in the heart" means that disagreeable words cause suffering in others' minds. "Produce torment, and make the continuum of ones' own consciousness and the continua of others' consciousnesses unworkable" means that harsh words make one's own and others' minds unserviceable or unruly. Having explained the kind of speech that harms others, the Buddha then explains the kind of speech that bodhisattvas use to please others:

> The types of words which [are]: tender, soft, agreeable, not false, pleasant to the ear, dear to the heart, dear to the hearts of city dwellers and crowds, agreeable to the minds of crowds, producing joyous mind, producing satisfied mind, and producing clarity in ones' own conscious continuum and the conscious continua of others – like that are expressed.

We too should speak like this, as this will make others happy and will not make them unhappy.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has abandoned senseless words. He speaks words which give proper answers and at the [proper] time, speaks justly, speaks meaningfully, speaks the Dharma, speaks suitably, speaks to subdue, speaks patiently, and speaks timely along with inquiring. If he completely abandons even as much as the objects of complete abandonment of making jokes, leave alone mentioning distracting through words.

Buddha says that when bodhisattvas are asked a question they answer it properly. Bodhisattvas also speak at the proper time and speak justly or correctly; they speak meaningfully and only with a purpose; they speak about the holy Dharma; they speak suitably. They also speak to tame others' minds by speaking slowly and softly. Bodhisattvas speak patiently to others without agitation. They speak in a timely way and ask questions. Bodhisattvas do not make jokes (that which causes laughter), so what need is there to mention that they do not distract others through their speech?

Vasubandhu says that senseless words, or idle talk, is speech motivated by afflictions.

This concludes the four non-virtuous actions of speech. The Buddha then sets forth the three of mind.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He is also without covetous mind. With regard to the wealth of others, the desires of others, the substances of others, and articles fully owned by others, he does not generate a covetous mind, does not cling, does not wish for – he does not generate the mind of attachment.

Covetousness is a mind attached to that which is possessed by others.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He is without harmful mind (malice). Since having toward all sentient beings the mind of love, mind of benefit, mind of compassion, happy mind, soft mind, and the mind which benefits all beings; having abandoned anger, resentment, hatred, defilement, harmful mind, and those which precede anger – those which have love are realized.

Bodhisattvas have a mind of love toward others and are free of harmful mind, or malice. They have abandoned all types of harmful minds toward sentient beings, such as anger, resentment, and so forth, and think only to benefit others. We too should abandon the mind of harm and develop the mind of love.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary continues:

> He has also abandoned wrong view. He abides on the right path, with right view, and is separated from having the views of virtuous signs, various kinds of auspiciousness, and of bad morality. Since his view is honest and without dissimulation – without deceit, he is definite to think about Buddha, Dharma and Sangha.

Wrong views are, for example, to hold that the law of actions and results does not exist. Right view is, for example, to hold the opposite, i.e., that from non-virtue arises suffering and from virtue arises happiness. Mundane right view is this correct understanding. Supramundane right view is the realization that phenomena are empty of true existence.

The quotation from the *Second Bodhisattva Ground* in Chandrakirti's autocommentary concludes:

> There, the first three paths of virtuous actions are completed by body, the middle four by speech, and the last three by mind. Hence [he] accumulates also all ten paths of virtuous actions.

Like these bodhisattvas, we too should abandon the ten non-virtuous paths of actions and practice the ten virtuous paths of actions that are relied on by the holy.

In this regard Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: How do a bodhisattva's qualities become pure through the sublimity of his ethics?
> ANSWER: Chandrakirti's root text says:
>
> *Because his movements of body, speech, and mind are pure,*
> *He accumulates all ten paths of excellent deeds.* [2.1cd]
>
> On all occasions of waking and dreaming his movements or activities of body, speech, and mind are pure of even subtle infractions; therefore, he accumulates all ten paths of excellent or supreme deeds. His accumulation of these means that he fulfills the first three paths of virtuous actions – abandoning killing, stealing, and sexual misconduct – with his body; the middle four – abandoning lying, divisive talk, harsh speech, and senseless chatter – with his speech; and the last three – abandoning covetousness, harmful intent, and wrong views – with his mind. Not only does he refrain from what is prohibited but also he fulfills all the positive achievements related to proper ethics.

Lama Tsongkhapa's commentary here is quite brief in that it merely explains Chandrakirti's root text. In relation to these paragraphs in the *Sutra on the Ten Grounds,* one text, in connection with the confession of downfalls, says: "Actions of body are three, speech three, and mind three. I individually confess the ten non-virtues."

Lama Tsongkhapa says: "Not only does he refrain from what is prohibited but also he fulfills all the positive achievements related to proper ethics." This more literally refers to what is prohibited (*dgag bces*) and what is prescribed (*drub bces*). That which is prohibited for the ordained is, for example, killing, stealing, digging in earth in which there are many creatures, and so forth. That which is prescribed for the ordained is, for example, to perform the restoring and purifying ritual (*so jong*) twice a month. Within the bodhisattvas vows there are also prohibitions and prescriptions. For example, one prohibition among the bodhisattva vows it to praise oneself and belittle others. On the other hand, when someone with the bodhisattva vows uses clothes, food, and so forth there is the prescription to do so with the thought to benefit other sentient beings. Also in regard to the tantra vows there are prohibitions and prescriptions, an example of the latter being to make mandala offerings three times a day.

However, there is debate as to whether these also exist in the context of sutra. There is a story about Geshe Khenrab Tobgye from Ganden Jangtse Monastery, who used to live in Canada. When taking the geshe lharam exam, he found himself in the position of the defendant with Geshe Tsultrim Gyatso in the position of the challenger. Geshe Tsultrim Gyatso began the debate by saying to him: "I will make a mandala offering to you," this being mentioned in *Engaging in the Bodhisattva Deeds*. He then said: "When offering a mandala does one not offer one's body, resources, and roots of virtue, the four continents, sun, and moon on the base?" Geshe Khenrab Tobgye accepted this. Geshe Tsultrim Gyatso said: "Then they have already been offered?" Geshe Khenrab Tobgye replied: "They are." Geshe Tsultrim Gyatso said: "Are they already dedicated to the Three Jewels?" Geshe Khenrab Tobgye replied: "They are." Geshe Tsultrim Gyatso said: "In that case the four continents and so forth, one's body, resources, and roots of virtues already belong to others?" Geshe Khenrab Tobgye replied: "They do." Geshe Tsultrim Gyatso said: "Having made offerings of all your belongings if you use them are you not using that which belongs to others? If you have the intention to take them you are stealing. If you do not intend to take them then you create the downfall which is related to an object that has been dedicated to others." Geshe Khenrab Tobgye found it difficult to answer. One should reflect on this. We can think that since we work for the Three Jewels we are permitted to use their belongings. However, we should do so only with the thought to benefit other sentient beings.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A2A-3 Superiority of ethics on the second ground over the first ground

Chandrakirti's autocommentary says:

If asked: are these ten paths of action not accumulated by the bodhisattva who generated the initial mind?

Indeed he also accumulated them, however:

These paths of virtue, also the ten together,
Having become surpassing on that, they become extremely pure. [2.2ab]

For the bodhisattva [who] generated the initial mind, it is not like that.

Like the autumn moon, always completely pure,
Peace and brilliance – he is beautified by them. [2.2cd]

Peace is to restrain the sense faculties. Brilliance is having a glittering clear body.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: Does a first ground bodhisattva not accumulate all ten of these paths of actions?
> ANSWER: Chandrakirti's root text says:
>
> *For him these ten paths of virtue,*
> *Perfected, are extremely pure.* [2.2ab]
>
> A first grounder does accumulate all these, but for a second grounder these ten paths of virtuous actions are perfected and become extremely pure. This does not occur for a first grounder.
>
> The teaching that giving is surpassing on the first ground indicates that bodhisattvas remain in possession of it on the higher ground. It is said that ethics is surpassing on the second ground because from among the nine remaining perfections a bodhisattva does not have the measure of perfect practice – which he has with respect to ethics – in relation to patience and so forth. Thus, this does not mean that he does not have the remaining perfections.
>
> The ten virtues are mentioned to illustrate the formulations of ethics based on them, and the bodhisattva maintains all those of proper ethics.
>
> Chandrakirti's root text says:
>
> *Like an autumn moon he is always pure,*
> *Beautified by them, serene and radiant.* [2.2cd]
>
> One whose ethics are so pure is like an autumn moon that extinguishes the pain of heat and abides glittering with white light. Just so, one always abiding in pure ethics has the serenity of having restrained the doors of the senses and has the radiance of a glitteringly clear body, and thus he is beautified by his ethics.

Although first ground bodhisattvas do accumulate the ten virtues and safeguard ethics, the ethics of second ground bodhisattvas are superior. Second ground bodhisattvas are said to have a surpassing practice of ethics whereby they are free from faulty ethics. They also have a surpassing practice of generosity, which was attained on the first ground. Therefore, when bodhisattvas attain the third ground, in addition to the previous two surpassing practices, they also have the surpassing perfection of tolerance.

Although the safeguarding of ethics by second ground bodhisattvas is surpassing, the remaining perfections, that of tolerance and so forth, are not surpassing perfections.

The Prasangika Madhyamikas assert that all ten perfections exist on the learner paths, whereas the Svatantrika Madhyamikas say that they do not. Instead, they assert that the *surpassing* practices of the ten – the means to attain the actual perfections – exist on the learner paths, whereas the actual perfections do not.

Lama Tsongkhapa says: "The ten virtues are mentioned to illustrate the formulations of ethics based on them, and the bodhisattva maintains all those of proper ethics." The ten virtues mentioned in Chandrakirti's root text in the passage "For him these ten paths of virtue, perfected, are extremely pure" illustrate the formulated ethics that are based on them. In other words, the ten virtues are the bases of the prohibitions and prescriptions.

Due to restraining their sense powers, the bodhisattvas are peaceful or serene (previously the Sanskrit word *shila* for ethics was said to mean coolness). Likewise, if we restrain the doors of our senses we too experience peace; otherwise we will not. In the Vinaya, it says that a fully ordained monk with ethics has a glowing complexion. The Tibetan nomads say: "Around the dwelling of a fully ordained monk there is the sweet smell of ethics."

We ourselves should refrain from committing the ten non-virtues and should engage in the ten virtues. Although no one orders us to do so, we should order ourselves to do so as in this way we will not feel uncomfortable, which tends to happen with orders coming from outside. We should control

our own minds. If one is not able to tame one's own mind, it will not be possible to tame others' continua. Atisha said that since it is difficult to tame others' continua without taming one's own continuum, one should begin by taming one's own mind.

Thursday afternoon, 9 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A2A-4 Another cause of the thorough purification of ethics

Chandrakirti's autocommentary says:

Although morality is fully purified like that:

If he views a nature [in] pure morality,
Thereby, it will not become pure morality. [2.3ab]

As taught in the *Exalted Pile of Jewels Sutra*:[13]

> Kashyapa, regarding this, some *bhikshus* possess morality. Bound and abiding by the vows of individual liberation (*pratimoksha*), [with] excellent rites and spheres of activity, they view apprehensively even very subtle transgressions. Having correctly assumed [them], they train in the bases of training and since they possess fully purified actions of body, speech, and mind, their livelihood is fully purified. However, they propound a self. Kashyapa, they are the first of the artificial ones, breaking morality [yet] seeming to have morality.

From [there] until:

> Kashyapa, furthermore, regarding this, although some bhikshus correctly assume the twelve qualities of ascetic training, they view a referent. Abiding in grasping to I and grasping to mine, they, Kashyapa, are the fourth of the artificial ones, breaking morality [yet] seeming to possess morality.

Therefore, he always will be perfectly separated from
The dualistic intellect's wandering toward the three. [2.3cd]

Toward the three: the sentient beings with respect to whom one produces abandonment, that [antidote] producing [abandonment], and [the agent] who produces [abandonment], they will be separated from dualistic intellects such as things and non-things and so forth.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

If he views his ethics as inherently pure,
Then their purity will not be complete. [2.3ab]

Some monks engage in very pure ethics based on [vows of] individual emancipation. However, if they do not abandon the view that phenomena inherently exist, then their ethics will not be pure but will be faulty though apparently proper. The *Pile of Jewels Sutra* says:

> Kashyapa, some monks have proper ethics; they abide restrained by vows of individual emancipation. Their rites and spheres of activity are perfect, and they view even coarse and subtle transgressions with concern. They thoroughly assume and train in

[13] Poisson, p. 286, note 1, cites *Shikshasammucchaya*, 52.12 etc.

> the precepts and possess pure activities of body, speech, and mind. Hence their livelihood is thoroughly pure, but they propound a self. Kashyapa, they are the first of those seeming to have proper ethics which in fact are faulty....
>
> Furthermore, Kashyapa, even though some monks thoroughly assume the twelve qualities of training, they view them with apprehension [of inherent existence]. Abiding in the conceptions of 'I' and 'mine', Kashyapa, they are the fourth of those whose ethics appear to be proper but are faulty.

There are fully ordained monks (bhikshus) who abide in the tenets of the Vaibhashika and Sautrantika schools. According to the Prasangika Madhyamikas, if these monks view phenomena to exist inherently they do not have pure ethics. This is from the point of view of philosophy but in general a monk who keeps his 254 vows purely has pure ethics. There is debate regarding this involving the examples of Shilarakshita/Dharmarakshita (a Vaibhashika), Suvarnadvipa (a Chittamatrin), and Ratnakarashanti (a Chittamatrin) who, according to the Prasangika Madhyamikas, would not be pure monks in that they view phenomena to exist inherently. The Prasangika Madhyamikas would have to respond to this saying that only Prasangika Madhyamikas have pure vows.

One can ask: "Is the conception of true existence faulty ethics?" This question can be asked in that here it says that a fully ordained monk's ethics are faulty because he views phenomena to exist inherently. The Prasangika Madhyamikas would have to answer this question by saying that the conception of true existence is faulty ethics in relation to the bodhisattva vows but not in relation to the individual liberation vows. Then one could ask: "Is there no Chittamatrin with pure bodhisattva vows?" To this the answer would have to be: "If it is a Chittamatra it follows that he is pervaded by having a root infraction of the bodhisattva vows."

"They propound a self" means that they propound a truly existent self. Because of this, the ethics of such fully ordained monks are said to be faulty. Although such monks appear to have pure ethics, in fact they have faulty ethics. Here Chandrakirti only quotes the sutra regarding the first and fourth of the types of monks who appear to have pure ethics but do not. In relation to the fourth type, the Buddha says to Kashyapa that although there are monks who train well in the twelve qualities of training, if they view 'I' and 'mine' to be truly existent, although they appear to have pure ethics, in fact they have faulty ethics. The twelve excellent qualities of training are: (1) three in relation to food, (2) three in relation to clothing, and (3) three in relation to the dwelling, and (4) and three in relation to the seat. The three in relation to food are:
(i) to eat food obtained by begging,
(ii) to eat one's meal on one seat without taking a second helping (this would be a simple lapse in relation to the vows of fully ordained monks), and
(iii) to not take food again, which means to not go for alms a second time.
The three in relation to clothing are:
(i) to possess the three Dharma robes,
(ii) to wear clothes made of wool, and
(iii) to wear clothes found in cemeteries or those that have been discarded by others.
The three in relation to the dwelling are:
(i) to dwell in isolated places,
(ii) to dwell near, i.e., under, a tree,
(iii) to dwell between walls without a roof,
The three in relation to the seat are:
(i) to abide in cemeteries,
(ii) to abide sitting upright (this being further divided into superior – not leaning in any direction; middling – leaning either to the left or right; and inferior – leaning to either side and to the back, and
(iii) to be content with a cushion made of leaves or grass.

The point of these trainings is to live having few desires and more satisfaction. These can be condensed into the four types of arya lineages, which are set out by Vasubandhu in *Treasury of Knowledge* as: (1) aryas who are satisfied with mediocre Dharma robes, (2) aryas who are satisfied with mediocre food attained from begging, (3) aryas who are satisfied with mediocre housing and bedding, and (4) aryas who enjoy the abandonments and meditation. We too should practice being satisfied with our food, housing, bedding and so forth by training ourselves in this.

Lama Tsongkhapa says: "they view them with the apprehension [of inherent existence]. Abiding in the conceptions of 'I' and 'mine.'" Viewing 'I' and 'mine' as inherently existent is the view of the transitory collection. Do such monks have pure or faulty ethics? According to this sutra they have faulty ethics. It would follow that second ground bodhisattvas also have faulty ethics due to having the view of the transitory collection that conceives the 'I' and 'mine' to exist inherently. The view of the transitory collection is present through the seventh ground. Perhaps it can be said that they have a conception of 'I' and 'mine,' but do not abide in this conception.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 'Propound a self' means viewing with apprehension [of inherent existence]. This is indicated by the fact that they abide in the conceptions of 'I' and 'mine', the meaning of which should not be understood as referring to the common false view of the transitory collection but as not having abandoned the [subtle] conception that 'I' and 'mine' exist by way of their own nature.

"Propound a self" does not refer to the common view of the transitory collection, which is to view the person as self-sufficient substantially existent. There are two types of views of the transitory collection: (1) that common to the lower schools and (2) that uncommon to the Prasangika Madhyamikas. The common view of the transitory collection is the view of a self-sufficient substantially existent person, whereas the uncommon view is to view the 'I' and 'mine' as existing inherently.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The word 'he' in the first line of stanza twenty cannot refer to the bodhisattva mentioned in stanza nineteen; therefore, Nak-tso translated these two lines this way:
>
> If he viewed his ethics as inherently pure
> Then his ethics would be faulty.
>
> His translation as 'then' [the hypothetical] is good [since a bodhisattva superior would never make this error].
>
> Chandrakirti's root text says:
>
> *Thus he always forsakes completely the wandering*
> *Of the dualistic intellect toward the three.* [2.3cd]
>
> If the view apprehending [inherent existence] is not abandoned, ethics are not pure. Thus, a second grounder always completely forsakes, or frees himself from, the wanderings of the dualistic intellect that views as inherently existent dualistic phenomena such as things and non-things. Here the view of inherent existence is forsaken with respect to the three – the sentient being with respect to whom faulty ethics are abandoned, the antidote used to abandon them, and the agent of abandonment.

This is an assertion of the Prasangika Madhyamikas alone. It is sufficient for a fully ordained monk to be in the process of becoming free from the dualistic intellect that views phenomena as inherently existent; it is not necessary that he has actually *become* free from it in order to have pure ethics, as

otherwise almost all monks would have faulty ethics since most of them view phenomena as inherently existent.

Jedzun Chokyi Gyeltshen, in *General Meaning* (page 163) says:

> Our own tradition: The meaning of the scriptural reference is that if it is a person viewing the three spheres of ethics as inherently existent, he is pervaded by not possessing the supramundane perfection of ethics. Therefore, second ground bodhisattvas, as the subject, are not persons viewing the three spheres of ethics as inherently existent because they are bodhisattvas abiding in the attainment of the supramundane perfection of ethics.

Someone who views the three spheres of ethics as inherently existent does not have a supramundane perfection of ethics but can still have a perfection of ethics. Therefore, he can have pure vows of ethics.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A2B Praise of ethics
>
> This section has five parts:
> 1 Enjoying the fruits of giving in a happy migration depends on ethics
> 2 Enjoying the fruits of giving in continuous lives depends on ethics
> 3 Liberation from bad migrations is extremely difficult for one bereft of ethics
> 4 Reason for discoursing on ethics after discoursing on giving
> 5 Praising ethics as a cause of both high status and definite goodness
>
> 3B1C-2A2B-1 Enjoying the fruits of giving in a happy migration depends on ethics

Chandrakirti's autocommentary (page 27) says:

> Thus, for a short while having expressed bodhisattvas as having excellent morality, after that, in order to indicate [it] as far greater than the excellent morality of the others in general, besides generosity and so forth, and being the support of all excellent qualities:
>
> *Resources from giving arise also in bad migrations*
> *Through defective legs of a being's morality.* [2.4ab]
>
> was mentioned.
>
> For the patron having morality, from just that giving excellent resources arise which are highly distinguished among gods and men. Through separating from the legs of morality, they themselves fall into the migrations of the bad migrations, born as an occasional sentient being of hell, an ox, horse, elephant, monkey, *naga*, and so forth, or preta (hungry ghost) possessing great magical emanations and so forth. For them, there will arise only the various excellent resources.

For someone who practices generosity but does not safeguard ethics, the result of generosity will ripen in a bad migration instead of being experienced in a higher realm. This occurs due to having broken the legs of ethics. Therefore, one should avoid breaking the legs of ethics whereupon one will enjoy the result of previous generosity in the happy migrations. For this reason it is important to practice generosity while safeguarding ethics.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Having said that the bodhisattva's ethics are perfect, Chandrakirti shows that although in general those of others [such as hearers] can be perfect, the features of a bodhisattva's ethics are far

greater than those of giving and so forth and serve as the base of all marvelous qualities. His root text says:

> *The arising in bad migrations of resources from giving*
> *Is due to a being's losing his legs of ethics.* [2.4ab]

From gifts given by donors with good ethics, special marvelous resources will arise during their lives as gods and humans. The arising of various marvelous resources in a birth in a bad migration, such as a being in a trifling hell or an ox, horse, elephant, monkey, naga, or a hungry ghost with great magical powers, is due to that being's having lost or been separated from his legs of ethics [that would have taken him to a good migration].

This indicates that if you lack proper ethics, the resources that are the fruit of giving will mature not in a happy migration but in a bad one. Since maturation of the effects of giving on the base of a happy migration is needed, a donor of gifts as explained above should – if he wants a happy migration – keep proper ethics.

Likewise, Lama Tsongkhapa says that if one practices generosity but does not safeguard one's ethics, one will be reborn in the bad migrations as a hell being, an animal, or a hungry ghost. There is no debate in relation to the fact that there exist animals, for example, some domestic animals, who receive plentiful food and drink, adequate shelter, (perhaps even clothing!) and so forth from their owners. This is the result of generosity in a previous life. However, there is debate regarding the maturation of the result of generosity in the hell realms in relation to how hell beings can experience the result of generosity. The conclusion is that there are occasional hells (trifling hells) in which during the day the beings experience the happiness of humans and gods but during the night experience the sufferings of hell, being forced to drink molten metals and so forth.

There are many stories about these occasional hells in sutra. For example, there is a story of merchants who traveled across the seas in search of jewels. In one house that they came across they asked the inhabitants to be permitted to stay and rest. Their request was accepted but they were warned not to stay there overnight as the situation would change. Being curious, they left as they had been advised but remained to watch from a certain distance to see what would happen. As night fell, the people in the house began to fight each other with many types of weapons. The merchants were astonished and, returning home, asked the Buddha why this had happened. The Buddha told them that this was the result of those peoples' actions when they were born at the time of Buddha Kashyapa, in that they had been monks who had played with their food, throwing it at each other and so forth.

Friday morning, 10 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A2B-2 Enjoying the fruits of giving in continuous lives depends on ethics

Chandrakirti's autocommentary says:

> Therefore:
>
> *If interest along with principal are fully exhausted,*
> *Hereafter, resources will not arise for him.* [2.4cd]
>
> There are some, who having sown very little seed, obtain the arisal of very great results and in order for another result, sow much more seed than that. It is possible to have a great collection of results without diminishing the sequence since increasing in accordance with the time (season).

> There are some, with methods which waste what was done, who thoroughly utilize even the former seeds through foolishness. Because of exhausting even the interest together with the principal, how could they view the generation of the excellent results which will arise?
>
> Similarly, because separated from morality, the extremely foolish thoroughly utilize resources incorrectly. Hence, because separated from a projection which did not formerly exist and because of thoroughly utilizing each and every former projection, thereafter, resources will not possibly arise.

Upon taking a new rebirth, one experiences the results of virtue created in a previous life. If one merely enjoys this result one will exhaust both the principal, the virtue, and the result, the interest. For example, if a large amount of seed is sown, the result will be many crops whereas if one sows few seeds, there will be little result. On the other hand, if one does not plant any seeds there will, of course, be no result. If one practices generosity in this life and then is reborn in a bad migration, one will merely exhaust the result of generosity without the opportunity to create more generosity. It is therefore important to not be separated from the practice of ethics.

Q: Is Chandrakirti not saying that by planting a few seeds one experiences a large result? It seems that Geshe-la said that from a small amount of seeds comes a small result and from a large amount of seeds comes a large result.
A: Chandrakirti says that by planting a small amount of seeds one will reap a large result. In order to continue having more crops the intelligent again plant more seeds; in this way they continue to reap a good harvest. On the other hand, if one plants seeds one season and then reaps the result but does not plant any more seeds the next season, the result will be exhausted. This is because the person merely enjoys the result of planting the previous seeds without preparing for the future. In general, if one plants few seeds one will have a little result, if one plants many seeds one will experience a great result, and if one does not plant any seeds one will not experience any result. Likewise, if one does a little bit of study one will not gain much knowledge, but if one studies continuously, one will gain many excellent qualities. Perhaps those with sharp faculties may study very little and learn quickly but the knowledge they gain is not very stable, easily diminishes, and does not improve very much. If one plants a small amount of seeds and reaps the result, it is important to plant some more as otherwise the result will merely be exhausted.

"Seed" here is an analogy for our virtues of generosity and so forth. What is this seed? It is a potentiality and can also be called a latency. If the Prasangika Madhyamikas are asked where these latencies are stored, they answer that they are deposited on the mere 'I' in one's own continuum or that they are deposited on the continuity of the consciousness. They say that there is no need to posit a separate consciousness on which they are stored such as a mind-basis-of-all, as do the Chittamatrins, or to posit that they are stored on the sixth mental consciousness, as do the Svatantrika Madhyamikas.

Here "seed" refers to virtues and in particular to the virtue of generosity. In order to ensure that one's generosity continues to increase, one must also practice ethics.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> If one lacks ethics, the fruits of giving ripen on the base of a bad migration. Merely enjoying the fruits of former giving on that base, one gives nothing newly due to extreme stupidity. Chandrakirti's root text says:
>
> *Having spent completely both principal and interest*
> *He will be without resources in the future.* [2.4cd]
>
> Since the principal as well as the interest is used, it is completely consumed. Once the fruits of former giving have been spent, that person will be without resources.

> For instance, someone who has gained much produce from planting a few seeds plants even more for the sake of increase, due to which his great stores are not exhausted. However, a fool merely enjoys his harvest instead of planting more seeds and thus does not continuously increase it.

Lama Tsongkhapa also says that from a small amount of seeds comes a large result and that in order to continue to reap a similar result in the future one must plant more seeds. A similar example is someone who puts some money in the bank and then over a period of time gradually withdraws it without adding any more money to the capital. In this way, one day his money will be exhausted and he may even end up owing money to the bank! This is similar to one who practices a small amount of generosity and then stops.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A2B-3 Liberation from bad migrations is extremely difficult for one bereft of ethics

Chandrakirti's autocommentary says:

> Not only is it very difficult to obtain complete arisal of resources with one separated from the legs of morality, but having gone to bad migrations rising again from bad migrations is extremely difficult to obtain. In order to indicate that:
>
> *When engaging independently and abiding agreeably,*
> *If one does not act to uphold oneself,*
> *By falling into the abyss one will engage controlled by others –*
> *Who will raise [him] from that later?* [2.5]
>
> was mentioned.
>
> At the time he is like a hero abiding in an agreeable place, liberated from bondage – engaging as desired without relying on others and abiding in the migrations of gods, humans and so forth – if one does not act to uphold himself, like having bound a hero and thrown him into a very great ravine – after having gone to bad migrations, who will take him out? Hence, because they act to harm, one is definitely in only bad migrations.
>
> Therefore, it is taught [in the *Sutra on the Ten Grounds*]:
>
> > Then, even if born among humans, two maturations will be manifestly achieved.

One who has broken the legs of ethics but has practiced generosity, having been reborn in the bad migrations, will consume the result of generosity, resources. But, since this person is unable to practice generosity in the bad migration, the results will merely be exhausted and he will have difficulty rising to a higher realm again. The meaning of this is that if one does not use one's rebirth in a higher realm well it will be difficult to obtain such a rebirth again. It is like someone who, having been bound and thrown into a ravine, is completely under the control of others without any independence. This is likened to someone who has been thrown from a good rebirth to a bad rebirth. This is because when one is reborn in the bad migrations no one will be able to help one. Therefore, one should use this opportunity as a human being who has control to better oneself. In this way, one will continue to take good rebirths. On the other hand, if one creates the causes for rebirth in the bad migrations, one's virtuous practices of generosity and so forth will only diminish.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> It is extremely difficult for one whose legs of ethics are broken to attain continual increase of resources. Moreover this leads to bad migrations from which it is very hard to escape. Chandrakirti's root text says:
>
> *If when acting freely and living agreeably,*
> *He does not act to hold [himself back from falling down],*
> *He will fall into an abyss and lose control;*
> *How will he raise himself from there in the future?* [2.5]
>
> A person who abides in a divine or human migration acts freely according to his own wish. He does not depend on others, but like a hero free from bondage abides in an agreeable land. If he does not act to hold himself from falling into a bad migration, he will be like a hero bound and cast into a great ravine. Having fallen into the chasm of a bad migration, he will have no independence and will lose control. By what means will he raise himself from that state in the future? He cannot.
>
> It is extremely rare to achieve virtue during a bad migration, in which the accumulation of sins is extremely powerful; thus, one must continue in only bad migrations. A sutra says, 'Even if one is born among humans, this is an achievement of two maturations.' Thus, it is said that birth as a human is difficult [to attain].
>
> Therefore, from now on you must keep yourself from falling into a bad migration. You should know that this means striving in proper ethics.

The principal cause of not falling into the bad migrations is striving in proper ethics. Ethics mainly means the mind of abandonment of physical and verbal misconduct. It is also a mind that does not permit one to engage in bad physical and verbal conduct. Bad conduct includes the three non-virtues of the body – killing, stealing, and sexual misconduct and the four non-virtues of speech – lying, divisive speech, harsh words, and idle talk. Ethics is the mind that abandons engaging in such actions. We are presently able to act as we wish, therefore we should definitely engage in virtuous actions as otherwise we will only create the causes to be reborn in the bad migrations.

Lama Tsongkhapa says: "the accumulation of sins is extremely powerful." We can see from our own experience that in general non-virtue is stronger than virtue. It is possible to create virtue mainly in the upper migrations, while in the bad migrations it is extremely rare to be able to create virtue. Only some beings are able to do so. For example, some nagas, who are classified as animals, can create virtue in that they practice generosity and other virtues. However, such nagas are an exception. Among the hungry ghosts there is also the possibility of creating virtue, which is illustrated by a story of some hungry ghosts who received teachings from the Buddha. In short, only a limited number of beings in the lower realms can create virtue. There are also bodhisattvas who take rebirth in the lower realms and create virtue there but this is a different case.

In the human realm there are many people who have complete sense powers but among them, the number of people who actually engage in pure virtue is very limited. Therefore, there is no need to mention how few of the beings born in the lower realms actually engage in pure virtue. We should not be like those mentioned in the root, which says: "If when acting freely and living agreeably, he does not act to hold [himself back from falling down]."

QUESTIONS AND ANSWERS

Q: In the *Sutra on the Ten Grounds* it mentions "two maturations." What are these?
A: Among the four types of results there are (1) fully ripened results (maturation results), (2) the result similar to the cause as an activity, (3) the result similar to the cause as an experience, and (4) the empowering result. Perhaps the two maturations here are the result similar to the cause as an activity and the result similar to the cause as an experience. When one is reborn in the human realm, one experiences both these results. For example, the result similar to the cause as an activity would be one's engaging in similar types of activity, such as the ten non-virtues. If the sutra says two maturations, why not three? We can also interpret these two maturations to be the fully ripened result

and the empowering result. Or perhaps the two maturations are that one will experience the result of non-virtue in the lower realm and then will experience it again when reborn in the upper realms.

Q: How many possibilities are there between action and dedication?
A: There are three possibilities in that there is nothing that is dedication but not action. The three possibilities are: (1) that which is an action but not a dedication, for example, killing insects, (2) that which is both action and dedication, and (3) that which is neither action nor dedication.

Q: The relation between form, or the aggregates, and self is set out in chapter six of Chandrakirti's autocommentary in a very condensed way, saying:

> *Form is not the self, the self does not possess form,*
> *The self is non-existent on form, nor does form exist on the self.*
> *Thus in four aspects should all the aggregates be known –*
> *These are asserted as the twenty viewing the self.* [6.144]

Could Geshe-la please explain this briefly?
A: The root verse literally says 'form is not the self,' which means the view of the transitory collection that views the form as a self, although it is not. The second part, that 'the self does not possess form,' means the view of the transitory collection that views the self as a possessor of things [which are a different entity from itself], like the way in which Devadatta possesses cows. However, the self does not possess form in the way that Devadatta possesses cows. The third, self is not on form, is the view of the transitory collection that views the self as supported on the aggregates. The fourth, form is not on the self, is the view of the transitory collection that views the aggregates as supported on the self. Such a view of the transitory collection is not qualified by inherent existence because it conceives a self-sufficient substantially existent self. Therefore, this view of the transitory collection is only an acquired view of the transitory collection and not an actual view of the transitory collection. This type of view of the transitory collection is common to the lower schools.

Q: A bodhisattva on the path of seeing attains disbelief of the referent object of the conception of true existence (see *Illumination*,; "Since the referent object of the view..."). When does this first occur? Can he already have this disbelief by means of an inferential valid cognizer?
A: It occurs whenever emptiness is realized, therefore it also includes the realization of emptiness by an inferential valid cognizer. At this time the referent object of the conception of true existence is refuted, whereby it is disbelieved. What does the realization of emptiness mean? Is the mind realizing emptiness pervaded by being a valid cognizer? [If one says "no," then] posit!
Student: A subsequent cognizer realizing emptiness.
Geshe Jampa Gyatso: According to the Svatantrika Madhyamikas and the lower schools that is right, but for the Prasangika Madhyamikas a subsequent cognizer *is* a valid cognizer in that for them a valid cognizer is one that is unmistaken with respect to its main object. In the Sera Me text books by Khedrub Gendun Tenpa Dhargye, it says that a mind realizing emptiness is not pervaded by being a valid cognizer because if emptiness is realized by a correct assumption it is also a realization. What do you think?
Student: That is not right.
Geshe Jampa Gyatso: One time in the past when His Holiness the Dalai Lama was offered honorary citizenship by the city of Bologna some students requested him to give the Kalachakra initiation in that city. His Holiness said that he would check but meanwhile advised them to study the two types of minds of enlightenment, the conventional and ultimate. He said that generating the conventional mind of enlightenment may seem to be easy but in reality is quite difficult. On the other hand, the

ultimate mind of enlightenment seems to be more difficult to realize, but in reality is easier, in that if one has a clear understanding of emptiness that is a realization of emptiness. Perhaps His Holiness was saying that as a realization it is enough to have correct assumption.

Q: It was said that a bodhisattva who achieves the first ground no longer has suffering because he attains a body that is the nature of the mind. What is this body that is the nature of the mind?
A: That is a bit difficult! As long as one has a physical body one is obstructed to pass through walls and so forth and is obligated to pass through open doors. On the other hand, when one has a body that is the nature of the mind one can go through mountains, walls, closed doors, and so forth. There is a story about Geshe Lekden from Tseshe Monastery who, one day when teaching his students, had a tea cup on the table in front of him. He was talking with his eye closed and clapping his hands in debate. The students saw that although he appeared to hit the cup with his hands, the cup did not move. How is that? It is said that although he appeared to have a physical body this geshe had obtained a body that is the nature of the mind. It is also said that beings in the intermediate state have a similar type of body that is the nature of the mind which is luminous and unobstructed. This is mentioned in the *Door to the Three Bodies,* which is translated by Lati Rinpoche and Jeffrey Hopkins in *Death, Intermediate State and Rebirth in Tibetan Buddhism*.

Q: With regard to the surpassing perfection of generosity, at what point on the first ground is it attained – the beginning or the end, in meditative equipoise or in subsequent attainment? And what is its direct cause?
A: The direct cause of the surpassing perfection of generosity is the exalted wisdom of the great supreme mundane qualities level of the path of preparation. The direct cause is also the strong practice of generosity done while the bodhisattva is on the path of accumulation and the path of preparation. The bodhisattva, while an ordinary bodhisattva, meditates on the three spheres of the practice of generosity as empty of true existence and engages in the practice of generosity.

It is attained on the path of seeing. When does it become manifest? It becomes manifest in subsequent attainment.

Q: What is the pervasion between giving and the intention to give?
A: They are the same.
Q: Are they mutually inclusive?
A: They can be said to be mutually inclusive.
Q: Then it follows that a great yogi does not have to give because it is enough to have the intention to give?
A: It is difficult to culminate the perfection of generosity by only cultivating the intention to give.
Q: Yet there cannot be one without the other?
A: There is such a possibility, for example, being forced to give without having the intention to give. There is a question as to whether this is generosity or not.

END

Monday afternoon, 13 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A2B-4 Reason for discoursing on ethics after discoursing on giving

Chandrakirti's autocommentary says:

Because such broken morality is the abode of very many collections of faults:

Therefore, the Conqueror, having given the discourse on giving,
Gave the very discourse on morality: that which follows. [2.6ab]

Therefore, the Conqueror who defeated every negative quality, in order that the qualities of giving and so forth not be wasted, immediately after the time of the discourse on giving, gave only the discourse on morality. Because:

If the qualities are increased in the field of morality,
The enjoyment of results will be unceasing. [2.6cd]

Because of being the support of all qualities, morality itself is a field. There, if the qualities of giving and so forth are increased by means of not ceasing higher and higher stages of the continuation of causes and results, the collection of results increases and is able to be utilized for a long time. Otherwise, they are not.

Faulty ethics are the source of many collections of faults in that, having been led to the bad migrations, one will continue to create many faults. For this reason the Conqueror discoursed on ethics immediately after having discoursed on generosity.

In order to ensure that the result of generosity is not wasted, one should safeguard ethics. If one does this, all excellent qualities will arise, whereby the result of generosity – resources – will be enjoyed continuously. For this reason ethics is said to be a field of all qualities. Just as the ground is the basis for the animate and inanimate, such as trees, mountains, and so forth, likewise proper ethics is the basis for many qualities. In this sense ethics is said to be a field. In short, by safeguarding ethics, one's qualities as well as one's resources will increase more and more. On the other hand, if one does not safeguard ethics, one's qualities will not increase and one will not enjoy the resources that are the result of generosity.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

Thus the Conqueror, having discoursed on giving,
Spoke upon its accompaniment by ethics.
When virtues are nurtured on the field of ethics,
The enjoyment of effects is unceasing. [2.6]

Faulty ethics is a source of many faults, such as being led to a bad migration; therefore, immediately after discoursing on giving, the Conqueror who had overcome all sins spoke on the achievement of accompanying giving with ethics so that the benefits thereof would not be wasted. The reason for this is that ethics is the base of all auspicious qualities and therefore is alone the field. If the virtues of giving and so forth are nurtured on the field of ethics, the continuation of engaging in causes, such as giving, and of using effects, such as a good body and good resources, will increase more and more. The collections of effects grow, and one is able to enjoy them for a long time. Otherwise, this is not possible.

This indicates that givers of gifts should not just consider the marvelous resources that are effects of giving but should think about the physical support with which they will enjoy them. They

should consider the continuation of resources in many lives. Thus, you should know that keeping proper ethics – the means of achieving these – is very important.

Novice bodhisattvas should, as was explained before, make effort at giving gifts, and they should do this in order to attain buddhahood for the sake of all sentient beings, who are their field of intent. Temporarily, however, they need a ripening of fruits of giving on the base of a happy migration over many lifetimes. This too depends on ethics because without them the favorable circumstances for training in the bodhisattva deeds are not complete.

In the vinaya it says that ethics is the base of all that moves and all that does not move. If one practices generosity alone without ethics, one will not enjoy the result of generosity with the body of a good migration. Therefore, in order to ensure that one will continue to take a body of a good migration, one should safeguard ethics. Presently we have a precious human rebirth complete with the eight freedoms and ten endowments. Therefore, we now have a special opportunity which is the result of keeping good ethics in the past. In order to continue to experience good rebirths in the future we also need to continue to keep good ethics. It is important not to degenerate our practice of ethics but to continually improve it. In addition, we should cultivate the path to enlightenment by practicing the remaining perfections. In particular, we need to cultivate the perfection of tolerance in our daily life.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) sets out the next outline as:

3B1C-2A2B-5 Praising ethics as a cause of both high status and definite goodness

The outline itself clearly indicates that ethics is the cause of both high status – rebirth as a human being or god, and definite goodness – liberation or omniscience. Since ethics is so important we should strive to combine the teachings given in the *Supplement* with those given in relation to the *Stages of the Path* and then integrate them into our daily life. In other words, we should not study such subjects merely as philosophy without putting them into practice.

Chandrakirti's autocommentary (Tib. page 29) says:

Because of that, by this method:

For ordinary beings, those born from speech,
Those with definite character toward solitary enlightenment, and
The Conquerors' children – the cause of definite goodness and
High status is not other than morality. [2.7]

As extensively taught [in the *Sutra on the Ten Grounds*, 2]:

Relying upon and abundantly enacting these paths of action of the ten non-virtues to a great degree becomes a cause of hell sentient beings. Middling becomes a cause of an animal state of rebirth. Small becomes the cause of the world of the Lord of Death.

There, through killing, sentient beings are led to the hells. Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved: short life and many diseases.

Through taking what is not given, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] small resources and shared (common) resources.

Through sexual misconduct, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] unreliable servants and a wife with [ones'] rivals.

Through speaking falsely, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] abundant slander and deception by others.

Through divisiveness, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] servants in discord and bad servants.

Through harsh words, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] to hear the unattractive and words of dispute.

Through senseless words, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] not being words worthy to be beheld and uncertain self-confidence.

Through covetous mind, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] not knowing satisfaction and great desires.

Through harmful mind, sentient beings are led to the hells. [Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly achieved:] not seeking benefit and harms done by others.

Through wrong view, sentient beings are led to the hells. Led to an animal state of rebirth. Led to the world of the Lord of Death. Then, even if born among humans, two maturations will be manifestly received: to fall into bad views and possess deceit.

Thus, these paths of action of the ten non-virtues will collect an immeasurable mass of suffering. Yet, through the cause of perfectly undertaking the paths of action of the ten virtues, rebirths will exist, such as rebirth as gods and men, up to the Peak of Existence.

Above that, if these paths of action of the ten virtues are fully meditated upon through the aspects of the trifling attitude, mind terrified by the three realms, without compassion and wisdom following that heard from others – induced from sounds: one will fully accomplish the hearers' vehicle.

Above that, if fully practiced through placing no regard in others, [aiming for] ones' own manifest complete buddhahood, without great compassion and skill in means and bearing in mind the very condition here – the profound – one will fully accomplish the solitary realizers' vehicle.

Above that, if fully trained through very extensive and immeasurable merciful heart, possessing compassion, [that] included in skill in means, firmly making great prayers, not forsaking any sentient being and referring to the very extensive exalted wisdom of buddhahood, one will fully purify the bodhisattva grounds and establish the great extensive, fully purified practices gone beyond.

Because of that, except for these paths of action of the ten virtues by these methods, there does not exist another means of attainment for ordinary beings, hearers, solitary realizers, and bodhisattvas, of any kind of high status, samsaric happiness, or definite goodness possessing the characteristic of liberation – the nature which is neither happiness nor suffering. The aforesaid will be clearly indicated.

In short, the *Sutra on the Ten Grounds* says that ethics is extremely important in that it brings about rebirths of high status as human beings or gods, as well as a hearer's enlightenment, a solitary realizer's enlightenment, and great enlightenment. A lack of ethics, such as engaging in the ten non-virtues, is faulty ethics. This sutra indicates that the result of non-virtue is more or less heavy in dependence on the strength of the action. If, for example, the action of killing is very heavy, one will be born in the hell realm; if it is middling, one will be born in the animal realm; and if it is light, one will be born in the realm of the lords of death, the hungry ghost realm. Because the suffering of the hell realm is the greatest, one is reborn there due to creating heavy non-virtue. On the other hand, middling non-virtue leads to rebirth as an animal in that, due to being stupid and foolish, one experiences middling suffering and has little opportunity to create virtue. Relatively light non-virtue is said to lead to rebirth as a hungry ghost because the suffering of hungry ghosts is said to be less than that of animals, due to the hungry ghosts being more clever than the animals. However, in the teachings on the *Stages of the Path,* it says that the greatest suffering is experienced in the hell realms, middling suffering in the hungry ghost realm, and the least suffering in the animal realm. Why is there this difference? Some people say that they are posited like this because hell beings have an extremely long life, due to which they experience the most suffering. The hungry ghosts have a shorter life than do hell beings and therefore suffer less. Because animals do not have a fixed lifespan, they have less suffering than hungry ghosts. The explanation in the *Sutra on the Ten Grounds*, on the other hand, is related to the fact that animals are very stupid whereby they cannot create happiness for themselves, whereas hungry ghosts are more intelligent and therefore experience more happiness.

The hungry ghost realm is called "the world of the Lord of Death" because that is where the lords of death live. In a ritual related to Dharmaraja (Kalarupa), there is a passage that says "the opponents of the lords of death are invoked from beneath the earth," indicating that the opponents of the lords of death live in the same place as the lords of death.

The hell guardians in the hell realms are said to be the henchmen of the lords of death. What are these hell guardians? Are they sentient beings or not?

Student: This question is asked in *Engaging in the Bodhisattva Deeds* and Shantideva says that the hell guardians are the creations of our own afflictions.
Geshe Jampa Gyatso: In other words, the hell guardians, who have the heads of horses, oxen, and so forth, are just appearances due to karma and not actual sentient beings. However, such karmic appearances strike the hell beings on the head with hammers and so forth, whereby they experience suffering. Think about this. If we say that everything is just an appearance of our karma we may fall into an extreme. Also, what about the lord of death, who is depicted as holding the wheel of existence between his fangs? Is he a karmic appearance or an actual being?

The *Sutra on the Ten Grounds* mentions heavy killing, middling killing, and light killing. What are the respective measures of heavy, middling, and light? As an example, that which leads to rebirth in the hell realm is said to be a heavy action of killing. The measure of the heaviness of non-virtue is posited in terms of the four: (1) the field, (2) the application/execution, (3) the thought, and (4) the thing. Heavy killing in terms of the *thing* is, for example, killing an elephant as opposed to killing a fly. The heaviness of the non-virtue of killing is therefore related to the size of the thing that is killed. A heavy non-virtue of killing in terms of the application, or *execution*, is, for example, killing a being slowly while causing great pain. A heavy non-virtue of killing in terms of *thought* is, for example, killing with intense anger. A heavy non-virtue of killing in terms of the *field* is to kill a holy object, such as one's root lama, another lama, a bodhisattva, a foe destroyer, a superior, or one's parents, as opposed to killing an animal and so forth. This is why the five actions of immediate retribution include killing

one's parents. Likewise, the strength of one's virtue is related to these four, the most important being the thought and the application.

In the sutra it mentions "two maturations" which, in the context of killing, are said to be short life and many diseases. In relation to stealing, the two maturations are said to be few resources and shared resources, the latter meaning that one's resources are common property and not one's own individual property. The two maturations of sexual misconduct are unreliable servants and having a wife who is together with one's enemy. In each case, both maturations are results similar to the cause as an experience. The two maturations of lying are being slandered and being deceived by others. Those of divisive talk are having servants who are in discord and having bad servants. Due to harsh words, one will hear unpleasant words and words of dispute. Due to senseless talk, one's words will not be worthy of note, i.e., they will be ignored, and one will have uncertain self-confidence. Due to covetousness, one will have little satisfaction and much desire. Due to harmful mind, or malice, one will not receive benefit from those one has benefited and one will receive harm from others. Due to wrong views, one will again fall into bad views and possess dissimulation and deceit. To fall into bad views is, for example, due to strongly thinking in the past that the law of actions and results does not exist, one holds this bad view again in this life. To possess deceit means to naturally deceive others.

In short, this passage in the *Sutra on the Ten Grounds* means that due to committing the ten non-virtues, after having been born in the lower realms one will later be reborn in the upper realms, where one will experience the two maturations. Likewise, depending on what type of virtue one creates, one will take various types of rebirth ranging from rebirth as a human being through rebirth as a god of the Peak of Existence. This range includes the six levels of the gods of the desire realm, the seventeen levels of the gods of the form realm, and the four levels of the gods of the formless realm. In addition, there are various types of human rebirths: those in the four continents and those in the eight sub-continents. In this way there are many types of rebirths, which are related to the kind of non-virtue and virtue one creates.

In addition to such rebirth in the upper realms, due to specific types of virtue one will also experience the results of hearer foe destroyer, solitary realizer foe destroyer, and so forth. The results of one's actions can be experienced as results included in rebirths as ordinary beings or superiors. Thus, Chandrakirti said before:

> *For ordinary beings, those born from speech,*
> *Those with definite character toward solitary enlightenment, and*
> *The Conquerors' children – the cause of definite goodness and*
> *High status is not other than morality.*

The two maturations in relation to covetousness are not knowing satisfaction and having great desire. We too experience these and therefore we should think about this and strive to decrease our attachment to material things. Although in regard to material things we should know satisfaction and have few desires, in regard to study and meditational practice we should never be satisfied and should have strong desire.

Tuesday morning, 14 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Both the body of a happy migrator and the enjoyment on that base of the fruits of giving for a long time depend on ethics, which are also necessary for the achievement of definite goodness [liberation from cyclic existence and omniscience]. Chandrakirti's root text says:

For common beings, those born from the word,
Those set toward solitary enlightenment, and
Conqueror children, a cause of definite goodness
And high status is none other than proper ethics. [2.7]

None other than ethics is a cause of high status for common beings who have not entered the path, and a cause of definite goodness – enlightenment – for hearers born from the Subduer's word and those set on the path of a solitary realizer's enlightenment as well as for conqueror children – bodhisattvas.

There are, however, many other causes which are not ethics. Thus, this means that in order to achieve special high status and definite goodness, a definite relation with ethics is necessary. If ethics are forsaken, there is no way that these can be accomplished.

The attainment of high status as a human being or god and the attainment of definite goodness – the enlightenments of hearers, solitary realizers, and bodhisattvas – are related to safeguarding ethics. Without ethics, these results cannot be attained. The main cause for ordinary beings who have not entered the path to attain a rebirth of high status is ethics.

In the teachings on the *Stages of the Path,* three types of beings are set out: those of inferior scope, those of middling scope, and those of great scope. Practitioners of inferior scope are those who have turned their backs on the lower realms and engage in practices to attain their own scope, a good rebirth within cyclic existence. In order to achieve this, they practice ethics. Practitioners of middling scope are those who have turned their backs on the pleasures of cyclic existence and mainly strive to achieve the definite goodness of liberation for their own welfare. In order to achieve this, they practice the three higher trainings. Practitioners of great scope are those who have turned their backs on solitary peace and strive to attain great enlightenment for the benefit of all sentient beings. The main cause of this too is the safeguarding of ethics.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

This has been a summary of meanings set forth in the *Sutra on the Ten Grounds*. There it is explained:

Each of the ten non-virtues – killing and so forth – are divided into great, middling, and small which lead respectively to [migrations as] a hell being, animal, and hungry ghost. Finally, if one is born among humans, killing causes a short life and many diseases. Each of the remaining nine non-virtues also produces two undesirables [a birth in a bad migration and later birth as an unfortunate human]. The ten virtues cause birth as a desire god, a human, [and a being in any of the higher realms] up through the Peak of Cyclic Existence.

Higher than that is the practice of the ten virtues in conjunction with a trifling attitude aimed at one's own welfare alone together with renunciation and fear of cyclic existence. When the ten virtues are practiced with this aspect lacking great compassion yet having the wisdom cognizing selflessness that is induced by others' words, then one comes to be liberated through the hearer vehicle.

Still higher is the practice of one who in his final cyclic existence does not depend on others and aims at the enlightenment of a solitary realizer. If one practices thus without great compassion and skill in means but penetrates the suchness of profound dependent arising, one is definitely freed through the solitary realizer vehicle.

Above that is the practice of one with extremely vast and immeasurable mercy, compassion, and skill in means. If one practices thus, establishing great waves of prayer petitions, not casting aside any sentient being, but aiming at the extremely vast buddha wisdom, one is thoroughly purified through the mind of enlightenment and accomplishes the vast deeds of the pure perfections.

Each of the ten non-virtues has four results, the main result being the fruitional result (fully ripened or maturation result), which is rebirth in the lower realms. Having finished that rebirth in the lower realms, one then takes rebirth in the human realm, where one experiences the other three results. These three are:

1. the result similar to the cause as an activity,
2. the result similar to the cause as an experience, and
3. the empowering result.

For example, due to having killed, one is reborn in the lower realms and then later on when born as a human being, one has the tendency to kill; this is the result similar to the cause as an activity. The result of killing that is similar to the cause as an experience is a short life and many illnesses. The empowering result of killing is living in an unpleasant place where there is fighting and so forth. The four opponent powers related to confession purify these four results. The power of the base, which is to take refuge and generate the mind of enlightenment, purifies the empowering result. The power of regret purifies the result similar to the cause as an experience. The power of determination purifies the result similar to the cause as an activity. The power of applying all antidotes purifies the fruitional result. Therefore, it is important to do confession conjoined with *all* four opponent powers in order to purify *all* four results.

A hearer's enlightenment is attained by those who – seeking their own welfare – fear cyclic existence, lack great compassion, and yet train in the wisdom realizing selflessness in dependence on others' words. The sutra says "the wisdom cognizing selflessness that is induced by others' words." The uncommon assertion of the Prasangika Madhyamikas is that this wisdom is the realization of the non-inherent existence of persons, whereas the common view of the lower schools is that it is the realization of the emptiness of the person of self-sufficient substantial existence. The Prasangika Madhyamikas say that the realization of the emptiness of a self-sufficient substantially existent person alone is not sufficient to eradicate the conception of a self of persons and become liberated from cyclic existence. In the *Sutra on the Ten Grounds* it says clearly that hearers, as well as solitary realizers, do not have great compassion. Solitary realizers are said to be "without great compassion and skill in means." However, they do penetrate "the suchness of profound dependent-arising," whereby they attain the liberation of solitary realizers. The main object of meditation of solitary realizers is dependent-arising. Dependent-arising can mean that phenomena arise in dependence on one another, but here it specifically means that solitary realizers completely realize the forward and reverse processes of the twelve links of dependent-arising, whereby they achieve their respective enlightenment. They meditate on the twelve links, beginning with the fact that from ignorance comes karmic formations, whereby they realize that this ignorance is the root of cyclic existence and they then go on to achieve liberation.

The sutra then says: "Above that is the practice of one with extremely vast and immeasurable mercy, compassion, and skill in means." This implies that a bodhisattva also meditates on dependent-arising and so forth and, in addition, has immeasurable mercy, compassion, skill in means in subduing trainees, and great waves of prayers, and does not cast aside sentient beings, and so forth. "Immeasurable mercy" refers to the immeasurable compassion which is included in the four immeasurables, whereas "compassion" refers to great compassion. The difference between immeasurable compassion and great compassion is a subject of debate. From the point of view of the *Ornament for Clear Realizations,* immeasurable compassion has a particular empowering condition, which is an actual meditative absorption of a concentration or a final concentration. However, it is questionable as to whether this empowering condition is actually necessary for the development of great compassion, whereas it is necessary for immeasurable compassion. This was discussed in the context of the eighth topic of the first chapter of the *Ornament*, achieving through engagement, in the context of the concentrations and formless absorptions.

In the *Sutra on the Ten Grounds* it says: "not casting aside any sentient being." This is a heavy negativity. When someone who has taken the tantra vows gives up love for even one sentient being, he commits a root downfall of the tantra vows. On the other hand, if someone with the bodhisattva vows gives up the mind of enlightenment, he commits a root downfall of the bodhisattva vows. In Kunkyen Jamyang Shepa's *Great Exposition of the Middle Way* (page 283) it says:

> If that is asserted, then a bodhisattva who has committed the root downfall of mentally giving up the mind of enlightenment and the root downfall of mentally abandoning sentient beings, as the subject; it follows that he does not have a bodhisattva's root downfall and the faulty ethics of that because he did not commit a root downfall of body and speech. This is because there is pervasion of the sign. You are unable to accept that, because the difference is in terms of whether or not they have vows of the three doors, in that bodhisattvas commit a root downfall even *by way of mind alone*, whereas hearers (those with individual liberation vows) do not [commit a root downfall] by way of mind alone (in that they do so only by body and speech).

The bodhisattva vows constitute a promise to engage in the bodhisattva deeds for the sake of all sentient beings. If it is asked: "Is a bodhisattva pervaded by having the bodhisattva vows?," there is no pervasion. Therefore, there are bodhisattvas who do not have the bodhisattva vows. An example is a bodhisattva who has generated the aspirational mind of enlightenment but not the practical mind of enlightenment.

Ethics is not pervaded by being a vow, whereas a vow is pervaded by being ethics. For example, a person who naturally stops killing has a type of ethics but this is not a vow. This is because in order for ethics to be a vow one must rely on an abbot or acharya from whom one takes the vows. However, in some cases it is also possible to take vows without the presence of a master.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Nagarjuna says in his *Friendly Letter* that training in proper ethics is very important:
>
> > You should observe ethics that are not low,
> > Not degenerate, not mixed, and not polluted.
> > Ethics are said to be the base of all attainments
> > As is the earth for all that does and does not move.

One should strive in ethics that are not degenerated by root downfalls. Just as the earth acts as a basis for that which does and does not move, similarly ethics acts as a basis for all attainments.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Therefore, although ethics is set forth in connection with the second ground, novice bodhisattvas should also practice them. They should think about the great importance of ethics, restraining their minds without being moved by tendencies toward the ten non-virtues.

Although ethics is [here] taught in connection with the second ground, lower bodhisattvas should also practice them. "Novice bodhisattvas" are bodhisattvas on the paths of accumulation and preparation. They should strive to be free even from non-virtuous motivations. This is said in relation to the specific ethics of restraining oneself from bad conduct.

In short, root downfalls of the bodhisattva vows can occur by way of actions of mind alone, whereas root downfalls of the individual liberation vows can only occur by way of actions of body and speech.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> As Chandrakirti says (2.7):
>
> > *For common beings, those born from the word,*
> > *Those set toward solitary enlightenment, and*
> > *Conqueror children, a cause of definite goodness*
> > *And high status is none other than proper ethics.*
>
> Then, they should train in conjoining the practice of proper ethics with the wisdom that cognizes the unapprehendability [of inherent existence]. Since merely understanding or familiarizing with these only a few times brings nothing, these meanings should be contemplated continuously. If they familiarize with them continuously, they will spontaneously engage in the modes of training of the bodhisattva deeds – even those that generate mental discomfort when first heard and those that our Teacher [Buddha] could not practice for a long time. Ratnadasa's *Praise of Endless Qualities (Gunaparyantastotra)* says:
>
> > Those deeds, which when heard of harm the worldly
> > And which you could not practice for a long time,
> > Will in time become spontaneous for all familiar with them.
> > Those not so familiar find it hard to increase attainments.

The practice of ethics and other virtues should be conjoined with the wisdom realizing non-inherent existence. If one only does this now and then, one will not achieve anything; therefore one needs to cultivate this wisdom continuously. Mere comprehension without putting it into practice will not bring benefit. Therefore, one should train in this awareness continuously throughout the day. It would be a mistake to meditate on this intensely only for one day or one month and then to stop.

Lama Tsongkhapa says that upon hearing about the bodhisattva deeds for the first time, some people experience discomfort. He says: "If they familiarize with them continuously, they will spontaneously engage in the modes of training of the bodhisattva deeds – even those that generate mental discomfort when first heard and those that our Teacher [Buddha] could not practice for a long time." Even Buddha could not engage in certain practices at first but, through striving in them, he became able to do so. Likewise, Shantideva says that through familiarity everything becomes easy. Therefore, by means of training continuously one will become able to engage in all types of practices. To illustrate this, Shantideva says that through familiarity even our present body, which is matter formed from the two substances of the father and mother, comes to be thought of as "mine." Likewise, if we train in such practices [as the bodhisattva deeds], one day they will become easy and spontaneous. On the other hand, if we do not do so they will remain difficult. To use an analogy, athletes who train their bodies over a long period of time gain great physical flexibility and so forth, whereas we who have not trained in the same way do not have such flexibility. However, if we were to train in a similar way we too would gain great flexibility. Likewise, through training in playing music or singing, one will eventually acquire ability in these. All such talents are attained by familiarizing with them over a long period of time.

Q: In the past, Geshe-la said that if one abandons love for a sentient being one commits a root downfall of the tantra vows, whereas if one gives up the mind of enlightenment one commits a root downfall of the bodhisattva vows. It was also said that a bodhisattva commits a root downfall through mentally abandoning the mind of enlightenment and mentally abandoning the mind of benefit

toward sentient beings. Is the mind of benefit not a mind of love? What is the difference between the abandonment of love for sentient beings in relation to the tantra vows and the abandonment of the mind of benefit toward sentient beings in relation to the bodhisattva vows?
A: Giving up sentient beings means to give up love for sentient beings; this also appears to be a root downfall of the bodhisattva vows. This is clarified in Kunkyen Jamyang Shepa's *Great Exposition of the Middle Way*. On the other hand, in the *Six-Session Guru Yoga*, giving up love for sentient beings is classified as a root downfall of the tantra vows, whereas giving up the mind of enlightenment is classified as a root downfall of the bodhisattva vows.

Student: I understood that there are two kinds of downfalls of bodhisattva vows that can be created by mind – the abandonment of the aspirational mind of enlightenment and the giving up the benefit of sentient beings. Is that right?
Geshe Jampa Gyatso: That is different. If, having adopted the aspirational mind of enlightenment by means of ritual, one creates any of the four black actions, one commits a transgression but does not break an actual vow. Adopting the aspirational mind of enlightenment by means of ritual is not the actual taking of the bodhisattva vows, as this implies taking the vows of practical mind of enlightenment. Therefore, adopting the aspirational mind by means of ritual of enlightenment is not actually taking the bodhisattva vows. On the other hand, if one takes the bodhisattva vows, one necessarily adopts the aspirational mind of enlightenment by means of ritual.

It can be asked: "If giving up the mind of enlightenment is a root downfall of the bodhisattva vows, is giving up the promise of the aspirational mind of enlightenment taken by means of ritual also a root downfall?" Giving up the mind of enlightenment is mentally thinking that one is unable to engage in the bodhisattva deeds and unable to continue on the path to enlightenment. This is a root downfall of the bodhisattva vows if one has taken these vows. If one has not taken these vows one merely loses the aspirational mind of enlightenment taken by means of ritual. This is discussed in Lama Tsongkhapa's commentary on the section on ethics in *Bodhisattva Grounds*.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) sets out the next outline:

3B1C-2A2C Example of non-mixture with what is not conducive to ethics

Chandrakirti's autocommentary says:

> The bodhisattva of the second mind generation:
>
> *Just like the ocean together with a corpse and*
> *The auspicious together with the black-eared –*
> *Thus does the great being the power of morality*
> *Not wish to abide together with that broken.* [2.8]
>
> "The black-eared" is a synonym of "inauspicious."

The Tibetan version we are following says the "black-nosed" rather than the "black-eared," as is translated here (the difference between the Tibetan words for nose and ear being just a superscribed letter). This [Tibetan] version is correct according to other sources, for example, in Chandra Das's Tibetan-English dictionary it says that "black-nosed female" is a synonym of that which is inauspicious and is a human who never accomplishes anything wherever he goes.

There is a story about this regarding one of the past mayors in Tibet. One time when he was in power, a thief was arrested and put in prison. The mayor wrote out a recommendation to the prison officials advising them to cut off a piece of his ear and free him, but by mistake he actually wrote that they should cut off a piece of the prisoner's nose. The nose of the thief was duly cut off. Upon hearing

this, the mayor became angry and asked why this had been done, whereupon he was shown the letter that he himself had written!

Tuesday afternoon, 14 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *Just as an ocean is incompatible with a corpse*
> *And just as prosperity is incompatible with calamity,*
> *So a great being subdued by ethics*
> *Does not wish to live with faulty ethics.* [2.8]
>
> For instance, a great ocean – due to the power of the cleanly nagas abiding there – does not dwell compatibly with a corpse but with its waves pushes it to the shore. Also, the marvels of prosperity and the bad fortunes of calamity are incompatible. Similarly, a second grounder, a great being subdued by pure ethics, does not wish to live with faulty ethics.
>
> Chandrakirti's commentary on Aryadeva's *Four Hundred* says, 'Calamity definitely exists in a household where Lucky resides.' However, this does not contradict his explanation here because in his commentary to the *Four Hundred* he was thinking of two persons having those names whereas here in the *Supplement* 'calamity' means misfortune.

Just as when a corpse is thrown into the ocean it is washed back to shore by the power of the nagas living in the ocean, in a similar way, a second ground bodhisattva naturally does not live with faulty ethics.

Lama Tsongkhapa says: "the marvels of prosperity and the bad fortunes of calamity are incompatible." More literally translated, this would be: "the two, the perfections of auspiciousness and the black-nosed female, i.e., inauspiciousness, do not associate with each other." This would be like Buddha and Devadatta not abiding together in the same place. Is this interpretation correct? On the other hand, in Chandrakirti's commentary on the *Four Hundred* this is explained in terms of there being two persons with these names abiding in the same place saying: "Black-nosed Female definitely exists in a household where Auspicious Female resides."

Here there seems to be some contradiction in that at first the text seems to be saying that these two cannot abide together and then it says that they can abide together. If this is debated, the conclusion is that it is possible for someone called 'Black-nosed Female' to abide together with someone called 'Auspicious Female' in that Black-nosed Female is not necessarily inauspicious and vice versa. For example, someone who is not a demon can be called 'Demon' and someone who is not a buddha can be called 'Buddha.'

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A2D Divisions of the perfection of ethics

Chandrakirti's autocommentary says:

> The explanation of the divisions of the previously explained morality gone beyond is:
>
> *Abandoning by whom, what, and regarding whom;*
> *If reference to the three exists, that morality*
> *Is explained as a so-called mundane gone beyond.* [2.9abc]
>
> That morality, if reference to the three exists, is indicated as mundane gone beyond.
>
> *That emptied of clinging to the three – the supramundane.* [2.9d]

> That very morality, if without reference to the three which were explained, is explained as the so-called supramundane gone beyond.

There are two types of ethics: (1) mundane ethics and (2) supramundane ethics. Mundane ethics is an ethics that is not conjoined with the wisdom realizing that the three spheres of ethics do not exist inherently. Supramundane ethics is an ethics that is conjoined with the wisdom realizing that the three spheres of ethics do not exist inherently.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *If there be any apprehension of the three –*
> *Forsaken by whom, what, and with regard to whom –*
> *Such ethics are described as being a mundane perfection.*
> *That empty of attachment to the three is supramundane.* [2.9]
>
> If one is unable to put an end to the seeds of apprehending the true existence of the three spheres – the object of abandonment which is being forsaken, the person by whom it is forsaken, and the sentient being with regard to whom it is being forsaken – then such ethics are described as a mundane perfection. If ethics are conjoined with the uncontaminated wisdom realizing unapprehendability – that is to say, are empty of attachment apprehending true existence in the three spheres as explained above – then they are supramundane. Thus, ethics have two divisions [mundane and supramundane].

The three spheres of ethics are expressed by Lama Tsongkhapa as: "the object of abandonment which is being forsaken, the person by whom it is forsaken, and the sentient being with regard to whom it is being forsaken." Thus, they are: (1) the *person who abandons* an action, such as killing; (2) the *object that is abandoned*, e.g. the action of killing; and (3) the *field with regard to whom killing is abandoned*, e.g. the being who one does not kill.

With respect to negative actions there are four branches:

(1) the base,
(2) execution,
(3) thought, and
(4) completion.

The base is of two types: the animate and the inanimate. For example, if I were to go to Venerable Chogyal's room and take his eyeglasses, there would be two bases of my action of stealing: Chogyal, the owner, and the eyeglasses. In addition, the thief himself is also a base. Although the base of the action of killing is necessarily a sentient being, this is not the case in regard to the action of stealing.

Thus, the three spheres of the perfection of ethics are the person who abandons, that which is abandoned, and the sentient being regarding whom it is abandoned. These three spheres were already mentioned in regard to the perfection of generosity; they can be posited similarly in regard to the remaining perfections.

In regard to the mundane and supramundane perfection of ethics, it can be asked, "Who has a mundane perfection of ethics?" According to the *Illumination,* a mundane perfection of ethics is posited as existing in the continua of bodhisattvas who have not abandoned the seeds of the conception of true existence of the three spheres, i.e., the bodhisattvas abiding on the paths of accumulation and preparation. On the other hand, the supramundane perfection of ethics exists in the continua of bodhisattvas abiding on the path of seeing and above.

As with the perfection of generosity, there is:

(1) a perfection of ethics (or an ethics gone beyond) that is the means to go beyond and

(2) a perfection of ethics (or an ethics gone beyond) that is the state of having gone beyond.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A2E Conclusion by way of expressing the features of the second ground

Chandrakirti's autocommentary says:

By means of subsequently expressing the qualities of the ground which were explained, to fully complete explaining the section of the morality gone beyond:

Arisen from the moon of the Conqueror's child – also this Stainless,
Not becoming [yet] being the glory of existence, free of stain,
Like the moonlight of autumn time,
Eliminates the mental torment of migrators. [2.10]

So-called *Stainless* because of lacking stains through the paths of action of the ten virtues, is the name concordant with the meaning of the second bodhisattva ground. Just as the autumn moonlight, free from stain, eliminates the torment of sentient beings, similarly also, this Stainless who arose from the moon of the Conqueror's child eliminates the mental torment generated by broken morality.

As he is not included in samsara, he is not becoming, but is the glory of existence (becoming) because all excellent qualities follow after him and because of being the cause of excellent lordship of the four continents.

From the *Explanation of the 'Supplement to the "Middle Way,"'* the Second Mind Generation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

Like the light of an autumn moon, the Stainless
Arising from the moon of a conqueror child,
Though not worldly, the glory of the world,
Removes the mental distress of migrators. [2.10]

Just as stainless autumn moonlight relieves creatures from the discomforts [caused by heat], so the second ground, the Stainless, removes the distress of migrators generated by faulty ethics. The Stainless arises from the moon of a conqueror child who is a second grounder and is so called because it has the light of pure ethics free from the stains of the faulty.

Because a second grounder is not included among those who wander in cyclic existence, he is not mundane – not of cyclic existence – but he is the glory of the world. This is because all marvelous attainments flow from this bodhisattva, and he, through the power of prayer petitions for the sake of sentient beings, has attained the sublime cause of universal monarchy over the four continents.

Such is the explanation of the second ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of Chandrakirti's 'Supplement to the Middle Way.'*

Here the second ground, the Stainless, is compared to the autumn moonlight, which is cooling and free from the veil, or pollution, of the dust that was settled by the summer rains. Likewise, a second ground bodhisattva is said to be free from the stains of the mist of faulty ethics. (Mist is one of the eight colors of which the first four colors mutually support each other, whereas the second four oppose each other; for example, the fifth and six, illumination and darkness, oppose each other and likewise the seventh and eighth, shadow and sunlight, oppose each other.)

A second ground bodhisattva is the glory of the world because "all marvelous attainments flow from this bodhisattva, and he, through the power of prayer petitions for the sake of sentient beings, has attained the sublime cause of universal monarchy over the four continents." There are four types of universal kings – those that respectively rule one, two, three, or four continents – each of which have their respective causes. A universal king who rules one continent is said to have an iron wheel or a conch, a universal king who rules two continents has a copper wheel, one who rules three continents has a silver wheel, and one who rules all four continents has a gold wheel.

Much is said in sutra regarding the ethics of vows. For example, Buddha said that when a fully ordained monk does full prostrations, he creates the karma to be born as a universal king for a number of times equal to the amount of dust particles beneath his outstretched body down to the golden base. In this context there is a discussion about whether someone with a large body creates more positive karma by doing prostrations than one who has a small body. The conclusion is that it is beneficial to have big body!

This concludes the explanation of the second mind generation.

THE THIRD MIND GENERATION

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) sets out the following outlines:

3B1C-2A3 Third ground, the Luminous

This section has four parts:

A Description of the third ground – the base of qualities
B Qualifying features of the third ground
C Distinguishing attribute of the first three perfections
D Conclusion by way of expressing the features of the third ground

3B1C-2A3A Description of the third ground – the base of qualities

Chandrakirti's autocommentary (Tib. page 32) says:

Now from the viewpoint of the third mind generation:

Because a light arises of the fire which burns the
Entire fuel of objects of knowledge, this third ground:
Luminous – … [3.1abc]

was mentioned.

Luminous is the name of the third bodhisattva ground. Further, if it is asked: "why is it luminous?" It acts to indicate concordance with the meaning since at that time there arises a light of the fire of exalted wisdom which burns the entire fuel of the objects of knowledge – possessing the essential nature of pacification. Therefore, this ground is explained as the Luminous.

… – to the Tathagata's child...

who generated the third mind,

There arises a copper-like appearance, like the sun. [3.1cd]

Just as prior to the occasion of sunrise, there arises a copper-like appearance, similarly, also to the bodhisattva on that [ground] there arises the appearance of exalted wisdom there.

The third bodhisattva ground is called Luminous because a third ground bodhisattva has the light of the fire of exalted wisdom that burns the knowledge obstructions. Just as there is a red glow prior to the actual sunrise, for a third ground bodhisattva there is a preliminary glow of the actual exalted wisdom that destroys the knowledge obstructions. The actual fire of exalted wisdom only exists on the eighth ground, since the knowledge obstructions are not actually abandoned before this point. As was explained in the *Ornament for Clear Realizations,* the heat level of the path of preparation is so-called because it is like a preliminary sign indicating that the conception of true existence is about to be burned. This explanation is similar to the reason for calling the third ground Luminous.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

Chandrakirti's root text says:

Because the light of the fire wholly consuming
The fuel of objects of knowledge arises,
This third ground is called the Luminous, for a copper

Splendor like the sun appears to the sugata child. [3.1]

The third bodhisattva ground is called the Luminous. Why is it so named? It accords with the meaning of its name because when the third ground is attained, the fire of wisdom burning all the fuel of objects of knowledge arises along with a light which by nature is able to extinguish all elaborations of duality during meditative equipoise. Furthermore, just as a copper-like splendor appears shortly before sunrise, so on this ground an illumination of wisdom appears to a bodhisattva, a sugata child, who has generated the third ground. This indicates that on the third ground an appearance of all-pervasive red or orange light appears subsequent to meditative equipoise.

Nagarjuna's *Precious Garland* (444-6) says:

The third ground is called the Luminous because
The pacifying light of wisdom appears.
The concentrations and clairvoyances are generated,
While desire and hatred are extinguished completely.

Through the maturation of these qualities
He practices supremely the deeds of patience
And putting an end to desire completely
Becomes a great wise king of the gods.

On the third ground there is said to be the pacification of mistaken dualistic appearances. However, this pacification actually begins on the first ground. On the first ground, mistaken dualistic appearances are pacified by means of the exalted wisdom of meditative equipoise.

Lama Tsongkhapa says: "an appearance of all-pervasive red or orange light appears subsequent to meditative equipoise." Mistaken dualistic appearances are pacified in meditative equipoise; as a result of this, in subsequent attainment this bodhisattva apprehends the appearance of all-pervasive red or orange light, even though at this time he does have mistaken dualistic appearances.

Nagarjuna says that on the third ground "the concentrations and clairvoyances are generated, while desire and hatred are extinguished completely." According to this, it would seem to be clear that for this bodhisattva desire and hatred are extinguished completely. Since on the third ground the bodhisattva has attained a surpassing practice of tolerance he can be said to have extinguished hatred, as well as the stains of hatred, even in a dream. However, in what sense is attachment completely extinguished? It can be said that this bodhisattva has completely extinguished attachment to the five pleasant sense objects, forms, sounds, and so forth, of the desire realm. Nagarjuna then says: "And putting an end to desire completely becomes a great wise king of the gods." It can be asked: "Does attachment not exist through the seventh ground?" It does, in that there are attachments that have the same observed object and aspect as the ignorance that is the conception of true existence that exists through the seventh ground. It can be asked: "Does attachment not observe objects that are also observed by the ignorance which is the conception of true existence?" In regard to this, there is a stanza in Aryadeva's *Four Hundred* that says that just as when the body sense power is destroyed, the body is destroyed, likewise when ignorance is destroyed, all other afflictions are also destroyed. This stanza comes in the context of a discussion about the attachment and ignorance that observe the same observed object. It can also be asked: "Are attachment in general and the attachment of the desire realm the same or different?"

In his autocommentary, Chandrakirti goes on to present various ways of cultivating tolerance. We need a lot of tolerance at all times. Tolerance is not merely the opponent of anger; there are also other types of tolerance. For example, when we experience difficulties in our studies we need patience or tolerance; specifically, the tolerance that bears suffering. We also need different kinds of tolerance

regarding different types of persons, for example, the teacher who explains, the translator, and even oneself, the person who is not able to understand! Therefore, we need patience with respect to each other. Patience should not just be a word on the tip of our tongues but something that we actually put into practice.

Wednesday morning, 15 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A3B Qualifying features of the third ground
>
> This section has four parts:
>
> 1 Surpassing patience on the third ground
> 2 Way of observing other patience
> 3 Divisions of the perfection of patience
> 4 Other pure features arising on the third ground
>
> 3B1C-2A3B-1 Surpassing patience on the third ground

Chandrakirti's autocommentary says:

> In order to indicate patience gone beyond as surpassing for the bodhisattva who obtained the appearance of exalted wisdom like that:
>
> *Even if someone of misplaced disturbance*
> *Will cut from his body flesh along with bone,*
> *For a long time, bit by bit, [due to] that,*
> *Patience strongly grows <u>toward</u> the cutter.* [3.2]
>
> Because the bodhisattva looks after the minds of others and because of having such exalted wisdom, he does not manifestly act to engage body, speech, and mind <u>in a nature resembling the basis of others' harmful intention due to possessing non-factual qualms regarding the three times</u>. Hence, it was qualified, saying: *Even if someone of misplaced disturbance... his.*
>
> Even if a sentient being of that type cut from the body of that bodhisattva, flesh together with bone, bit by bit, pausing and pausing, for a long time, not only will he not at all become disturbed within the mind, but very surpassing patience will be generated in the bodhisattva who refers to the sufferings of hell and so forth having the condition of that evil action, as greater [than the experience of others].

A bodhisattva who has attained the third ground has a surpassing perfection of tolerance. In order to indicate this, Chandrakirti says that even if someone with a harmful mind were to cut the flesh and bones of this bodhisattva slowly, bit by bit, over a long time, the bodhisattva does not become angry but instead generates compassion toward the mutilator, thinking that as a result of his actions the mutilator will be reborn in the lower realms. In this way the bodhisattva is able to tolerate the suffering of being cut.

There is debate about this subject such as the questions: "Does a third ground bodhisattva have a physical body of flesh of bones that can be cut? Does this bodhisattva not have a body that is the nature of mind?" The conclusion is that according to ordinary appearances this bodhisattva does have a physical body made of flesh and bone. When this body is cut the bodhisattva does not show anger but instead generates compassion and tolerance toward the person who is harming him.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In order to indicate that a bodhisattva who has found such illumination of wisdom has a surpassing perfection of patience, Chandrakirti says in his root text:
>
> *Though another, unjustifiably disturbed*
> *By anger, cuts from his body flesh and bone*
> *Bit by bit for a long time, he generates*
> *Patience strongly toward the mutilator.* [3.2]
>
> Since surpassing giving and ethics, which were explained earlier, are possessed on this higher ground, here from among the remaining eight perfections patience is surpassing. It is surpassing in that the measure of advancement in the practice of this perfection is not present in the remaining seven.
>
> A third ground bodhisattva protects the minds of others and possesses the peace of wisdom as explained in the previous stanza. Thus, though others might generate qualms that serve as a basis of harmful intent by thinking, 'In the past he harmed me and my friends,' 'He harms us now,' or 'He will harm us in the future,' he does not engage in such activities of body, speech, and mind. Therefore, Chandrakirti qualifies the bodhisattva as an unjustified source of anger.
>
> Even if someone, disturbed by such anger, cuts from the body of this bodhisattva not just flesh but also bone, not in large sections but bit by bit, not continually but pausing in between, and not finishing in a short time but cutting over a long period, the bodhisattva would not get angry at the mutilator. Instead, he would generate very strong patience by taking cognizance of the mutilator and realizing that due to this sin this person will experience suffering as a hell being and so forth even greater than that of other hell beings.

On the first ground the bodhisattva attains a surpassing practice of generosity, on the second ground he attains a surpassing practice of ethics, on the third ground he attains a surpassing practice of tolerance, on the fourth ground he attains a surpassing practice of effort, and so forth. Although a bodhisattva on the third ground is said to attain a surpassing practice of tolerance, this does not mean that bodhisattvas on the first and second grounds do not have tolerance. If their bodies are cut they also do not generate anger. The difference is that, although they do not get angry, first and second ground bodhisattvas do not have a *surpassing* practice of tolerance. The difference is that the third ground bodhisattva is able to increase his practice of tolerance in such situations. On the third ground, tolerance is surpassing in that this bodhisattva "protects the minds of others and possesses the peace of wisdom as explained in the previous stanza" which burns the fuel of the knowledge obstructions.

Chandrakirti says "the basis of others' harmful intention" and likewise Lama Tsongkhapa says "a basis of harmful intent." There are <u>three types of bases of harmful intent</u>, which are related to the three times. These are the thoughts:

(1) "He has harmed me and my friends in the past,"
(2) "He is harming me and my friends now,"
(3) "He will harm me and my friends in the future."

These three can be further elaborated into nine:

(1) "He has harmed me in the past,"
(2) "He is harming me now," and
(3) "He will harm me in the future";
(4) "He has harmed my friends in the past,"
(5) "He is harming them now," and
(6) "He will harm them in the future";
(7) "He has helped my enemies in the past,"
(8) "He is helping them now," and
(9) "He will help them in the future."

Due to such thoughts, one generates anger, but it is not correct to become angry based on such reasoning.

Third ground bodhisattvas are not the right source, or justifiable source, of anger in that they lack the bases of harmful intent that are mentioned above. However, those with harmful mind still cut their flesh and bones bit by bit over a long time, yet the bodhisattva's mind remains undisturbed and instead his tolerance increases. He generates compassion and tolerance toward the harmer, understanding that that person is creating the cause for being reborn in the bad migrations where he will experience great suffering.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> This is what it means to have surpassing patience. Therefore, it is clear that such patience is not generated on the Very Joyful or the Stainless grounds even though a first or second ground bodhisattva's mental continuum is not disturbed when his body is cut. Hence, it should be understood that surpassing patience first arises on the third ground.

Chandrakirti's autocommentary says:

> Furthermore:
>
> *Whatever is cut, by whom, when, and how,*
> *From the bodhisattva who sees selflessness,*
> *Since also phenomena are seen like their reflections,*
> *Hence he is patient.* [3.3]
>
> He not only becomes very surpassingly patient having observed the greater sufferings of hell and so forth having the condition of that evil action. Since he also sees phenomena as similar to reflections and separates from the discrimination of I and mine, he is therefore also very extremely patient. The terms whatever, [whom, when, and how] are in order to include the causes of patience.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *Also through viewing these phenomena*
> *As like reflections – what bodhisattva*
> *Seeing selflessness is cut, by whom,*
> *Just how, and when – he will be patient.* [3.3]
>
> Not only does a third ground bodhisattva have surpassing patience that observes the great suffering of hell beings and so forth, he also sees clearly the phenomena of the three spheres as like reflections. Because the three – by whom the body of a bodhisattva seeing selflessness is cut, what is cut, in what manner and at what time – are vividly seen in this way and because he does not discriminate falsely about 'I' and 'mine', the bodhisattva will be patient.
>
> Chandrakirti's commentary explains that the word 'also' [in the first line] of the stanza is 'for the sake of including the causes of patience'. Thus, his patience results from this cause as well as the former causes of non-disturbance which were just explained. Furthermore, Chandrakirti says, 'Because of this also', and thus the verse should be translated as 'also through viewing' [instead of 'because of viewing', as it was in Tibetan].

The third ground bodhisattva who knows that someone cutting his body is creating the cause to experience the sufferings of the lower realms generates compassion and his tolerance increases. In addition, this bodhisattva sees the three spheres of tolerance as non-truly existent: (1) the cutter, (2)

the one cut, and (3) the act of cutting. This bodhisattva is free from the acquired conception of 'I' and 'mine.' This too enables him to increase his practice of tolerance.

Q: This bodhisattva sees the three spheres as like reflections. Does he also see them as like illusions?
A: Sentient beings appear like illusions to this bodhisattva.
Q: Do they not appear as truly existent to this bodhisattva?
A: It can be said that sentient beings appear both as truly existent and as like illusions in subsequent attainment.
Q: Therefore, this bodhisattva has both appearances?
A: Yes. Why? Because this bodhisattva has the appearance of both conventional truth and ultimate truth. Because there is conventional appearance, there is also false appearance. False appearance is illusion-like appearance in that it appears but is not true. For example, in a magic show there are three types of people: the magician, the spectators whose eyes have been tricked by mantra, and those whose eyes have not been affected by mantra who arrive later on. The eyes of both the spectators and the magician are affected by the mantras of the magician, yet, for example, when the basis of a substance such as a pen is transformed into a lion, this lion appears to the magician yet he knows that the lion is not real. On the other hand, the spectators whose eyes have been affected see the lion and believe it to exist. To those whose eyes have not been affected by mantra a lion does not appear and only the pen appears. Ordinary beings are like the spectators whose eyes are affected by mantra in that to them there is the appearance of true existence and the adherence to it. A bodhisattva who has realized non-true existence is like the magician, in that he has the appearance of true existence but knows that it is not true. A bodhisattva in the exalted wisdom of meditative equipoise is similar to those whose eyes have not been affected by mantra because he has no appearance of true existence.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A3B-2 Way of observing other patience

This section has two parts:

A Unsuitability of anger
B Suitability of observing patience

3B1C-2A3B-2A Unsuitability of anger

This section has four parts:

1 Unsuitability of anger due to its being senseless and very faulty
2 Contradiction of not wanting suffering in the future and making harmful response
3 Unsuitability of anger due to its destroying virtue accumulated over a long time
4 Stopping anger by reflecting on the many faults of impatience

3B1C-2A3B-2A1 Unsuitability of anger due to its being senseless and very faulty

Chandrakirti's autocommentary says:

> This patience is not only a feature appropriate to bodhisattvas – since it is also a cause of safeguarding every quality of those other than them. To explain to the impatient reversal from anger as proper it is said:
>
> *Due to harm done, if you are belligerent toward one,*
> *Can hostility for them reverse what is already done?*
> *Therefore, resenting them is definitely meaningless here;*
> *It also becomes unfavorable in other worlds.* [3.4]

> If you are belligerent toward someone [who] did harm, this gives the opportunity of inner agitation for some time. Then, because the harm already done is without reversal, the hostile attitude referring to him is just meaningless, because what was to be done was already done.
>
> Not only is resentment of this pointless now, it will become unfavorable (contradictory) also to other worlds because of generating anger and throwing unattractive maturations.

One should not become angry because, as Chandrakirti says: "Due to harm done, if you are belligerent toward one, can hostility for them reverse what is already done?" For example, someone hits us with a stick whereby a bruise forms on our body. If, after this has happened, we were to hit the other person back and thereby the bruise were to transfer to the other person it would make some sense to hit the person. However, this does not happen; instead we risk being hit once again. In this way our bruise will become even bigger, whereby our pain as well as our anger will increase. Therefore, there is no benefit to hitting the person back, the only result is to lose our good qualities. In short, when someone hits us, we should not strike back but should instead strive to diminish our anger. Thus, Chandrakirti says that being patient is very important whereas retaliation is pointless. In addition, retaliation brings about a negative result in future lives in that due to this negative action we will experience suffering.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Patience is not just a practice suited to the minds of those on bodhisattva paths, for it causes those not abiding on a ground to maintain all attainments without diminishment. Therefore, it is fitting for those lacking patience to avoid anger. Chandrakirti's root text says:
>
> *If you get angry with someone who has done you harm,*
> *Is that harm stopped because of your resentment toward him?*
> *Resentment thus is certainly senseless here*
> *And unfavorable for future lives.* [3.4]
>
> If you become angry at someone who harmed you, then since the harm cannot be reversed, does resenting him reverse the harm already done? It does not. Therefore, resentment is certainly senseless here.
>
> Resentment is an irritable coarse disposition, synonymous with belligerence. Not only is it purposeless, but it is also unfavorable to your welfare in future lives because time spent in anger impels unpleasant fruition after death.

When someone becomes angry with us, we should remain patient without becoming angry. We should stop anger by contemplating the many disadvantages that anger brings in this and future lives. For example, as Lama Tsongkhapa says "it is also unfavorable to your welfare in future lives" and "impels unpleasant fruition after death." Thinking in this way we should diminish our anger. Not only is there suffering in future lives but even in this life when we become angry our mind becomes disturbed and agitated. In addition, our anger also makes the people around us unhappy. In short, anger disturbs both one's own and others' minds. Anger causes us to experience negative results even in our daily life such as others, our colleagues and assistants, harming us rather than helping us. Therefore, by contemplating the results of anger we should strive to decrease it. Another example of the unhappiness that anger causes is a case when one member of a family gets angry and he may not even want to eat, although food is offered to him. In the end, this is his loss as he will go hungry!

The object of anger is not necessarily a sentient being but can be any object whatsoever. For example, we can become angry at a pen if it does not work properly or we can become angry with our car if it does not start and so forth. In fact, there are numerous things that can cause us to become angry. In short, we should avoid the rough disposition of mind that characterizes anger.

Here the title of this section itself, "Unsuitability of anger due to its being senseless and very faulty," clearly indicates that anger is senseless and has many disadvantages and that it is therefore not proper to become angry.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A3B-2A2 Contradiction of not wanting suffering in the future and making a harmful response

Chandrakirti's autocommentary says:

> There are some, while experiencing the different results of faulty deeds done by themselves, due to confusion think, "The other did that harm to me," and with regard to that thought, employ belligerence toward the harmer. In order to avert whatever desire there is to defeat his harm through employing harm in response, it was explained:
>
> *The very one desiring to express as exhausted*
> *Those results of non-virtue done in the past,*
> *How is it possible he leads to suffering again*
> *Through harm and belligerence toward the other?* [3.5]
>
> The very great suffering of harms inflicted upon someone's body by enemies through bringing down the edges of sharp weapons upon it is the final result arising [from] the action of killing in the past.
>
> The severe fully ripened results of hell sentient beings, animal rebirth states, the world of the Lord of Death, and so forth were experienced and what are the causes of averting without exception the unpleasant results of those, having still remaining afflictions – results similar to the cause – since transforming into the aspect just like that again, like the last dose of medicine, the cause of curing the disease existing inside, through disturbance from within and harm to others, they will lead to the very causes which give rise to results harming much more than even the unpleasant results already passed.
>
> Because of that, as one acts toward a physician operating with a sharp instrument, through that being the cause of curing the disease, very great patience is proper toward causes which give rise to temporal suffering.

Because we do not desire suffering in the future, it is inappropriate to retaliate to harm done to us now. Chandrakirti says that we tend to think that we must harm someone who harmed us because we do not realize that the harm we receive is the result of our own previous actions. Due to our ignorance we even think that others harm us even though they may not actually be harming us, whereby we become angry. We then think to harm and defeat these people. This is our usual way of thinking. However, it is improper. Instead when we are harmed we should think that this harm is the result of non-virtue that we created in past lives. Therefore, when we receive harm, instead of becoming unhappy and angry we should feel fortunate in that it enables us to exhaust the result of these negative actions. Any harm that we return and anger that we develop will only bring suffering to ourselves and will not bring benefit. For this reason we should definitely refrain from retaliating and developing anger. Whether others actually harm us or not, we should not get angry in that if we become angry we are only planting the seeds of our own future suffering. Since we do not want suffering in the future we should definitely not retaliate by harming others. Retaliation is contradictory with our wish for happiness. Therefore, it is fundamental to understand the functioning of actions and results. When we experience harm or problems we should think, "This is the result of my own non-virtue," and when we experience happiness we should think, "This is the result of my

own virtue." Understanding that happiness comes only from virtue and that suffering comes from non-virtue, we should engage in virtue and avoid non-virtue as much as possible in this life in order to experience happiness in the future and be free from suffering. Being patient is our own individual responsibility.

Wednesday afternoon, 15 March 2000

In general, it is worthwhile to experience a small suffering in order to avoid a large amount of suffering. For example, people undergo surgery well aware that although they will experience some suffering the end result will be that they will be cured of a greater suffering. For example, in the past in Tibet bloodletting was common practice, the suffering of which was willingly born in order to cure the illness.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Some people, when suffering due to former bad deeds, are influenced by their obscuration to think, 'Another has harmed me,' and generate anger toward the harmer. They want to prevent the arising of the suffering that involves such harm in the future by making a harmful response. In order to overcome this [tendency] Chandrakirti says in his root text:
>
> > *How could it be right for one, wishing to assert that*
> > *He is finishing the effects of non-virtuous*
> > *Actions done earlier, to sow the seeds of*
> > *Suffering through harming and hating others?* [3.5]
>
> The great suffering that enemies inflict on one's body is an effect of the non-virtuous action of killing one did in the past. That effect can be experienced as a strong fruition in the three bad migrations. Also, those for whom effects still remain [after a lifetime in a bad migration] undergo unpleasantness by way of fruits similar to that cause [upon rebirth as a human]. How could it be right for one, who wishes to say that he is finishing the remaining effects of those actions in order to overcome such unpleasantness, to sow the seeds or causes of future suffering? That suffering will be far greater than he is experiencing here, and he is led to it through making harmful answers to others and disturbing his continuum from within through anger. It is not suitable.
>
> Therefore, just as one bears the pain of bloodletting with a sharp instrument as a physician's means of healing disease, it is very suitable to bear small superficial suffering for the sake of overcoming limitless deep suffering.

Although the fact is that we undergo certain sufferings as a result of our own previous non-virtuous actions, we have the tendency to point to others as the cause of our problems. However, this is inappropriate. Such sufferings are the result of our own negative actions and are experienced when certain conditions come together. But thinking, for example, that one did not achieve success in a particular activity because someone else did something to prevent this happening, one becomes angry at that person in order to avert the suffering one is experiencing.

If one experiences strong physical pain it is the result of having killed in a past life. However, in order for this non-virtuous karma to ripen it has to meet particular conditions, for example, people who cause one pain. In short, the main cause of physical pain is the karma of having killed but the superficial condition is the people who cause one this pain. The pain one experiences presently is only a secondary result of killing, a result similar to the cause as an experience, whereas the main result, a fruitional result, was already experienced as rebirth in a lower realm. For this reason, Lama Tsongkhapa first sets out the fruitional result of killing and then the result similar to the cause as an experience which occurs when one is once again reborn as a human being.

In order to exhaust the result of negative karma one should avoid retaliating when harmed. On the other hand, if one does retaliate to harm which is the result of negative karma created in the past,

one will once again create the cause to experience suffering in the future. For this reason Lama Tsongkhapa says: "Therefore, just as one bears the pain of bloodletting with a sharp instrument as a physician's means of healing disease, it is very suitable to bear small superficial suffering for the sake of overcoming limitless deep suffering." The pain of bloodletting is limited and temporary but enables one to overcome the more severe pain of a particular illness and therefore is willingly borne.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A3B-2A3 Unsuitability of anger due to its destroying virtue accumulated over a long time

This section has two parts:

A Meaning of the text on the unsuitability of anger due to its destroying virtue accumulated over a long time
B Ancillary meanings

3B1C-2A3B-2A3A Meaning of the text on the unsuitability of anger due to its destroying virtue accumulated over a long time

Chandrakirti's autocommentary says:

In order to indicate that: "impatience is not only the cause of throwing extensive unpleasant maturations in the manner explained, it is also the cause of exhausting the collection of merit accumulated over a long time":

Since, due to belligerence to the Conqueror's children,
Virtues arisen from giving and morality accumulated for
One hundred eons are destroyed in an instant; therefore,
There exists no evil other than impatience. [3.6]

was mentioned.

If a bodhisattva mahasattva (great being) strongly superimposes true and untrue faults upon those who generated the mind toward enlightenment and generates a thought of anger a mere instant because of the absence of ascertaining the qualification due to the person (i.e., their being a bodhisattva) [or] although [that] has already been ascertained, because of engaging in the afflictions in reliance upon familiarization – if due to merely that, the collection of merit accumulated for one hundred eons generated from familiarization with giving and morality gone beyond, which were indicated before, will be destroyed – leave alone mentioning the generation toward a bodhisattva by one who is not a bodhisattva.

Therefore, as the quantity of water in the great ocean cannot be ascertained through measurement, the extent of maturation in that cannot be ascertained.

Therefore, since like that, there does not exist another evil greater than impatience which throws unpleasant results and harms virtue.

Also saying that, [the *Manjushri Sport Sutra*] taught:

Manjushri, anger, so-called 'anger', acts to thoroughly destroy virtues accumulated for a hundred eons. Therefore, it is called 'anger'.

Chandrakirti says that if a bodhisattva becomes angry at another bodhisattva for a single instant, he destroys the virtues of generosity and ethics accumulated over a hundred eons. This clearly shows that anger destroys the roots of virtue included in the collection of merit but not those included in the collection of wisdom. Likewise, we too should practice patience and avoid becoming angry. Anger is

likened to a strong fire that is able to burn mountains, trees, houses, and so forth in that anger burns or consumes the roots of virtue included in the collection of merit.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Impatience not only is a cause projecting vast unpleasantness as its fruition but also consumes collections of merit accumulated over a long time. Indicating this, Chandrakirti's root text says:
>
> *One moment of hating a conqueror child destroys*
> *The virtues arising from giving and ethics'*
> *Accumulated for a hundred eons.*
> *Thus there can be no [worse] sin than impatience.* [3.6]
>
> When a bodhisattva, a great being, generates an angry thought toward a conqueror child, who already has an altruistic mind of enlightenment, he does so through forcefully imputing true and untrue faults. Either he does not determine that the person is a bodhisattva or, despite so determining, he is influenced by his strong habituation to the afflictions. Even if a bodhisattva generates anger toward another bodhisattva for just a moment, accumulations of merit amassed over a hundred eons – virtues arising from the perfections of giving and ethics which were explained before – are destroyed. If that is the case, then what need is there to say anything about one who is not a bodhisattva getting angry with one who is?
>
> Just as one cannot measure the amount of water in a great ocean, so one cannot ascertain the limits [of suffering] that results from being angry with a bodhisattva. In terms of projecting unpleasant effects and harming virtue there is no greater sin than impatient anger.

Lama Tsongkhapa says that if a bodhisattva destroys a great quantity of roots of virtue by becoming angry for a single instant with another bodhisattva there is no need to mention how harmful it is for someone who is not a bodhisattva to become angry with a bodhisattva. For example, if a bodhisattva on the great level of the path of accumulation becomes angry with a bodhisattva on the small level of the path of accumulation he returns to the small level of the path of accumulation and must begin the path again. Likewise, if someone who has created virtue for many years generates strong anger he destroys all this virtue and must begin to collect it again.

Lama Tsongkhapa says: "In terms of projecting unpleasant effects and harming virtue there is no greater sin than impatient anger." Anger is the most harmful of minds. This is because although attachment acts as a condition for the creation of non-virtue it does not destroy one's roots of virtue. For this reason, anger is compared to a blazing fire.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [Jaya-ananda] says in his *Explanation* that 'imputing true faults' refers to falsely imputing bigness to small [faults].
>
> With respect to Chandrakirti's explanation that roots of virtue are destroyed by anger, the *Manjushri Sport Sutra (Manjushrivikridita)* says, 'Manjushri, anger destroys virtue accumulated over a hundred eons.' It is not clear in that sutra whether the object of anger and the base of anger [the person who is angered] are bodhisattvas or not; however, in his commentary Chandrakirti explains it within the context of both the object and the base being bodhisattvas.
>
> Prior to quoting this sutra, Nagarjuna quotes the *Lion's Roar of Maitreya Sutra* (*Maitreyamahasimhanada*) in his *Compendium of Sutra*:
>
> > Merely by attacking all sentient beings in the realms of a thousand world systems having a billion worlds with reproach, rebuke, sticks, and fists, a bodhisattva does not wound or scar himself. However, he is wounded and scarred even by generating harmful intent, obstinacy, or a mind of hatred for another bodhisattva. Why? Even if he does not lose [the path of] omniscience completely, the bodhisattva must from that time wear the armor [practice the six perfections] for as many eons as there were thoughts

> of harm, obstinacy, and hatred generated toward the other bodhisattva.
>
> Thus it is clear that Chandrakirti bases his commentary on this rendition in which both the object and the base of anger are bodhisattvas. [The reference in the *Lion's Roar of Maitreya* is to a lesser unprophesied bodhisattva's being angry with a prophesied bodhisattva.]

Two cases can be considered in term of the base of anger (the one who becomes angry) and the object of anger: a bodhisattva who becomes angry at another bodhisattva and a non-bodhisattva who becomes angry at a bodhisattva. In the first case the one who becomes angry is a bodhisattva and the object of anger is also a bodhisattva, whereas in the second case the one who becomes angry is not a bodhisattva. The *Lion's Roar of Maitreya Sutra* refers to the first case saying that if a bodhisattva were to attack all the sentient beings in the realms of a thousand world systems having a billion worlds with reproach, rebuke, sticks, and fists he would not harm himself. "However, he is wounded and scarred even by generating harmful intent, obstinacy, or a mind of hatred for another bodhisattva." This clearly shows that if he were to attack another bodhisattva with reproach, rebuke, sticks, and fists he would create great negative karma, but that he is even wounded by merely generating harmful intent toward another bodhisattva.

The *Lion's Roar of Maitreya Sutra* then says: "Why? Even if he does not lose [the path of] omniscience completely, the bodhisattva must from that time wear the armor [practice the six perfections] for as many eons as there were thoughts of harm, obstinacy, and hatred generated toward the other bodhisattva." Although due to his anger the bodhisattva does not lose the path to omniscience, he needs to practice the six perfections for a number of eons equal to the number of instants he was angry with another bodhisattva. For this reason, it is very dangerous to generate anger even for an instant toward a bodhisattva. Therefore, we should take great care not to do so.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> QUESTION: Why do the masters Shura [Ashvaghosha] and Shantideva say that the virtue accumulated over a thousand eons is destroyed? Shantideva's *Engaging in the Bodhisattva Deeds* (VI.1) says:
>
> > One moment's hatred destroys
> > All the good deeds of giving,
> > Worshipping sugatas, and so forth
> > Amassed over a thousand eons.
>
> ANSWER: Although Prajnakaramati's commentary on Shantideva's *Engaging in the Bodhisattva Deeds* says that being angry with sentient beings destroys the virtue accumulated over many thousands of eons, it is difficult to believe. The two masters [Ashvaghosha and Shantideva] do not clearly identify the object and the base; however, only a bodhisattva is an object of anger that destroys roots of virtue accumulated over a hundred or a thousand eons.
>
> If on the basis of the reference to 'a bodhisattva, a great being' we make an inference about the base of anger in [Chandrakirti's text], it appears that he is a bodhisattva of greater power than the bodhisattva who is the object. Furthermore, [in general] the base of anger is definitely a bodhisattva who is a common being [on the paths of accumulation and preparation], but the object can be either a bodhisattva who has attained a ground or who has not. Thus, there are three hatreds – by a bodhisattva of greater power to a lesser, by a lesser to a greater, and by one to another equal in power. When a bodhisattva of greater power becomes angry at one of lesser power, virtue accumulated over a hundred eons is destroyed, and when one who is not a bodhisattva is angry with one who is, it is clear that virtue accumulated over a thousand eons is destroyed.
>
> I will analyze in relation to scripture the destruction of virtuous roots when a lesser bodhisattva becomes angry with a greater one and when a bodhisattva is angry with an equal. I will also analyze the destruction of roots of virtue in relation to the status of the object when a lesser becomes angry with a greater.

When both the base of anger and the object of anger are bodhisattvas there are three hatreds: (1) anger by a bodhisattva of greater power to a lesser, (2) anger by a lesser bodhisattva to a greater, and (3) anger by one bodhisattva to another equal in power. When a greater bodhisattva becomes angry at a lesser bodhisattva the roots of virtue accumulated over a hundred eons are destroyed. When a lesser bodhisattva becomes angry at a greater bodhisattva or a non-bodhisattva becomes angry at a bodhisattva the roots of virtue accumulated over a thousand eons are destroyed. However, when a bodhisattva becomes angry with another bodhisattva of the same level it is not clear how many eons of roots of virtue are destroyed. This can only be understood from scriptural authority.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [Lesser bodhisattva being angry with a greater]
>
> The first part of the quote from the *Lion's Roar of Maitreya Sutra* – 'Merely by attacking all sentient beings in the realms of a thousand world systems having a billion worlds with reproach, rebuke, sticks, and fists, a bodhisattva does not wound or scar himself' – sets forth an instance of a bodhisattva's being angry with non-bodhisattvas, abusing them with speech and striking them physically. This is shown to differ from wounding or scarring a bodhisattva; hence, it should be known that it is not necessary for a bodhisattva who becomes angry with one who is not to bear the armor from the very beginning. It is indicated that if a bodhisattva merely generates an angry thought toward a bodhisattva without any physical or verbal expression, he must bear the armor from the beginning for as many eons as the times that he generated the thought.

When a bodhisattva becomes angry at another bodhisattva, even without abusing him verbally or striking him physically, he must wear the armor from the very beginning. However, when a bodhisattva becomes angry at someone who is not a bodhisattva, although some amount of roots of virtue are destroyed, there is no need to begin over from the beginning.

We do not know who is and who is not a bodhisattva. Therefore, we need to be careful with regard to everyone since we cannot rule out someone being a bodhisattva thinking "He is not a bodhisattva because he is ugly" or "He is not a bodhisattva because he is sleepy" and so forth.

Thursday morning, 16 March 2000

In relation to the destruction of roots of virtue there is the base of anger, the person who becomes angry, and the object of the anger, the person to whom one gets angry. There are three different cases when both the base of anger and the object of anger are bodhisattvas:

1. a bodhisattva with a higher level of realizations becoming angry with one of lesser realizations,
2. a bodhisattva with lesser realizations becoming angry with a bodhisattva with superior realizations, and
3. a bodhisattva becoming angry with a bodhisattva of equal realizations.

In the first case the bodhisattva who becomes angry destroys the roots of virtue accumulated over a hundred eons. In the second case the bodhisattva who becomes angry destroys the roots of virtue accumulated over a thousand eons. In the third case the amount of roots of virtue destroyed by the bodhisattva who becomes angry is not specified.

There are also other cases:

4. a bodhisattva becoming angry with a non-bodhisattva,
5. a non-bodhisattva becoming angry with a bodhisattva, and
6. a non-bodhisattva becoming angry with another non-bodhisattva.

When a bodhisattva becomes angry with a non-bodhisattva less roots of virtue are destroyed than in the case of a non-bodhisattva becoming angry with a bodhisattva. There is even less destruction of roots of virtue when a non-bodhisattva becomes angry with a non-bodhisattva.

In the second case in which the object of anger is superior to the base of anger, i.e., a bodhisattva with lesser realizations becoming angry with a bodhisattva with superior realizations, the amount of roots of virtue destroyed can be determined on the basis of scriptural references such as the following.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The object of such is clearly a bodhisattva who has been prophesied, and the base is clearly one who has not.

A bodhisattva who has been prophesied has higher realizations than one who has not been prophesied. Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) then says:

> The *Condensed Perfection of Wisdom Sutra* (*Sanchayagathaprajnaparamita*) says:
>
> If a bodhisattva who has not been prophesied
> Angers and disputes with another who has so been,
> He must bear the armor from the beginning for as many
> Eons as the times his mind was imbued with hatred.
>
> With respect to the necessity of bearing the armor from the beginning, if, for example, one who has the capacity to pass quickly from a bodhisattva's great path of accumulation to a path of preparation becomes angry at another who has been prophesied, he cannot pass to the path of preparation for as many eons as the number of instants of anger and must train in the path from the beginning.

When a bodhisattva who is about to achieve the path of preparation becomes angry with a bodhisattva who has been prophesied, he must train again from the beginning of the path for as many eons as the number of instants of anger.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> [A bodhisattva being angry with an equal]
>
> Shantideva's *Engaging in the Bodhisattva Deeds* (I.34) says:
>
> The Subduer said that one who generates
> A bad mind to such a conqueror child patron
> Will stay in a hell for as many eons as there were
> Instants of the bad mind which he generated.
>
> Thus, it is said that one will abide in a hell for as many eons as there were instants of developing hatred for a bodhisattva. There is also the fault of destroying roots of virtue accumulated over many eons.
>
> If a non-prophesied bodhisattva is angry with a prophesied one, his detention in a hell is similar to that just explained, and he must also bear the armor from the beginning for as many eons. The *Compendium of All the Weaving Sutra (Sarvavaidalyasamgraha)* says that if one abandons the doctrine as set forth in the sutra but confesses the fault three times daily for seven years, the fruition of that deed is purified, but even at the fastest ten eons are necessary to attain endurance [facility allowing progress to the next path]. Thus, even though confession and restraint in many ways does not restore a path that has become slower, it will purify experience of the fruition. Hence, you should make effort at confession and restraint.

By confessing one can purify the fruition of the karma but cannot not restore a path that has become slower, therefore one should be careful not to create such negative karma. The Tibetan nomads say: "One does not know who is a buddha and who is a thief." One should not judge people by their appearance alone.

The Chinese punish the Tibetans by beating them and shouting at them to point out their gods. They turn buddha statues upside down and menace the Tibetans saying that since the buddhas cannot even turn themselves upright how can they help you Tibetans?

There was once a king called Gungta who had a beautiful son. The prince was very devoted to the Hindu gods and would gather people together to talk to them about religion. His father was not pleased by this as wanted the prince to study and prepare to become the next ruler. However, the prince continued to maintain his interest in religion. The king also had a daughter who had received particular powers from Ishvara which enabled her to not be burned by fire, carried away by water, and so forth. The father, being unhappy with his son, decided to kill him. Together with his daughter the king constructed a large walled in area, in the center of which he sat his son in the lap of his daughter and lit a fire under them. However, contrary to his wishes, the daughter died while the son remained unharmed. This was because the daughter had a negative mind which made Ishvara unhappy with her and therefore he prevented her from using her powers.

This king is said to have been a demon. Another time the king said to his son, "If the supreme rare one really exists, where is it?" The son replied that the supreme rare one exists everywhere. The father asked, "Is there a god in the pillar here?" The father then began to strike the pillar with his fist calling out, "If you are there come out." However, what came out of the pillar was a being with a human head and the legs of a lion who said, "Here I am." He then took the king up in his claws and said, "I am the god, what do you want?" The father remained speechless. The being then took the king to the doorstep and said, "Now I will kill you." The king replied that he could not be killed because he had powerful attainments, specifically that of not being able to be killed during the day or night, inside or outside, or by any weapons. However, as it was sunset, neither day or night, and they were on the doorstep, which is neither inside or outside, the being was able to rip him apart with its claws.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) then says (for the following outline there is no corresponding text in Chandrakirti's autocommentary):

3B1C-2A3B-2A3B Ancillary meanings

When anger is generated, it destroys roots of virtue even if neither the object nor the base are bodhisattvas. Shantideva quotes a Sarvastivada scripture [the *Questions of Upali Sutra (Upalipariprchchha)*] in his *Compendium of Instructions*:

> 'Monks, a monk pays homage with all his limbs to a reliquary of hair or nails, he makes his mind pure and thus is holy. Monks, this monk will enjoy the reign of a universal monarch for a thousand times the number of grains of sand beneath him extending 84,000 yojanas to the sphere of gold'... Then the distinguished Upali paid homage by joining his palms in the direction of the Blessed One and asked him, 'Since the Blessed One has said that the virtuous roots of monks are so great, then, O Blessed One, in what situation are virtuous roots diminished, thoroughly reduced, and completely extinguished?' 'Upali, I do not see such wounding and scarring [from other non-virtues], but when one whose behavior is pure generates a bad intention toward one having pure behavior, Upali, through that these great roots of virtue are diminished, thoroughly reduced, and completely consumed. Therefore, Upali, if it is unsuitable to mentally harm even sticks, what need is there to mention a conscious body?'

'Diminish' refers to lessening the increase of very great and marvelous roots of virtue and shortening those of long increase; not destroying all the effects it is a small extinguishment.

> 'Reduction' is a middling extinguishment [leaving no more than a little fruition], and 'complete consumption' is a great one [entirely destroying the possibility of fruition].

This passage indicates that many roots of virtue are destroyed even in the case of one who is not a bodhisattva becoming angry with someone else who is not a bodhisattva. Upali says to the Buddha that if a monk with pure conduct accumulates a great amount of virtue through prostrating to a reliquary in what situation are his virtuous roots diminished, thoroughly reduced, and completely extinguished? 'Diminished' means that one's anger diminishes or lessens the increase of great and marvelous roots of virtue and shortens those of long increase. In this case it does not destroy all the results of the roots of virtue. In the second case, reduction, there is some small result of one's roots of virtue. However, in the third case, complete consumption, there is no result at all of one's roots of virtue. These occur in relation to the intensity of the anger generated.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The *Moon Lamp Sutra* (*Chandrapradipa*, *Samadhiraja*) quoted in Nagarjuna's *Compendium of Sutra* says:
>
> > For one who thinks to harm his companions
> > Proper ethics and hearing will not protect him,
> > Neither will concentration and retreat,
> > Nor giving and worshipping the buddhas.
>
> 'Companions' are those engaging in pure behavior. Non-protection by the six – ethics and so forth – means that these cannot stop the destruction of roots of virtue by anger. The earlier parts of that sutra do not explain clearly which roots of virtue are destroyed, but Shantideva's *Engaging in the Bodhisattva Deeds* explains them as, 'Giving, worshipping sugatas, and so forth,' and Chandrakirti's *Supplement* [stanza 33] explains them as having arisen from giving and ethics; his commentary explains them as 'the collections of merit'. Therefore, it seems that this does not apply to the virtuous roots of having cognized selflessness well, but this is to be analyzed.

While it appears that according to Chandrakirti's *Supplement* only the roots of virtue included in the collection of merit are destroyed and not those included in the collection of wisdom, Lama Tsongkhapa says that this needs to be analyzed.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> OBJECTION: The *Teaching of Akshayamati Sutra (Akshayamatinirdesha)*, as quoted in Nagarjuna's *Compendium of Sutra*, gives the example of a drop of water that has fallen into a great ocean and has not been consumed for a great eon. The sutra says that a virtuous root dedicated to enlightenment will not be consumed until enlightenment. The *Array of Stalks Sutra (Gandavyuha)* also takes as an example an ounce of a type of quicksilver called 'gold-appearing' which although it transforms a thousand ounces of iron into gold cannot be dissipated by that iron. The sutra says that the element of quicksilver of an altruistic mind generation to enlightenment cannot be consumed by all the iron of contaminated actions and afflictions. Thus, is it not that altruistic mind generation, virtues conjoined with it, and virtues dedicated to enlightenment cannot be destroyed by anger?

It is generally said that the roots of virtue of bodhisattvas are pervaded by being dedicated to enlightenment, whereby they are not destroyed until enlightenment is attained. Someone makes the objection that if such roots of virtue of bodhisattvas which are dedicated to enlightenment cannot be destroyed by anger, then anger does not destroy roots of virtue. However, since previously there was a discussion of the destruction of roots of virtue in the case of bodhisattvas becoming angry with other bodhisattvas and so forth, he asks what is the actual situation. The *Array of Stalks Sutra* gives the

example of quicksilver which transforms iron into gold but is not used up in the process. The *Teaching of Akshayamati Sutra* likens the fact that a bodhisattva's roots of virtue which have been dedicated to enlightenment are not destroyed by anger to a drop of water which when put in the ocean does not dry up until the ocean itself dries up [in that a bodhisattva's roots of virtue are not used up until enlightenment is attained]. Thus, according to this person there appears to be some contradiction in the various scriptures.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> ANSWER: It is not so because the destruction of virtuous roots in bodhisattvas who are great beings is also mentioned. The meaning of the former passage [in the *Teaching of Akshayamati*] is that virtuous roots are not consumed through the emergence of their effects; however, it is not that anger does not consume them.

In short, the answer to the objection is that the first case, the analogy of a drop of water in the *Teaching of Akshayamati Sutra*, indicates that the roots of virtue of bodhisattvas which are dedicated to enlightenment are not exhausted until enlightenment is attained in the sense that they are not consumed by the arisal of their results, however this does not mean that they are not destroyed by anger.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The meaning of the second passage [in the *Array of Stalks*] is that contaminated actions and afflictions cannot waste an altruistic mind generation in the way that contaminated actions and afflictions can be wasted in dependence on altruistic mind generation.

The analogy of quicksilver in the *Array of Stalks Sutra* indicates that contaminated actions and afflictions cannot destroy the mind generation, whereas the mind generation can destroy contaminated actions and afflictions.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Some explain the meaning of destroying virtuous roots this way: 'The capacity of former virtues to generate their effects quickly is overcome, and the emergence of effects is postponed. [In the meantime] the effects of former hatred, for instance, emerge, but it is not that the effects of the virtues will not emerge when the proper circumstances are eventually encountered. Since no worldly path can abandon seeds to be abandoned, afflictions could not abandon [virtuous] seeds.'
>
> ANSWER: That is inconclusive because although the virtue of a common being's purification of non-virtue through the power of the four antidotes does not abandon the seeds [of non-virtue], a fruition [of the non-virtues purified] will never emerge even though the proper circumstances are encountered. Also, at the time of attaining the levels of peak and forbearance on the path of preparation, one has not abandoned non-virtuous seeds that would cause wrong views or bad migrations; however, even if the proper circumstances are encountered, one never generates wrong views or takes rebirth in a bad migration.

The objectors' assertion regarding the destruction of roots of virtue is incorrect. These people say that the destruction of roots of virtue refers to postponing the arisal of the result. They say that first the result of anger is experienced and only later on will the results of the roots of virtue arise. In this way anger postpones the fruition of the roots of virtue yet later on when conditions come together these roots of virtue will bring about their result. They say that the case of roots of non-virtue is similar in that a mundane path cannot abandon the seeds of afflictions. In short, the objector asserts that it is impossible for the results of both virtue and non-virtue to be wasted.

The answer is that when someone purifies non-virtue through confessing it with the four opponent powers, although he does not abandon the seeds of the non-virtue, this non-virtue will not ripen even if conditions were to come together for this to happen.

Likewise, when the peak level of the path of preparation is attained wrong views can no longer cut the roots of virtue of this person. Although the seeds of wrong views in the continuum of this person have not been abandoned, wrong views cannot arise. It is also said that one who has attained the tolerance level of the path of preparation will not be reborn in the lower realms. Although he has not abandoned the seeds of non-virtue that cause rebirth in the lower realms, this person will not be reborn there.

Thursday afternoon, 16 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Furthermore, a sutra quoted in Vasubandhu's commentary to his *Treasury of Knowledge* says:
>
> > Actions cause fruition
> > In cyclic existence – first the heavy,
> > Then the proximate, then the accustomed,
> > Then what was done before.
>
> Thus, through the prior fruition of a virtuous or non-virtuous action, the opportunity for fruition of other actions is temporarily blocked; however, one cannot posit that a virtue or non-virtue has been overcome merely because of this, and no such claim has been made. If this were the case, one would have to say that all powerful non-virtuous actions overpower virtuous roots.

Before someone said that the destruction of roots of virtue by anger means that the ripening of these roots of virtue is postponed. Here this is proven to be wrong. In general heavier actions ripen prior to lighter ones. In the case of two actions which are equally heavy whichever was created most recently will ripen first. If these two actions were also created more or less at the same time then that which is more habitual will ripen first. If they are also equal in terms of familiarity that which was created earlier will ripen first. For this reason Vasubandhu says: "first the heavy, then the proximate, then the accustomed, then what was done before."

It is said that through the ripening of one action "the opportunity for fruition of other actions is temporarily blocked." However, this does not mean that other actions are destroyed. If this were posited as the meaning of the destruction of actions then a powerful non-virtue would destroy all virtue because non-virtuous actions tend to be heavier than virtuous actions whereby, in accordance with the previous explanation, they would ripen first. In short, the ripening of one action merely delays the ripening of another but does not destroy it.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Bhavaviveka's commentary on his *Essence of the Middle Way* [the *Blaze of Reasoning (Tarkajvala)*] says that just as a shoot will not be produced from a ruined seed even in the proper conditions, so when a non-virtue is purified by the four powers or when a virtuous root is overcome through wrong views or harmful intent, their effects cannot emerge even when the proper circumstances are eventually encountered.

If a seed has been scorched by fire, although the conditions come together for it to grow it will not produce a sprout. Likewise, when a non-virtue is purified by the four opponent powers, even if the conditions arise for its result to be produced, it will not bring about a result. In this context 'harmful intent' refers to anger. This is understood because it is often said in the scriptures that anger destroys

roots of virtue. Roots of virtue can also be destroyed by wrong views. This is quite serious since wrong views destroy both roots of virtue created through application and inborn roots of virtue. Anger, on the other hand, only destroys roots of virtue created through application.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Also, the overcoming of a virtue does not mean that a virtue in one's continuum ceases to exist after one generates anger; rather, anger harms the virtue's capacity to issue forth an effect. The extent to which later fruition is harmed accords with the amount of harm done, causing a small, middling, or great extinguishment of virtue as explained above.
>
> Thus, harm is incurred in two ways: the capacity to generate a new path quickly is overcome and the generation of effects such as happy migrations is undermined. Nagarjuna's *Compendium of Sutra* sets forth the limitless fault of hating, despising, and criticizing bodhisattvas with bad motivation. Ascertaining or not ascertaining that a person is a bodhisattva and having true or untrue reasons for anger are said to be similar. Therefore, you should strive as hard as you can to stop anger in general and in particular that aimed at bodhisattvas and those whose behavior is pure.

The meaning of anger destroying one's roots of virtue is that it makes them unable to ripen in a result. "A small, middling, or great extinguishment of virtue" refer respectively to the diminishment, reduction, and complete consumption of the result which were explained previously. Small extinguishment means that when anger is generated it delays the ripening of the roots of virtue, middling extinguishment means that the result that would have been produced is lessened, and great extinguishment means that there is no ripening of the result at all. In short, the meaning of anger destroying roots of virtue is that it destroys the potency of the roots of virtue. However, this does not mean that the roots of virtue are extinguished. For example, when a barley seed produces a sprout the external part of the barley seed still remains. That part of the seed is likened to the roots of virtue which still exist but have become impotent and unable to produce a result.

Lama Tsongkhapa says: "harm is incurred in two ways: (1) the capacity to generate a new path quickly is overcome and (2) the generation of effects such as happy migrations is undermined. Nagarjuna's *Compendium of Sutra* sets forth the limitless fault of hating, despising, and criticizing bodhisattvas with bad motivation. Ascertaining or not ascertaining that a person is a bodhisattva and having true or untrue reasons for anger are said to be similar." The fault is the same whether one ascertains that the person is a bodhisattva or not and whether the anger is justifiable or not. In other words, even if one has a reason for becoming angry with someone, the fault is the same. Lama Tsongkhapa therefore says that "you should strive as hard as you can to stop anger in general and in particular that aimed at bodhisattvas and those whose behavior is pure." 'Those whose behavior is pure' refers to a community of fully ordained monks or nuns, one should also avoid becoming angry at them.

In short, becoming angry with ordinary people is a heavy negativity, becoming angry with the ordained is even heavier, and becoming angry with a bodhisattva is even heavier than that.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> The *Akashagarbha Sutra (Akashagarbha)* says that root infractions [of bodhisattva vows] destroy roots of virtue previously generated. Also, Shantideva's *Compendium of Instructions* states that aspiring to a household because of strong attachment to goods, being inflated with the pride of conceit [boasting that one has attainments not yet acquired], and forsaking the doctrine are acts that destroy virtues formerly generated and deprive one of progress based on virtuous practice. Therefore, having identified the conditions for destroying virtuous roots, you should forsake them with strong force.
>
> This is just a brief account. You definitely should look at Nagarjuna's *Compendium of Sutra* and Shantideva's *Compendium of Instructions*.

We should follow Lama Tsongkhapa's advice and study Nagarjuna's *Compendium of Sutra* and Shantideva's *Compendium of Instructions* as he recommends.

Here 'root infractions' refer to the bodhisattva vows. "Shantideva's *Compendium of Instructions* states that aspiring to a household because of strong attachment to goods, being inflated with the pride of conceit, and forsaking the doctrine are acts that destroy virtues formerly generated." These actions also prevent one's virtuous qualities from increasing. One should identify the conditions that destroy one's roots of virtue and then abandon them.

'Forsaking the doctrine' is a very heavy negative action. In fact in the *Guhyasamajatantra* it is said to be even heavier than four of the five actions of immediate retribution in that by practicing this tantra one purifies these four actions whereas it does not purify the action of abandoning the Dharma.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A3B-2A4 Stopping anger by reflecting on the many faults of impatience

Chandrakirti's autocommentary says:

> Furthermore, the impatient who are powerless to harm others act to destroy only themselves. The powerful who lack compassion act to harm themselves and others.
>
> By its mere production, it:
>
> *Produces an ugly form and leads to the unholy,*
> *Robs the full analysis which knows right and wrong and...* [3.7ab]
>
> ...later, having given up agreeable family,...
>
> *Impatience quickly acts to cast into bad migrations.* [3.7c]

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *It creates an ugly form, leads to the unholy,*
> *And robs discrimination that knows right and wrong.*
> *Through impatience one is quickly cast into a bad migration.* [3.7abc]
>
> Impatience in one who is powerless destroys only himself, but impatience in the powerful and non-compassionate destroys both self and others. Merely generating it, one's face becomes ugly, one is led to the unholy and robbed of the discrimination that thinks, 'This is a right and that is a wrong way to act.' Through impatience – anger – one is quickly cast into a bad migration after death.
>
> Having reflected on these faults, do whatever you can to stop anger through thinking that there is no occasion for it.

Anger, or impatience, only brings unpleasant results. For example, if one safeguards ethics but lacks patience one will be born as a human being with an ugly body. This is illustrated by the story of Pleasant Voice who had a beautifully melodious voice but a very repulsive body. When his voice alone was heard he attracted many people, whereas if his body was seen he frightened them. When Buddha was asked why this person had such a pleasant voice but an ugly body, he replied that he was ugly as a result of being very short-tempered in a previous life. On the other hand, he had a pleasant voice because in the past he had offered a bell to the stupa of the buddha Kashyapa.

Chandrakirti then says that anger "leads to the unholy." The measure of that which is unholy is to engage in non-virtue and not to engage in virtue. The measure of that which is holy is to engage

in virtue and not to engage in non-virtue. When someone becomes angry he is naturally led to the unholy.

Due to anger one will also be robbed of the discrimination that knows right and wrong. We can understand this is true based on our own experience in that when we get angry we tend to forget every good thing that we ever learned. Anger also causes us do to negative actions even in regard to our own parents.

Also as a result of anger one will be reborn in the bad migrations. Therefore, we should contemplate the disadvantages of anger and try to avoid situations that give rise to it.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A3B-2B Suitability of observing patience

This section has two parts:

1 Reflecting on the many advantages of patience
2 Summary exhortation to observe patience

3B1C-2A3B-2B1 Reflecting on the many advantages of patience

Chandrakirti's autocommentary says:

If asked: if those are the faults of impatience, what are the qualities of patience?
It is explained:

Patience produces qualities contrary to those already explained. [3.7d]

Through patience, one will be beautiful, dear to
Holy beings, and skilled in knowing
Right and wrong and after that
Reborn with gods and men; and evils will be exhausted. [3.8]

With regard to patience, one should know those qualities which are contrary to those which were indicated as faults regarding impatience.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

QUESTION: If those are the disadvantages of impatience, what are the advantages of its opposite, patience?

ANSWER: Chandrakirti's root text says:

Patience creates qualities opposite to those [3.7d]

Explained above. Through patience comes beauty, dearness
To the holy, skill in discriminating between
The right and wrong, birth afterwards as a human
Or god, and the extinguishment of non-virtues. [3.8]

Through cultivating patience, qualities opposite to the faults of impatience explained above are created. One attains a beautiful body, is dear to and cherished by holy beings, becomes skilled in knowing the right – the suitable – and the wrong – the unsuitable, after death takes birth as a human or god, and removes non-virtues accumulated through anger and so forth.

Reflecting on these, you should generate the power of patience.

Is patience physical, or verbal, mental? Patience is a factor of consciousness in that it is defined as an undisturbed mind. To be patient is to be undisturbed in the context of the four types of trainings in virtue:

(1) although upbraided, to not upbraid,
(2) although [others] become angry, to not become angry,
(3) although beaten, to not beat, and
(4) although [others] expose one's faults, to not expose their faults.

Instead one should practice patience in such situations. For example, in general we tend to become angry when we are criticized, but instead we should use such opportunities to practice patience. If we do this we will not give anger an opportunity to arise.

As a result of practicing patience one will be reborn with a beautiful body. In addition, one will be dear to and cherished by holy beings. One also "becomes skilled in knowing the right – the suitable – and the wrong – the unsuitable." Then "after death takes birth as a human or god, and removes non-virtues accumulated through anger and so forth."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A3B-2B2 Summary exhortation to observe patience

Chandrakirti's autocommentary says:

> Therefore, like that:
>
> *Ordinary beings and the Conqueror's children,*
> *Knowing the faults [and] qualities of belligerence and patience,*
> *Having abandoned impatience, should always quickly observe*
> *The patience venerated by the arya beings.* [3.9]
>
> Belligerence and patience are belligerence and patience. Faults and qualities being faults/qualities, the two phrases are joined: 'the faults and qualities of belligerence and patience.'
>
> By means of reversing from the faults of belligerence which were explained, bearing in mind the qualities of patience, having abandoned impatience, at all times, only patience is the object to be observed.

We should think about the advantages of cultivating patience and the means of cultivating it.

END

Monday afternoon, 20 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *Ordinary beings and conqueror children,*
> *Realizing the faults of anger and advantages of patience*
> *And forsaking impatience, should quickly and always observe*
> *The patience praised by superior beings.* [3.9]
>
> One should realize, as explained above, the disadvantageous faults of common beings' anger and the beneficial advantages of conqueror children's patience. Having forsaken impatience, one should always observe the patience praised by superior beings.

Lama Tsongkhapa urges us to consider the disadvantages of anger such as the result of rebirth in the lower realms, being ugly in a future life, and so forth. The disadvantages of anger can also be contemplated in terms of our daily life experience; it disturbs the mind, creates disharmony between ourselves and others, and so forth. In short, one should think about the disadvantages of anger and then try to practice the patience praised by superiors. The practice of patience is the best practice. For this reason, Shantideva says that there is no fortitude better than patience. To cultivate patience one should study the chapter on patience in Shantideva's *Engaging in the Bodhisattva Deeds,* which clearly sets out the disadvantages of anger and the advantages of patience.

In conclusion, one should cultivate patience by thinking about the disadvantages of anger and the advantages of patience. It is important to apply the practice of patience in one's daily life. It is not sufficient to talk about it, instead it should be integrated with one's mind. There is a story related to the importance of integrating one's knowledge with practice in daily life. At the time of Shakyamuni Buddha, there was a fully ordained monk who was able to memorize the extensive, middling, and brief Perfection of Wisdom Sutras, but only saw the Buddha as faulty. Therefore, one can be a scholar without integrating the Dharma with one's mental continuum. For this reason, it is important to ensure that one puts patience into practice.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A3B-3 Divisions of the perfection of patience

Chandrakirti's autocommentary says:

> Now, in order to indicate the divisions of patience gone beyond:
>
> *Although dedicated to the enlightenment of complete buddhahood,*
> *If reference to the three exists, it is mundane.* [3.10ab]
>
> Although already fully dedicated for buddhahood itself, if there exists reference to the three: what patience, patience by whom, and patience toward what sentient being, the patience is called "mundane patience gone beyond."
>
> *That itself without reference, the Buddha*
> *Taught, saying "supramundane gone beyond."* [3.10cd]

If the three spheres of patience are observed as truly existent, it is a mundane perfection of patience. On the other hand, if the three spheres of patience are observed as non-truly existent it is a supramundane perfection of patience. Chandrakirti says: "Although dedicated to the enlightenment

of complete buddhahood, if reference to the three exists, it is mundane." This means that if one dedicates the roots of virtue of patience to enlightenment but observes the three spheres of patience to exist truly, it is a mundane perfection of patience. On the other hand, if one's dedication is conjoined with the awareness that the three spheres do not exist truly, it is a supramundane perfection of patience.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> In his basic text Chandrakirti indicates that the perfection of patience has two divisions, mundane and supramundane:
>
> *Though dedicated to enlightenment of perfect buddhahood,*
> *[Patience] is mundane if one apprehends the three.*
> *[Patience] that does not involve such apprehension*
> *Buddha taught as a perfection supramundane.* [3.10]
>
> This can be understood from the former explanations [of the perfections of giving and ethics].

Two divisions of patience, the mundane and supramundane, are posited in the same way as were the two divisions of generosity and two divisions of ethics. In short, whether it is a mundane or supramundane perfection depends on whether the respective three spheres are observed to exist inherently or not.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A3B-4 Other pure features arising on the third ground

Chandrakirti's autocommentary says:

> On that ground, just as the bodhisattva's patience gone beyond will be completely pure, similarly:
>
> *On that ground, the Conqueror's children [obtain] concentrations and*
> *Clairvoyances; an attachment and hatred will be completely exhausted.*
> *Due to that, they will also be able to overcome*
> *The attachment of mundane desire.* [3.11]
>
> The term concentration of the so-called 'concentrations' [above], being an illustrative meaning, holds also the absorptions and immeasurables.
>
> As taught in the *Third Bodhisattva Ground* [of the *Sutra on the Ten Grounds*]:
>
> 1. The bodhisattva who abides on this Luminous Ground of the bodhisattvas is isolated from desire, is isolated from evil, non-virtuous practices. Achieving the first concentration having joy and happiness, generated from isolation, having investigation, having analysis – he abides.
> 2. Separated from investigation and analysis, and completely pure inside; achieving the second concentration having joy and happiness generated from meditative stabilization, without investigation, without analysis as it is a single continuum of consciousness – he abides.
> 3. Abiding in equanimity separated from attachment to joy and having mindfulness and alertness, he experiences bodily happiness, the "equanimity possessing mindfulness

> and alertness" which is expressed by the Arya. Achieving the third concentration without joy, he abides.
>
> 4. Abandoning also that happiness, being neither happy nor suffering – since earlier suffering was abandoned and mental happiness and mental unhappiness disappeared – equanimity and mindfulness completely pure, achieving the fourth concentration, he abides.
>
> The aforesaid are the four concentrations.

Chandrakirti's root text says: "On that ground, the Conqueror's children [obtain] concentrations." In other words, a third ground bodhisattva attains many qualities such as the concentrations, clairvoyances, and so forth. The word "concentrations" in the root text also illustrates the absorptions and immeasurables. "The absorptions" includes the four absorptions of the form realm and the four of the formless realm. The four absorptions of the form realm are the first, second, third, and fourth concentrations. The first concentration is said to have five branches, the scriptural reference for this being the *Sutra on the Ten Grounds,* which is cited above.

The five branches of the first concentration are:
(1) Investigation and (2) analysis – the antidotal branches – which are antidotes to the attachment to pleasant sense objects,
(3) joy and (4) bliss – the benefit branches – are generated from isolation, meaning that they are generated through isolation from non-virtue and the attachment of the desire realm, and
(5) meditative stabilization, the basis branch.

The state possessing these five branches is an actual meditative absorption of the first concentration. Prior to achieving this, there are three types of preparations:
1. mental contemplation of a mere beginner,
2. mental contemplation pacifying afflictions, and
3. mental contemplation of Not Unable.

The mental contemplation of a mere beginner is included in calm abiding. It is defined as: a meditative stabilization supported on the bliss of pliancy that is able to abide on its object single-pointedly as long as wished by way of the nine mental abidings. Someone who attains this is said to have achieved the mental contemplation of a mere beginner.

The mental contemplation pacifying afflictions is the same as the preparation included in special insight. It has six divisions:
1. the mental contemplation of individual knowledge of the character,
2. the mental contemplation arisen from belief,
3. the mental contemplation of thorough isolation,
4. the mental contemplation of withdrawal or joy
5. mental contemplation of analysis, and
6. the mental contemplation of final training.

1. The mental contemplation of individual knowledge of the character means that, on the basis of calm abiding, one analyzes the disadvantages of the desire realm and the advantages of the first concentration. In this way one comes to see the desire realm as coarse and the form realm as peace. This is not an actual special insight but a similitude of special insight.

2. The mental contemplation arisen from belief is the generation of the bliss of mental and physical pliancy induced by analysis. At this point one has attained a union of calm abiding and special insight.
3. The mental contemplation of thorough isolation is divided into small, middling, and great. Each of these is further divided into an uninterrupted path and a path of release, both of which are mundane. The attachment of the desire realm is also divided into three – great, middling, and small – each of which are further subdivided into three for a total of nine levels of attachment of the desire realm, the great of the great and so forth. The three divisions of mental contemplation of thorough isolation, the small, middling, and great, oppose respectively the great of the great, the middling of the great, and the small of the great levels of attachment of the desire realm. After each of these uninterrupted paths, a path of release is generated.
4. The mental contemplation of withdrawal or joy is also divided into small, middling, and great. These oppose respectively the great of the middling, the middling of the middling, and the small of the middling levels of attachment of the desire realm. After each of these uninterrupted paths, a path of release is generated. In this way, six levels of attachment of the desire realm have been abandoned.
5. With the mental contemplation of analysis this person now examines whether all the afflictions of the desire realm have been abandoned. Thereby, he comes to realize that the great of the small, the middling of the small, and the small of the small levels of attachment of the desire realm have yet to be abandoned.
6. The mental contemplation of final training is also divided into three levels, the great, middling, and small. These oppose respectively the great of the small, the middling of the small, and the small of the small levels of attachment of the desire realm. After each of these uninterrupted paths, a path of release is generated.

This last path of release is the actual meditative absorption of a first concentration, which has the five branches: (1) investigation and (2) analysis, the antidotal branches; (3) joy and (4) bliss, the benefit branches; and (5) meditative stabilization, the basis branch.

The <u>second concentration has four branches</u>:
(1) internal clarity, the antidotal branch,
(2) joy and (3) bliss – the benefit branches – which are generated by a meditative stabilization lacking investigation and analysis, and
(4) meditative stabilization, the basis branch.
In order to achieve the second concentration, one sees investigation and analysis as coarse and strives to become free from them. There are also six preparations leading up to the second concentration. In some texts, there are said to be eight preparations.

The <u>third concentration has five branches</u>:
(1) mindfulness, (2), introspection, and (3) equanimity, the antidotal branches,
(4) happiness of mind (*sems bde*) – happiness without joy – the benefit branch, and
(5) meditative stabilization, the basis branch

The <u>fourth concentration has four branches</u>:
(1) thoroughly pure equanimity (the equanimity that is a compositional factor) and (2) thoroughly pure mindfulness, the antidotal branches,
(3) thoroughly pure equanimity feeling, the benefit branch, and
(4) meditative stabilization, the basis branch.

One who has achieved the first concentration has abandoned all the afflictions of the desire realm, one who has achieved the second concentration has abandoned the afflictions of the first concentration,

one who has achieved the third concentration has abandoned the afflictions of the second concentration, and one who has achieved the fourth concentration has abandoned the afflictions of the third concentration. In order to abandon the afflictions of the fourth concentration, one must achieve an actual meditative absorption of the formless realm.

Chandrakirti's autocommentary says:

> The four formless absorptions are like this:
>
> 1. Perfectly passing beyond the discrimination of form in any way, since the discriminations of obstruction disappeared and the various discriminations are not attended to; having considered "space is infinite", achieving the entrance of infinite space, he abides.
> 2. Perfectly passing beyond the entrance of infinite space in all ways, having considered "consciousness is infinite", achieving the entrance of infinite consciousness, he abides.
> 3. Perfectly passing beyond the entrance of infinite consciousness in all ways, having considered "nothing at all exists", achieving the entrance of nothing at all, he abides.
> 4. Perfectly passing beyond the entrance of nothing at all in all ways, having considered "[gross] discrimination does not exist, [subtle] discrimination is not non-existent", achieving the entrance of without [gross] discrimination, not without [subtle] discrimination, he abides.
>
> The aforesaid are the four formless absorptions.

In order to achieve the first formless absorption one must achieve the various preparations through seeing the fourth concentration as coarse and infinite space as peace.

The formless absorptions are distinguished in terms of their observed objects, whereas the concentrations are distinguished in terms of their branches. The four formless absorptions are infinite space, infinite consciousness, nothingness, and the peak of existence. The meditative absorption of infinite space discriminates all phenomena as infinite space, the meditative absorption of infinite consciousness discriminates all phenomena as infinite consciousness, and the meditative absorption of nothingness discriminates all phenomena as nothingness. The meditative absorption of the peak of existence is without coarse discrimination but not without subtle discrimination. It is said in the texts that the fourth formless absorption is not suitable as a base of an uncontaminated path because it is unclear. In addition, the mind of the desire realm is also not suitable as a base of an uncontaminated path because it is too coarse.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *On this ground the conqueror child has the concentrations*
> *And clairvoyances. Desire and hatred are extinguished.*
> *Always he is able to overcome*
> *The world's lustful desires as well.* [3.11]
>
> Just as on the third ground a conqueror child has the pure perfection of patience, so he attains the four pure concentrations. This implies that he also attains the four pure formless absorptions – limitless space, limitless consciousness, nothingness, and the peak of cyclic existence – as well as the four pure immeasurables – love, compassion, joy, and equanimity – and the five pure clairvoyances – magical creations, the divine ear, knowing others' minds, remembering former lives, and the divine eye.

The concentrations are a very stable mind; to achieve these one needs mindfulness and introspection. For this reason, one should never be parted from mindfulness and introspection in daily life.

Tuesday morning, 21 March 2000

In the *Compendium of Mahayana Sutras* it says that all four concentrations and four formless absorptions have eight preparations:

1. the mental contemplation of a mere beginner
2. the mental contemplation of individual knowledge of the character,
3. the mental contemplation of belief,
4. the mental contemplation of isolation,
5. the mental contemplation of joy-withdrawal
6. the mental contemplation of analysis,
7. the mental contemplation of final training, and
8. the mental contemplation of the result of final training.

The first seven are actual preparations, while the last is an actual meditative absorption. That the eighth is called a preparation is a case of giving the name of the cause to the result.

Chandrakirti's autocommentary then sets out the four immeasurables through quoting the *Third Bodhisattva Ground*:

> The four immeasurables are like this:
>
> 1. A vast and extensive mind possessing love; impartial, immeasurable and unresentful, matchless, unobscured, and harmless. Since pervading to all – having been bounded by the sphere of dharma, reached the limits of space and pervaded the worlds possessing all – achieving, he abides.
>
> Similarly, "the vast minds
>
> 2. possessing compassion,
> 3. possessing joy, and
> 4. possessing equanimity"
>
> are like the former.

Immeasurable love is a vast and extensive mind in the sense that it extends without partiality to all the sentient beings who pervade the limits of space. This love is immeasurable and without resentment. It is matchless in that it has no equal. It is without harm. Just as everything is pervaded by the sphere of reality, likewise love pervades the limits of space. Love is an awareness that observing all sentient beings wishes them to have happiness. In the *Ornament for Clear Realizations,* it says that the empowering condition of immeasurable love is an actual meditative absorption of a concentration or the final concentration. Therefore, without achieving an actual meditative absorption of a concentration one cannot have immeasurable love. For this reason Chandrakirti first sets out the four concentrations and four formless absorptions before setting out the four immeasurables. However, the recitation of the formula of the four immeasurables is included in many practices and sadhanas, whereby at least one generates them in one's imagination.

The remaining immeasurables have the same qualities in that they too are: "impartial, immeasurable and unresentful, matchless, unobscured, and harmless. Since pervading to all – having been bounded by the sphere of dharma, reached the limits of space and pervaded the worlds possessing all." Therefore, immeasurable compassion also observes all sentient beings and possesses

these qualities. Compassion itself is defined as an awareness that, observing sentient beings, wishes them to be free from suffering. Likewise, immeasurable joy has the above qualities. Joy is an awareness that, observing sentient beings, wishes them to be not be separated from happiness. This happiness is in particular the happiness that they already possess, such as the happiness of a rebirth of high status or the happiness of definite goodness. Immeasurable equanimity also has the above qualities. Equanimity is a state free of being close and distant to sentient beings due to, respectively, attachment and hatred for them. In the Yamantaka sadhana, equanimity is said to be the state in which one abides having become free from the eight conceptions of apprehenders and apprehendeds, whereas in the Heruka sadhana, it is said to be the state in which one abides having become free of the root and secondary afflictions.

Chandrakirti's autocommentary then sets out the five clairvoyances through quoting the *Third Bodhisattva Ground*. The first is the clairvoyance of magical emanation:

> The five clairvoyances are like this:
>
> 1. He experiences many types of performances of magical emanations: he shakes the earth; having been one, they become many; having been many, they become one; being visible and becoming invisible; traveling directly into walls, traveling directly into barriers, and traveling directly into mountains; unobstructed, as if in space.

Here the sutra lists the various types of clairvoyance of magical emanation such as shaking the earth, transforming one into many and many into one, becoming visible or invisible, and passing through walls, barriers, and mountains without obstruction. Chandrakirti continues to quote the *Third Bodhisattva Ground* in this regard:

> He travels crossed-legged in space, as if a feathered bird. He raises above the ground and enters it burrowing, as if in water. He travels on the water, not sinking, as if on earth. With his body he acts to emit smoke, acts to blaze, as if a mass of fire; and sending forth great streams of water, as if a great cloud. Even [fires] strongly spreading everywhere and blazing, blazing everywhere, and strongly blazing in these great thousand, three thousand world systems, becoming one flame, are extinguished by those streams of water. Even the two, the moon and sun, with great emanations like this, great strength like this, he holds and strokes with his hand. Up to the world of Brahma, he dominates with his body.
>
> The aforesaid is the clairvoyance of magical emanation.

One who achieves the clairvoyance of magical emanation is able to, for example, emanate fire blazing upward from his upper body and water flowing downward from his lower body. In addition, one is able to penetrate the earth as if sinking in water. In short, one with this clairvoyance dominates all the worlds up through the first concentration, the realm of Brahma. There is a story related to this about a king called Naluno who was a previous incarnation of Shakyamuni Buddha. This king dominated all four human continents but was not satisfied. He then gained control over the gods of the desire realm and then the realm of Brahma. However, upon reaching this level his karma to be ruler was exhausted and he fell back to the human continent.

With the clairvoyance of magical emanation one is said to be able to hold and shake the sun and the moon.

The second clairvoyance, the clairvoyance of divine ear, is set out by Chandrakirti through quoting the *Third Bodhisattva Ground*:

> 2. Since the completely pure divine ear element surpasses the human, he hears the sounds of gods and men; hears sounds minute and loud and those however far, however close, even to the extent of flies, flesh flies, bees, and insects.
>
> This is the clairvoyance of divine ear.

With the clairvoyance of divine ear one can hear faint and loud sounds at a distance of 100 *paktse* (yojana).

The third clairvoyance, the clairvoyance of knowing others' minds, is set out by Chandrakirti through quoting the *Third Bodhisattva Ground*:

> 3. With his mind thoroughly knowing just exactly as they really are the minds of other sentient beings and the minds of other persons, he thoroughly knows just exactly as they really are minds with attachment as minds with attachment – knows just exactly as they really are minds separated from attachment as minds separated from attachment. Similarly, [those] with hatred and separated from hatred, with confusion and separated from confusion, with delusions and without delusions, small and broad, become great, immeasurable, brief and extensive, equipoised and not equipoised, fully liberated and not fully liberated, faulty and faultless. He thoroughly knows just as they really are coarse minds called coarse minds, thoroughly knows just as they really are minds which are not coarse called minds which are not coarse. Hence, with his mind, he thoroughly knows just exactly as they really are the minds of other sentient beings and minds of other persons.
>
> The aforesaid is the clairvoyance of knowing others' minds.

With the clairvoyance of knowing others' minds one knows another person who has attachment as having attachment. Likewise, one knows another person who is separated from attachment as being separated from attachment. It is the same in the case of hatred and ignorance.

Attachment is defined as a mental factor that, motivated by improper conceptualization, observes a contaminated phenomenon and exaggerates its attractiveness. Hatred is defined as a mental factor that, motivated by improper conceptualization, observes a contaminated phenomenon and exaggerates its unattractiveness. Confusion is a state of mind that does not know the reality of an object. An affliction, in general, is defined as a mental factor that renders the mind unruly and agitated. One with the clairvoyance of knowing others' minds knows whether another person's mind is together with attachment, free from attachment, together with hatred, free from hatred, and so forth.

"Small and broad" mean respectively an uptight, agitated mind and a spacious, relaxed mind.

"Great" and "immeasurable" are not opposites while the following are: "brief and extensive, equipoised and not equipoised, fully liberated and not fully liberated, faulty and faultless." These are all said in relation to the mind and mental factors. "Brief and extensive" means that there are minds that like brief explanations and minds that like extensive explanations. "Equipoised and not equipoised" means that there are minds that are equipoised and those that are not equipoised single-pointedly on their objects. "Fully liberated and not fully liberated" are minds that are free from and not free from the bondage of the afflictions. "Faulty and faultless" means minds that are respectively together with and free from faults.

The sutra then says: "He thoroughly knows just as they really are coarse minds called coarse minds, thoroughly knows just as they really are minds which are not coarse called minds which are not coarse." These refer respectively to coarse and subtle minds, which can be posited in terms of their objects, such that if the object is coarse the mind is posited as coarse and vice versa. Coarse and subtle

minds can also be understood respectively in relation to sense consciousnesses and the mental consciousness.

In short, Buddha says: "Hence, with his mind, he thoroughly knows just exactly as they really are the minds of other sentient beings and minds of other persons." Vasubandhu, in his text *Treasury of Knowledge* (v. 7.5), says:

> *It does not know levels, faculties, past persons, the ceased and the ungenerated.*

This means that, although one possesses clairvoyance, there are certain minds that cannot be known due to a difference in:

1. faculty,
2. time,
3. level, and
4. person.

For example, the first, faculty, means that someone with the clairvoyance knowing others' minds does not know the mind of someone with a sharper faculty who has higher realizations.

The fourth clairvoyance, the clairvoyance of remembering former states, is set out by Chandrakirti through quoting the *Third Bodhisattva Ground*:

> 4. Remembering many types of former states, he remembers one lifetime, two lifetimes, three, four, five, ten, twenty, thirty, forty, fifty, one hundred, one thousand. He remembers many hundreds of lifetimes, thousands of lifetimes, many hundred thousands of lifetimes, many hundred thousands of *kotis* (ten million) of lifetimes, many hundred thousands of *niyuta* (one hundred thousand million) of *kotis* of lifetimes, the eon of annihilation, the eon of formation, many eons of annihilation and formation. He remembers one hundred eons, remembers one thousand eons, remembers one hundred thousand eons, one *koti* of eons, one hundred *koti* of eons, one thousand *koti* of eons, from one hundred thousand *koti* of eons to many hundred thousand *niyutas* of *kotis* of eons.
>
> In such and such a place I was called such and such a name, called such and such a family, called such and such a caste – ate food like this, was capable of this much life, abided this long an extent, experienced happiness and suffering like this. "Having died and transferred from that, I was born in such and such a place; having died and transferred from that, I was born here", with their aspects, with their motives and with their reasons – thus he remembers many types of former lives.
>
> This is the clairvoyance of remembering former states.

With this clairvoyance one is able to remember one's own past lives, extending back many eons and is also able to remember one's name, caste, the food one ate, and so forth. In addition, one is able to remember the lives and situations of others. The name itself "the clairvoyance of remembering former states" indicates that one is able to remember the places where one was born in the past. With this clairvoyance, one sees one's former states and thereby determines to improve in the future. However, if one with such a clairvoyance says to someone else "In the past you were born in such and such a place and ate such and such food" and so forth it is quite likely that that person would not believe it. Thus, it is easier to verify the existence of the clairvoyance of magical emanation in that magical emanations can be seen with the eyes. Also one can verify the existence of clairvoyance knowing others' minds through the person who has it, who says "You are thinking such and such."

Clairvoyance comes about due to the specific cause of an actual meditative absorption of a concentration. In order to attain this one must first achieve a union of calm abiding and special insight. Prior to this, one must achieve calm abiding and special insight respectively through cultivating their respective causes. According to sutra, calm abiding and special insight are developed sequentially in that first one achieves calm abiding and then special insight. On the other hand, according to tantra, they can be attained simultaneously.

Tuesday afternoon, 21 March 2000

The fifth clairvoyance, the clairvoyance of divine eye, is set out by Chandrakirti through quoting the *Third Bodhisattva Ground*:

> 5. Since the completely pure divine eye surpasses the human, he sees sentient beings dying and transferring and being reborn, of pleasant color and unpleasant color, gone to happy and gone to bad [migrations], good and bad. He thoroughly knows just exactly as they really are, the sentient beings migrating just exactly in accordance with their karma. He thoroughly knows: "O, these sentient beings having faulty behavior of body, having faulty behavior of speech, having faulty behavior of mind, reviling the aryas, they possess wrong views. Due to the karma of wrong view, upon the disintegration of the body which was perfectly received, after death they are born in bad migrations, completely fallen, as hell beings.
>
> O these sentient beings having proper behavior of body, having proper behavior of speech, having proper behavior of mind, not reviling the aryas, they possess right view. Due to the karma of right view, upon the disintegration of the body which was perfectly received, after death they are born in happy migrations, in the world of high status, among the gods."
>
> Hence, since the completely pure divine eye surpasses the human, seeing sentient beings dying and transferring and being reborn, of p1easant color and unpleasant color – from the aforesaid until: "seeing all, with their aspects, with their motives and with their reasons, thoroughly knowing sentient beings migrating just exactly in accordance with karma."

With the clairvoyance of divine eye one knows when sentient beings will die and when they will be reborn. In addition, one knows what kind of rebirth they will take, with a pleasant and unpleasant color and so forth, and where they will be reborn, i.e., in a good or a bad migration. In short, one knows whether sentient beings will have a good or bad rebirth in accordance with the actions they created. Due to the three negative actions of body – killing, stealing, and sexual misconduct – and the four negative actions of speech – lying, divisive speech, harsh words, and idle talk – sentient beings are born in bad migrations. In addition, due to the three negative actions of mind, they are reborn in the bad migrations. Also due to reviling or deprecating superiors, sentient beings are reborn in the bad migrations. In relation to this citation, there is discussion as to whether or not reviling superiors is actually wrong view. In general, reviling or deprecating superiors means to deprecate qualities that they actually possess. The *Third Bodhisattva Ground* sutra says: "upon the disintegration of the body which was perfectly received, after death they are born in bad migrations."

On the other hand, when sentient beings have proper conduct of body, speech, and mind through engaging in the ten virtues, they will be reborn in good migrations.

One who possesses the clairvoyance of divine eye knows the kind of rebirth that sentient beings will take through knowing what kinds of causes sentient beings create and what their results will be.

The *Third Bodhisattva Ground* concludes (page 40), saying:

> Although absorbing and rising in these concentrations and absorptions, he is intent on them seen as fully completing the limbs of enlightenment; hence, other than rebirth through the power of having made prayers, he is not reborn by the power of those.
>
> If asked: "why is that?" Because the bodhisattva like this possesses a continuum of consciousness which strongly achieves through skill in means.
>
> is set forth.
>
> Hence, here, the concentrations and clairvoyances will arise in the bodhisattva.

Bodhisattvas take rebirth in cyclic existence, not due to proper or improper conduct, but by the force of prayer.

Chandrakirti's autocommentary then says:

> If asked: how will attachment and hatred be fully exhausted?
> The term 'and' means 'also', in order to include the unmentioned, his confusion, being exhausted.
>
> If asked: how?
> Also this, according to the *Sutra* it was taught:
>
> > By that, since all phenomena merely rely on conditions, a good deal more than by conceiving as merely without transference and merely without destruction, all fetters of desire will be diminished. All fetters of forms, fetters of existence, and fetters of ignorance will be diminished. The fetters which were views were abandoned earlier.
> >
> > The bodhisattva abiding on this Luminous Ground of the bodhisattvas will abandon wrong attachment not decreased in many hundred eons, many thousand eons, many hundred thousand eons, many *kotis* of eons through many hundred thousand *niyutas* of eons. He will abandon wrong hatred which was not [so] abandoned. He will abandon wrong confusion which was not abandoned.
> >
> > Hence, his attachment, hatred and confusion will be fully exhausted.
>
> If asked: in what way is he always able to overcome the attachment of the world's desire?
> As was taught:
>
> > O children of the Conqueror, this is a brief presentation of the third bodhisattva ground, called the Luminous. The bodhisattva abiding on it mostly becomes the deva king, deva lord, Indra; is trained and are the principal in achieving the means of completely averting all sentient beings' attachment to desire; and is skilled in extricating sentient beings from the mud of desire.
> >
> > Hence, the children of the Conqueror will be able to overcome attachment of the world's desire.

In this context, attachment, hatred, and confusion are the objects of abandonment of the mundane path of meditation. There are four fetters:

1. fetters of forms,
2. fetters of existence,
3. fetters of ignorance,
4. fetters of the desire realm.

"Fetters" here refers to the afflictions. To what do the afflictions bind one? They bind one to the pole of cyclic existence. The *fetters of the desire realm* are the attachment that binds one to pleasurable sense objects: forms, sounds, odors, tastes, and tangible objects. The *fetters of the form realm* [fetters of forms] are the attachment to the happiness of the concentrations. The *fetters of existence* are the fetters of the formless realm, i.e., the attachment to the happiness of the formless absorptions. Some people count the four fetters differently:

1. the fetters of the desire realm, which are attachment to the five pleasant sense objects,
2. the fetters of existence, which are attachment to the happiness of the concentrations and formless absorptions,
3. the fetters of ignorance, and
4. the fetters of views.

A fetter is that which impedes one from being free.

On the third ground, the fetters of forms, fetters of existence, and fetters of ignorance have become thin, whereas the fetters of view were abandoned previously. The fetters of view are acquired views that are abandoned on the path of seeing.

The sutra then says: "The bodhisattva abiding on this Luminous Ground of the bodhisattvas will abandon wrong attachment not decreased in many hundred eons..." This means that the third ground bodhisattva overcomes wrong attachment, wrong hatred, and wrong ignorance, which did not diminish over many hundreds of eons.

Q: Why is "wrong" attachment and so forth said?
A: Although this seems to imply a "right" attachment, "right" hatred, and "right" confusion, this has to be examined. Perhaps wrong is said in relation to the motivation; for example, the motivation that is improper conceptualization. Or perhaps the sutra says "wrong" in order to stop the thought that there are instants of right attachment and so forth. Some people think that attachment is something that brings benefit and is necessary, as without attachment there would be no sense to living. They think that without attachment one would be impotent whereas with attachment one can become a universal king. Also since human beings are the result of attachment, they think attachment is good. Some people also think that hatred or anger is good because due to it one is able to protect oneself and others from harm. Others think that the three mental poisons are positive because they can be taken into the path through the tantra vehicle.

However, it is difficult to explain why Buddha said "wrong confusion." Due to this, debate arises in terms of whether confusion can be taken as a path. Most answer that it is difficult to take confusion into the path. However, in the *Aralitantra* it is said that confusion can be taken into the path. When commentary is given on this tantra, it is explained that this is not *actual* confusion in that it is not ignorance. Then what is it? It is said to imply using sleep as a path. Sleep is said to be a type of ignorance in that it does not perceive anything.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Though he enters into and rises from the concentrations and formless absorptions, he is intent on seeing the thorough completion of the causes of enlightenment. Thus, he is born by the power of prayer petitions and not by that of these worldly concentrations and formless absorptions. Though he did indeed attain these on the first ground, here he attains a training in higher meditative stabilization far superior to what he had on the preceding grounds. Since there are [now] greater doubts about whether he might be reborn by the power of these concentrations and absorptions, it is discussed here [in connection with the third ground].
>
> On this ground an extinguishment of desire and hatred is attained. The word 'and' [in the second line of stanza 38] means 'also' and includes an unmentioned extinguishment of ignorance. This 'extinguishment' is not complete because the *Sutra on the Ten Grounds* says that all the four fetters

> – desire, form [attachment to the form realm], existence [attachment to the formless realm], and ignorance – are diminished [not completely destroyed].
>
> According to Asanga's *Bodhisattva Levels (Bodhisattvabhumi)* the meaning of these is that through the power of meditative stabilization in the worldly concentrations and formless absorptions one becomes free from attachment to [the realms of] desire, form, and formlessness – this being an abandonment of the manifest as explained before. Therefore, the sutra distinctly says 'diminished'. Also, the fetters are clearly those explained in the *Knowledges* [and not the uncommon afflictions as explained in the Prasangika system].

There is the doubt concerning whether a third ground bodhisattva takes rebirth in cyclic existence by the power of the concentrations and formless absorptions since he has attained a superior higher training in meditative stabilization. However, the third ground bodhisattva takes rebirth not by the power of the concentrations and formless absorptions but by the power of prayer. This, in fact, occurs from the first ground onward.

On the other hand, when someone takes rebirth in cyclic existence by the power of the concentrations and formless absorptions, it is by the power of actions (karma) and afflictions. One takes rebirth in cyclic existence due to projecting karma and actualizing karma. The preparations for the concentrations and formless absorptions are projecting karmas, whereas the actual meditative absorptions are actualizing karmas. In terms of the twelve links, the preparations are the second link, that of karmic formations, whereas the actual meditative absorptions are the tenth link, that of existence. Thus, the unfluctuating karma that brings rebirth in the upper realms is the preparations for these eight levels, the four concentrations and four formless absorptions. This subject can be debated, asking: "If it is a preparation is it pervaded by being a projecting karma and if it is an actual meditative absorption is it pervaded by being an actualizing karma?"

There are three higher trainings: (1) the higher training in ethics, (2) the higher training in mind, or concentration, or meditative stabilization, and (3) the higher training in wisdom. The surpassing higher training of ethics is attained on the second ground. The surpassing higher training of meditative stabilization is attained on the third ground. The higher training of wisdom is composed of three parts: (1) the wisdom skilled in the coarse and subtle aspects of the thirty-seven harmonies with enlightenment, which is posited on the fourth ground; (2) the wisdom skilled in the coarse and subtle four noble truths, which is posited on the fifth ground; and (3) the wisdom skilled in both the forward and reverse orders of the twelve links, which is posited on the sixth ground. When the latter wisdom is attained on the sixth ground, one attains a surpassing higher training in wisdom.

Lama Tsongkhapa says: "Also, the fetters are clearly those explained in the *Knowledges* [and not the uncommon afflictions as explained in the Prasangika system]."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> On this, the *Sutra on the Ten Grounds* [quoted in Chandrakirti's commentary] says, 'The fetters which are views were abandoned earlier.' Some explain this as meaning that the latter three views [perverse view, conceiving bad ethics as well as codes of behavior as superior, and conceiving bad views as superior] were abandoned on the path of seeing, but it should be taken as referring to having abandoned [all] five artificial views on the first ground [including that of the transitory collection as real 'I' and 'mine' and views holding to extremes].

Among the five views, the view of the transitory collection is that which holds to a real 'I' or 'mine.' A view holding to extremes is a view holding that the 'I' or 'mine' conceived by the view of the transitory collection does not exist or holding that the 'I' or 'mine' conceived by the view of the transitory collection exists truly. These are respectively the extreme of annihilation and the extreme of permanence.

Wrong view is the view holding the Three Jewels and the law of actions and results to not exist. The view holding bad views as supreme is the view holding either the view of the transitory collection or the view of extremes as supreme. The view holding bad ethics and conduct as supreme is the view conceiving bad ethics to be good ethics and bad conduct to be good conduct. The five acquired views are abandoned by the bodhisattva on the first ground.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Asanga's *Bodhisattva Levels* says, 'The fetters which are views were abandoned [in manifest form] first from the level of engagement through belief [on the paths of accumulation and preparation] by believing in the suchness that is the nature of phenomena.' Further on, the sutra says that wrong desire, hatred, and ignorance which had not decreased over a hundred trillion eons are abandoned on the third ground. This refers to abandoning the seeds, which in turn refers to the objects of abandonment of this ground in the context of the abandonment of the six levels of gross and middling innate afflictions – these being abandoned on the path of meditation by means of the second through seventh grounds.
>
> In commenting, Chandrakirti does not clearly state either that the artificial afflictions are abandoned on the first ground or that the innate afflictions are abandoned from the second ground. However, Nagarjuna's *Precious Garland* explains that until the eighth ground is attained, the seeds of all afflictions are not removed [stanzas 455-6], that the conception of true existence is assigned as an affliction [stanza 35], that until that conception is removed the view of the transitory is not removed [stanza 35], and that the three links [view of the transitory collection as real 'I' and 'mine', afflicted doubt, and viewing bad ethics and codes of discipline as superior] are abandoned on the first ground [stanza 441]. Therefore, it is extremely clear that afflictions in general are divided into two [artificial and innate] and that the view of the transitory in particular must be divided in the same way.

(Note: "the three links" can also be translated as "the three thorough entanglements" [Tib. *kun sbyor*].)

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) continues:

> In this system which identifies the conception of true existence as an affliction, when an affliction is abandoned by a non-contaminated path, a seed of the conception of true existence is necessarily abandoned. This abandonment can in no way remove a portion of the predispositions for erroneous dualistic appearance which are other than the seeds of the conception of true existence and which are assigned as the obstructions to omniscience. Therefore, the obstructions to omniscience are not abandoned until all the afflictions are extinguished. The obstructions to omniscience are abandoned on the three pure grounds [eighth, ninth, and tenth].

Wednesday morning, 22 March 2000

The first stanza of the third chapter mentions burning the fuel of the knowledge obstructions, saying:

> *Because a light arises of the fire which burns the*
> *Entire fuel of objects of knowledge, this third ground:*
> *Luminous – …* [3.1abc]

This needs to be explained in more detail.

In presenting our own tradition's presentation of the two obstructions, Jedzun Chokyi Gyeltshen's *General Meaning* (pp. 171-172) sets out two outlines (see supplementary study material, Feb. 21, 2000):

1 Explaining the presentation of the two obstructions
2 On what path and in what way are the two obstructions abandoned

1 Explaining the presentation of the two obstructions
A Explanation of the afflictive obstructions
B Explanation of the knowledge obstructions

1A Explanation of the afflictive obstructions

The definition of an afflictive obstruction: an obstruction which mainly hinders the attainment of liberation. When divided: acquired and innate.

The definition of an acquired afflictive obstruction: that which is included in either (1) possessing a concomitance with afflictions arising due to the influence of tenets polluting one's continuum or (2) a seed produced by that. When divided: the manifested acquired and the factor of a seed.

The definition of an innate afflictive obstruction: that which is included in either (1) possessing a concomitance with afflictions arising due to the influence of beginningless latencies in one's continuum and not arising due to the influence of tenets polluting one's continuum or (2) a seed produced by that. When divided: the manifested and the factor of a seed.

There is debate concerning this, asking: "Is an afflictive obstruction pervaded by being 'an obstruction which mainly hinders the attainment of liberation'?" In the *Ornament for Clear Realizations,* the definition of an afflictive obstruction is given as: one of the two obstructions abiding in a type of obstruction that mainly hinders the attainment of liberation. The words "abiding in a type" imply that an afflictive obstruction is not pervaded by being "an obstruction which mainly hinders the attainment of liberation."

If someone says that an afflictive obstruction is pervaded by being an obstruction which mainly hinders the attainment of liberation, then it can be asked: "Is the attachment which is a branch of altruism in the continuum of a bodhisattva superior an afflictive obstruction? Is it that which mainly hinders the attainment of liberation? If it is, whose liberation does it hinder?" This attachment does not hinder other beings' liberation and it does not mainly hinder the bodhisattva superior's attainment of liberation. This is because it is an attachment that is a branch of others' benefit and helps to attain liberation.

The definition of an acquired afflictive obstruction says: "possessing a concomitance with afflictions arising due to the influence of tenets polluting one's continuum." This means that due to studying tenets, one accepts that a person or pot truly exists. For example, due to studying the tenets of the Vaibhashikas, Sautrantikas, or Chittamatrins one comes to assert that person and pot are truly existent. This person has a conception of true existence of persons that is an acquired afflictive obstruction. Concomitant with this conception of true existence of persons there can be attachment, hatred, or pride. The conception of true existence itself is ignorance. In short, the conception of true existence, the afflictions concomitant with it, and the seeds of this conception are all acquired afflictive obstructions. Do sentient beings who have not studied tenets, such as birds, antelopes, and so forth, have these acquired afflictive obstructions? They do not, they only have innate afflictive obstructions.

Acquired afflictive obstructions are divided into: the manifested acquired and the factor of a seed. The manifested acquired afflictive obstruction is a consciousness, while the factor of a seed is a potential deposited by a previous affliction that is able to induce a subsequent affliction.

When a bodhisattva attains the path of release of the path of seeing, he has abandoned all the acquired afflictive obstructions. Likewise, when a hearer attains the sixteenth moment of subsequent knowledge of true paths, he has abandoned all acquired afflictive obstructions. This is because hearers abandon the objects of abandonment serially. In other words, hearers attain the sixteen forbearances and knowledges serially. On the other hand, bodhisattvas attain all eight forbearances simultaneously and attain all eight knowledges simultaneously. This is because bodhisattvas abandon the objects of abandonment simultaneously. In short, they simultaneously abandon the afflictions of the three realms in relation to the four noble truths.

Jedzun Chokyi Gyeltshen gives the definition of an innate afflictive obstruction as: that which is included in either (1) possessing a concomitance with afflictions arising due to the influence of beginningless latencies in one's continuum and not arising due to the influence of tenets polluting one's continuum or (2) a seed produced by that.

Afflictions such as attachment, hatred, and pride can be concomitant with the conception of true existence. When attachment is concomitant with the innate conception of true existence, hatred is not concomitant with it. There is debate about this in Vasubandhu's *Treasury of Knowledge* in the context of determining how many root and secondary afflictions are present in the retinue of a single main mind. Thus, there can be more than one. We know from our own experience that attachment arises without depending on reasoning but through merely perceiving an object. This is an example of an innate affliction. Acquired afflictions, on the other hand, arise in dependence on a process of reasoning and the study of tenets. The Tibetan word for 'tenet' (*grub mtha'*) literally means "establishing boundaries," the etymology being to reach a conclusion by way of reasoning.

There are many latencies in our continua that have been deposited since beginningless time due to which afflictions arise. There are two divisions of innate afflictive obstructions: the manifested and the factor of a seed. The manifested are the afflictions that arise in the mind. According to the Prasangika Madhyamikas, there is a difference between the manifest (*mngon gyur*) and the manifested (*mngon gyur ba*). If it is manifested (*mngon gyur ba*) it is not pervaded by being manifest (*mngon gyur*). This is because the manifest (*mngon gyur*) is: that which is the object of direct perception of any of the six engaging consciousnesses. An illustration of that which is manifested but not manifest is a manifested conception of the true existence of pot due to being polluted by tenets. It is not manifest because the conception of true existence of pot is not directly perceived by any of the six engaging consciousnesses. On the other hand, if it were manifest it would be pervaded by being directly perceived by any of the six engaging consciousnesses. It is manifested because it is a consciousness apprehending both an observed object and aspect. A factor of seed is not manifested because it does not apprehend an observed object and aspect, i.e., it is not a consciousness. This discussion of manifest and manifested is specific to this context of manifested and seed. In other contexts, there is no such distinction; for example, is a rice seed manifest (*mngon gyur*) or hidden? For the Prasangika Madhyamikas the manifest and the directly perceivable are mutually inclusive. In the lower schools 'direct perceiver' (*mngon sum*) is pervaded by being a consciousness, whereas for the Prasangika Madhyamikas it is not. To avoid confusion this latter is translated into English as "directly perceivable."

Jedzun Chokyi Gyeltshen's *General Meaning* (page 172) then continues:

1B Explanation of the knowledge obstructions

The definition of a knowledge obstruction: an obstruction which mainly hinders the attainment of omniscience. When divided: the manifest and the factor of a seed.

> The definition of a manifest knowledge obstruction: that abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception, being a factor of mistaken dualistic appearance which is the appearance of one's object, forms and so forth, as truly existent. For example, a factor of mistaken dualistic appearance which is the appearance of the objects of the six engaging consciousnesses, forms and so forth, as truly existent.
>
> The definition of a seed of a knowledge obstruction: that abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception which arises through the depositing of an uncommon imprint by the conception of true existence which is its cause and is the substantial cause for mistaken dualistic appearance which is its result.
>
> The division of knowledge obstruction into the two, acquired and innate, is not feasible because there is no acquired knowledge obstruction since there is no knowledge obstruction which is an object of abandonment of the path of seeing. Therefore, there is no knowledge obstruction which is a consciousness because the conception of true existence is not a knowledge obstruction.

There are no knowledge obstructions which are consciousnesses. Thus, according to the Prasangika Madhyamikas a knowledge obstruction is a latency or potentiality. Yet knowledge obstruction is divided into the manifest and the factor of a seed.

Q: Kunkyen Jamyang Shepa says that there is a knowledge obstruction which is consciousness. However, here Jedzun Chokyi Gyeltshen says that there is no knowledge obstruction which is a consciousness. Why is this?
A: This is because Jedzun Chokyi Gyeltshen says that the conception of true existence is not a knowledge obstruction. For the Prasangika Madhyamikas, if it is a conception of true existence it is pervaded by not being a knowledge obstruction because it is an afflictive obstruction. For the Svatantrika Madhyamikas, the conception of true existence is a knowledge obstruction; therefore, for the Svatantrikas there is a knowledge obstruction that is a consciousness.

Q: Jedzun Chokyi Gyeltshen gives as an example of a manifest knowledge obstruction "a factor of mistaken dualistic appearance which is the appearance of the objects of the six engaging consciousnesses, forms and so forth, as truly existent." Jamyang Shepa says that there is a knowledge obstruction which is a consciousness because that which is mistaken, "a factor of mistaken dualistic appearance," is necessarily a consciousness.
A: Is a person pervaded by being a consciousness because a person makes mistakes? Is an eye consciousness of a bodhisattva of the tenth ground a knowledge obstruction because it is a factor of mistaken dualistic appearance? It follows that it is because to his eye consciousness forms and so forth appear to exist truly. Kensur Pema Gyeltsen discusses the factor of mistaken dualistic appearance and the appearance of true existence.

Q: The Tibetan term *den 'dzin* is usually translated as "conception of true existence." Does the eye consciousness have *den 'dzin*?
A: It does not. It has the appearance of true existence but it does not conceive, grasp, hold, or apprehend (*'dzin*) true existence (*den*). That which appears is not pervaded by being apprehended. For this reason different types of objects are posited – appearing object, object of the mode of apprehension, and so forth. For the Svatantrika Madhyamikas the object of negation, true existence,

does not appear to an eye consciousness, whereas for the Prasangika Madhyamikas it does appear. This difference is due to the object of negation being posited differently by these tenets. For the Svatantrika Madhyamikas the measure of true existence, the object of negation, is: an object established by way of its own objective uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness. Since this does not appear to an eye consciousness, for the Svatantrika Madhyamikas true existence does not appear to an eye consciousness.

Eye consciousnesses apprehend color and shape; they do not apprehend true existence. True existence does appear to an eye consciousness, but the eye consciousness does not apprehend it. On the other hand, if an eye consciousness did apprehend true existence, the eye consciousness would be an object of abandonment.

Q: Why can this object of negation not appear to an eye consciousness?
A: A form which is not posited by the force of appearing to a non-defective awareness cannot appear to an eye direct perceiver. In other words, that which is superimposed by conception cannot appear to an eye consciousness.

For the Prasangika Madhyamikas the measure of true existence, the object of negation, is: existence from its own side or independent existence. A form that appears to eye consciousness appears to exist from its own side. The factor of appearing from its own side is the factor of true existence. [Therefore, true existence does appear to an eye consciousness.]

Wednesday afternoon, 22 March 2000

Kensur Pema Gyeltshen's commentary says that both Lama Tsongkhapa and Gyeltshap Je assert that there is no knowledge obstruction which is consciousness. In a *Dose of Emptiness,* Khedrup Je presents the definitions of the two types of obstructions, these being similar to those in *General Meaning*. He also divides the afflictive obstructions into the manifested and a factor that is a seed and likewise their definitions are similar.

Jedzun Chokyi Gyeltshen's *General Meaning* (page 173) continues:

2 In what way on which path are the two obstructions abandoned
- A In what way on which path are the afflictive obstructions abandoned
- B In what way on which path are the knowledge obstructions abandoned

2A In what way on which path are the afflictive obstructions abandoned

From the point of view of the hinayana, one begins to abandon the afflictive obstructions from the dharma forbearance of true sufferings of the hinayana path of seeing and the attainment of hinayana foe destroyer and the abandonment of the afflictive obstructions occur simultaneously.

From the mahayana point of view, one begins to abandon the afflictive obstructions from the dharma forbearance of true sufferings of the mahayana path of seeing and the attainment of the eighth ground and the abandonment of the afflictive obstructions occur simultaneously.

2B In what way on which path are the knowledge obstructions abandoned

One begins to abandon the knowledge obstructions from the attainment of the eighth

> ground and the attainment of an exalted knower of all aspects and the abandonment of the knowledge obstructions occur simultaneously. Until the attainment of the eighth ground one does not begin to abandon the knowledge obstructions because until one who did not previously precede in the hinayana path attains the eight ground the conception of true existence is not abandoned and without having abandoned all conceptions of true existence without exception, one does not begin to abandon the knowledge obstructions.

The Svatantrika Madhyamikas say that for a bodhisattva definite in the mahayana lineage, the attainment of foe destroyer, which is the abandonment of the afflictive obstructions, and the attainment of tathagata, which is the abandonment of the knowledge obstructions, occur simultaneously. This is discussed in detail in the *Compendium of Knowledge* in the context of the Svatantrika Madhyamikas' assertion that the conception of true existence is a knowledge obstruction and not an afflictive obstruction.

Jedzun Chokyi Gyeltshen's *General Meaning* (page 173-4) continues:

> Therefore, there exists a way in which one on the uninterrupted path of the mahayana path of seeing abandons the conceptions to be abandoned by the path of seeing; it is that he abandons them from the point of view of abandoning their seeds. This is because (1) approaching the generation of an uninterrupted path of the mahayana path of seeing in one's continuum and (2) approaching the cessation of the seeds of the conceptions to be abandoned by the path of seeing in one's continuum occur simultaneously, whereby their seeds are abandoned from the point of view of having simultaneously already generated the uninterrupted path of the mahayana path of seeing in one's continuum and already ceased the seeds of the conceptions to be abandoned by the path of seeing in one's continuum.
>
> It is a fact that there are no seeds of the conceptions to be abandoned by the path of seeing in the continuum of one on the uninterrupted path of the mahayana path of seeing, however, it can be asked, "Does he or does he not have the seeds of the conceptions to be abandoned by the path of meditation in his continuum?" (1) In the Svatantrika system he does not have them because, in that system, the consciousness in the continuum of one on the uninterrupted path of the mahayana path of seeing has already been transformed into an uncontaminated entity because the mental consciousness in his continuum is asserted to be the person who is the illustration of one on the uninterrupted path of the mahayana path of seeing, and, the mental consciousness having already been transformed into an uncontaminated entity, if there did exist the seeds of the conceptions to be abandoned by the path of meditation on it there would be the fault that it would follow as contaminated.
>
> (2) In the Prasangika Madhyamika system he *does have* the seeds of conceptions to be abandoned by the path of meditation in his continuum because, although the mental consciousness in his continuum has already become an uncontaminated entity, there is no contradiction in asserting that there are the seeds of the conceptions to be abandoned by the path of meditation existing on the mere 'I' in his continuum in that they assert the mere 'I' as the illustration of the person.

The Svatantrika Madhyamikas say that there are no seeds of conceptions to be abandoned by the path of seeing in the continuum of one on the uninterrupted path of the path of seeing. Is there the conception of true existence in the continuum of one on the uninterrupted path of the path of seeing? Does this person have latencies in his continuum? What happens in subsequent attainment?

For the Prasangika Madhyamikas, latencies are stored on the mere 'I'; therefore, they do assert latencies but how do they posit them? This is discussed in the sixth chapter of *Supplement,* in which Chandrakirti says:

> *Since that is not inherently ceased, therefore,*
> *Because this [effect] is capable even without a basis of all.*
> *Ceased actions pass a long time in some, yet the action*
> *Should be understood as giving rise to the correct effect.* [6.39]

In *General Meaning*, there is an objection saying that there is no common locus of afflictive obstruction and knowledge obstruction (i.e., there is nothing which is both an afflictive obstruction and a knowledge obstruction), and so forth.

Jedzun Chokyi Gyeltshen's *General Meaning* (page 178) says:

> Our own system: If it is asked what is the meaning of the passage in the autocommentary (in relation to v. 12.31) that says: "the latency of ignorance...?" It does have [a meaning] because saying "the latency of ignorance" indicates the illustration of knowledge obstruction; saying "[it] hinders the thorough distinguishing of objects of knowledge" indicates its definition; and saying "attachment and so forth," by the term 'and so forth,' not only indicates the latencies of afflictions as knowledge obstructions but also indicates them as the cause of the negative reflexes (*gnas ngan len*) of body and speech that occur in the continua of foe destroyers. A negative reflex of body is, for example, a foe destroyer's body jumping like a monkey due to the influence of latencies of attachment. A negative reflex of speech is, for example, a foe destroyer's calling others stupid females due to the influence of the latencies of hatred. A negative reflex of mind is an unclear mine regarding the difficult to realize, subtle objects of knowledge; for example, Maudgalyana, who, in spite of looking with clairvoyance for a long time for his mother who had been born in the hell of the worldly realm of Light Rays, did not realize where she was.

The passages from the autocommentary which are the bases of Jedzun Chokyi Gyeltshen's commentary above are:

> Now, in terms of the strength that know the exhaustion of contaminations, it is explained:
>
> *Knowing the afflictions along with imprints of the conquerors that*
> *Will perish quickly due to the strength of knowing all aspects and*
> *The afflictions of the learners and so forth that are ceased by awareness –*
> *Unimpeded and infinite – is asserted as a strength.* [12.31]
>
> There, the afflictions are ignorance, attachment, and so forth because of afflicting the three worldly realms. That which subsequently proceeds to defile [or] stain the mind is an imprint. "Reaching the border of afflictions," "familiarity," "root" and "imprint" are equivalent. Even though the uncontaminated path has already abandoned the afflictions, all hearers and solitary realizers are unable to abandon them (i.e., imprints). Like, even though sesame oil, flowers, and so forth have already been removed, one observes subtle qualities by meeting with them in pots, woolen cloths, and so forth. Thus, since imprints exist although the afflictions are abandoned, even though arhats have already overcome the behavior of proceeding [by] jumping around, having been monkeys before arhats, and speaking to female servants, having been brahmins in the past, the opposite is also observed.

> There, the imprint of ignorance becomes an obstacle of fully distinguishing the objects of knowledge. The existence of the imprints of attachment and so forth are also causes of such kinds of operation of body and speech. Furthermore, the imprints of ignorance, attachment, and so forth are overcome only in the omniscient mind and buddha; they are not in others.

Note that Chandrakirti says: "'Reaching the border of afflictions,' 'familiarity,' 'root' and 'imprint' are equivalent."

The question here is as to whether the negative reflexes of body, speech, and mind of a foe destroyer are afflictive obstructions or knowledge obstructions. The answer is that they cannot be afflictive obstructions, since foe destroyers have abandoned all afflictive obstructions. According to the Vaibhashikas, these negative reflexes of body and speech are form. Is a negative reflex of mind, such as Maudgalyana not being able to see where his mother had been born, an ignorance or a knowledge obstruction? According to Vasubandhu's *Treasury of Knowledge,* it is an unafflicted ignorance. Kensur Pema Gyeltshen, in his commentary on the *Supplement,* gives the example of Shariputra who was not able to see the very subtle aggregate of morality of the tathagata. According to the Vaibhashikas, this inability to perceive [something subtle] is an ignorance. If it is asked, "Is ignorance not a root affliction?," it can be said that it is not a root affliction because there are two types of ignorance – that which is not a root affliction and that which is. If the Svatantrika Madhyamikas are asked to posit the six root afflictions, they could cleverly answer: "The attachment which is a root affliction, the hatred which is a root affliction," and so forth. Usually the root afflictions are posited as attachment, hatred, ignorance, pride, doubt, and afflicted view.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> One abiding on the third ground has mostly become an Indra, chief of the gods. He has become skilled in an ability always to overcome the lustful desires of worldly sentient beings. Becoming a leader, he is skilled in removing sentient beings from the mud of desire.
> The word 'also' appears in Nak-tso's translation as, 'He always abandons also lustful desire,' and this is most suitable.

Chandrakirti's autocommentary says:

> Hence, it is indicated that "without doubt this bodhisattva on the bodhisattva's third ground will attain completely pure patience gone beyond, the concentrations, immeasurables, absorptions, clairvoyances and full exhaustion of attachment and so forth."

(Note: This phrase was incorrectly included under the next outline [2B1C-2A3C].)

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A3C Distinguishing attribute of the first three perfections

Chandrakirti's autocommentary says:

> Now, having reached patience gone beyond, in order to clarify the presentation of (1) the differences of support of the first three [practices] gone beyond, (2) the nature of the collections and (3) the fully accomplished result, it is explained:

> *The three practices of generosity and so forth mostly,*
> *Were venerated by the Tathagata for householders,*
> *Also the collection of merit, just they*
> *[Are] the causes of the buddha body whose essence is form.* [3.12]

Indeed, only bodhisattvas are supports of giving and so forth which were explained, yet, nevertheless, it was expressed as stated in terms of two possibilities for them, due to the divisions of householders and monks.

There, for householders, mostly the three practices of generosity and so forth are easy to achieve; for monks, joyous effort, concentration, and wisdom are – still, one is not impossible for the other.

The collection of causes of buddhahood are two, the collection of merit and the collection of exalted wisdom. With regard to that, it is thoroughly presented saying, "the collection of merit is those very three gone beyond; the collection of exalted wisdom is concentration and wisdom: joyous effort is the cause of both."

There, that which is the collection of merit is the cause of the form body of the buddha bhagavan, the marvelous possessor of the character of hundreds of merits and having various unimaginable forms. The cause of the body which possesses the essence of Dharma, having a character without generation, is the collection of exalted wisdom.

The first three perfections are practices suitable for lay people, therefore, the Tathagata recommended that they practice them. In this context, the practice of generosity mainly refers to the generosities of giving material things and giving protection from fear; the practice of ethics is that of a householder or lay person; and the practice of patience is that of definitely thinking about Dharma. Here "Dharma" mainly refers to the emptiness which is the emptiness of inherent existence. Phenomena are empty of inherent existence because of being dependent-arisings. This means that all phenomena arise in dependence, in that all phenomena arise in dependence on causes and conditions and cease in dependence on causes and conditions. Therefore, when householders encounter difficulties they should think that such difficulties do not exist inherently but are dependent-arisings. Since they arise in dependence on causes and conditions, they also cease in dependence on causes and conditions. Thinking in this way, one is able to bear difficulties and the mind remains peaceful.

The Tathagata recommended that the ordained practice the fourth, fifth, and sixth perfections – joyous effort, concentration, and wisdom. These three are said to be easier to practice for ordained bodhisattvas [than for householder bodhisattvas]. However, this does not mean that lay and ordained bodhisattvas should not practice the other three perfections.

Thursday morning, 23 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti now clearly presents (1) the differences between those who are bases of [practicing] the first three perfections, (2) the nature of the collections, and (3) the fruit that is achieved. His root text says:
>
> > *The Sugata mainly praised these three practices*
> > *Of giving, ethics, and patience for householders.*
> > *These are also the collection of merit, the cause*
> > *Of a buddha body the nature of which is form.* [3.12]
>
> Both householder and monk bodhisattvas are indeed bases of [practicing] giving and so forth, but in terms of difficulty and ease of achievement, the three practices of giving, ethics, and patience are easier for householder bodhisattvas to achieve. Therefore, the Sugata praised these three for them.

> Of the two collections, that of merit consists of these three. It is the predominant cause of a buddha body whose nature is form.
>
> Nagarjuna's *Precious Garland* (399) says:
>
> > At that time [when you are a king] you should internalize
> > Firmly the practices of giving, ethics, and patience
> > Which were especially taught for householders
> > And which have an essence of compassion.
>
> Among the three practices which are easy for householder bodhisattvas, giving covers the donation of articles and bestowal of non-fright [taking bugs out of water, etc.]. Ethics is that of householders, and patience is mainly a mind determined about the doctrine. Effort, concentration, and wisdom are easier for monk bodhisattvas, but this does not mean that householders and monks do not have the other three perfections.
>
> The collection of wisdom consists of concentration and wisdom, which mainly cause the truth body. Effort is a cause of both collections.

There are bodhisattvas who are ordained and those who are householders, i.e., lay people. For householder bodhisattvas, it is easier to practice the first three perfections; for this reason the Buddha recommended them to these bodhisattvas. On the other hand, the remaining three perfections are easier for ordained bodhisattvas to practice; therefore, the Buddha recommended them to these bodhisattvas. However, these recommendations do not mean that both types of bodhisattvas should not practice all six perfections.

The first three perfections, generosity, ethics, and patience, comprise the collection of merit. This is because these practices are the main cause of achieving the form body of a buddha. The last two perfections, those of concentration and wisdom, comprise the collection of wisdom, which is the main cause of the truth body. Effort is the cause of both the form body and the truth body and is therefore included in both collections. Thus, Lama Tsongkhapa says: "Effort is a cause of both collections."

Lama Tsongkhapa says that for householder bodhisattvas it is easier to practice two types of generosity: (1) the generosity of giving material things and (2) the generosity of giving protection from fear. Bestowing non-fear is, for example, to protect someone from the sufferings of hunger, thirst, heat, cold, sickness, and so forth. Because householders can do such practices, the Buddha recommended these to them.

The practice of ethics is also recommended for lay bodhisattvas. Here ethics refers to three types of vows:

(1) the male lay vows (Skt. *upasaka,* Tib. *dge bsnyen*),
(2) the female lay vows (*upasika*, Tib. *dge bsnyen ma*), and
(3) the 24-hour vows (Skt. *upavasa,* Tib. *bsnyen gnas*).

The 24-hour vows are taken on the eighth, fifteenth, and thirtieth of the lunar calendar. These vows are the same abandonments as those of the eight mahayana precepts. However, the eight 24-hour vows and the eight mahayana precepts differ from the point of view of both motivation and result. In the case of the 24-hour vows the motivation is renunciation (definite emergence), whereas in the case of the mahayana precepts, the motivation is the mind of enlightenment. The result of the 24-hour vows is the attainment of liberation, whereas the result of the eight mahayana precepts is omniscience. As in the case of the mahayana precepts, the 24-hour vows are taken for the period of one day and one night. An ordained person is not permitted to take these 24-hour vows, because he will degenerate his ordination in that he has already taken these vows for his life. Ordained people do the restoring and purifying ceremony *(gso sbyong)* on the 15th and 30th days of the lunar calendar in order to restore their vows. On the other hand, I have heard that the taking of the 24-hour vows is a lay person's method for restoring and purifying their vows. There is a question as to whether or not a lay person who has taken the lay vows for life can take these 24-hour vows. I think that this is possible, because when one

takes the lay vows for life, one does not take a vow to refrain from sexual conduct but promises not to engage in sexual *mis*conduct, whereas when one takes the 24-hour vows, one promises to refrain from sexual conduct for the period of 24 hours. Therefore, a lay person with vows for life should be able to take the 24-hour vows. However, nowadays it is common practice to take the eight mahayana precepts instead of the 24-hour vows.

When Lama Tsongkhapa says "Ethics is that of householders" this includes the taking of some or all of the five lay vows for life as well as the vow of pure conduct (*brahmacharya*). A lay person who takes all five vows does not take the vow of abandoning sexual conduct, but takes that of refraining from sexual misconduct. Those who take the vow of pure conduct must also refrain from sexual conduct.

On the other hand, the ethics of the ordained covers five types of vows:
(1-2) the two of fully ordained monks and nuns (Skt. *bhikshu, bhikshuni*, Tib. *dge slong, dge slong ma*),
(3-4) the vows of probationary nuns (Skt. *shikshamana*, Tib. *dge slob ma*), and
(5) the two of novice monks and nuns (Skt. *shramanera*, *shramanerika*, Tib. *dge tsul, dge tsul ma*).

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A3D Conclusion by way of expressing the features of the third ground

Chandrakirti's autocommentary says:

> Now, having expressed the essence as great through the great essence of the support and so forth, to complete the section of the third bodhisattva ground, it is explained:
>
> *This Luminous One abiding in the sun – the Conqueror's child*
> *Having first perfectly dispelled all darkness included in himself,*
> *Strongly desires to completely destroy the darkness of migrators.* [3.13abc]
>
> This Luminous Ground, abiding in the sun of the Sugata's child, on the very occasion of generating, having dispelled the essence of unknowing which existed in his support which was the hindrance of arising [the third ground], desires to destroy the darkness which hinders the arising of the third ground of others, through finely showing an aspect like this.
>
> The bodhisattva:
>
> *Although very sharp on this ground, he will not become angry.* [3.13d]
>
> Although already engaged very sharply like the sun, since he overcame the darkness of faults – the destroyer of qualities – he will not become disturbed with faulty beings, because of very surpassing familiarity with patience and because his continuum has been oiled by compassion.

Just as the sun dispels darkness, the third ground bodhisattva dispels the darkness of unknowing in himself and others. This bodhisattva abandons all hindrances, the darkness of unknowing, upon actualizing the third ground. The darkness of unknowing is of as many types as there are objects of knowledge, but when condensed there are two:
(1) the ignorance that is an obscuration with respect to suchness and
(2) the ignorance that is an obscuration with respect to actions and results.
There are two types of motivations: (1) a causal motivation and (2) a temporal motivation. The causal motivation is the ignorance that is an obscuration with respect to suchness, while the temporal motivation is the ignorance that is an obscuration with respect to actions and results. Due to the temporal motivation, one creates non-virtuous actions. In some texts it says that the first link, ignorance, includes both the ignorance that is an obscuration with respect to suchness and the ignorance that is an obscuration with respect to actions and results. However, our own system says

that the ignorance that is the first link of dependent-arising is only the ignorance that is an obscuration with respect to suchness because the ignorance that is an obscuration with respect to actions and results has not existed since beginningless time.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *Abiding in the sun which is the conqueror child,*
> *The Luminous first completely dispels his darkness,*
> *Then seeks to overcome the darkness of migrators.*
> *On this ground, though very sharp, he does not get angry.* [3.13]
>
> As soon as it is generated, the Luminous Ground abiding in the sun – the bodhisattva – completely dispels the darkness of ignorance, included in his own continuum, that obstructs the arising of this ultimate ground. Through showing this aspect to others he then seeks to overcome the darkness obstructing the third ground for other migrators.
>
> Because a bodhisattva on the third ground overcomes the darkness of faults that destroy virtues, he becomes very sharp like the sun, but he does not get angry with faulty beings. This is because he has become extremely well accustomed to patience, and his continuum has been oiled with compassion.

Lama Tsongkhapa's commentary is similar to Chandrakirti's autocommentary.

Chandrakirti's autocommentary says:

> From the *Explanation of the 'Supplement to the "Middle Way,"'* the Third Mind Generation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Such is the explanation of the third ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of Chandrakirti's 'Supplement to the Middle Way.'*

This concludes the third chapters of both the *Supplement* and *Illumination* on the third mind generation.

The main point of the third chapter is the surpassing perfection of patience. The first verse of this chapter says:

> *Because the light of the fire wholly consuming*
> *The fuel of objects of knowledge arises,*
> *This third ground is called the Luminous...* [3.1]

On the third ground there occurs a sign of the light of the exalted wisdom that burns the fuel of the knowledge obstructions. In this context, there is a discussion of the two types of obstructions: (1) afflictive obstructions and (2) knowledge obstructions.

Afflictive obstructions are those that mainly hinder the attainment of liberation, whereas knowledge obstructions are those that mainly hinder the attainment of omniscience. The subject of the afflictive obstructions becomes quite complex in the context of the assertions of the various schools. For example, the Prasangika Madhyamikas assert that the two conceptions of self – the conception of a self of persons and the conception of a self of phenomena – are both afflictive obstructions. On the other hand, according to the Svatantrika Madhyamikas, the conception of a self-sufficient

substantially existent person is an afflictive obstruction, whereas the conception of the true existence of phenomena is a knowledge obstruction. This means that for them the conception of a self of phenomena is not an afflictive obstruction but a knowledge obstruction. The two lower schools, the Vaibhashika and Sautrantika, do not assert the conception of a self of phenomena to be an object of abandonment because for them there does not exist a selflessness of phenomena in that phenomena are pervaded by being established as a self. This is discussed in detail in *Tenets*.

The subject of non-afflicted ignorance, which was mentioned briefly before, requires some further clarification. It can be asked: "If there is an ignorance that is not an affliction, what is posited as its illustration?" Non-afflicted ignorance is, for example, Maudgalyana's ignorance regarding his mother having been born in the hell beneath the northern continent Light Rays. Vasubandhu, in his *Treasury of Knowledge,* posits this is an example of a non-afflicted obscuration in that the Vaibhashikas assert both afflictive obscurations and non-afflictive obscurations. In one text, it says that this is an example of a non-afflicted ignorance in name only but is not ignorance. It also says that the latencies of the afflictions are *termed* non-afflicted ignorance but are not ignorance because latencies are not consciousnesses. In this view, there is no common locus of ignorance and knowledge obstruction.

The third chapter of the *Supplement* sets forth the inappropriateness of becoming angry and the appropriateness of patience. There are six different types of situations related to anger: (1) a bodhisattva with higher realizations becoming angry with a bodhisattva of lower realizations, (2) a bodhisattva with lesser realizations becoming angry with a bodhisattva of higher realizations, (3) the two, the base of anger and the object of anger, being of equal realizations, (4) a non-bodhisattva becoming angry with a bodhisattva, (5) a bodhisattva becoming angry with a non-bodhisattva, and (6) a non-bodhisattva becoming angry with a non-bodhisattva. However, in the text only five of these are set forth (the fifth being omitted) as in the case of Jedzun Chokyi Gyeltshen's *General Meaning* (page 183) which says:

> (1) A bodhisattva of great power becoming angry with one of little power, (2) a bodhisattva of little power becoming angry with bodhisattva of great power, (3) a bodhisattva becoming angry with one of equal power, (4) a person who is not a bodhisattva becoming angry with a bodhisattva, (5) a person who is not a bodhisattva becoming angry with one who is not a bodhisattva.

Anger is said to destroy roots of virtue. Which roots of virtue are these? They are the roots of virtue accumulated by means of the practice of generosity and ethics over hundreds of eons. In brief, roots of virtue in this context are those that mainly comprise the collection of merit.

How are roots of virtue destroyed? There are three levels of destruction: (1) diminishment, (2) reduction, and (3) complete consumption. When it is said that anger destroys roots of virtue does this mean that the roots of virtue are made completely non-existent? Does anger completely annihilate the roots of virtue in one's continuum? It does not. It means that: (1) the potential of roots of virtue to bring about a result is weakened or diminished, (2) the fruition of the result of the roots of virtue is delayed, and (3) the potential of the roots of virtue to bring about a result is destroyed whereby there is no result. In short, we need to be careful about whom we get angry with since we do not know who is and who is not a bodhisattva!

There is a story in relation to this. Once there were four monks from Sera Monastery who went to Lhasa. When returning, they were heavily loaded and stopped to rest. They talked among themselves about the sangha. It is said in the teachings that a group of four monks is sangha and that one of them is a bodhisattva; these monks discussed who amongst themselves was that bodhisattva. They said maybe it was Chodze, who was well-dressed. They also decided that one of the monks,

Langdon, was definitely not a bodhisattva, and the conversation continued. In reality, however, Langdon was a bodhisattva who later became very well-known but at that time "Crazy Langdon," as he was called, was extremely humble, badly dressed, and so forth. He behaved very normally at that time, but later on he became a famous lama and people would line up to see him. Therefore, since one never knows from outer appearance alone who is a bodhisattva and who is not, one should be careful not to get angry and try to develop patience in all situations.

Q: In *Illumination* (Tib. page 98) there is a citation from sutra that appears in the *Treasury of Knowledge* which says:

> Actions cause fruition
> In cyclic existence – first the heavy,
> Then the proximate, then the accustomed,
> Then what was done before.

What is the difference between the proximate and that which was done before?
A: A heavy karma ripens before a lighter one. When two karmas are equal in heaviness the most proximate or recent ripens first. "Proximate" refers to whichever action was done nearest to the time of death. At the time of death, if two actions are equal in terms of proximity then the action that is most familiar will ripen first. If the two actions are equally familiar then that which was done first will ripen first.

Q: Previously, Geshe-la said that wrong view destroys both the roots of virtue created through application and those attained at birth, whereas harmful intent or anger only destroys those created through application. Why is this? There is a passage that says that when a bodhisattva who is about to achieve the path of preparation becomes angry at another bodhisattva he destroys the roots of virtue created over a hundred eons. However, some of these roots of virtue are attained at birth and not by application, so how is this?
A: I will check the scriptures. What I said was according to either the *Treasury of Knowledge* or the *Stages of the Path*. This doubt is relevant because when talking about so many eons it definitely involves roots of virtue attained at birth.

We have created many roots of virtue which are projecting karmas to be reborn as a human being. However, due to becoming angry one is reborn in the lower realms. However, the virtuous projecting karmas to be born as a human being remain in our continuum; these projecting karmas are not destroyed. If they were also destroyed, it would mean that once born in the lower realms, one could no longer be reborn in the upper realms.

THE FOURTH MIND GENERATION

3B1C-2A4 Fourth ground, the Radiant

This section has three parts:

A Surpassing effort on the fourth ground
B Description of the fourth ground
C Features of abandonment

3B1C-2A4A Surpassing effort on the fourth ground

Chandrakirti's autocommentary says:

> Now, by means of indicating joyous effort gone beyond as surpassing the aspects of giving, morality, and patience gone beyond, from the viewpoint of the fourth mind generation it is explained:
>
> *Qualities without exception follow after joyous effort and*
> *[It is] the cause of the two collections: merit and intelligence.*
> *The ground where joyous effort blazes*
> *Is the fourth, Radiant.* [4.1]
>
> Since someone not delighted in virtuous actions does not engage in giving and so forth in all ways, the arisal of all qualities is impossible, yet since in someone delighted to accumulate the qualities which were set forth previously, it is possible that the attained and not attained increase and be attained, the cause of all that is a quality which is only joyous effort. It is the very cause of the two collections, already explained above.
>
> That joyous effort, by way of fully purifying one's own qualities, is explained to blaze exceedingly on that ground, called the Radiant Fourth Ground of the bodhisattva.

Chandrakirti says that the surpassing practice of generosity attained on the first ground depends on joyous effort, the surpassing practice of ethics attained on the second ground depends on joyous effort, and the surpassing practice of patience attained on the third ground depends on joyous effort. On the fourth ground, the fourth mind generation is explained by presenting the surpassing perfection of joyous effort. The stanza in the root text says: "Qualities without exception follow after joyous effort." It then says that "[it is] the cause of the two collections." The accumulation of merit and the collection of wisdom are the causes of the two bodies, the truth body and the form body. These in turn depend on joyous effort.

The root text then gives the etymology of the fourth ground, Radiant: "The ground where joyous effort blazes is the fourth, Radiant." Effort is the mental factor that delights in virtuous activity. The mental factor which does not delight in virtuous activity is laziness. Someone who lacks pleasure in virtuous activity will not engage in the practices of generosity, patience, ethics, and so forth. In short, someone who possesses effort practices generosity and so forth while those who lack effort do not practice generosity and so forth. This is why the root text says that qualities follow effort. Someone who has effort gains qualities not yet gained. Someone who already has qualities increases them. On the other hand, someone who lacks effort loses all the qualities already gained and does not gain any further knowledge or qualities. In brief, one should understand the benefits of effort and the disadvantages of laziness.

In the autocommentary there is a passage saying, "the cause of all that is a quality which is *only* joyous effort." This passage means that through joyous effort one attains those qualities that have not been attained and increases those that were attained previously. Note that the emphasis here is on the term "only."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Now Chandrakirti indicates that on the fourth ground effort surpasses the first three perfections and is lower than the remaining six. His root text says:
>
> *All attainments follow after effort,*
> *Cause of the two collections of merit*
> *And wisdom. The ground where effort*
> *Flames is the fourth, the Radiant.* [4.1]
>
> One who does not delight in virtue does not engage in all the various forms of giving and so forth; therefore, no attainments arise. However, for one who delights in accumulating or having accumulated the auspicious qualities of giving and so forth explained before, the qualities of attainments increase and qualities not yet attained are realized. All auspicious attainments follow after effort, the cause of the two collections of merit and wisdom. The ground where effort is said to flame increasingly is the fourth, called the Radiant.
>
> On the third ground a training in higher meditative stabilization is attained that greatly exceeds that of the first two grounds. On the fourth ground a bodhisattva thereby attains pliancy generated from meditative stabilization. This is a special factor totally removing laziness; hence, the perfection of effort is surpassing.

Lama Tsongkhapa says that a bodhisattva on the third ground attains the higher training of meditative stabilization, or the higher training of the mind. In attaining the higher training of the mind, this bodhisattva attains pliancy. With this pliancy, the bodhisattva totally dispels laziness on the fourth ground. This is why effort is said to be surpassing on the fourth ground.

The *Ornament for Clear Realizations* mentions three types of effort that oppose the three types of laziness: (1) the effort of not being attached to bad actions or behaviors, (2) the effort of not becoming fatigued, and (3) the effort of thoroughly upholding the path. When we posit the three contrasting lazinesses, they are: (1) the laziness attached to bad actions – this refers to the worldly actions of this life alone; (2) the laziness of lethargy, and (3) the laziness of discouragement. Lama Tsongkhapa says that by abandoning these three types of laziness, one comes to possess the three types of effort.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> 3B1C-2A4B Description of the fourth ground

Chandrakirti's autocommentary says:

> Further, if asked: "why is it expressed as Radiant?" In order to indicate the reason of engaging the name:
>
> *There, for the Sugata's children generated from*
> *Higher meditation on the harmonies of complete enlightenment,*
> *Arises an appearance surpassing the copper light and* [4.2abc]
>
> – was mentioned.
>
> Thus, for the bodhisattva on this ground, from meditation upon the thirty-seven practices harmonious with enlightenment, there will arise an appearance surpassing the copper appearance

explained before. Therefore, since the light of the fire of perfect exalted wisdom arises, that bodhisattva ground is called the Radiant.

As extensively taught [in the *Sutra on the Ten Grounds*]:

There, the thirty-seven practices harmonious with enlightenment are like this:

1. the four close placements of mindfulness,
2. the four perfect abandonments,
3. the four legs of magical emanation,
4. the five powers,
5. the five strengths,
6. the seven branches of enlightenment and
7. the eight-branched arya path.

(1) There, the four close placements of mindfulness are:

i. O children of the Conqueror, the bodhisattva abiding on this bodhisattva ground having radiance, having become ardent and in possession of alertness and mindfulness, completely forsaking covetousness and unhappiness concerning the world, with regard to the inner body, contemplates the body and abides. Having become ardent and in possession of alertness and mindfulness, completely forsaking covetousness and unhappiness concerning the world, with regard to the outer body, contemplates the body and abides. With regard to inner and outer bodies, contemplates the body and abides,... as said before.

The fourth ground is called Radiant due to the surpassing practice of the thirty-seven harmonies with enlightenment. Therefore, there is the [surpassing] appearance of a copper light, like a red light similar to the light of a sunset. The meaning is that the light of exalted wisdom is analogous to the light of the sunset.

The thirty-seven harmonies are of two types: the subtle and the coarse. This could mean that the object to be realized has two levels, subtle and coarse. We can take the example of a bodhisattva meditating on the close placement of mindfulness of the body, the first of the thirty-seven harmonies with enlightenment. On the coarse level, the bodhisattva meditates on the body qualified by the emptiness of a self-sufficient substantially existent person. The subtle level is to meditate on the body qualified by the emptiness of an inherently existent person.

Close placement of mindfulness on the body merely means that one meditates on the body. The body is of three types: inner body, outer body, and both inner and outer. These are posited in a way similar to the first three of the twenty emptinesses which were discussed previously [in the *Ornament*]: the emptiness of the internal, emptiness of the external, and emptiness of both the internal and external. The inner body refers to forms such as the eye faculty; the outer body to outer objects such as forms, sounds, etc. They are called "outer body" because they are objects not conjoined with a consciousness. A body that is both outer and inner refers to the eye organ, the nose, the tongue, the body itself, etc. Why are these called "both inner and outer"? They are outer because compared to the inner faculty, they are outside; they are inner because they are conjoined with feelings. In short, we meditate on these three by placing our mindfulness on them while also applying introspection.

First we meditate on the inner body by meditating on our body parts. Meditating on the body can also be done in several other ways, such as examining whether the body is light or heavy. A third meditation is to meditate on the body as being composed of elements. One can also examine whether the body is contaminated or uncontaminated. Another way is to examine whether the body is material or non-material. One can also meditate on one's own body being a composite of the thirty-six impure substances. This last meditation is mentioned in Shantideva's *Engaging in the Bodhisattva Deeds*. One

meditates on these thirty-six in order to avoid the negativities of covetousness, mental unhappiness, etc. When the Buddha says "completely forsaking covetousness," he is referring to the fact that the bodhisattva abandons attachment. The bodhisattva also abandons mental unhappiness, which is fuel for the development of anger. When we do not provide the fuel for anger, mental unhappiness, there is no way for anger to arise.
The way to meditate is to apply mindfulness and introspection, or alertness. With mindfulness, one holds onto the object without forgetting it. With introspection, one is alerted to distraction and brings the mind back to the object of meditation whereby the mind remains on its object.

The passage in the *Sutra on the Ten Ground* continues:

> ii. Similarly, having become ardent and in possession of alertness and mindfulness, with regard to inner feelings, outer feelings, inner and outer feelings and... as before.
> iii. With regard to inner thoughts, outer thoughts, and inner and outer thoughts... he abides.
> iv. With regard to inner phenomena, outer phenomena, and inner and outer phenomena... he abides.

The Buddha mentions three types of feelings: inner, outer and both inner and outer. What is inner feeling? Perhaps inner feeling is mental feeling, while outer feeling is a feeling related to the sense consciousnesses. Then we need to reflect on what could be a feeling that is both inner and outer. We can also posit inner feeling as the feeling that is experience related to the inner sense powers; outer feeling as the experience related to external objects; and the feeling that is both as the feeling that is the experience related to the sense organs. This latter assertion, which is my own personal opinion, is perhaps correct in that it corresponds to the third type of body that was discussed previously.

In general, feelings are of two kinds: those that arise in the retinue of mental consciousness and those that arise in the retinue of the sense consciousnesses. An illustration of the first is mental unhappiness. An illustration of the second is suffering feeling.

According to *Abhidharmakosha*, there are five types of faculties of feeling: (1) happiness, (2) suffering, (3) mental happiness, (4) mental unhappiness, and (5) equanimity. Happiness and suffering refer to the happiness and suffering feeling that are in the retinue of a sense consciousness. Those that are in the retinue of the mental consciousness are mental happiness and mental unhappiness.

We can also discuss three types of feeling: happiness, unhappiness, and equanimity. Happiness refers to both that which occurs in the retinue of the sense consciousness and that which occurs in the retinue the mental consciousness. The definition of the feeling of happiness is: the experience of contentment. The definition of the feeling of unhappiness is: the experience of pain. The definition of the feeling of equanimity is: a feeling that is neutral, neither contentment or pain. Feeling is a fundamental factor in that it gives rise to many mental factors: attachment, hatred, etc. Using mindfulness and introspection, one should meditate on these different feelings in order to stop the arising of attachment, hatred, and so forth. We can tell from our experience that we like happy feelings and dislike unhappy feelings.

Regarding the close placement of mindfulness on thoughts/mind, there are also three: inner, outer, and both inner and outer. “Mind” here refers to a main mind, not the mental factors. Inner mind can be posited as the mental consciousness, outer mind as the sense consciousnesses. Mind that is both inner and outer is a mind that apprehends the container of the sense faculties; i.e., the organs themselves. This main mind can have different aspects: a main mind along with attachment, a main mind along with hatred, a main mind without attachment, or a main mind without hatred, and so

forth. Or it can be a virtuous mind, a non-virtuous mind, or a neutral mind. What is a virtuous mind? What is a non-virtuous mind? We need to examine this. Doing so is the close placement of mindfulness on the mind.

Regarding close placement of mindfulness on phenomena there are also three: inner, outer, and both inner and outer. We can apply the same formula as before. Inner phenomena can be posited as true paths; outer phenomena as true cessations; phenomena that are both inner and outer as the person itself. But we must think about this since all remaining phenomena (those not included in the first three close placements of mindfulness) are included as objects of meditation of close placement of mindfulness on phenomena. This fourth close placement of mindfulness also includes nirvana.

The purpose of meditating on the four close placements of mindfulness is to engage in the four noble truths. By closely placing the mind on the body, one engages in true sufferings. By closely placing the mind on feelings, one engages in true origins. By closely placing the mind on the mind, one engages in true paths. By closely placing the mind on phenomena, one engages in true cessations. This is because by meditating on the body, one comes to the conclusion that it is the nature of suffering. One finds that the body is the foundation for all different types of sufferings. The body acts as a basis for past sufferings and as a cause for future sufferings. By way of the close placement of mindfulness on feelings, one finds that feelings give rise to mental factors such as attachment and hatred. Due to these mental factors, one creates karma that gives rise to many sufferings. Thus, feelings are true origins. Regarding the close placement of mindfulness on the mind, this must be a main mind that trains in the three higher trainings – ethics, meditative stabilization, and wisdom. In that way, one engages in the truth paths. By cultivating true paths, one attains nirvana, the true cessation which is the principal object of meditation of the fourth close placement of mindfulness, the close placement of mindfulness on phenomena.

END

Monday afternoon, 27 March 2000

We have now finished the subject of the four close placements of mindfulness; next come the four thorough abandonings.

Chandrakirti's autocommentary continues to cite the *Sutra on the Ten Grounds*:

> (2) The four perfect abandonments are like this:
> i. In order to not generate evil, non-virtuous dharmas not [yet] generated, he generates aspiration, endeavors, and puts forth effort. The mind firmly grasped, [it is] perfectly, firmly settled.
> ii. "In order to abandon evil, non-virtuous dharmas [already] generated…," as before.
> iii. "In order to generate virtuous dharmas not [yet] generated...," as before.
> iv. "In order to bring about abidance, increase, future arisal (non-disappearance), and strong completion of virtuous dharmas [already] generated, he generates aspiration, endeavors…," as before.

The first thorough abandoning is to not generate non-virtues that have not yet been generated. If one has not created non-virtue, one needs to make effort in order to continue not creating non-virtue. The second thorough abandoning is to abandon the non-virtue that one has already generated; one needs to make effort in order to abandon it. The Buddha says that one needs to generate the aspiration that is the effort to abandon negative actions already committed. The text says "endeavors and puts forth effort;" these two essentially mean the same thing, although "endeavors" is perhaps stronger. Regarding "puts forth effort," one takes pleasure in abandoning non-virtue and continuing to refrain from non-virtue. "The mind firmly grasped" means that the mind is single-pointedly fixed on the activities of (1) not generating non-virtue not yet generated and (2) abandoning non-virtue already generated. "(It is) perfectly and firmly settled" has the sense of wisdom. There are four factors needed in order to practice these two abandonments: (1) aspiration, (2) effort, (3) meditative stabilization, and (4) wisdom. The last two factors could perhaps also be posited as mindfulness and introspection. Therefore, one can choose between either of two interpretations – (i) meditative stabilization and wisdom or (ii) mindfulness and introspection – but it is better to posit them as the first, meditative stabilization and wisdom.

The third thorough abandoning is that of generating as many virtuous qualities as one is able. The fourth thorough abandoning is to increase those virtuous qualities that one has already generated and to not allow them to degenerate. These two thorough abandonings are to be understood as abandoning (1) non-aspiration, (2) non-effort, (3) non-meditative stabilization, and (4) non-wisdom. Regarding the first two thorough abandonings, one needs to generate the four: aspiration, effort, meditative stabilization, and wisdom.

The third group of the thirty-seven harmonies of enlightenment consists of the four legs of magical manifestation. According to the commentaries on the *Ornament for Clear Realizations*, the first group, the close placements of mindfulness, is posited on the small path of accumulation; the second group, the four thorough abandonings, on the middling path of accumulation; and the third group, the four legs of magical manifestation, on the great path of accumulation.

Regarding the four legs of magical manifestation, Chandrakirti's autocommentary quotes from the *Sutra on the Ten Grounds*, which says:

> (3) The four legs of magical emanation are like this:

i. The leg of magical emanation possessing meditative stabilization of aspiration [and] the applications [of antidotes] which abandon – abiding in isolation, abiding separated from attachment, abiding in cessation, through complete abandonment, fully transformed – meditates. Similarly,
ii. the leg of magical emanation possessing meditative stabilization of joyous effort [and] the applications which abandon,
iii. the leg of magical emanation possessing meditative stabilization of intention [and] the applications which abandon, and
iv. the leg of magical emanation possessing meditative stabilization of analysis [and] the applications which abandon.
also as before.

The "legs of magical manifestation" refer to a type of meditative stabilization. Thus, the close placements of mindfulness are wisdom, the thorough abandonings are effort, and the legs of magical manifestation are meditative stabilization. In regard to this passage there could be a discussion of calm abiding, but perhaps we will leave that aside for now.

The word 'leg' is used in this context because when one cultivates meditative stabilization, one can travel a great distance very quickly. This is likened to walking with one's legs whereby one arrives at a particular place, whereas with the legs of magical manifestation, by the force of meditative stabilization, one arrives at a place merely by *thinking* to go there. Usually when these four legs of magical manifestation are counted, they are listed as: (1) aspiration, (2) effort, (3) intention/thought, and (4) analysis. Although these are the names given to the four legs, one should not think that the four legs of magical manifestation are these mental factors. Rather, the legs of magical manifestation are meditative stabilizations concomitant with these four mental factors.

"Abiding in isolation, abiding separated from attachment" can refer to abiding at a physical level or at a mental level. At a physical level, it means that one abides alone, by oneself. At a mental level it means that the mind is free from conceptions. "Abiding separated from attachment" refers to having few attachments and being content. "Abiding in cessation" means abiding in the cessation of the three mental poisons. "Cessation" could also mean being free from distraction. This means that having abandoned all distractions, one focuses on the observed object of meditative stabilization.

Aspiration refers to seeking an object. When we have aspiration for something such as study, this causes us to have *effort*. This in turn produces *intention*, which leads the main mind to its object. As a result of intention, the mind begins to *analyze* its object. These four factors (aspiration, effort, intention, and analysis) are necessary in order to develop our mind.

Chandrakirti's autocommentary says:

(4) The five powers are like this:
i. "The power of faith, abiding in isolation," similarly,
ii. "the power of joyous effort,"
iii. "the power of mindfulness,"
iv. "the power of meditative stabilization" and
v. "the power of wisdom, abiding in isolation, abiding separated from attachment."
and so forth.

Why are these called powers? [*Note:* The Tibetan word translated here as "power" (*dbang po*) is translated by Hopkins as "faculty."] They are so-called because with these five, one is empowered with respect to completely pure phenomena. The first of the five powers is faith. Faith is a prerequisite

for all mahayana virtuous qualities. Effort is also fundamental in that every kind of virtuous quality follows upon effort. Faith can be likened to a mother. A mother gives birth to a child and then takes care of the child in many ways from birth until it grows up. Faith has a similar function. It produces, maintains, and increases all virtuous qualities. The Buddha said in one sutra that a person without faith does not give rise to virtuous qualities. How can a person who lacks faith generate a virtuous quality? He cannot, in that it would be like a scorched seed being able to generate a sprout.

These five – faith, effort, mindfulness, meditative stabilization, and wisdom – are essential. In the fourth chapter of the *Ornament for Clear Realizations,* it says that these are the foundation of the mahayana teaching/path. The main point here is that these five empower one with respect to completely pure phenomena. All five of these mental factors can arise simultaneously in the retinue of a single main mind; i.e., they can be concomitant with a single main mind. When concomitance between a main mind and mental factors is discussed, it refers to there being five similarities between them: (1) base, (2) observed object, (3) aspect, (4) time, and (5) substantial entity. This was discussed previously.

Faith is very important. It is even included in the discussion of calm abiding. When one develops calm abiding, one must do so by means of the eight antidotes that oppose the five faults. There are four antidotes to the first fault, laziness, these being faith, aspiration, effort, and pliancy. Therefore, one must have faith in the very beginning; on that basis, aspiration, effort, and pliancy can arise.

These five powers, which belong to the completely pure class, are attained on the heat and peak levels of the path of preparation.

The *Sutra on the Ten Grounds* then says:

> (5) The five strengths are those themselves, having defeated the discordant class.

When one develops the five forces, or five strengths [Hopkins translates the Tibetan word *stobs* as "powers"] , there is no longer any occasion for their discordant classes to arise. On the other hand, at the level of the powers, their discordant classes could still arise. Although the discordant classes of the five forces cannot arise, they have not yet been abandoned. The discordant class of faith is non-faith; the discordant class of effort, laziness; the discordant class of mindfulness, forgetfulness; the discordant class of meditative stabilization, distraction; and the discordant class of wisdom, faulty wisdom.

In short, on the occasion of the five powers, the five discordant classes can manifest, whereas on the occasion of the five forces, the five discordant classes can no longer manifest. The five forces are posited on the tolerance and supreme mundane qualities levels of the path of preparation.

The *Sutra on the Ten Grounds* then says:

> (6) The seven branches of enlightenment are like this:
> i. "Correct mindfulness, the branch of enlightenment – abiding in isolation," and so forth. Similarly,
> ii. "finely discriminating phenomena, the branch of enlightenment,"
> iii. "correct joyous effort, the branch of enlightenment,"
> iv. "correct joy, the branch of enlightenment,"
> v. "correct pliancy, the branch of enlightenment,"
> vi. "correct meditative stabilization, the branch of enlightenment" and
> vii. "correct equanimity, the branch of enlightenment – abiding in isolation," as before.

The first branch of enlightenment is correct mindfulness. Mindfulness is defined as non-forgetfulness with respect to a familiar phenomenon. First, we familiarize with an object and then we become mindful of it. The term "*correct* mindfulness" indicates that mindfulness has been transformed into a superior's path. The second branch of enlightenment is correct discrimination. In essence, this is wisdom. Wisdom allows one to discriminate things well, i.e., to know what to abandon and what to adopt or practice. The third branch of enlightenment is correct effort. It is an effort that has become the entity of a superior's path. The fourth branch of enlightenment is correct joy. The third branch of enlightenment is also joy in that effort includes joy. Perhaps the difference between the joy in the third and fourth branches is the way in which the joy is expressed. The fifth branch of enlightenment is correct pliancy. Both body and mind are trained so perfectly that they have become serviceable. Within the two types of pliancy, physical and mental, the fifth branch of enlightenment is mental pliancy because it is necessarily the entity of a superior's path. The sixth branch of enlightenment is correct meditative stabilization. Meditative stabilization means that one is able to abide single-pointedly on one's observed object for as long as one wishes. The seventh branch of enlightenment is correct equanimity. This is an equanimity that is a compositional factor rather than a feeling. The equanimity that is a compositional factor refers to the equanimity that is one of the eleven virtuous mental factors. This equanimity is a state free from laxity and excitement.

These are the seven branches of enlightenment. They are called 'branch' in the sense of being a cause; therefore, they are seven causes for enlightenment. The definition of a branch of enlightenment is: that which functions as a cause for enlightenment. The seven branches of enlightenment are posited on the path of seeing, while the eight-fold path of superiors is posited on the path of meditation. These levels are posited here according to the *Ornament for Clear Realizations*.

The five factors – faith, effort, mindfulness, meditative stabilization, and wisdom – are given different names in dependence on the path on which they are found. In the *Treasury of Knowledge,* it says that on the path of seeing these five factors are called "the power making all that is unknown known;" on the path of meditation they are called "the power knowing all," and on the path of no-more-learning, they are called "the power possessing all knowledge."

The *Sutra on the Ten Grounds* continues:

(7) The eight branch arya path is like this:
i. "Correct view, abiding in isolation, abiding separated from attachment, through complete abandonment, fully transformed – meditates," also
ii. "correct thought," as before,
iii. "correct speech,"
iv. "correct end (i.e., aim) of actions,"
v. "correct livelihood,"
vi. "correct exertion,"
vii. "correct mindfulness" and
viii. "correct meditative stabilization, abiding in isolation…," as before.

The eight-fold path of superiors consists of: (1) correct view, (2) correct thought, (3) correct speech, (4) correct aims of actions, (5) correct livelihood, (6) correct exertion, (7) correct mindfulness, and (8) correct meditative stabilization. These were discussed previously. In this context, a qualm arises: "Are all eight of these exalted knowers?" These eight are said to be superior's paths. According to the Svatantrika Madhyamikas, this means that they are all consciousnesses. According to the Prasangika Madhyamikas, one needs to examine whether or not they are all consciousnesses. For example, it can be asked whether the fifth and sixth, correct livelihood and correct exertion, are consciousnesses. Also

the third, correct speech, cannot be consciousness. One also needs to examine whether the fourth, correct aims of actions, is consciousness. Correct livelihood is said to be included in ethics. According to the Prasangika Madhyamikas, ethics is not pervaded by being consciousness because, for them, a vow is not pervaded by being consciousness. At the beginning of the *Ocean of Vinaya,* it says: "The abstention from verbal non-virtue and physical non-virtue due to the motivation of renunciation are physical according to the lowest and highest schools, the Vaibhashika and Prasangika Madhyamika." "Abstention" refers a vow; it is posited as form. Therefore, ethics is form. However, there is a distinction between ethics and a vow. To conclude, ethics is not pervaded by being form, whereas a vow *is* pervaded by being form. Therefore, one needs to reflect on whether the correct livelihood included in the eight-fold path of superiors is form.

The eight-fold path of superiors can be condensed into four:

1) the branch of thorough analysis – correct view,
2) the branch that causes others to understand – correct thought,
3) the branches that cause others to trust – correct speech, correct aims of actions, and correct livelihood, and
4) the branches that are antidotes to the discordant class –correct effort, correct mindfulness, and correct meditative stabilization.

Correct speech, correct aims of actions, and correct livelihood are called "branches that cause others to believe" because when one's speech is correct, when one behaves properly, and when one engages in correct livelihood, others come to believe in one. Correct effort/exertion is a branch which is the antidote to the root afflictions. Correct mindfulness is a branch which is the antidote to the secondary afflictions of laxity and excitement. Correct meditative stabilization is the antidote to the obstructions to absorption.

Tuesday morning, 28 March 2000

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

QUESTION: Why is this ground called the Radiant?
ANSWER: Chandrakirti's root text says:

There for the sugata child an illumination arises
Produced from a greater cultivation of the harmonies
Of perfect enlightenment, surpassing the copper light. [4.2abc]

On the fourth ground, an illumination of wisdom arises for a sugata child, produced from a more intense cultivation of the thirty-seven practices harmonious with perfect enlightenment. It surpasses the copper-like light described on the third ground. Since the intense light of the fire of true wisdom arises, this bodhisattva ground is called the Radiant.

Chandrakirti's description in his *Supplement* is similar to Nagarjuna's explanation in his *Precious Garland* (447-8):

The fourth is called the Radiant
Because the light of true wisdom arises
In which he cultivates supremely
The harmonies of enlightenment.

Through the maturation of these qualities he becomes
A king of the gods in [the Land] Without Combat,
He is skilled in quelling the arising of the view
That the transitory collection [is a real self].

The thirty-seven harmonies with enlightenment are divided into seven groups:
I Four mindful establishments

1 Mindful establishment on the body
2 Mindful establishment on feeling
3 Mindful establishment on mind
4 Mindful establishment on phenomena

II Four thorough abandonings
5 Generating virtuous qualities not yet generated
6 Increasing virtuous qualities already generated
7 Not generating non-virtuous qualities not yet generated
8 Thoroughly abandoning non-virtuous qualities already generated

III Four legs of manifestation
9 Aspiration
10 Effort
11 Thought
12 Analytical meditative stabilization

IV Five faculties
13 Faith
14 Effort
15 Mindfulness
16 Meditative stabilization
17 Wisdom

V Five powers
18 Faith
19 Effort
20 Mindfulness
21 Meditative stabilization
22 Wisdom

VI Seven branches of enlightenment
23 Correct mindfulness
24 Correct discrimination of phenomena
25 Correct effort
26 Correct joy
27 Correct pliancy
28 Correct meditative stabilization
29 Correct equanimity

VII Eightfold path
30 Correct view
31 Correct realization
32 Correct speech
33 Correct aims of actions
34 Correct livelihood
35 Correct exertion
36 Correct mindfulness
37 Correct meditative stabilization.

The first ground is the basis of training. In terms of the entities of the trainings, the second is in higher ethics, the third is in higher meditative stabilization, and the fourth through the sixth are in higher wisdom. On the fourth ground a bodhisattva has the training in wisdom and becomes very skilled in the coarse and subtle thirty-seven harmonies with enlightenment.

Lama Tsongkhapa posits the three higher trainings in terms of the grounds. The basis of the trainings, the perfection of giving, is posited on the first ground. The higher training of ethics is posited on the second ground. The higher training in mind, or meditative stabilization, is posited on the third

ground. The higher training of wisdom is posited on the fourth through the sixth grounds. On the fourth ground, the bodhisattva gains the wisdom that knows the subtle and coarse aspects of the thirty-seven harmonies with enlightenment. On the fifth ground, the bodhisattva gains the wisdom that knows the subtle and coarse aspects of the four noble truths. On the sixth ground, the bodhisattva gains the wisdom meditating on the forward and reverse processes of the twelve links of dependent-arising.

On the fourth ground, the bodhisattva becomes very skilled in the subtle and coarse aspects of the thirty-seven harmonies with enlightenment, and has the higher training of wisdom.

The wisdom knowing the coarse aspect of the thirty-seven harmonies with enlightenment is the wisdom knowing the thirty-seven harmonies with enlightenment as qualified by the emptiness of the person of self-sufficient substantial existence. The wisdom knowing the subtle aspect of the thirty-seven harmonies with enlightenment is the wisdom knowing the thirty-seven harmonies with enlightenment as qualified by the emptiness of the person of inherent existence.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A4C Features of abandonment

Chandrakirti's autocommentary says:

> On this ground, not only meditation upon the harmonies of enlightenment arises:
>
> *[That] related to viewing oneself is fully exhausted.* [4.2d]
>
> On this ground, viewing toward his own self will also be exhausted, as was taught:
>
> > O children of the Conqueror, the bodhisattva who abides on this bodhisattva ground possessing radiance is separated from excessive movement of motivation due to strong settling upon self, sentient beings, living creatures, effigies, beings, persons, aggregates, elements, and entrances; and is separated from complete investigation, complete analysis, holding as stable, holding as mine, holding as jewels, and all which is abiding of the world.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> *What is related to the view of a self is extinguished.* [4.2d]
>
> The view of a self is the subtle view of the transitory collection, which precedes the coarse conceptions of a self of persons and of a person's belongings, and Chandrakirti refers to these latter as being related with a view of self. They are the conceptions that sentient beings and so forth exist substantially, self-sufficiently. Both this conception of a self of persons and that of phenomena – an adherence to the truth of the aggregates, constituents, and sources – are thoroughly extinguished.
>
> The meaning of 'extinguishment' is an abandonment of the seeds of the two conceptions of self that are to be abandoned on this ground and not extinguishment of all [forms of the two conceptions. For] the *Sutra on the Ten Grounds* indicates that [a fourth grounder] has the innate view of the transitory collection as a real 'I' and 'mine'.

The conception viewing the person as a self-sufficient substantially existent self is only an *imputed* view of the transitory collection; it is not a real view of the transitory collection. There is an innate view of the transitory collection viewing the person as self-sufficient substantially existent which is an

object to be abandoned. The objects to be abandoned by the fourth ground include both the conception of self of persons and the conception of a self of phenomena.

Is the conception of the person as self-sufficient substantially existent a conception of a self of persons? If one realizes the non-existence of the referent object of the conception of the person as self-sufficient substantially existent, is one pervaded by having realized the selflessness of persons? If someone accepts this, one asks: "Has he also realized emptiness? Has he realized the emptiness existing on the person? Is there a Vaibhashika who has entered a path?" It follows that if there is, he has realized the person as empty of being self-sufficient substantially existent. Since he has realized the person as being empty of self-sufficient substantial existence, it follows that he has realized the selflessness of persons. If he has realized the selflessness of persons, it follows that he has realized the emptiness on the person. The solution to this dilemma is to say that he has realized the *coarse* selflessness of persons, i.e., he has realized the non-existence of the referent object of the conception of a *coarse* self of persons, but he has not realized the non-existence of the referent object of the conception of a self of persons. In short, he has realized the coarse selflessness of persons, but he has not realized the selflessness of persons. If it is a realization of selflessness of persons, it is pervaded by being a realization of the subtle selflessness of persons.

When the root text says "What is related to the view of a self is extinguished," some people interpret the word 'self' in relation to the emptiness of the person of self-sufficient substantial existence. However, this interpretation is not correct. The correct interpretation is that this passage refers to the subtle selflessness of persons. On the fourth ground the bodhisattva realizes the subtle selflessness of persons which is the emptiness of the person of inherent existence. "Extinguished" means that the bodhisattva on the fourth ground extinguishes the view of a self of persons only with respect to himself, not with respect to all persons. This implies that the view of self exists on the higher grounds; in fact, it exists through the seventh ground. There are some who say that such a view of a self-sufficient substantially existent self is extinguished by the fourth ground; they claim there is no such conception on the later grounds. I do not think this is correct because there is a view of self which is innate that is not extinguished by the end of the fourth ground; rather it continues through the seventh ground. Upon reaching the eighth ground, all conceptions of a self have been completely abandoned. Lama Tsongkhapa also says: "The *Sutra on the Ten Grounds* indicates that a fourth grounder has the innate view of the transitory collection as a real 'I' and 'mine.'" This means that sutra also presents that there exists an innate view of the transitory collection.

Student: What is the difference between an *acquired* conception of a self-sufficient substantially existent self and the *innate* conception of a self-sufficient substantially existent self?
Geshe-la: An innate conception of the person as self-sufficient substantially existent is not a view of the transitory collection. It is only *imputed* as a view of the transitory collection and is not a *real* view of the transitory collection. It is not a view of the transitory collection because a view of the transitory collection must be an afflicted wisdom that, observing 'I' or 'mine,' conceives them to be inherently existent.
Student: So that would be called the object of abandonment of the path of seeing that is the *imputed* view of the transitory collection?
Geshe-la: The Tibetan word *kun btags* can be translated as either 'imputed' or 'acquired.' On the path of seeing, the *acquired* view of the transitory collection is abandoned but not the *imputed* one. This will be elaborately explained in the sixth chapter in the context of establishing the selflessness of persons.

Chandrakirti's autocommentary says:

From the *Explanation of the 'Supplement to the "Middle Way,"'* the Fourth Mind Generation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Such is the explanation of the fourth ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of Chandrakirti's 'Supplement to the Middle Way.'*

To synthesize, the main focus of the fourth chapter is the thirty-seven practices harmonious with enlightenment. These are common to all superiors – hearer superiors, solitary realizer superiors, bodhisattva superiors, and buddha superiors. These thirty-seven were also discussed in the *Ornament* in the context of the thirty-seven aspects of the exalted knower of all aspects common to hearers.

With respect to the passage in the *Illumination* that says "becomes very skilled in the coarse and subtle aspects of the thirty-seven harmonies with enlightenment," what does this mean and how does it relate to our life? How do we understand the close placement of mindfulness of the body? How do we understand its coarse and subtle aspects? Since the thirty-seven harmonies with enlightenment have coarse and subtle aspects, the close placement of mindfulness of the body must also have a coarse and subtle aspect. These are posited from the point of view of cause. A coarse body is a body that is produced by the conception of a self-sufficient substantially existent person. A subtle body is produced by the conception of an inherently existent person. When one closely places the mindfulness on a body qualified by being empty of self-sufficient substantial existence, one is meditating on the *coarse* aspect of the close placement of mindfulness of the body. If one meditates on a body qualified by being empty of inherent existence, one is meditating on the *subtle* aspect of the close placement of mindfulness of the body.

In general, it is said that when meditating on the close placement of mindfulness on the body, one analyzes the two – the general and specific characteristics of the body. Meditating on the *general* characteristics of the body is meditating on the body as empty of being self-sufficient substantially existent and also as empty of being inherently existent. 'General characteristics' include two features: (1) the emptiness of a self-sufficient substantially existent self and (2) the emptiness of an inherently existent self. These two are called *general* characteristics because they are also characteristics with regard to feelings, mind, and phenomena; i.e., they are not limited to merely the body. 'Specific characteristics' in the case of the body are, for example, that it is light, heavy, an element, and an evolute. These specific characteristics pertain to the body; they are not common to feelings, mind, and phenomena. In brief, there are two meditations with regard to the close placement of mindfulness on the body: meditation on the general characteristics of the body and meditation on the specific characteristics of the body.

Geshe-la: To which of the four close placements of mindfulness - body, feeling, mind, or phenomena – does meditation on the breath belong? Think about this. When one meditates on the breath, one understands that it is part of the body. How would you characterize the breath?
Student: It is a movement of the gross body.
Geshe-la: Khor sum! Do you think that the breath is an element or an evolute? We should be aware that the term 'body' does not necessarily refer to the physical body that we possess. The Sanskrit term for body is *kaya*, which has many connotations. *Kaya* is defined as: that which is composed of many branches. Do you not think that the breath is the wind element? It is tangible because all four elements are tangible objects. Evolutes (i.e. secondary elements, products of the elements, that derived from the elements) are of seven types: (1) smoothness, (2) roughness, (3) heaviness, (4) lightness, (5) cold, (6) hunger, and (7) thirst. All the elements belong to the category of the close placement of mindfulness of the body.

Meditation on the breath can be done in many ways, for example, in conjunction with the four noble truths, the four elements, five aggregates, the six spheres, and the twelve links of dependent-arising. The main point is to closely place one's mindfulness on the body while examining the characteristics of the body very thoroughly. When a bodhisattva meditates on the close placement of mindfulness of the body, he takes both his own and others' bodies as his object of meditation. In contrast, hearers meditate on only their own bodies; they do not observe others' bodies.

Tuesday afternoon, 28 March 2000

In regard to the outline "Features of abandonment" (3B1C-2A4C) Lama Tsongkhapa says: "The view of the self is the subtle view of the transitory collection, which precedes the coarse conceptions of a self of persons and of a person's belongings, and Chandrakirti refers to these latter as being related with a view of self. They are the conceptions that sentient beings and so forth exist substantially, self-sufficiently." Regarding "the coarse conceptions of a self of persons," it can be asked: "How do these conceptions apprehend the person as self-sufficient substantially existent?" One interpretation is that these conceptions are of two types: (1) conceptions acquired through learning tenets and (2) innate conceptions that arise automatically. When one apprehends the person as self-sufficient substantially existent, one apprehends the person as a carrier of a load, the load being the aggregates. Or one apprehends the person to be the owner of the aggregates, the aggregates being that which is owned. The person as owner thinks: "I own this and that," "These are my eyes," "These are my aggregates," and so forth. In this way, the person has a natural idea of being the owner of the aggregates. When one has the conception thinking 'mine,' one conceives of the person as completely independent from the aggregates. In other words, the person is conceived to be completely self-sufficient, not dependent on the aggregates. This passage about the person and the aggregates is elaborately explained in two scriptural references: the Prasangika section of the *Treatise Differentiating Interpretable and Definitive Meanings: The Essence of Eloquence* by Lama Tsongkhapa and *A Dose of Emptiness* by Khedrup Je, both of which are available in English.

The conception apprehending the person to be permanent, unitary, and independent is necessarily acquired; it cannot be innate.

THE FIFTH MIND GENERATION

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A5 The fifth ground, the Difficult to Overcome

This section has two parts:

A Description of the fifth ground
B Surpassing concentration and skill in the truths

3B1C-2A5A Description of the fifth ground

Chandrakirti's autocommentary says:

Now, from the viewpoint of the fifth mind generation:

The mahatma, even by all maras,
Cannot be defeated on the Difficult to Overcome Ground. [5.1ab]

> If the bodhisattva abiding on the fifth bodhisattva ground cannot be defeated even by the devaputra maras (demons of the sons of the gods] abiding in all realms of the world, leave alone mentioning by other than them, such as Obeyers of Mara's Requests and so forth. Therefore, the name of this ground is Difficult to Overcome.

Chandrakirti says that a bodhisattva on the fifth ground cannot be defeated by any kind of god; for this reason, this ground is called Difficult to Overcome. When Chandrakirti says "cannot be defeated even by the devaputra maras," he is referring to one of the four maras, the mara of the sons-of-the-gods. The devaputras, or sons-of-the-gods, are also called "those with the five arrows" in that they have five arrows with which they harm sentient beings. However, the sons-of-the-gods cannot harm the bodhisattva on the fifth ground by shooting their arrows. Since the sons-of-the-gods cannot overcome this bodhisattva, there is no need to mention that their servants are not able to harm him. The five arrows are: (1) the arrow that causes confusion, (2) the arrow that causes fainting, (3) the arrow that causes craziness, (4) the arrow that kills, and (5) the arrow that causes forgetfulness. Due to being hit by the arrows of the sons-of-the-gods, one may, for example, feel strong desire and attachment. Also, if right from the time one wakes up one feels very clumsy and ignorant, then it is a sign that one has been hit by an arrow. One should not think of these as physical arrows; rather it is a kind of energy being sent to us by the sons-of-the-gods as a result of which one feels ignorant and so forth. However, this only happens to people like us; the fifth ground bodhisattva is not open to such harm.

There is also another list of the five arrows from a different source: (1) an intoxicating arrow, (2) a shaking arrow [i.e., one that causes one to shake], (3) an arrow that makes one proud, (4) an obscuring arrow, and (5) a dying arrow. At the beginning of his *Treatise Differentiating Interpretable and Definitive Meanings: The Essence of Eloquence,* Lama Tsongkhapa sets forth a homage, one verse of which says:

> *[The gods known as] Bliss-Arising, Cloud Mount, Golden Womb,*
> *Bodiless Lord, Garlanded Belly, and so on –*
> *Even they became like fireflies [overwhelmed] by the sun and thereupon*
> *Paid respect with their beautiful crowns to his lotus feet.*

The 'Bodiless Lord' refers to the sons-of-the-gods; therefore, at this point the commentaries on *The Essence of Eloquence* discuss the five arrows. The sons-of-the-gods are called bodiless lords because they are so huge compared to the beings of the desire realm that these beings appear tiny, almost bodiless.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) (Tib. page 107) says:

> Chandrakirti's root text says:
>
> *This great being on the ground Difficult to Overcome*
> *Cannot be defeated even by all the demons.* [5.1ab]
>
> This great being abiding on the fifth ground, the Difficult to Overcome, cannot be defeated even by all the *devaputra* demons abiding in all the realms of the world. If so, what need is there to mention that he cannot be overcome by other demons such as Obeyers of [Demonic] Requests and Servant Demons? Therefore, the name of this ground is 'Difficult to Overcome'.
>
> Nagarjuna's *Precious Garland* (449-50) says:

> The fifth is called the Extremely Difficult to Overcome
> Since all demons find it extremely hard to conquer him;
> He becomes skilled in knowing the subtle
> Meanings of the noble truths and so forth.
>
> Through the maturation of these qualities he becomes
> A king of the gods abiding in the joyous Land,
> He overcomes the sources of the afflicted views
> Of all the Forders.

Lama Tsongkhapa says that a fifth ground bodhisattva cannot be overcome by demons and, therefore, the fifth ground is called Difficult to Overcome. Nagarjuna's *Precious Garland* says: "The fifth is called the Extremely Difficult to Overcome since all demons find it extremely hard to conquer him; he becomes skilled in knowing the subtle meanings of the noble truths and so forth." This means that a fifth ground bodhisattva is skilled in the four noble truths.

Nagarjuna then says: "He becomes a king of the gods abiding in the joyous land." This can be translated either in this way or alternatively as: "He *conquers* the gods abiding in the Joyous Land."

Nagarjuna then says: "He overcomes the sources of the afflicted views of all the Forders." What are the views of the Forders? They are the sixty-two bad views discussed in the context of the *Ornament for Clear Realizations* which, when condensed, are the fourteen unspecified views. These fourteen can be further condensed into four groups: three groups of four, and one group of two. The first group consists of the four: the view of the I and the world as permanent, impermanent, both, and neither. The second group consists of the view of the I and the world as having a beginning, not having a beginning, having both, and having neither. The third group consists of the view of the Tathagata arising after his death, not arising after his death, both, and neither. The last group includes the view of the body and life force as being one substantial entity and the view that they are different substantial entities. These are called "the bad views of the Forders" or "the fourteen unspecified views." They are called "unspecified" in that when the Buddha was asked whether, for example, there is a beginning, he did not answer but remained silent. The Buddha did not answer these questions because the questioner posed the question on the basis of conceiving of a self of persons. If the Buddha had said that there is no beginning, the questioner would have thought that then there is no self. Such an answer regarding selflessness would not have been an adequate answer for these people. On the other hand, if the Buddha had said that there *is* a beginning, they would have thought that there is a self. Although one of these *is* the correct answer, the Buddha chose not to answer these questions in order not to harm his questioners.

According to the *Treasury of Knowledge* the source of views is all contaminated phenomena. This text (v. 1.8) says:

> *The contaminated are also the appropriated*
> *Aggregates, with combat too.*
> *Sufferings, origins, the world,*
> *The source of views, and existence are also those.*

These lines set forth various epithets for contaminated phenomena. True sufferings and true origins are posited as mutually inclusive in the *Treasury of Knowledge*. "Are also those" means that sufferings, origins, the world, and the source of views are also contaminated phenomena. Contaminated phenomena are the source of views because, due to one's apprehending contaminated phenomena, many bad views arise.

In *Precious Garland* "the source of afflicted views" can refer to either the sixty-two bad views mentioned previously or to the five bad views:

1) the view of the transitory collection,
2) the view holding to an extreme,
3) the view holding a bad view as supreme,
4) the view holding bad ethics and modes of conduct as supreme, and
5) wrong view.

In conclusion, the fifth ground bodhisattva overcomes *all* of these bad views, the five and the sixty-two.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

3B1C-2A5B Surpassing concentration and skill in the truths

Chandrakirti's autocommentary says:

That bodhisattva:

Attains surpassing concentration and extreme skill also
To realize the precise nature of the truths of the good minded. [5.1cd]

should be known.

For him, from the ten [practices] gone beyond, concentration gone beyond itself will become greatly surpassing. The good minded are the aryas. Their truths – the truths of the good minded – means the "arya truths." Nature is self entity. The nature which is to be borne in mind by a precise knower is the precise nature; hence, he will become greatly skilled in knowing the subtle self entity of the truths of [those with] good intelligence.

There, the four arya truths are called: suffering, origin, cessation, and path.

If asked: the Bhagavan indicated the truths are only two; that is, conventional truth and ultimate truth. As was taught in the *Meeting of Father and Son Sutra:*

The Exalted Knower of the World, not listening to others,
Demonstrated these two truths by himself.
They are conventional and likewise ultimate –
A third truth does not exist at all.

Among the ten perfections, the fifth ground bodhisattva attains the surpassing practice of concentration. When the text says "the good-minded," it means superiors. "Nature is self entity" refers to the four noble truths, which are realized by superiors. "The nature which is to be borne in mind by a precise knower is the precise nature" refers to the subtlety of the four noble truths. When the root text says "the truths of the good-minded," this refers to the four noble truths. The four noble truths have coarse and subtle aspects. The fifth ground bodhisattva knows both these aspects.

The four noble truths are: true sufferings, true origins, true cessations, and true paths. When the Buddha turned the first Dharma wheel of the four noble truths, he said: "Such are sufferings, truths for superiors; such are origins, truths for superiors; such are cessations, truths for superiors; such are paths, truths for superiors." Then he said: "True sufferings are to be known, true origins are to be abandoned, true cessations are to be actualized, and true paths are to be meditated." Next, the Buddha taught: "Sufferings are known, there are no more sufferings to be known. Origins are abandoned, there are no more origins to be abandoned. True cessations are actualized, there are no more cessations to be actualized. True paths are meditated, there are no more paths to be meditated." In this way the Buddha taught the four noble truths by means of three repetitions within the first Dharma wheel: (1) the repetition regarding the entity, (2) the repetition regarding what is to be done, and (3) the repetition regarding that done.

Coarse and subtle true sufferings and coarse and subtle true origins can be understood by applying the same formula as in the case of the coarse and subtle [close placement of mindfulness on the] body. Thus, coarse true sufferings are those produced from the conception of the person as self-sufficient substantially existent. Subtle true sufferings are those produced from the conception of the person as inherently existent. We can find more detail concerning this in Kunkyen Jamyang Shepa's *Great Exposition of the Middle Way* and Jedzun Chokyi Gyeltshen's *General Meaning*.

Chandrakirti next sets forth an objection: "Why is there discussion about four truths when the Buddha taught that there are only two truths?" This question arises because in the *Meeting of Father and Son Sutra,* Buddha taught that there are only two truths. This sutra was taught in the Sakya village, Kapila, in which the Buddha's father, Shuddhodana, lived. A monk named Udayin who also lived in this village had invited the Buddha to teach there. The Buddha, seeing his father among the crowd, taught the two truths. This is the reason that this sutra is called the *Meeting of Father and Son Sutra*. The Sanskrit name is *Pitaputrasamagamasutra*, *pita* referring to the father Shuddhodana and *putra* referring to Siddhartha, the Buddha.

Wednesday morning, 29 March 2000

As was said before, someone raises an objection in regard to the *Meeting of Father and Son Sutra,* asking why there are said to be four truths since, in this sutra, Buddha taught that there are only two truths. The two truths taught in this context are the *conventional truth* and the *ultimate truth*. Conventional truth is an object found by a valid cognizer analyzing for a conventionality. Ultimate truth is an object found by a valid cognizer analyzing for an ultimate.

This objection continues in the autocommentary (Tib. page 47) saying:

> And also explained in the [*Treatise on the*] *Middle Way* [24, 8]:
>
> > The Dharma taught by the buddhas depends wholly on the two truths,
> > worldly conventional truth and ultimate truth.
>
> Therefore, how can another four arya truths exist differently from the two truths?

When the *Treatise on the Middle Way* says "worldly conventional truth and ultimate truth" the word "worldly" implies a conventional awareness. That which is a truth for it is a conventional truth. An ultimate truth is a truth for an exalted wisdom of meditative equipoise. The exalted wisdom of meditative equipoise is taken as the ultimate and that which is a truth for it is an ultimate truth. When the objector asks "how can another four arya truths exist differently from the two truths?," the answer is that although there are no truths that are not included in the two truths, there is a reason for presenting the four truths.

Chandrakirti's autocommentary says:

> I shall explain. Although it is indeed like that, nevertheless, in order to indicate the properties of cause and result of that to be accepted and that to be abandoned, the four arya truths are described here.
>
> Regarding that, the side which is to be abandoned is the fully deluded. Its result is the truth of suffering. The cause is the truth of origin. The side which is to be accepted is the completely pure. Its result is the truth of cessation. The cause of attaining that is the truth of the path.

> There the truths of suffering, origin and the path, are included within conventional truth. The truth of cessation is the self-entity of ultimate truth. Similarly, whatever few other truths exist are to be ascertained as solely included in either of the two truths.

Although the four truths are included in the two truths, the Buddha taught them in order to understand what is to be adopted and what is to abandoned. What is to be abandoned are true sufferings, the result, and true origins, the cause of that result. What is to be adopted are true cessations, the result, and true paths, the cause of attaining that result. A true cessation is only a nominal result which is called 'a result of separation,' but is not an *actual* result. In the sense that true paths are the means for attaining a true cessation, they are said to be its cause. However, true cessations are not an actual result because they are permanent phenomena, whereas both causes and results are phenomena that are able to perform a function. Therefore, true cessations are only nominally given the name 'result.'

Next follows an explanation of the four noble truths and their sixteen attributes. The presentation of the sixteen attributes differs in the various scriptures. The presentation of the four noble truths in the two *Knowledges* is a presentation of the coarse four noble truths, whereas the presentation in the *Supplement* is of the subtle four noble truths. When the four noble truths are explained individually, their attributes are also explained in terms of both the coarse and the subtle. However, Jedzun Chokyi Gyeltshen says that the first of the sixteen attributes, impermanence, does not have both coarse and subtle aspects because there is no difference in the degree of subtlety of the impermanence explained by the lower schools and that explained by the higher schools in that both present impermanence as momentariness or that which disintegrates momentarily. On the other hand, Kunkyen Jamyang Shepa says that there *are* both coarse and subtle impermanences.

The two aspects of the second attribute of true sufferings, misery, are presented in terms of cause in that the misery produced by the conception of a self-sufficient substantially existent person is coarse, whereas the misery produced by the conception of an inherently existent person is subtle. For this reason, the two aspects of coarse and subtle misery are posited in terms of their causes.

The remaining attributes of true sufferings, empty and selfless, also have two aspects; however, they are not presented in terms of cause. The coarse aspect is the common assertion that empty means empty of a permanent, independent, unitary self that is a different entity from the aggregates and that selfless means the lack of a self-sufficient substantially existent person. The subtle aspect is the uncommon assertion of the Prasangika Madhyamikas that both empty and selfless are the emptiness of inherent existence or the emptiness of existing from its own side. In short, they do not distinguish a difference between the attributes of empty and selfless, whereas the lower schools do distinguish them. The Prasangika Madhyamikas also assert that the person is empty of being permanent, independent, unitary; however, they explain that this is the emptiness of a permanent, independent, unitary person *qualified by non-inherent existence*.

The four coarse attributes of true origins – coarse cause, coarse origin, coarse strong producer, and coarse condition – are all the eighth link craving as it is commonly asserted by the lower schools, or the attachment produced by the conception of a self-sufficient substantially existent person.

The four subtle attributes of true origins – subtle cause, subtle origin, subtle condition, and subtle strong producer [again, is this correct order?] – are all the attachment produced by the conception of an inherently existent person. These four attributes are subtle in the sense that they are more difficult to realize than the coarse attributes. Thus, in this case coarse and subtle are in relation to the difficulty of realizing them. In short, because the first four are easier to realize, they are called the coarse attributes of true origins, whereas the second four are more difficult to realize and are therefore called the subtle attributes of true origins.

True origins are explained as actions and afflictions. Within the true origins that are afflictions, there are two types: the six root afflictions and the twenty secondary afflictions. The true origins that are actions are of many types, such as projecting actions, actualizing actions, completing actions, and so forth.

The attributes of true cessations are cessation, pacification, auspicious highness, and definite emergence. True cessations are also of two types: the coarse and the subtle. Coarse true cessations are those explained in the two *Knowledges* (the *Treasury of Knowledge* by Vasubandhu and the *Compendium of Knowledge* by Asanga), whereas the subtle are those explained by the Prasangika Madhyamikas. Some say that the true cessations explained in the lower schools (i.e., in the two *Knowledges*) are imputed true cessations, not fully qualified true cessations. Likewise, they say that the true paths explained in the two *Knowledges* are not fully qualified true paths. This would mean that the foe destroyers explained in the two *Knowledges* are imputed foe destroyers and not fully qualified foe destroyers.

However, if someone were to insist that there are another kind of coarse and subtle true cessations they can be posited respectively as: (1) a cessation which is a state in which the conception of self-sufficient substantial existence is abandoned and (2) a cessation in which the conception of inherent existence is abandoned. However, this assertion leaves room for debate.

In regard to the attribute of definite emergence of true cessations, the term 'definite emergence' is the same as that which comes in the context of the three principal aspects of the path (definite emergence or renunciation, the mind of enlightenment, and correct view). What is the difference between them? In the context of the *Stages of the Path,* a thought of definite emergence is presented, this being the thought to achieve nirvana. On the other hand, in the context of the attribute of definite emergence there is a discussion as to where one emerges, from what, by what means, and who emerges.

The four attributes of true paths are: path, suitability, achievement, and deliverance. These four also have a coarse and subtle aspect. The four coarse attributes are exalted knowers of the emptiness of self-sufficient substantial existence, whereas the four subtle attributes are exalted knowers of the emptiness of inherent existence. An exalted knower is called 'path' because by means of it one reaches liberation. In the fourth chapter of the *Ornament for Clear Realizations,* true paths are posited in terms of theses and proofs in that a thesis is set out, a question asked, and a proof given. However, the fourth attribute of true paths, deliverance, does not have a proof as there was no need for Buddha to set this out in order for his close disciples to understand it.

For the Prasangika Madhyamikas true sufferings, true origins, and true paths, are conventional truths, whereas true cessations are ultimate truths. For the Svatantrika Madhyamikas all four truths are conventional truths, i.e., they do not assert true cessations to be ultimate truths. However, the following is quoted in Kunkyen Jamyang Shepa's *Great Exposition of the Middle Way* in the context of the fifth mind generation (page 343): "*A Dose of Emptiness* says: 'Regarding the assertion that if it is a true cessation it is pervaded by being thusness, there are no Chittamatra and Madhyamika scholars who would disagree with this." But if asked whether the Svatantrika Madhyamikas accept true cessations as thusnesses, although they should in that they are Madhyamikas, they do not. The assertions of *A Dose of Emptiness* often differ from other texts. Here it would seem to say that the Chittamatrins assert true cessations to be ultimate truths.

For the Vaibhashikas, true cessations are probably ultimate truths, because they give the definition of conventional truth as: a phenomenon that is such that when it is broken up or mentally separated into individual parts, the awareness apprehending that object is canceled. An ultimate truth is a phenomenon that is such that when it is broken up or mentally separated into individual parts,

the consciousness apprehending that object is not canceled. A true cessation cannot be destroyed, for example, by a hammer. In addition, it cannot be mentally separated into parts, therefore the consciousness apprehending it cannot be canceled by this means.

On the contrary, for the Sautrantikas a true cessation is a conventional truth because it is a phenomenon that is not able to perform a function ultimately. In the Sautrantika school an ultimate truth is defined as that which is able to perform a function ultimately, while a conventional truth is defined as that which is not able to perform a function ultimately. There is a text in English called *The Two Truths,* by Guy Newland, which draws on several sources including Geshe Ngawang Palden, and sets out the definitions of the two truths according to the four schools.

For what reason do the Svatantrika Madhyamikas say that true cessations are not ultimate truths but conventional truths? They say that a true cessation arises through abandoning an object of abandonment that is a conventional truth, therefore, because the object of abandonment is a conventional truth, its abandonment must also be a conventional truth.

For what reason do the Prasangika Madhyamikas say that true cessations, i.e., abandonments, are ultimate truths and not conventional truths given that they assert that the object of abandonments are conventional truths? They say that the reality of the mind is emptiness, ultimate truth. Although all minds have this reality, only when an object of abandonment has been removed is it posited as a true cessation. Only then is the reality of the mind posited as ultimate truth, as a true cessation. For example, today Sherab, our translator, is in his usual aspect of wearing lay clothes, having a girl friend, and so forth but what happens if tomorrow he were to cut his hair and put on monk's clothes? Although Sherab has changed, Sherab still remains. Are there two Sherabs, one a lay person and one a monk, or only one? Sherab is still Sherab, whether he is a lay person or monk, yet there has been a change in his appearance. Likewise, the reality of the mind remains the same but the difference is in terms of whether or not the stains of the objects of abandonment have been removed. When the stains have been removed, the reality of the mind is a true cessation, whereas when the stains have not been removed the reality of the mind is not a true cessation.

Q: Therefore, are true cessations merely imputed ultimate truths but not actual ultimate truths?
A: Everything is imputed according to the Prasangika Madhyamikas.
Q: Are they not fully qualified true cessations?
A: They are both fully qualified and merely imputed.

This concludes the discussion of the coarse and subtle four noble truths, which are further clarified in *Two Truths*.

The word 'conventional truth' in Tibetan is *kun 'dzob den pa*; literally *kun* means 'all,' *dzob* means 'concealer' or 'that which obscures,' and *den pa* means 'truth.' Conventional truths are so-called because they obscure the seeing of reality. This is what Dharmakirti says in *Compendium of Valid Cognition,* but there are different interpretations. When the mind apprehends a conventional mode of subsistence it is prevented from apprehending the ultimate mode of subsistence. In the *Compendium of Valid Cognition,* conception is posited as the concealer that obscures all. For example, conception cannot see a form, an object of the eye consciousness, nakedly. What perceives a form directly or nakedly? Only the eye consciousness sees a form nakedly. A conception is not able to see a form directly or nakedly because it conceals the form's mode of subsistence.

Wednesday afternoon, 29 March 2000

Chandrakirti's autocommentary says:

Further, if asked: what other truths exist different from the four truths?

I shall explain. They exist as was taught in the *Fifth Bodhisattva Ground* [of the *Sutra on the Ten Grounds*]:

> "This is suffering, the arya truth" is thoroughly known just as it really is. "This is the origin of suffering. This is the cessation of suffering. This is the path which progresses to the cessation of suffering, the arya truth," are thoroughly known just as they really are.
>
> He is skilled in conventional truth; skilled in ultimate truth; skilled in the truth of characteristics; skilled in the truth of complete divisions; skilled in the truth which, differentiating, realizes; skilled in the truth of functioning things; skilled in the truth of strong production; skilled in the truth which knows exhaustion and non-generation; skilled in the truth of engaging the knower of paths; skilled in the truths from achieving connecting the borders of all sequences of bodhisattva's grounds till the exalted wisdom of the Tathagata arises.
>
> There, [he] thoroughly knows conventional truth through producing satisfaction exactly in accordance with knowing the thoughts of other sentient beings; thoroughly knows ultimate truth through fully absorbing in the sole progression; thoroughly knows the truth of characteristics through realizing specific and general characteristics; thoroughly knows the truth of complete divisions through realizing the presentation of the complete divisions of phenomena; thoroughly knows the truth which, differentiating, realizes through subsequently realizing the presentation of the aggregates, elements, and entrances; thoroughly knows the truth of functioning things through descending into experience the harms to body and mind; thoroughly knows the truth of strong production through realizing rebirth (joining the essential boundary) in migrations; thoroughly knows the truth which knows exhaustion and non-generation through extremely pacifying all extensive torments of epidemics; thoroughly knows the truth which engages the knower of paths through strongly establishing the non-dual; and thoroughly knows the truths from achieving connection of the borders of all sequences of bodhisattva's grounds till the exalted wisdom of the Tathagata arises through bearing in mind manifestly and completely all aspects.

The *Fifth Bodhisattva Ground* of the *Sutra on the Ten Grounds* mentions various types of truths but all of them are included in the two truths, conventional truths and ultimate truths.

"Skilled in the truth of characteristics" either means being skilled in the divisions of the two truths or in the characteristics or definitions of the two truths.

"Skilled in the truth of complete divisions" means that the bodhisattva is skilled in the divisions of conventional truth and ultimate truth. For example, conventional truth is divided into two, that which is real and that which is unreal to the face of worldly knowledge. Ultimate truth also has its respective divisions such as the sixteen ultimate truths or sixteen emptinesses, the twenty ultimate truths, four ultimate truths, and so forth.

"Skilled in the truth which, differentiating, realizes" means that the bodhisattva is skilled in differentiating and realizing. "Skilled in the truth of functioning things" means being skilled in the three divisions of functioning things: matter, consciousness, and non-associated compositional factors. "Skilled in the truth of strong production" means knowing that which is produced by causes and conditions.

"Skilled in the truth which knows exhaustion and non-generation" means that the bodhisattva knows certain afflictions have been exhausted and that they will not be produced again. Vasubandhu, in his *Treasury of Knowledge,* posits ten kinds of knowledge, the last two being the knowledge of exhaustion and the knowledge of non-generation. These ten knowledges are:

(1-4) the knowledges of the four noble truths,

(5-6) dharma knowledge and subsequent knowledge,

(7) the knowledge of conventionalities,
(8) the knowledge of others' minds,
(9) the knowledge of exhaustion, and
(10) the knowledge of non-generation.

This topic of exhaustion and non-generation is also discussed in the fifth chapter of the *Ornament for Clear Realizations* in the context of the definition of great enlightenment.

"Skilled in the truth of engaging the knower of paths" means that the bodhisattva knows the three types of knower of paths: (1) a knower of paths knowing hearers' paths, (2) a knower of paths knowing solitary realizers' paths, and (3) a knower of paths knowing mahayana paths.

"Skilled in the truths from achieving connecting the borders of all sequences of bodhisattva's grounds till the exalted wisdom of the Tathagata arises" means that the bodhisattva knows the means of progressing sequentially through the bodhisattva grounds up to the buddha ground.

"There, [he] thoroughly knows conventional truth through producing satisfaction exactly in accordance with knowing the thoughts of other sentient beings" means that due to knowing all the diverse phenomena, the bodhisattva is able to benefit sentient beings in accordance with their aptitudes. For example, if the bodhisattva knows that a sentient being needs a cup of coffee he can materialize it! In this way a bodhisattva can satisfy sentient beings.

Someone recently asked me what he should do in order to attain clairvoyance. I told him that he needed to cultivate concentration. However, one should be careful when doing so because it is said that between reasoned knowledge and clairvoyance it is better to have knowledge gained through reasoning. There is a story about this regarding Vasubandhu and Dignaga. Dignaga, with his eye clairvoyance, could see a pregnant cow on the other side of a mountain and that the calf had a patch on its forehead. However, Vasubandhu, who did not have clairvoyance, said that it was not a patch on the forehead but that the tip of its white tail was resting on its forehead (he was able to say this because when a calf is in the womb, its tail generally rests on its forehead). They made a bet as to who was right and then went to the house of the family who owned the pregnant cow. They told the story to the householder and asked him to let them know when the calf was born whether its forehead or the tip of its tail were white. When the calf was born it was the tip of the tail that was white. This shows that reasoned knowledge can at times be better than eye clairvoyance. Likewise, the clairvoyance knowing others' minds can at times be mistaken or the person with it can misinterpret what is seen. For example, there are clairvoyants who do mirror-reading, meaning that they see images in a mirror. However, merely seeing these images is not enough; they must know how to interpret what they see. Also in Nepal there are people who paint their left palm and put some grains of rice on it and then ask a young child to look at it whereupon the child recounts what he sees. For the children, it is like watching TV and therefore, at times, they remain entranced by what they see instead of reporting it to the adult! At times, letters appear rather than images, these being easier to understand.

The *Fifth Bodhisattva Ground* [of the *Sutra on the Ten Grounds*] then says: "Thoroughly knows ultimate truth through fully absorbing in the sole progression." This means that the bodhisattva realizes emptiness, the path to enlightenment. In general it is said that the wisdom realizing emptiness is the unique path which all the buddhas of the three times travel.

"Thoroughly knows the truth of characteristics through realizing specific and general characteristics" does not refer to specifically characterized phenomena and generally characterized phenomena, but to specific and general characteristics. Specific characteristics are those that are unshared by other phenomena, while general characteristics are those that are common to other phenomena. In the *Ornament for Clear Realizations,* true sufferings were explained in terms of their specific characteristics and general characteristics, saying that the specific characteristics of true sufferings are their four attributes (impermanence, misery, empty, and selfless) whereas their general

characteristic is their lack of true existence. The word 'characteristic' (Tib. *mtshen nyid*) can mean either attribute or definition. However, usually it means definition. In the context of the specific and general, *mtshen nyid* is translated as characteristic.

The bodhisattva "thoroughly knows the truth of complete divisions through realizing the presentation of the complete divisions of phenomena." How many divisions of phenomena are there? There can be said to be many – the 108 divisions from forms through the exalted knower of all aspects – or there can be said to be very few, the modes and varieties.

The bodhisattva "thoroughly knows the truth which, differentiating, realizes through subsequently realizing the presentation of the aggregates, elements, and entrances." 'Aggregates' are defined as a heap or pile or mass of many things. 'Entrance' or sphere is defined as a door of production. 'Element' or constituent is defined as a type or class. In general when aggregates are divided there are five, the form aggregate through the consciousness aggregate. However, there are many other types of aggregates such as the five uncontaminated aggregates, the aggregates or heaps in the context of the *Sutra of the Three Heaps* which is also called the *Bodhisattva's Confession of Downfalls*.

Entrances (or spheres) are divided into twelve, which are grouped into six inner entrances and six outer entrances. The six outer entrances are: (1) the form entrance, (2) sound entrance, (3) odor entrance, (4) taste entrance, (5) tangible object entrance, and (6) phenomena entrance. The six inner entrances are: the (1) eye entrance, (2) ear entrance, (3) nose entrance, (4) tongue entrance, (5) body entrance, and (6) mental entrance.

There are eighteen constituents, or elements, which are grouped into three groups of six:

- form constituent, sound constituent, odor constituent, taste constituent, tangible object constituent, and phenomena constituent;
- the eye constituent, ear constituent, nose constituent, tongue constituent, body constituent, and mental constituent; and
- the eye consciousness constituent, ear consciousness constituent, nose consciousness constituent, tongue consciousness constituent, body consciousness constituent, and mental consciousness constituent.

There is also a more elaborate way of dividing the constituents into sixty-two.

"Thoroughly knows the truth of functioning things through descending into experience the harms to body and mind" means that the bodhisattva knows the truth of things that harm body and mind, of which there are many types. He also knows what benefits body and mind.

"Thoroughly knows the truth of strong production through realizing rebirth (joining the essential boundary) in migrations" means that the bodhisattva knows the truth of the rebirths of sentient beings. There are six migrations into which sentient beings can be reborn; the bodhisattva knows these. In addition, there are four types of rebirth taught in sutra: (1) rebirth from a womb, (2) rebirth from an egg, (3) rebirth from heat and moisture, and (4) spontaneous rebirth. The six migrations include the four types of rebirth, whereas the four types of rebirth do not include the six migrations. This is because the intermediate state being is included in the four types of rebirth but is not included in the six migrations. If asked whether the intermediate state being is an animal, hungry ghost, human being, and so forth this question cannot be answered, whereas if asked to which type of rebirth does the intermediate state being belong, we can say that he belongs to that of spontaneous rebirth.

The bodhisattva "thoroughly knows the truth which knows exhaustion and non-generation through extremely pacifying all extensive torments of epidemics." How does the bodhisattva extremely pacify all extensive torments of epidemics? There are many types of epidemic or contagious diseases mentioned in a text related to the White Umbrella deity, such as a one-day contagious disease, a two-day contagious disease, a three-day contagious disease, and so forth. "A one-day contagious disease" is perhaps a disease that kills after a single day of sickness or perhaps it is one

that only lasts a day. In general there are said to be 400 diseases (however, some say that the Tibetan number used in this context means 424 diseases or that there are 400 diseases plus four root diseases. These four root diseases can be posited as the root afflictions of attachment, hatred, confusion, and a combination of all three, each of which are the root of 100 diseases). The fifth ground bodhisattva knows these diseases and the methods for pacifying them.

Thursday morning, 30 March 2000

The bodhisattva "thoroughly knows the truth which engages the knower of paths through strongly establishing the non-dual." Here the Tibetan word *mi gnyis,* translated as 'non-dual,' literally means "not existing as two."

The bodhisattva "thoroughly knows the truths from achieving connection of the borders of all sequences of bodhisattva's grounds till the exalted wisdom of the Tathagata arises through bearing in mind manifestly and completely all aspects." "All sequences of bodhisattva's grounds" means that the bodhisattva knows the connections of borders between the first and second ground and so forth. "Connections of borders" means that when the bodhisattva completes the practices of the first ground, he connects to the second ground and so forth.

The first ten grounds are causal grounds, while the eleventh is the resultant tathagata ground called Universal Light. In the context of tantra, there are thirteen grounds, the last being called the Vajradhara Ground.

In regard to this section Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Chandrakirti's root text says:
>
> > *His concentration excels, and he attains great skill in knowledge*
> > *Of the subtle nature of the truths of those with a good mind.* [5.1cd]
>
> On the fifth ground, from among the ten perfections, that of concentration is greatly surpassing. When Chandrakirti presents it thus [in his commentary], one should understand that since a bodhisattva is known to have already attained the surpassing perfections of giving, ethics, patience, and effort, he is indicating that 'from among the latter six perfections the perfection of concentration is surpassing'. Here on the fifth ground a bodhisattva has a measure of attainment with respect to complete non-oppression by faults discordant with the perfection of concentration, such as distraction and so on, that he does not have with respect to the perfections of wisdom and so forth.
>
> Not only is his concentration surpassing, but also he attains great skill with respect to the subtle nature of the truths of those with a good mind – the truths of superiors [the four noble truths] – which must be understood with a fine mind. Hence, he here comes to possess a higher wisdom which is comprised of skill in the coarse and subtle truths.

A fifth ground bodhisattva has attained five surpassing perfections: generosity, ethics, patience, joyous effort, and concentration. In particular, this bodhisattva is no longer oppressed by the discordant class of concentration, which is distraction. However, this bodhisattva is oppressed by the faults discordant with the perfection of wisdom. The remaining perfections of method, prayer, power, and exalted wisdom are included in the sixth perfection, the perfection of wisdom. This is the usual order of the last four perfections, but in the *Ornament for Clear Realizations* the order is stated as method, power, prayer, and exalted wisdom.

The fifth ground bodhisattva not only has a surpassing perfection of concentration, but has also attained skill with respect to the coarse and subtle natures of the four noble truths.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) continues:

> QUESTION: The *Sutra on the Ten Grounds* specifically sets forth that a fifth grounder is skilled in the four truths – sufferings, sources, cessations, and paths – and in conventional truths and ultimate truths as well. However, the *Meeting of Father and Son Sutra (Pitaputrasamagama)* and Nagarjuna's *Treatise on the Middle Way* (XXIV.8) say that truths are limited to two, conventional and ultimate. How could the four truths be separate from the two?
>
> ANSWER: Chandrakirti explains in his commentary that although there are no truths that are not included in the two, there is a purpose in setting out the four truths. It is done to indicate that the division of thoroughly afflicted phenomena which are to be abandoned consists of causes or sources, and effects or sufferings. Also, the division of very pure phenomena which are to be assumed consists of causes or true paths, and effects or true cessations. Furthermore, he explains that true sufferings, sources, and paths are conventional truths and that true cessations are ultimate truths.
>
> Chandrakirti also explains in his commentary on Nagarjuna's *Sixty Stanzas of Reasoning* that nirvanas are ultimate truths and that the other three truths are conventional ones.

All four truths are included in the two truths, conventional truths and ultimate truths. However, there is a purpose to setting out the four truths – this is in terms of their being two sets of causes and results. Maitreya, in his *Sublime Continuum* (*Uttaratantra*), says that the illness is to be recognized, its cause is to be abandoned, the state of well-being is to be attained, and the medicine is to be taken. This is an analogy of the fact that true sufferings are to be known, true origins are to be abandoned, true cessations are to be attained, and true paths are to be cultivated.

Buddha taught the four noble truths in terms of causal and resultant truths. In the *Descent into Lanka Sutra,* it says that just as a doctor prescribes medicines according to the illness of the patient, Buddha gave teachings according to the dispositions and interests of trainees. This means that Buddha taught the four noble truths in order for sentient beings to be cured of the chronic illness of the afflictions.

Among the four noble truths, the three – true sufferings, true origins, and true paths – are conventional truths while true cessations are ultimate truths. Lama Tsongkhapa says: "Chandrakirti also explains in his commentary on Nagarjuna's *Sixty Stanzas of Reasoning* that nirvanas are ultimate truths and that the other three truths are conventional ones." There are those who say that true cessations are ultimate truths but are not suchnesses, emptinesses, and realities. On the other hand, others say that ultimate truth, suchness, emptiness, and reality are synonyms, as are unmistaken suchness, perfect suchness, and so forth. Those who assert that true cessations are not suchnesses give the reason that it is because the object of negation of a true cessation has existed since beginningless time. They say that if the opposite were the case, that is, if true cessations were suchnesses, then their objects of negation should *not* have existed since beginningless time. The object of negation in relation to a true cessation is something that exists; it is an affliction. Panchen Sonam Dragpa says: "True cessation, as a subject, it follows that it is not thusness because its object of negation exists." Thus, he says a true cessation is an ultimate truth but is not suchness, emptiness, and reality.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Nirvanas are true cessations, and he adds that the Teacher, Buddha, asserted that there is direct knowledge of true cessations. This is not feasible in the systems of proponents of true existence who assert that a direct valid cognizer has as its object an exclusively characterized [impermanent] phenomenon. In Chandrakirti's own system direct knowledge of cessation is established within the context of cognizing the meaning of suchness by way of a wisdom consciousness of uncontaminated meditative equipoise. Therefore, if true cessations were conventional truths, his presentation would be impossible. He also proves with great effort that when a nirvana is actualized, one must cognize the meaning of suchness directly. Therefore, those

> who propound that [according to Chandrakirti] true cessations are conventional truths have not come to the right decision.

True cessations or nirvanas are established by a superior's exalted wisdom of meditative equipoise. This can be debated: "If it is established by an exalted wisdom of meditative equipoise is it pervaded by being an emptiness? For example, is omniscient mind an ultimate truth because it is established by a superior's exalted wisdom of meditative equipoise?" Lama Tsongkhapa says: "In Chandrakirti's own system direct knowledge of cessation is established within the context of cognizing the meaning of suchness by way of a wisdom consciousness of uncontaminated meditative equipoise. Therefore, if true cessations were conventional truths, his presentation would be impossible. He also proves with great effort that when a nirvana is actualized, one must cognize the meaning of suchness directly." It can be asked: "Is the omniscient mind that realizes modes not a conventional truth because it is to be attained by means of a superior's exalted wisdom of meditative equipoise?" In the *Illumination* it says that true cessations are ultimate truths because they are actualized by a superior's exalted wisdom of meditative equipoise. Indirectly, this implies that such true cessations appear to the face of this exalted wisdom. However, according to Panchen Sonam Dragpa this is not correct. He says that the *Illumination* states that true cessations are ultimate truths but does *not* clearly state that they are emptinesses or suchnesses. In *A Dose of Emptiness*, which is quoted in Kunkyen Jamyang Shepa's *Great Exposition of the Middle Way* in the context of the fifth mind generation (Tib. page 343), it says: "Regarding the assertion that if it is a true cessation it is pervaded by being thusness, even among Chittamatra and Madhyamika scholars there are none who would disagree."

Lama Tsongkhapa says: "Therefore, those who propound that [according to Chandrakirti] true cessations are conventional truths have not come to the right decision."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Although an elimination of true existence – the object of negation – with respect to any base is considered an ultimate truth, it does not necessarily follow that the objects of negation of all ultimate truths do not exist among knowable objects. Nagarjuna's *Praise of the Element of Qualities* says:
>
> > Homage and obeisance to the element of qualities.
> > When it is not thoroughly understood,
> > One wanders in the three existences
> > Although it does in fact abide in all sentient beings.
> >
> > Just this is also the body of truth
> > And the nirvana that is the purity
> > From having purified that which serves
> > As the cause of cyclic existence.
>
> The nature of phenomena is accompanied with defilement, and when that is purified, Nagarjuna says that this nature becomes a nirvana and a truth body. There are many similar teachings that defilement is the object to be negated with respect to the purified nature of phenomena. If their nature could not become free from defilement, toil would be fruitless. Also, if the nature of phenomena can be freed from defilement, then its objects of negation can exist among knowable objects.
>
> For example, in the non-existence of the horns of a rabbit these horns are the object of negation and do not occur among knowable objects. However, the non-existence of a pot – the negative of pot with pot as the object of negation and existing among knowable objects – can be posited as the non-existence of the horns of a rabbit.
>
> In general, pure and impure phenomena are qualified by this nature [which is the absence of inherent existence], and in this context the negatives of the two selves, for instance, are negations in the sense that the object negated [inherent existence] simply does not occur among knowable objects. However, when the phenomena qualified by this nature are gradually purified of defilement, their nature also becomes purified. Therefore, with respect to a certain phenomenon qualified by

> this nature, it is not sufficient for its nature to be a partial purity, it must also be purified of the adventitious defilements which accord with a particular position [on the path]. These are called true cessations.

On a basis, such as a table, when the object of negation – true existence – is negated, that is an ultimate truth. If it is asked: "Is it necessary that the object of negation of all that is ultimate truth does not exist at all among objects of knowledge?" It is *not* necessary [that that object of negation does not exist among objects of knowledge]; for example, a true cessation is an ultimate truth yet its object of negation *does* exist among objects of knowledge. To prove that the object of negation of ultimate truth is not pervaded by not existing, Lama Tsongkhapa quotes from the *Praise to the Element of Qualities*: "When it is not thoroughly understood, one wanders in the three existences although it does in fact abide in all sentient beings." Due to not understanding the sphere of reality, one wanders in the three existences: (1) under the ground, (2) on the ground, and (3) above the ground or (1) in the desire realm, (2) in the form realm, and (3) in the formless realm. In short, due to not knowing the sphere of reality, sentient beings continue to take rebirth in cyclic existence. The *Praise to the Element of Qualities* further says: "I prostrate to my own mind, a buddha abiding in afflictions." This means that amidst the afflictions lies a buddha. According to Jonangpa, there is a buddha complete with all the major and minor marks in the continuum of each sentient being, meaning that there is the tathagata nature in the continua of sentient beings. These days the incarnation of Jonangpa (also called Taranatha) lives in Dharamsala and is called Karga Jedzun Dampa (Karga is the name of the village in Mongolia where he was born, in which there used to be a large monastery of 100,000 monks. The monastery is said to have been destroyed by the Russians and all the monks killed in a single day.) Because Jonangpa asserted that ultimate truth is an affirmative, independent phenomenon, he is said to have been a master who had pure conduct but mistaken view.

The sphere of reality acts as a cause of cyclic existence and nirvana in that [when it is not purified it acts as a cause of cyclic existence and] when it is purified it acts as a cause of nirvana. If this passage is accepted literally to mean that the sphere of reality is the cause of cyclic existence, then this is an incorrect interpretation. Rather, it means that if one does not understand the reality of the mind, one wanders in cyclic existence whereas, through realizing it, one achieves nirvana. Some Nyingma texts say: "The sphere of reality is not non-existent and it is the foundation of both cyclic existence and nirvana. It is not existent and it is not seen by the Buddha." The discussion of the views of existence and non-existence arise from such texts. In other words, these texts say that the sphere of reality is not non-existent because it is the foundation of both cyclic existence and nirvana, yet it is also not existent because it is not seen by the buddhas. If this is explained correctly, it has a very profound meaning but if it is explained incorrectly it becomes absurd. The meaning is that when one does not understand the sphere of reality one wanders in cyclic existence, whereas when one understands it one becomes free.

There is an emptiness that is purified and an emptiness that is not purified. The "purified nature of phenomena" is an emptiness that is free from the object of negation, i.e., the stains. Lama Tsongkhapa says: "If their nature could not become free from defilement, toil would be fruitless." This means that if it were not possible for the emptiness of the mind to become free from stains then all the hardships experienced while striving to attain this would be fruitless. Hardship or toil refers to the practices of meditating, prostrating, and so forth.

Lama Tsongkhapa then says: "Also, if the nature of phenomena can be freed from defilement, then its objects of negation can exist among knowable objects. For example, in the non-existence of the horns of a rabbit these horns are the object of negation and do not occur among knowable objects." The object of negation that is the horns of a rabbit is not feasible among objects of knowledge, i.e., the horns of a rabbit are non-existent.

Lama Tsongkhapa says: "However, the non-existence of a pot – the negative of pot with pot as the object of negation and existing among knowable objects – can be posited as the non-existence of the horns of a rabbit." Is the non-existence of a pot the non-existence of the horns of a rabbit? The object of negation of the non-existence of pot is pot, and that exists.

Lama Tsongkhapa says: "In general, pure and impure phenomena are qualified by this nature [which is the absence of inherent existence], and in this context the negatives of the two selves, for instance, are negations in the sense that the object negated [inherent existence] simply does not occur among knowable objects." The object of negation is inherent existence, which does not exist.

Lama Tsongkhapa then says: "However, when the phenomena qualified by this nature are gradually purified of defilement, their nature also becomes purified. Therefore, with respect to a certain phenomenon qualified by this nature, it is not sufficient for its nature to be a partial purity, it must also be purified of the adventitious defilements which accord with a particular position [on the path]. These are called true cessations." "A certain phenomenon qualified by this nature," literally a specific substratum, is the mind qualified by this nature. With respect to the mind, just as it becomes free from stains, the *emptiness* of the mind also becomes free from stains. "It is not sufficient for its nature to be a partial purity, it must also be purified of the adventitious defilements which accord with a particular position [on the path]" refers to the two stains or defilements, which are the natural and the adventitious. The freedom from natural stains is already there, therefore, only when the freedom from adventitious stains is attained is there a true cessation. In short, the freedom of the mind from an adventitious stain is a true cessation.

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Many designations of truths such as skill in the truth of definitions and so forth occur with respect to this ground in the *Sutra on the Ten Grounds*. However, this does not mean that these are not included in the two truths.

In short, all truths are included in the two truths.

Chandrakirti's autocommentary says:

> From the *Explanation of the 'Supplement to the "Middle Way,"'* the Fifth Mind Generation, called "Difficult to Overcome."

Lama Tsongkhapa's *Illumination* (Hopkins, *Compassion in Tibetan Buddhism*) says:

> Such is the explanation of the fifth mind generation in the *Illumination of the Thought, An Extensive Explanation of Chandrakirti's 'Supplement to the Middle Way.'*

The main point in the chapter on the fifth mind generation is to understand the four noble truths well and to understand what is to be abandoned and what is to be adopted. This understanding has to then be integrated with the mind by examining the causes of our daily sufferings. These sufferings arise due to particular conditions; recognizing them, we should put effort into eliminating them.

Thursday afternoon, 30 March 2000

THE SIXTH MIND GENERATION

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

3B1C-2B Explaining the sixth ground: the Manifest

The explanation of the sixth ground, the Manifest, has four parts:

1 Etymology of the ground and indication that the perfection of wisdom is surpassing
2 Praise of the perfection of wisdom
3 Explanation of suchness in which the profound dependent arising is seen
4 Conclusion by way of expressing the features of this ground.

3B1C-2B1 Etymology of "The Manifest" and indication that the perfection of wisdom is surpassing

Chandrakirti's autocommentary says:

Now, the explanation from the viewpoint of the sixth mind generation:

Abiding in the mind equipoised on the approach,
[He] approaches the features of complete buddhahood and
Sees the thusness of this arising in dependence[14] *– he*
Will attain cessation through abiding in wisdom. [6.1]

The bodhisattva who abides in the equipoised mind on the sixth ground as a result of attaining the fully purified concentration gone beyond on the fifth ground and who sees the thusness of profound dependent arising will attain cessation with the fully purified wisdom gone beyond. It is not [attained] previously because of lacking surpassing wisdom. Cessation cannot be attained by possessing [merely] the [five] excellent perfections, generosity and so forth.

Because of understanding the reflection-like nature, because the bodhisattva observes the truth of the path of the fifth bodhisattva ground, and because of approaching the features of complete buddhahood, this ground is called 'Manifesting.'

The sixth ground is called Approaching or Manifesting because the sixth ground bodhisattva *approaches* the attainment of the qualities of fully complete buddhahood. This is because the sixth ground bodhisattva, in dependence on the condition that is a meditative equipoise on dependent-arising, approaches the uncommon absorption of cessation. On the fifth ground, the bodhisattva became skilled in the wisdom knowing the coarse and subtle four noble truths, whereby he now gains skill in the wisdom thoroughly knowing the forward and reverse processes of dependent-arising. Thereby, he attains the surpassing higher training in wisdom.

Through practicing the four remaining perfections – method, prayer, power, and exalted wisdom – the bodhisattva develops the wisdom knowing varieties. With the fifth mind generation, the bodhisattva attained the thoroughly pure perfection of concentration, whereby on the sixth ground he gains the wisdom realizing the forward and reverse orders of dependent-arising.

Chandrakirti says: "Cessation cannot be attained by possessing [merely] the [five] excellent perfections, generosity and so forth." Here the word 'cessation' refers to the uncommon absorption of cessation.

[14] Sanskrit: ldam-pratyaya: Tibetan: 'di rten 'byung wa – 'the state of being dependently arisen from this or that,' is used here instead of the usual phrase 'dependent arising,' Sanskrit: pratitya-samutpada; Tibetan: rten cing 'brel bar 'byung ba.

Chandrakirti then gives three reasons regarding the etymology of the name of the sixth ground: "(1) Because of understanding the reflection-like nature, (2) because the bodhisattva observes the truth of the path of the fifth bodhisattva ground, and (3) because of approaching the features of complete buddhahood, this ground is called 'Manifesting.'"

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle"* says:
>
> *Approaching the qualities of a perfect buddha*
> *And seeing the suchness of arising-dependent-upon-this*
> *Due to which they abide in wisdom, [bodhisattvas]*
> *On the Manifest, abiding in equipoise, attain cessation.* [6.1]
>
> Because [bodhisattvas] attained the thoroughly pure perfection of concentration on the fifth ground, they abide in a fully developed mind of meditative equipoise [on emptiness] on the sixth ground, the Approaching, or the Manifest. Based on this, they abide on the sixth bodhisattva ground seeing the profound suchness of mere conditionality – dependent arising. Because of this, they abide in the fully developed perfection of wisdom, whereby they attain [an uncommon absorption of] cessation. Prior to this, on the fifth ground and below, they did not attain [an uncommon absorption of] cessation because of not having the surpassing form of the fully developed perfection of wisdom. One cannot attain [an uncommon absorption of] cessation merely through the five fully developed perfections of giving, and so forth [that is, ethics, patience, effort, and concentration].
>
> This ground is called "The Manifest" or "The Approaching" because (1) the reflection-like nature of phenomena has become *manifest* by way of their wisdom, which is surpassing in the way [just described]; (2) on the fifth ground they *observed* true paths [and thus have newly gained complete wisdom with respect to the four truths], and (3) they are *approaching* attainment of a perfect buddha's qualities [in that they now have the surpassing form of the perfection of wisdom].

These three reasons for the etymology of the names of the sixth ground are the same as those set out by Chandrakirti.

"[Bodhisattvas] on the Manifest, abiding in equipoise, attain cessation" means that these bodhisattvas attain an uncommon absorption of cessation. According to the Prasangika Madhyamikas, an uncommon absorption of cessation is not a non-associated compositional factor, as is asserted by the Svatantrika Madhyamikas. The Prasangika Madhyamikas define an absorption of cessation in general as: a superior's exalted wisdom of meditative equipoise which is single-pointedly absorbed on emptiness in dependence on its empowering conditions, which are an actual absorption of a concentration and a supramundane path. In Jedzun Chokyi Gyeltshen's *Ocean of Sport* (page 104) it says:

> [The definition of] an absorption of cessation (Prasangika-Madhyamika) is: an exalted wisdom of single-pointed meditative equipoise on reality (*dharmata*) that abides in a type free from attachment to the Peak of Existence in dependence on (1) the supramundane path which is the means of attaining it and (2) an actual mind of the Peak of Existence. When divided there are: an uncommon absorption of cessation and a common absorption of cessation.

Jedzun Chokyi Gyeltshen's *General Meaning* (page 196) says:

> If it is asked: "Why is it called 'absorption of cessation?'" The exalted wisdom of meditative equipoise of the sixth ground, as the subject, there is a reason for calling it 'an absorption of cessation;' it is so-called due to the reason that thusness is called 'cessation'

> and it is an exalted wisdom equipoised on that. There is a reason for calling thusness 'cessation;' it is because the exalted wisdom directly realizing thusness is an exalted wisdom which has stopped the elaborations of dualistic appearance.

Jedzun Chokyi Gyeltshen's *Ocean of Sport* (page 104) says:

> The definition of an uncommon absorption of cessation (Prasangika-Madhyamika) is: an exalted wisdom equally and directly placed on reality (*dharmata*) that is qualified by a surpassing practice of the perfection of wisdom

On the other hand, according to the lower schools the absorption of cessation is a non-associated compositional factor and *not* a consciousness.

A common absorption of cessation is one that exists from the first through the tenth grounds. For this reason, it is called a common absorption of cessation. On the other hand, an uncommon absorption of cessation only exists from the sixth ground upward. However, some say that a common absorption of cessation is the absorption of cessation asserted by the lower schools, whereas an uncommon absorption of cessation is that asserted by the Prasangika Madhyamikas. This is the second interpretation of the meaning of 'common' and 'uncommon' absorptions of cessation.

When the lower schools posit the absorption of cessation, they also say that it depends on a supramundane path that is the means for attaining it and an actual concentration of the Peak of Existence, but they posit its entity as a non-associated compositional factor.

Jedzun Chokyi Gyeltshen's *Ocean of Sport* (page 106) says:

> The definition of an absorption of cessation (Svatantrika-Madhyamika) is: a non-associated compositional factor which is an absorption in the continuum of a superior abiding in a type distinguished by the cessation of the gross objects to be stopped along with their concomitant factors on the subtle mental consciousness, the basis of cessation.

Jedzun Chokyi Gyeltshen's *Ocean of Sport* (page 104) says:

> The definition of absorption of cessation (Chittamatra) is: that observed to be a non-associated compositional factor which is an absorption in the continuum of a superior that is the cessation of the objects to be stopped – the seven coarse collections [of consciousness] – on either a mental consciousness or a mirror-like exalted wisdom which is the basis of cessation.

Bodhisattvas on the eighth ground and upward no longer have a mind-basis-of-all in that on these levels it is called a 'fruitional consciousness.' Foe destroyers also do not have a mind-basis-of-all.

The Chittamatrins assert eight consciousnesses: the usual six – eye, ear, nose, tongue, body, and mental consciousnesses – plus a mind-basis-of-all and an afflicted mentality. Bodhisattvas on the eighth ground and beyond, as well as foe destroyers, no longer have an afflicted mentality due to which they no longer have a mind-basis of all. A mind-basis-of-all is defined by the Chittamatrins as: a main mental cognizer that is a different entity from the collection of six consciousnesses and which is the basis on which the latencies of virtue and non-virtue are stored. In fact, it is called 'mind-basis-of-all' because it is the mind that is the basis on which all the latencies of virtue and non-virtue are stored. The eighth consciousness, an afflicted mentality, is defined by the Chittamatrins as: a main mental cognizer that observes the mind-basis-of-all, its observed object, and has the aspect apprehending the 'I' or 'mine' as self-sufficient substantially existent.

Student: Is there debate as to when the uncommon absorption of cessation is attained? Before it was said that it was attained on the seventh ground.
Geshe-la: This subject is discussed further ahead in this text in the context of the seventh ground or seventh mind generation. Earlier on, in the context of bodhisattvas outshining hearers and solitary realizers, it was said that seventh ground bodhisattvas outshine the hearers and solitary realizers by the power of their intelligence or awareness due to being able to enter and rise from the uncommon absorption of cessation on the perfect end in the shortest moment of a complete action. This occurs only on the seventh ground upward, although the bodhisattva already has an uncommon absorption of cessation on the sixth ground. Chandrakirti's root text says:

> *On this, the Gone Afar, instant by*
> *Instant he will enter cessation and*
> *The method gone beyond will also blaze well.* [7.1abc]

Having attained an uncommon absorption of cessation on the sixth mind generation, on the seventh ground the bodhisattva attains the ability to enter and arise from it in an instant. Gyelwa Gendun Drub, in his *Mirror of the Clarification of the Thought,* says:

> This bodhisattva, dwelling in this seventh stage, Gone Far, attains qualities which are superior to those of the sixth stage; for in each instant, he can enter meditation on cessation, and also he attains the full blossoming of the transcendent action of means.

According to the lower schools, why does one enter the absorption of cessation? One does so in order to avoid the mental despondency caused by coarse feelings and discriminations. Due to having feelings and discriminations, one experiences many difficulties. However, this explanation is not valid according to the Prasangika Madhyamikas, who do *not* say that the reason for entering the absorption of cessation is to stop coarse feelings and discriminations. However, when absorbed single-pointedly on reality, coarse feelings and discriminations are stopped because they arise only due to seeing forms and so forth.

There is debate regarding the Chittamatrins' assertion that there is no mind-basis-of-all existing in the continua of bodhisattvas on the eighth ground and upward, and that there is no mirror-like exalted wisdom on these grounds since it exists only on the buddha ground. From the eighth through the tenth grounds, the mind-basis-of-all is given another name, the fruitional consciousness (*rnam smin gyi rnam shes*). To prove that there is a mind-basis-of-all, the Chittamatrins quote from the *Sutra Unraveling the Thought* (*Illumination*, page 307), which says:

> The receiving consciousness is profound and subtle.
> All the seeds fall on it like a stream,
> Conceiving it to be a self is inappropriate.
> I did not present this to the childish.

The Chittamatrins assert that the mind-basis-of-all is the basis for the stopping of feelings and discrimination. If there were no mind-basis-of-all, then future rebirths would not be feasible. Using such reasonings, the Chittamatrins establish the existence of a mind-basis-of-all. We can ask: "Which of the seven awarenesses and knowers is the mind-basis-of-all?" The seven are: direct valid cognizer, inferential valid cognizer, subsequent cognizer, correct assumption, wrong consciousness, doubt, and an awareness to which an object appears but is not ascertained. The mind-basis-of-all is an awareness

to which an object appears but is not ascertained (an *inattentive awareness*). How many mental factors are there in the retinue of a mind-basis-of-all? There are nine.

Friday morning, 31 March 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> With respect to the meaning of the second reason [why the sixth ground is called "The Manifest," Jayananda's] *Commentarial Explanation* [incorrectly] explains this [second reason] to be that [bodhisattvas] manifest a path in which knower and known are not observed. However, that on the fifth ground true paths are observed is a case of [referring to the four truths by way of] mentioning the last of the four truths. Hence, since on that [fifth ground, bodhisattvas] attain skill with regard to the coarse and subtle four truths, on the sixth the wisdom that is comprised of skill with regard to the four truths is complete. This is what is meant [by Chandrakirti's referring to the fact that fifth ground bodhisattvas "observe true paths." This skill is attained on the fifth ground, but on the sixth one has such skill by way of a fully developed perfection of wisdom.]
>
> The first reason [above, which states that the reflection-like nature of phenomena – the emptiness of inherent existence which is *itself* like a reflection in that it exists but is not truly established – has become manifest] indicates that they have completed the training in wisdom which consists of skill in the forward procedure [of entry into cyclic existence when there is ignorance] and the reverse procedure [of liberation from cyclic existence when ignorance is overcome, these being in terms of the twelve links of] dependent arising. Hence, [the name, the Manifest] means that the truths and dependent arising have become manifest by way of [bodhisattvas'] completing these two trainings in wisdom [regarding the four truths and regarding the twelve links of dependent arising].
>
> Thus, on this ground they complete the three trainings in wisdom [that is, skill regarding emptiness, the four truths, and dependent arising]. Further, as much as calm abiding is enhanced, so much is their special insight enhanced, and on the fifth ground they attained full development of the perfection of concentration whereby, in dependence on it, here [on the sixth ground] their perfection of wisdom is fully developed. Therefore, an uncommon absorption in cessation [that is, a wisdom consciousness directly realizing emptiness within the context of the cessation of coarse discrimination and feeling] is attained from this [ground].
>
> Moreover, Nagarjuna's *Precious Garland* says:
>
> > The sixth is called the Approaching because
> > They are approaching the qualities of a buddha.
> > Through familiarity with calm abiding and special insight
> > They attain cessation and hence are advanced [in wisdom]. [451]
> >
> > Through the maturation of these [qualities] they become
> > A king of the gods [in the land of Enjoying] Emanation.
> > Since hearers cannot surpass them, they pacify
> > Those having the pride of superiority. [452]
>
> [In that] "Emanation" means "Enjoying Emanation".

The explanation in Jayananda's commentary is incorrect in that he says that the sixth ground is called the Manifest because bodhisattvas manifest a path in which knower and known are not observed. Lama Tsongkhapa says that they *do* observe coarse and subtle true paths. Mentioning that they know true paths, the last of the four noble truths, also means that they know all of the coarse and subtle four noble truths. Thus, this bodhisattva is completely skilled in the coarse and subtle four noble truths. On the sixth ground, the bodhisattva has completed the three higher trainings in wisdom:
(1) the wisdom skilled in the coarse and subtle thirty-seven harmonies with enlightenment, which is gained on the fourth ground,

(2) the wisdom skilled in the coarse and subtle four noble truths, which is gained on the fifth ground, and
(3) the wisdom skilled in the forward and reverse processes of dependent-arising, which is gained on the sixth ground.

Lama Tsongkhapa says: "Further, as much as calm abiding is enhanced, so much is their special insight enhanced." One fully develops calm abiding on the fifth ground, whereas one develops special insight on the sixth ground.

In relation to the ten grounds, one can discuss the three higher trainings together with their basis. On the first ground, the bodhisattva attains the surpassing practice of generosity, this being the *basis* of the higher trainings. On the second ground, the bodhisattva attains the surpassing perfection of ethics and achieves the entity of the *higher training in ethics*. On the third ground, he attains the surpassing perfection of patience and the *higher training in mind* or the higher training in *meditative stabilization*. On the fourth to tenth grounds, the bodhisattva develops the *higher training in wisdom*. In this way, the bodhisattva cultivates all three higher trainings. When omniscience is attained, the *result* of the three higher trainings is achieved. In this way the three are present: (1) the basis of the higher trainings, (2) the entity of the higher trainings, and (3) the result of the higher trainings.

A bodhisattva on the fourth, fifth, and sixth grounds develops the higher training in wisdom mainly observing *emptiness*. On the seventh, eighth, ninth, and tenth grounds the bodhisattva attains a surpassing higher training of wisdom observing *varieties*.

Lama Tsongkhapa says: "Therefore, an uncommon absorption in cessation [that is, a wisdom consciousness directly realizing emptiness within the context of the cessation of coarse discrimination and feeling] is attained from this [ground]."

Nagarjuna says that the sixth ground is called 'Approaching' because this bodhisattva approaches the qualities of a fully complete buddha due to having attained familiarity with calm abiding and special insight. He also says: "Since hearers cannot surpass them, they pacify those having the pride of superiority." This refers to the fact that bodhisattvas from the seventh ground upward outshine the hearers by the power of their intelligence or awareness. Nagarjuna says that such bodhisattvas "become a king of the gods [in the land of Enjoying] Emanation" (Enjoying Emanation being the fifth level of the desire realm gods). The first four levels of desire realm gods are (1) the Four Great Kings, (2) the Gods of the Thirty-Three, (3) Without Combat, and (4) Joyous; the sixth is Controlling Others' Emanations.

QUESTIONS AND ANSWERS

Student: In the third chapter, when discussing the knowledge obstructions, Geshe-la quoted Chandrakirti's *Supplement* (Tib. page 246), which says:

> The existence of the imprints of attachment and so forth are also causes of such kinds of operation of body and speech. Furthermore, the imprints of ignorance, attachment, and so forth are overcome only in the omniscient mind and buddha; they are not in others.

Does this mean that the imprints of attachment are knowledge obstructions?
Geshe-la: It would seem that they are. What objection do you have?
Student: In Jedzun Chokyi Gyeltshen's *General Meaning* (page 172), the definition of a seed of a knowledge obstruction is given as:

> That abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception, which arises through the depositing of an uncommon imprint by the conception of true existence, which is its cause, and is the substantial cause for mistaken dualistic appearance, which is its result.

If it is a manifest knowledge obstruction it has to be a factor of mistaken dualistic appearance or a latency laid down by the conception of true existence. So is the imprint of attachment a factor of mistaken dualistic appearance or a latency laid down by the conception of true existence?
Geshe-la: It is *not* a factor of mistaken dualistic appearance but it *is* a latency laid down by the conception of true existence.
Student: Why is that?
Geshe-la: The latency of attachment has been laid down by its own uncommon conception of true existence which is its cause.
Student: In the uncommon [Prasangika] tenets it says that there is an attachment and a hatred conceiving true existence. Is it that?
Geshe-la: It is. There is a specific passage that mentions this.

Student: In Jedzun Chokyi Gyeltshen's *General Meaning* (page 172) it says:

> The definition of a manifest knowledge obstruction is: that abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception, being a factor of mistaken dualistic appearance, which is the appearance of one's object, forms and so forth, as truly existent. For example, a factor of mistaken dualistic appearance which is the appearance of the objects of the six engaging consciousnesses, forms and so forth, as truly existent.

Would it not be enough to give the definition of a manifest knowledge obstruction as merely "a factor of mistaken dualistic appearance which is the appearance of one's object, forms and so forth, as truly existent" without saying "that abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception"?
Geshe-la: There must be a reason that Jedzun Chokyi Gyeltshen says this! In fact, if the definition were given as merely "a factor of mistaken dualistic appearance which is the appearance of one's object, forms and so forth, as truly existent," then there would be no pervasion that it is a manifest knowledge obstruction, because there is a factor of mistaken dualistic appearance that is the appearance of one's object, forms and so forth, as truly existent that is an *afflictive* obstruction. For example, one who has studied tenets who asserts that forms are truly existent has a factor of mistaken dualistic appearance that is the appearance of his object, forms and so forth, as truly existent.

We can set out a syllogism regarding this: A factor of dualistic appearance appearing to an acquired conception of true existence apprehending its object, forms and so forth, to exist truly, as the subject, it follows that it is a knowledge obstruction because it is a factor of mistaken dualistic appearance that is the appearance of one's object, forms and so forth, as truly existent. In short, it is necessary for the definition of a manifest knowledge obstruction to include the words "that abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception."

Student: The example that Geshe-la posited was of an afflictive obstruction. Is it an acquired afflictive obstruction?
Geshe-la: It is.

Student: Is it a manifest acquired afflictive obstruction or a factor of a seed?
Geshe-la: It is a consciousness.
Student: I would say [as a consequence] that the factor of mistaken dualistic appearance is a consciousness.
Geshe-la: The factor of mistaken dualistic appearance itself is not a consciousness, but a consciousness is that which has mistaken dualistic appearance. In one text, *Clarification of Doubts Regarding the Middle Way* by Khensur Pema Gyeltshen of Loseling, it says that it is not correct to say "the factor of mistaken dualistic appearance." In fact, in Kunkyen Jamyang Shepa's Gomang College textbooks, there is debate about the *factor* of mistaken dualistic appearance.

Student: On the fourth ground, the bodhisattva develops the higher training in wisdom observing the coarse and subtle aspects of the thirty-seven harmonies with enlightenment. If we take faith from among the five powers as an example, how does the bodhisattva realize it in terms of the coarse and subtle?
Geshe-la: The coarse and subtle are in relation to the *objects* of the faith. If its object is realized to be empty of self-sufficient substantial existence, it is coarse faith, whereas if its object is realized to be empty of inherent existence, then it is subtle faith.
Student: But faith does not realize emptiness.
Geshe-la: All five powers including faith *do* realize emptiness. This is because concomitant with, for example, the exalted wisdom of meditative equipoise of the path of preparation realizing emptiness, there are the five, faith and so forth, which realize emptiness, although they are not *realizing awarenesses*. The five, faith and so forth, existing on the path of preparation have particular functions, those on the path of seeing have other functions, and so forth. On the path of seeing they realize emptiness.

In the context of the five powers, such as faith, the coarse and subtle can perhaps also be posited respectively as: (1) the five powers such as faith qualified by being empty of self-sufficient substantial existence and (2) the five powers such as faith qualified by being empty of inherent existence.

Student: The definition of hatred is the intention to harm. Does this include the wish for someone to experience mental discomfort?
Geshe-la: When there is the wish for others to have pain, this wish itself is not anger yet anger is present.
Student: Can harm include mental suffering as well as physical?
Geshe-la: Definitely, since causing others to have mental suffering is even worse than causing them physical harm.
Student: If one is trying not to be angry but is still becoming angry, is one collecting the karma of anger or the karma of practicing patience?
Geshe-la: You have to look at that within your own mind. If one knows the faults of anger and is trying to suppress the anger, then it is the practice of patience. On the other hand, if one holds on to anger, even though it is not manifest, it is still anger or resentment or belligerence, i.e., one of the twenty secondary afflictions. In regard to holding a grudge towards others, some say that it is better to manifest anger, as then the pain of resentment will be relieved! However, from the point of view of Dharma, that explosion of anger is not advisable. If you express your anger verbally there will only be a *temporary* relief of anger at the most. In every situation one has to look at the prohibitions and necessities.
Student: What does the person who is the object of anger need to do?
Geshe-la: If someone is angry with you, take this as an opportunity to practice patience. One can also say to the other person that there is no need to be angry and so forth. However, what is most

important in that situation is to practice patience oneself. In addition, we can also teach others how to practice patience. Sometimes, one can help short-tempered people by irritating them again and again whereby they may gradually become tired of getting angry! I myself have seen this happen.

Student: We accumulate many seeds of acquired obstructions in one life time. Do they ripen in the same lifetime or dissolve or transfer to another life?
Geshe-la: A seed is a potentiality that continues in other lives. What do you think about this?
Student: I think that is right. If in one life one upholds mistaken tenets such as thinking there are no buddhas, then in a future life it will be difficult for one to receive teachings from buddhas and so forth.
Geshe-la: Then you agree that the seeds continue to a future life?
Student: I think that they do continue, but this seems to contradict the statement that acquired afflictive obstructions and their seeds are related to one life.
Geshe-la: Although acquired, the seeds can remain for many lives. Do you think that there is an error in the definition of acquired afflictive obstructions?
Student: There is no error in Jedzun Chokyi Gyeltshen's definition, but I remember that it was said that the acquired afflictive obstructions are related to one life.
Geshe-la If the seeds of acquired afflictive obstructions dissolved at death that would be wonderful!

Student: In relation to the four close placements of mindfulness, I understood that coarse and subtle are related respectively to the conception of self-sufficient substantial existence and the conception of inherent existence. Therefore, in regard to the close placement of mindfulness on the body, are there different observed objects in terms of the coarse and subtle?
Geshe-la: The coarse placement of mindfulness on the body is to observe the body that has been produced by a conception of a self-sufficient substantially existent person, whereas the subtle placement of mindfulness on the body is to observe the body that has been produced by the conception of an inherently existent person. Or else, coarse and subtle can be distinguished in terms of the mind in that observing the body as qualified by self-sufficient substantial existence is the coarse close placement of mindfulness on the body and observing the body qualified by inherent existence is the subtle close placement of mindfulness on the body.
Student: If it is coarse and subtle respectively from the point of view of the conception of self-sufficient substantial existence and the conception of inherent existence, it would seem that there is a different body that one observes, one that is coarse and one that is subtle. Is this what happens?
Geshe-la: One body cannot have two aspects. If these are posited in terms of a factor of cause saying, that there is a coarse body that comes from a coarse cause and a subtle body that comes from a subtle cause, it would mean that there are two heads, two right arms, and so forth. One could make this consequence, which is also mentioned in the *Compendium of Valid Cognition* in relation to the body being of two types, one that is fruitional and one that develops. Are there two bodies? One can say that there are two, the fruitional and the developmental. Then one has two heads, the fruitional and the developmental? The conclusion is that there are two bodies. The fruitional body which is a result of projecting karma and does not change, and the developmental body which does grow and change due to eating food and so forth.

In short, the body can be said to be produced by both the conception of self-sufficient substantial existence and the conception of inherent existence. The coarse close placement of mindfulness on the body is to meditate on the body that is a result of a virtuous action motivated by the conception of a self-sufficient substantially existent person. The subtle close placement of mindfulness on the body is to meditate on the body that is a result of a virtuous action motivated by the conception of an inherently existent person.

Student: Our society teaches particular types of behavior, and advertisements and so forth cause the arisal of desire for a motorbike, a good career, and so forth. Do these induce innate or acquired afflictive obstructions?
Geshe-la: There can arise both innate and acquired afflictive obstructions from these. In our life we depend on material things without which one cannot study and so forth. Therefore, the desire to have them is not necessarily an affliction as we need these things to survive. The improvements in housing, travel, communication, and so forth due to better technology do not arise only from afflictions but also come from virtuous thoughts.
Student: But is an advertisement that produces desire for a particular object a factor that produces an acquired afflictive obstruction since it strengthens the conception of true existence or is it something that induces an innate seed within us?
Geshe-la: It can activate latencies. For example, when we see advertisements they act as a condition for desire to rise. However, the main causes are the three mental poisons – attachment, hatred, and ignorance.

END

Monday afternoon, 3 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B2 Praise of the perfection of wisdom

Chandrakirti's autocommentary says:

> Now, in order to indicate that the collections of qualities other than that merely depend upon the wisdom gone beyond, it is explained:
>
> *Just as a blind group is easily led to the*
> *Desired location by a single being with eyesight,*
> *Similarly, here too, intelligence, taking along the qualities*
> *Of impaired eyesight, goes to the Conqueror's state.* [6.2]
>
> Just as a single being possessing eyesight easily leads the entire group of the blind to the location it strongly desires to go to, similarly, the wisdom gone beyond, having taken along the qualities of the perfections other than that, also goes to the Tathagata ground called 'Universal Light,' because of being the very nature that sees the correct path and the incorrect path.

The first five perfections, generosity through concentration, which are led by wisdom to buddhahood, are likened to a group of blind people who need a sighted person to take them where they want to go. In other words, by means of the first five perfections alone one cannot achieve buddhahood. Rather, one needs the perfection of wisdom in order to achieve the resultant state. Chandrakirti says: "Similarly, here too, intelligence, taking along the qualities of impaired eyesight, goes to the Conqueror's state." Intelligence is likened to a sighted person who guides the blind where they want to go, in that the perfection of wisdom guides the other perfections to buddhahood.

The ground called Universal Light is the resultant ground, omniscience, on which everything is seen correctly. The *Ornament* likens wisdom to a sighted bird that guides a flock of a particular type of blind birds.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> To indicate that the collections of giving, and so forth – which are other than wisdom – progress to the ground that is the fruit [namely, buddhahood] in dependence on the perfection of wisdom, Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"* says:
>
> *Just as a person having eyes easily leads*
> *All in a blind group to their desired destination,*
> *So here also the mind [of wisdom], taking hold of virtues*
> *That lack the eye [of wisdom], goes to the state of a Conqueror.* [6.2]
>
> Just as one sighted person easily leads all of – that is, an entire – group of blind persons to a place where they wish to go, so also at this point on the path awareness – the perfection of wisdom – fully taking hold of the good qualities of giving, and so forth, which themselves lack the eye seeing suchness, goes to the state of a conqueror, the fruit [namely, buddhahood]. For, the perfection of wisdom unerringly perceives correct and incorrect paths. Moreover, the *Superior Sutra of the Condensed Perfection of Wisdom* says:
>
> How could billions of blind and guideless persons,
> Not even knowing the path, enter the city?
> Without the perfection of wisdom, these five sightless perfections
> Lack a guide and thus cannot reach enlightenment.
>
> Also, the *Diamond Cutter Sutra* says:

> A bodhisattva who gives gifts upon falling into [misapprehending] things [such as gift, giver, and recipient, as inherently existent] should, for example, be viewed as like a person with eyes who sees nothing upon having entered into darkness.
>
> Subhuti, it is this way: A bodhisattva who, not having fallen into [such misapprehension of] things, gives gifts should be viewed as like a person with eyes who, when the sun shines at dawn, sees varieties of forms.
>
> The same is so also for ethics and so forth.

Lama Tsongkhapa's commentary is very similar to that by Chandrakirti. In the *Diamond Cutter Sutra,* the Buddha says that just as when a sighted person enters darkness he is unable to see anything, likewise the first five perfections are not able to see the way to buddhahood. On the other hand, just as a sighted person sees forms clearly at dawn, the perfection of wisdom sees the way to buddhahood. The *Superior Sutra of the Condensed Perfection of Wisdom* also likens the blind who cannot see the path to a city to the five perfections which, when separated from the sixth, wisdom, are unable to progress to the city of nirvana or great enlightenment alone. They need to be led there by the perfection of wisdom. Just as one cannot find a path in the forest due to darkness and fog, so too one cannot progress to enlightenment without the perfection of wisdom.

In relation to this there is story about an event that took place in 1969, when Tibetan monks first moved from Buxar to the settlements in the south of India. Soon after arriving there, one young monk was out walking at dusk one evening when it suddenly became very foggy and he found himself not knowing in which direction to go. In that area there were many piles of logs alongside the road, and he lay down to sleep on one of them. However, the next morning upon waking, he found that he was right near his own house!

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B3 Explanation of suchness in which the profound dependent-arising is seen
>
> This section has five parts:
>
> A [Chandrakirti's] promise to explain the meaning of the profound [emptiness]
> B Identification of those who are vessels for an explanation of the profound meaning
> C [Description of] how good qualities arise when it is explained to them
> D Exhortation to those who are vessels to listen
> E [Description of] how the suchness of dependent-arising is explained.

> 3B1C-2B3A Promise to explain the profound emptiness

Chandrakirti's autocommentary says:

> If asked: In what was mentioned here [6.1cd], [the sixth ground bodhisattva] sees the thusness of this arising in dependence – he will attain cessation through abiding in wisdom, if the bodhisattva sees dependent-arising phenomena, how will he see the suchness that arises dependent on it?
>
> Explanation: The eye of intelligence completely covered by a thick film of ignorance, the self-entity of that does not come into our sphere, yet it has become the object of bodhisattvas who abide on the higher grounds such as the sixth and so forth. Therefore, one should not ask us about that, it should be addressed to those very bodhisattvas and buddha bhagavans possessing the stainless eye of intelligence, free of the film of the cataract of ignorance, anointed by the eye-medicine of unmistakenly seeing emptiness that destroys the film of the cataract of ignorance.

If said: in the recitation of the Sutras such as the *Exalted Wisdom Gone Beyond [Sutra]* and the *Exalted [Sutra] on the Ten Grounds*, is it not taught "how the bodhisattva practicing the exalted wisdom gone beyond sees the thusness of dependent appearance?" Therefore, it is proper to explain it through following after scripture.

This is also not so. Because the intent of scripture is difficult to ascertain, those like us are unable to present thusness even from the scriptures. [The Sutras] were expressed from the point of view of independence, yet the intention of the scriptures is to be ascertained from seeing the treatises composed by valid beings and [their] unmistaken scriptural explanations, hence:

[Nagarjuna presented] through scripture as well as reasoning
How the very profound dharma is realized by that [bodhisattva], hence,
Like that, from the textual tradition of Arya Nagarjuna,
I shall speak in accordance with how the tradition abides. [6.3]

Just as the bodhisattvas who practice the wisdom gone beyond see the essential nature of phenomena – the state that is viewed (ultimate truth) – like that, Arya Nagarjuna, through unmistakenly knowing the scriptures, clearly revealed in the *Treatise on the Middle Way* by reasoning and scriptural citation, the essential nature of phenomena – the state that is correctly viewed – having the characteristic of lacking self-nature.

Chandrakirti promises to explain profound thusness by means of reasonings and scriptural references in accordance with the system of Arya Nagarjuna. The *Supplement* is a commentary on Nagarjuna's *Treatise on the Middle Way* and on the three mothers – the extensive, middling, and brief Perfection of Wisdom Sutras. Nagarjuna set out the explicit meaning of these three mothers mainly in his *Treatise on the Middle Way*, whereas their implicit meaning – the stages of the path – is explained by Maitreya in the *Ornament for Clear Realizations*. Here Chandrakirti promises to explain emptiness as Nagarjuna did in his Five Collections of Reasonings or Six Collections of Reasonings (the number depends on whether or not the *Precious Garland* is included).

The main point is to see the thusness of dependent-arising. It is said that when one sees the thusness of dependent-arising, one abides on the wisdom which attains cessation, i.e., the absorption of cessation, which was discussed in relation to the first verse of the sixth chapter. The Prasangika Madhyamika school's definition of an uncommon absorption of cessation (Jedzun Chogyi Gyeltshen, *Ocean of Sport*, page 104) is: an exalted wisdom equally and directly placed on reality that is qualified by a surpassing practice of the perfection of wisdom. A bodhisattva must see the thusness of dependent-arising since, without it, he is unable to progress to buddhahood. A bodhisattva who lacks wisdom is likened to a person with cataracts who is unable to see forms clearly. The cataract of ignorance is removed by realizing the thusness of dependent-arising, emptiness. For this reason, the wisdom realizing emptiness is likened to an eye-medicine that removes the cataract of ignorance. When the bodhisattva removes the cataract of ignorance, he sees reality and is able to progress to buddhahood. Since in order to realize emptiness it is essential to first understand what it is, Chandrakirti makes this promise to explain profound thusness. He promises to do so in accordance with the textual tradition of Nagarjuna, i.e., in accordance with Nagarjuna's *Treatise on the Middle Way*.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

[First, Chandrakirti indicates that he cannot, on his own, explain emptiness, the profound suchness of dependent-arising. He further points out that since scriptures on this topic are so difficult, he cannot give an explanation based solely on scripture either; rather, he will base his explanation on the more accessible writings of Nagarjuna.]

Question: [You said] before [in the first stanza of this chapter] that when sixth-ground bodhisattvas see dependent-arising, they see the suchness of the arising of this [particular phenomenon] in dependence on that [particular phenomenon]. How is this?
In answer to this, Chandrakirti's [*Auto*]*Commentary* states that:

> The entity of that [suchness of dependent-arising – namely, the emptiness of inherent existence,] is not an object for us whose mental eye is completely covered by the thick cataracts of ignorance; it is an object for those who dwell on the higher grounds – the sixth, and so forth. Therefore, this question should not be put to us. You should speak with just buddhas and bodhisattvas whose mental eye is free from the dimming cataracts of ignorance because they have applied the eye-medicine of the good perception of emptiness that overcomes the cataracts of ignorance.

This indicates that one who would ask about making manifest the meaning of suchness should ask them.

[Since Chandrakirti is indicating that one should definitely ask such beings about *perceiving* suchness, it would be a mistake to conclude that in Chandrakirti's system there is no mind perceiving suchness in meditative equipoise.] Hence, just as, when eye-medicine is applied, one's eyes become clearer but the eyes are not extracted, so, by applying the eye-medicine which is perception of emptiness, the mental eye becomes clearer – the eye of exalted wisdom is not extracted. If you understand this, you will not be polluted by the bad view consisting of the deprecation that there is no exalted wisdom consciousness in a superior's meditative equipoise.
Question: Does it not say in sutras such as the Mother Sutras [that is, the Perfection of Wisdom Sutras], the *Sutra on the Ten Grounds,* and so forth, that bodhisattvas coursing in the perfection of wisdom see the suchness of dependent-arising? Therefore, give an explanation following scripture [rather than Nagarjuna's *Treatise*].
Answer: Because it is difficult even to ascertain the thought of scripture, someone like myself [that is, Chandrakirti] is unable to teach suchness even through scripture. This is said in terms of [being unable to give] an independent explanation; however, the thought of scripture can be ascertained through seeing a treatise teaching suchness that was written by a valid being [that is, Nagarjuna] and that unerringly explains scripture.

> To indicate this, Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"* says:
> *Since with scripture as well as reasoning*
> *[Nagarjuna taught] how those [sixth-ground bodhisattvas] realize*
> *The very profound doctrine, I [Chandrakirti] will speak*
> *In accordance with the system of the Superior Nagarjuna.* [6.3]

In his *Treatise on the Middle Way* the Superior Nagarjuna, with unerring knowledge of the scriptures, taught very clearly the suchness of phenomena in accordance with how sixth grounders realize the very profound doctrine [of emptiness]. He did so through scriptures from the sets of discourses and, beyond that, in addition to scriptures, through the use of reasoning. Therefore, the honorable Chandrakirti will relate how suchness is taught in the textual system of the Superior Nagarjuna, just as it is in the system that Nagarjuna taught.

Chandrakirti says that emptiness is difficult to realize. Someone who does not have cataracts is able to see forms clearly, whereas someone with cataracts has difficulty seeing forms. Likewise, emptiness cannot be seen by one who lacks the wisdom realizing emptiness. Ignorance is likened to a cataract, in that as long as it is present one is unable to see emptiness. Chandrakirti says that on his own, he is unable to explain emptiness as it is set out in the sutras. Therefore, he will do so by relying on the textual system of Nagarjuna. The subject of emptiness needs to be explained by means of valid reasonings and scriptural references. In short, Chandrakirti says that he will explain it on the basis of Nagarjuna's *Treatise on the Middle Way* (also called *Fundamental Wisdom*). The name of Chandrakirti's text is translated as the *Supplement to the 'Middle Way'* or the *Entrance to the 'Middle Way*.' The words 'middle way' have many meanings; for example, the middle way of base, the middle way of path, the middle way of result, the *Treatise on the Middle Way* itself, or the middle way (Madhyamika) tenets. In

the context of Chandrakirti's *Entrance to the 'Middle Way,'* which 'middle way' is entered? It enters the *Treatise on the Middle Way*. In short, in the context of the *Entrance to the Middle Way*, the words 'middle way' do not refer to the middle way of the base, path, result, or tenets, but only to the *Treatise on the Middle Way*. For this reason, at the beginning of the autocommentary Chandrakirti says:

> In order to supplement the *Treatise on the Middle Way*, since I wished to compose the *Supplement to the 'Middle way,'*…

Geshe-la: Then, it can be asked: "If the sixth chapter is a commentary on the *Treatise on the Middle Way,* what is the source of the first five chapters?
Student: Chandrakirti supplements Nagarjuna's *Treatise on the Middle Way* in terms of method and for this reason explains the first five perfections.
Geshe-la: But what is the source of the explanation on the first five perfections?
Student: Buddha's scriptures.
Another student: The source is Nagarjuna's *Precious Garland*.
Geshe-la: It can be said that the five chapters on the first five mind generations have the *Precious Garland* as their source. It is said that Nagarjuna wrote only three texts that completely explain the entire corpus of the path, these being the *Precious Garland*, *Praise to the Sphere of Reality*, and *Compendium of Sutra*.

Student: What is the meaning of 'dependent-arising' in the context of the sixth chapter?
Geshe-la: The two main subjects of the sixth mind generation, the sixth chapter, are the reasonings regarding the selflessness of persons and the reasonings regarding the selflessness of phenomena. First, Chandrakirti sets out the reasonings settling the meaning of the selflessness of phenomena. The basis of this reasoning is dependent-arising, which is mentioned in Nagarjuna's homage at the beginning of the *Treatise on the Middle Way*: (Garfield, *The Fundamental Wisdom of the Middle Way*)

> I prostrate to the perfect buddha
> The best of teachers, who taught that
> Whatever is dependently arisen is
> Unceasing, unborn,
> Unannihilated, not permanent,
> Not coming, not going,
> Without distinction, without identity,
> And free from conceptual construction.

Nagarjuna pays homage to the Teacher who has seen the dependent-arising that possesses these features. The Buddha established the selflessness of persons and the selflessness of phenomena mainly using the reasoning of dependent-arising. However, the *Treatise on the Middle Way* mainly sets out the reasoning analyzing causes, the diamond slivers reasoning. This is explained in the sixth chapter of the *Supplement,* beginning with the eighth verse, which says:

> *That itself does not arise from that, how could it from others?*
> *Neither is it from both, how could it exist without cause?* [6.8ab]

Tuesday morning, 4 April 2000

Chandrakirti says that on his own he is unable to explain dependent-arising but can only do so by basing his explanation on a valid scripture composed by a valid being. The valid being in this case is Nagarjuna. A valid scripture is one that is pure by way of the three-fold analysis:
(1) when the main subject taught is a manifest phenomenon, it is not harmed by a valid direct perceiver;
(2) when the main subject taught is a slightly hidden phenomenon, it is not harmed by inference through the power of the fact; and
(3) when the main subject matter taught is an extremely hidden phenomenon, it is not harmed by scriptural authority.
A valid scripture is composed by a valid being, who in this context is Nagarjuna. He is a valid being in that he was prophesied by the Buddha himself. The meaning of valid being is: one who is able to fulfill the desires of disciples in a non-deceptive manner. The word 'non-deceptive' in the definition of a valid being is the same as that which occurs in the context of the definition of a valid cognizer: a knower that is incontrovertible, or non-deceptive, with respect to its own object. For the Prasangika Madhyamikas, a valid cognizer is not pervaded by being a *new* cognizer. Therefore, for them, subsequent cognizers are also valid cognizers.

Chandrakirti's autocommentary says:

> Therefore, just as the thusness of phenomena was presented by reasoning and scripture from the holy speech of Arya Nagarjuna, only like that, I shall speak in accordance with how the tradition finely presented by him abides.
>
> If asked: but first of all, how [is it known that] Arya Nagarjuna had unmistaken ascertainment of the scriptures?
>
> [It is known] from the scriptures. As was taught in the *Exalted Descent into Lanka Sutra:*
>
> In the southern place of Veta, famed as the great Bhikshu Shrimant,
> He, called the name 'Naga,' will abolish the positions of existence and non-existence.
> Having superbly revealed my vehicle – the unsurpassed mahayana – in the world,
> And attaining the Extremely Joyous ground, he will go to Sukhavati.
>
> and taught in the *Exalted Twelve-Thousand Great Cloud [Sutra]*:
>
> > Ananda, four hundred years after I have passed beyond sorrow, this youth of Licchavi called 'Pleasing to be Seen by All Sentient Beings,' having become a bhikshu called 'Naga' and superbly revealing my doctrine extensively, finally in the realm of the world called 'Exceedingly Clear Light' will become the tathagata arhat perfectly completed buddha called 'Jñanakara.'
>
> Therefore, it is established that he ascertained the scriptures unmistakenly.

Chandrakirti explains dependent-arising according to the system presented by Nagarjuna. How is it known that Arya Nagarjuna is a valid being? It is known in dependence on many scriptural references by the Buddha, two of which are quoted here: the *Exalted Descent into Lanka Sutra* and the *Exalted Twelve Thousand Great Cloud [Sutra].* Nagarjuna is said to have "opened the chariot track" of the Middle Way school, meaning that he clarified the system of the Middle Way (the Madhayamika). What is the Middle Way and how did he clarify it? He clarified the middle way that is free from the two extremes – the extreme of permanence and the extreme of annihilation. He established that, although phenomena do not exist truly, all phenomena from forms through the exalted knower of all aspects do exist conventionally and are feasible to function as agents, objects, and actions.

What is the definition of an "opener of a chariot track"? The definition of an opener of a chariot track is: one prophesied by the Buddha who is able to clarify the system on his own without depending on a commentary by another being in human form. Nagarjuna fulfills the requirements of this definition.

In the *Descent into Lanka Sutra,* the Buddha said: "In the southern place of Veta, famed as the great Bhikshu Shrimant, he, called the name 'Naga'…" Nagarjuna's name literally means "the achieved naga." There are many interpretations of his name, one of which is that he is so-called because he, who knew all the Buddha's doctrine, went to the naga land where he became an object of worship of the nagas. Another interpretation is that he was so-called because he was very good at reasoning and was therefore likened to a past Indian prince named Arjun who was extremely good at hitting his target with his arrow.

Buddha taught the extensive, middling, and brief Perfection of Wisdom Sutras. It is said that he taught the extensive version at Vulture's Peak in India after which the nagas took this scripture back to their land. Later, in order to bring it back to the human world, Nagarjuna went to the naga land, fulfilled their needs, and brought this scripture back. However, two of the chapters of the extensive Perfection of Wisdom scripture are said to have remained in the naga land. The actual scripture that was brought back by Nagarjuna from the naga land can still be seen in Kathmandu, Nepal, where it is shown to the public one month each year but can only be viewed from quite a distance. Thanks to Nagarjuna, the extensive Perfection of Wisdom Sutra remains extant in our world.

The *Descent into Lanka Sutra* then says that Nagarjuna "will abolish the positions of existence and non-existence," meaning that Buddha prophesied that Nagarjuna would abolish the extreme of permanence, true existence, and the extreme of annihilation, non-existence. When the sutra says "Having superbly revealed my vehicle – the unsurpassed mahayana – in the world," "the unsurpassed mahayana" can also be taken to mean that Nagarjuna opened the track of highest yoga tantra by clarifying the *Guhyasamajatantra*, which is also known as "the king of tantras." It is said that if the practice of *Guhyasamajatantra* exists in the world, tantra exists in the world; it is not enough that the practice of other tantras exists. Nagarjuna opened the chariot track of highest yoga tantra by writing a text on the five stages of the *Guhyasamajatantra*: (1) the generation stage, (2) the isolation of mind together with its branches, (3) the impure illusory body, (4) the meaning clear light, and (5) the unification of the clear light and illusory body, which exists both at the level of a learner and no-more-learner. The completion stage of *Guhyasamajatantra* has six stages: (1) isolation of body, (2) isolation of speech, (3) isolation of mind, (4) illusory body, (5) clear light, and (6) unification. Nagarjuna explained all of these various stages.

The sutra continues: "attaining the Extremely Joyous ground, he will go to Sukhavati." Buddha prophesied that having attained the first ground, Extremely Joyous, Nagarjuna would go to Sukhavati, the Joyous Land. Sukhavati is the pure land of supreme emanation body Amitabha, where Avalokiteshvara and Tara are also said to abide. According to some, the pure land of Amitabha is the Potala Pure Land which is in the southern direction (in relation to oneself this would be to one's right!).

Some people mistakenly say that the *Exalted Twelve Thousand Great Cloud Sutra* was never translated into Tibetan. It is recounted that when Buddha was teaching this sutra, a child appeared before him and referring to this child, Buddha prophesied to Ananda: "Ananda, four hundred years after I have passed beyond sorrow, this youth of Licchavi called 'Pleasing to be Seen by All Sentient Beings,' having become a bhikshu called 'Naga' and superbly revealing my doctrine extensively, finally in the realm of the world called 'Exceedingly Clear Light' will become the tathagata arhat perfectly completed buddha called 'Jñanakara.'" Just as Buddha had prophesied, 400 years after his passing away, Nagarjuna appeared and fulfilled the prophesy. Chandrakirti says: "Therefore, it is established that he ascertained the scriptures unmistakenly."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> *Question*: How is it [determined] that the Superior Nagarjuna errorlessly ascertained the meaning of the definitive scriptures [that is, those explaining the emptiness of inherent existence]?
> *Answer*. This is known from scripture. The *Descent into Lanka Sutra* says:
>
> In the south, in the area of Vidarbha
> Will be a monk known widely as Shriman
> Who will [also] be called Naga.
> Destroying the [extreme] positions of existence and nonexistence,
>
> He will thoroughly teach in the world
> The unsurpassed Great Vehicle – my vehicle.
> Having done this, he will achieve the Very Joyous ground
> And then go to the Blissful [Pure Land upon passing away].
>
> Thus [Buddha] said that Nagarjuna would comment on the definitive vehicle, free from the extremes of existence and nonexistence.
>
> He is a rebirth of a Licchavi youth, known as Liked-When-Seen-By-All-The-World, during the time of the Teacher [Buddha] who is mentioned in the *Excellent Golden Light Sutra*.
> The *Great Cloud Sutra* says:
>
> Four hundred years after I [Shakyamuni Buddha] pass from sorrow [that is, die], this youth [Liked-When-Seen-By-All-The-World] will become a monk known as Naga and will disseminate my teaching. Finally, in the land called Very Pure Light he will become a Conqueror named Light-Which-Is-A-Source-Of-All-Wisdom.
>
> Hence it is established that [Nagarjuna] had unmistaken ascertainment of the definitive scriptures [because such ascertainment is necessary to attain the first ground]. Also, in the *Manjushri Root Tantra* the time of Nagarjuna's appearance and his name are the same, and it is explained that he will live for six hundred years.

Buddha prophesied that Nagarjuna would appear 400 years after his own death and would live for 600 years.

> The *Great Drum Sutra* says:
>
> 1. that after the Teacher's passing away, when the [average] lifespan is eighty years and the teaching [of the Mahayana] has degenerated, this Licchavi youth Liked-When-Seen-By-All-The-World, having become a monk bearing the Teacher's name [in the sense of being of the Shakya clan], will disseminate the teaching, and
>
> 2. that, after one hundred years, he will die and be born in the Blissful [Pure Land].
>
> That this scripture also prophesies the master [Nagarjuna, even though it does not explicitly mention his name] is asserted by Sthavira Bodhibhadra and the Great Elder [Atisha]; they are relying on the explanation that the Licchavi Liked-When-Seen and Nagarjuna are of one continuum [that is to say, earlier and later births in a single stream of rebirth].
>
> The *Great Drum Sutra* states that this monk [Nagarjuna] is a seventh-ground [bodhisattva]. It cannot be established that such an explanation contradicts the former [statement in the *Descent into Lanka Sutra* that Nagarjuna was a first-ground bodhisattva], for variations among scriptures do occur [because some scriptures describe how great beings appeared to ordinary sight, and others describe their actual attainment]. In some scriptures, for instance, certain great kings are said to be stream enterers, whereas in other scriptures they are said to be buddhas.

Scriptures say different things; for example, some say that certain great kings are stream enterers and others say that they are buddhas. The 'great kings' mentioned here are the four great kings that are mentioned in the ritual of the *Sixteen Elders*: (1) Dhritarashtra, (2) Virudhaka, (3) Virupaksha, and (4)

Vaishravana. In short, Lama Tsongkhapa says that although some scriptures say that Nagarjuna was a first ground bodhisattva and others say that he was a seventh ground bodhisattva, there is no contradiction in that Nagarjuna lived for 600 years and therefore at one time in his life he could have been a first ground bodhisattva, at another a seventh ground bodhisattva, and at another a buddha.

There is one passage that says that Nagarjuna will appear 400 years after Buddha's passing and another that says he will appear "when the [average] lifespan is eighty years and the teaching [of the Mahayana] has degenerated." When Buddha was alive, the average lifespan was one hundred years; after that it diminished over time. These two passages would mean that between the time when the average lifespan is one hundred years and the time when it is eighty years there was a lapse of 400 years, the time at which Nagarjuna came. However, nowadays people say that the average lifespan is increasing, which would appear to contradict the scriptures. In general, the average lifespan can be said to be sixty years although this might be argued. This can be explained in terms of the fact that by the age of sixty, the majority of people have lost most of their teeth, whereas those who have all their teeth at this age are very few. The expression "At the age of sixty the mouth is broken" is used to prove that the actual average lifespan is sixty years (although this reason could also be argued). Of course, this does not mean that people do not live less than or more than sixty years. The scholar Shantarakshita is said to have lived for 900 years and, although Nagarjuna was born when the average lifespan was eighty years, he lived for 600 years.

In short, there are various scriptural references to Nagarjuna. It is said that during his lifetime Nagarjuna made <u>three great Dharma proclamations</u>:
(1) he clarified the Discipline and expelled monks of broken morality from Nalanda Monastery in India,
(2) he composed the Six Collections of Reasonings on the Middle Way, and
(3) he composed the *Praise to the Sphere of Reality*.
I heard this myself from Kunu Lama Tenzin Gyeltshen Rinpoche.

<u>Note</u>: In the endnotes to Anne Klein's *Path to the Middle* it says:

> In his first proclamation of doctrine Nagarjuna protected the monks at Nalanda from famine through alchemy, exhorting the indolent and expelling the wayward. Then, having gained adepthood, somewhere between his fiftieth and hundredth year he went to the land of dragons (*naga*) and, bringing back the *One Hundred Thousand Stanza Perfection of Wisdom Sutra*, appeared in South India a second time. Having composed the *Treatise on the Middle Way, the Fundamental Text Called "Wisdom,"* he proclaimed the second proclamation of the Mahayana doctrine of emptiness for up to a hundred years. Then, he went to the northern continent called Unpleasant Sound, furthering the interests of sentient beings for two hundred years, and again appeared in South India for a third time. During this final period, he brought back the *Great Drum Sutra*, the *Great Cloud Sutra*, and so forth, from the northern continent and proclaimed the third proclamation of doctrine, a discourse examining the basic constituent of the buddha nature. During this final period of a hundred years, he taught about the existence of the buddha nature in all sentient beings in such works as his *Praise of the Element of Reality*.

Tuesday afternoon, 4 April 2000

Nagarjuna's three proclamations of Dharma are clarified in his biography, which is found in the text, *Biographies of the Lineage Lamas of the Stages of the Path* (Tib. page 122). Here, it says that Nagarjuna's first proclamation was to clarify the Discipline (vinaya) by expelling thousands of monks with bad conduct from Nalanda Monastery. His second proclamation consists of the six treatises he composed on the middle way, which establish the meaning of emptiness. The third proclamation is his

composition of the *Praise of the Sphere of Reality,* which he did in the later part of his life in southern India.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

3B1C-2B3B Identification of those who are vessels for an explanation of the profound emptiness

Chandrakirti's autocommentary says:

> Further, the treatise that bears the result of presenting dependent-arising just as it really is should be taught to only those who have planted the seeds of emptiness in their continua through prior familiarization – not to others, because although they hear about emptiness, they possess the great folly of having thoughts that engage it erroneously. Like this: since sometimes unskilled, they will go to bad migrations having abandoned the Dharma. Sometimes, saying, "the meaning of emptiness is non-existence" – mistakenly identifying like that, having [first] generated the wrong view that denies all things, it will increase. Therefore, the teacher, definitely making the distinction of special appreciation, should explain the view of emptiness to listeners.
>
> If asked further: how is one able to ascertain the difficult to ascertain, [namely], "since it is suitable to reveal emptiness to him, I shall reveal emptiness to him?"
>
> Since that is to be ascertained through outer signs, in order to finely indicate the reasons for that, it is explained:
>
> *Upon hearing about emptiness even while an ordinary being,*
> *Whoever gives rise repeatedly to inner extreme joy,*
> *Eyes moistened by tears from extreme joy and*
> *The hairs of the body standing on end,* [6.4]
>
> *They have the seed of the mind of complete buddhahood –*
> *They are a vessel to whom to finely reveal thusness –*
> *One should reveal the ultimate truth*
> – having characteristics that will be explained –
>
> *To them.* [6.5abc]

Chandrakirti says that it is important to recognize who is and who is not a suitable vessel for the teachings on emptiness since, if someone is not a suitable vessel, the teachings can harm that person. The right vessel is someone who has the seed of familiarity with emptiness, this being gained through having received teachings on emptiness in the past. Unsuitable vessels who hear teachings on emptiness only bring harm upon themselves. For example, they may abandon emptiness whereby they create the negative karma to be reborn in the lower realms. Others who are not suitable vessels come to a wrong understanding of emptiness and then deprecate it, whereby they generate wrong views that will then increase more and more. For this reason, one has to be very careful to whom one gives teachings on emptiness. Therefore, first identify whether the listener is a correct vessel or not. In regard to this, Nagarjuna's *Treatise on the Middle Way* says:

> Those of little wisdom are harmed
> When their view of emptiness is faulty,
> Just as [harm comes to] those who faultily hold a snake
> Or faultily use a knowledge-mantra. [XXIV.11]

Due to misunderstanding emptiness, one will experience harm, like one who catches a snake wrongly. In order to know who is a correct vessel, Chandrakirti says that it is one with the seed of the mind of complete buddhahood, which is revealed by:

> *Upon hearing about emptiness even while an ordinary being,*
> *Whoever gives rise repeatedly to inner extreme joy,*
> *Eyes moistened by tears from extreme joy and*
> *The hairs of the body standing on end,* [6.4]

Such a person is a correct vessel for the teachings on emptiness. However, there is no pervasion that one who has eyes moistened by tears and the hairs of the body standing on end is a correct vessel for the teachings on emptiness, since people cry for other reasons and also, when someone becomes cold, all their body hairs stand on end! One with the seed of the mind of enlightenment is specifically someone who *upon hearing teachings on emptiness* experiences inner joy, whereupon his eyes are moistened by tears and his body hairs stand on end. If this occurs, then that person is a suitable vessel for the teachings on emptiness.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Furthermore, [Nagarjuna's] *Treatise* on the definitive meaning [that is, emptiness] should be taught just to those who through prior cultivation have established seeds in their [mental] continuums for the realization of emptiness. It should not be taught to others, for, even if they have heard texts that teach emptiness, they have thoughts wrongly oriented with respect to emptiness, and hence [teaching it to them] is disastrous.
> With respect to how such disaster comes about, some through lack of skill abandon emptiness and thereby go to a bad transmigration [upon rebirth]. Others, erroneously apprehending the meaning of emptiness, which is the non-establishment of inherent existence, think that these phenomena [due to lacking inherent existence] simply do not exist or are nonexistent. First they generate the wrong view deprecating all things – causes and effects – and then, since they do not give it up, this view increases more and more.

Emptiness should only be taught to those who have the seed or the latency of an awareness realizing emptiness, as otherwise it will only bring harm. Emptiness should not be taught to someone who, listening to the teachings on emptiness, misunderstands them, because the result will be disastrous. If one who listens to teachings on emptiness is not skilled, he will create the negative karma of abandoning emptiness due to which he will be reborn in the lower realms. There is a story related to this subject. At the time of the Buddha, Manjushri taught emptiness to many ordinary beings who were not suitable vessels, due to which they generated wrong views and were reborn in the lower realms. Shariputra, knowing this had happened, told the Buddha that Manjushri had created a disaster and said that if instead he himself had taught those people the hinayana, this would have been suitable in that they would have entered the hinayana. The Buddha said to Shariputra that he had not understood the intention of Manjushri, which was that, although these ordinary beings would be reborn in the lower realms, when reborn again as human beings they would possess the seed of familiarity with emptiness and would thereby again meet the mahayana teachings on emptiness and attain enlightenment. He also said that if Shariputra had taught the hinayana to them, although these people would have entered the hinayana, they would then have taken a long time to attain enlightenment. Similarly, if we make the mistake of teaching emptiness to unsuitable vessels it does bring the positive result of establishing a seed for these people to hear teachings on emptiness again in a future life.

Others who are unsuitable vessels generate wrong views upon hearing the teachings on emptiness. To prove this, Lama Tsongkhapa quotes Nagarjuna's *Treatise on the Middle Way* (Klein, *Path to the Middle*):

> [Nagarjuna's *Treatise* says:]
> Those of little wisdom are harmed
> When their view of emptiness is faulty,
> Just as [harm comes to] those who faultily hold a snake
> Or faultily use a knowledge-mantra. [XXIV.11]

When someone possesses a faulty view of emptiness, there is danger to that person, just like someone who is unskilled in trying to catch a snake or who uses knowledge-mantras in a faulty way in order to do so. Knowledge-mantras, when used correctly, prevent the snake's poison from harming the person, whereas when used incorrectly the person is harmed by the poison. In general, there is a particular mantra that counteracts snake's poison.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Furthermore, Chandrakirti's *Clear Words*, commenting on this, says that (1) in order not to fall to the extreme of deprecating conventionalities, it is necessary not to undermine [the validity of nominally existent] actions and their effects which are like reflections and (2) in order not to fall to the extreme of superimposing ultimate existence [onto phenomena, which only nominally exist], it is necessary to see that actions and their effects pertain only to things that lack inherent existence. Chandrakirti describes the opposite of these two [that is, undermining the validity of nominally existent phenomena and misconstruing that actions and their effects pertain only to inherently existent phenomena] as falling to the extremes of annihilation and permanence [respectively].

Lama Tsongkhapa says that one should not fall to the extreme of deprecating conventionalities or the extreme of superimposing ultimate existence. By understanding causes and results, one will not fall to the extreme of deprecating conventionalities and by understanding that causes and results are established on the basis of non-inherent existence, one will not fall to the extreme of superimposing ultimate existence. These two extremes are respectively:
(1) the extreme of annihilation and
(2) the extreme of permanence.
Lama Tsongkhapa says: "Chandrakirti describes the opposite of these two [that is, undermining the validity of nominally existent phenomena and misconstruing that actions and their effects pertain only to inherently existent phenomena] as falling to the extremes of annihilation and permanence [respectively]."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> [Chandrakirti] says that one who considers compositional phenomena to be nonexistent has a wrong view; hence, even though there is a verbal difference between "not existent" and "not being existent", the appearance to the mind of the aspect of "not existent" does not differ at all [from the appearance to the mind of the aspect of "not being existent"] even though one looks into it in detail.

Are 'not existent' and 'not being existent' really the same? It is only a difference in the words; the meaning is the same. For example, if we say "on the table in front of me, a pot is not existent" and "on the table in front of me there does not exist a pot," they have the same meaning.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> [Chandrakirti,] in commenting on Aryadeva's *Four Hundred* where it states:
>
> The one goes just to a bad transmigration [upon rebirth]
> Whereas the non-ordinary goes to peace,
>
> says:
>
> On hearing the teaching of selflessness, the unwise abandon it or realize it incorrectly, whereby they go just to a bad transmigration [upon rebirth].
>
> Thus [Chandrakirti] explains that both [those who abandon the teaching of emptiness and those who realize it incorrectly] go to a bad transmigration [upon rebirth].

Here in Aryadeva's text, "the one" who goes to a bad migration is an ordinary being, whereas the "non-ordinary" being who "goes to peace" is a superior. Chandrakirti says that this means that those who are unwise listen to teachings on emptiness but then either abandon them or misunderstand them, due to which they go to a bad migration.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> To realize [emptiness] erroneously is to apprehend the meaning of emptiness as signifying nonexistence.

There is a discussion in this text as to whether the word 'realize' should perhaps be 'investigate,' these being similar in Tibetan. Think about this.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Therefore, when prideful persons – who lack the mental capacity to discriminate the very subtle meaning [of emptiness] and yet fancy that they have [such capacity] – develop a strong facsimile of belief in the mere words of the profound meaning which [actually] is unsuited to their faculties, this leads to disaster. Consequently, you should take care regarding these points.

One should be careful not to reveal emptiness to such persons.

Lama Tsongkhapa (Klein, *Path to the Middle*) then poses a question and answer:

> *Question:* How can one ascertain what is difficult to ascertain – that it is suitable to teach emptiness to this person and not to that person?
> *Answer:* To indicate that one can ascertain this through external signs, Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"* says:
>
> *Even while an ordinary being,*
> *On hearing about emptiness inner joy arises again and again,*
> *Tears arising from this happiness moisten the eyes,*
> *And the hairs of the body stand on end.* [6.4]
>
> *Such [persons] have the seed of the awareness of a perfect buddha.*
> *They are vessels for the teaching of suchness.*
> *The ultimate truth is to be taught to them.* [6.5abc]
>
> Even while they are ordinary beings and beginners, when they hear non-erroneous discourse about emptiness, from hearing it strong joy arises again and again internally with regard to that discourse; tears arising from that strong joy moisten the eyes, and the hairs of the body stand on end. Such [persons] have the seed of realizing emptiness, called the seed of the awareness of a

> perfect buddha, the non-conceptual exalted wisdom. Those persons are vessels for the teaching of suchness by a skilled master. The ultimate truth, having the characteristics about to be explained, should be taught to them.

The answer is that suitable vessels are ascertained in dependence on particular external signs, which are special signs of body. Inner realizations can be inferred from special external signs; this is called a *correct sign of result*. The *Sutra on the Ten Dharmas* sets out two examples and two meanings saying: "Just as one can know the existence of water through seeing water fowl and the existence of fire through seeing smoke, one can also know that the mahayana lineage has been activated through seeing special external signs." The meaning of this is that one can infer inner realizations in dependence on special signs of body and special signs of speech. One can set out a syllogism: a bodhisattva on the path of accumulation, as the subject, is a correct vessel for the teachings on emptiness because, upon hearing about emptiness, he experiences inner joy whereupon his eyes are moistened by tears and his body hairs stand on end. Such a person is a suitable vessel for the teachings on emptiness because he has the seed of an awareness of a perfect buddha.

Lama Tsongkhapa then says: "Those persons are vessels for the teaching of suchness by a skilled master. The ultimate truth, having the characteristics about to be explained, should be taught to them."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> If these physical marks are seen to arise when [a person] has the composite of (1) having heard non-erroneous discourse on emptiness and (2) not having misunderstood it, this is an unambiguous sign. If the meaning is not understood or, even if understood, these marks do not arise, one cannot determine that [such persons] are vessels for the profound for the time being; still, if they will not depart from what is set out by an excellent lama [that is, will not merely follow their own conjecture], they are suitable vessels for newly infusing many potencies [that will serve as] a causal lineage for [developing] realization of emptiness.

Those who have the wisdom arisen from listening to teachings on emptiness and the wisdom arisen from reflecting on emptiness will unambiguously have these physical marks, or signs. On the other hand, those who hear the teachings on emptiness but do not understand the meaning and those who understand the meaning but do not have the physical signs are not suitable vessels for the teachings on profound emptiness. However, if they rely on and do not depart from the lama's advice they can still be taught emptiness, since this will leave latencies in their continua for them to realize emptiness in the future.

In short, it is dangerous to teach emptiness. Those who are suitable vessels are those who experience joy when hearing the teachings on emptiness. Likewise, in the *Ornament for Clear Realizations,* those who are suitable vessels for the teachings on the mother sutras are described as those who have made offerings to the buddhas, created roots of virtue, and are under the care of a virtuous spiritual friend. Such persons, being suitable vessels for the teachings on the mother sutras, the subject of which is emptiness, are therefore suitable vessels for the teachings on emptiness.

In short, it is necessary to have the support of a collection of merit in order be a suitable vessel to listen to teachings on emptiness.

Wednesday morning, 5 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B3C How good qualities arise when the profound emptiness is explained to proper vessels

Chandrakirti's autocommentary says:

> The effort of revealing suchness to the listener who is like that will not be without result.
>
> If asked: why?
> Like this:
>
> *In him, qualities that follow after that will arise.* [6.5d]
>
> Not only will that listener not possess the misfortune produced by the error of grasping to emptiness, also the qualities bearing the cause of listening to emptiness will arise.
>
> If asked: how?
> He thinks about listening to the view of emptiness as like finding a treasure, and in order not to degenerate that:
>
> *Always he will dwell having correctly assumed morality,*
> *Will bestow gifts, cultivate compassion,*
> *Meditate on patience, fully dedicate his virtue*
> *In order to liberate migrators and* [6.6]
>
> *Pay respect to the completed bodhisattvas.* [6.7a]
>
> There, having understood, "If I fall into the bad migrations through the condition of broken morality, the continuity of the view of emptiness will be cut," he will always dwell having correctly assumed morality. Thinking, "Although reborn in happy migrations due to morality, if I am poor, due to the endeavor to search for such necessities as food, medicine, robes, and so forth the continuity of listening to emptiness will be cut," and bestows gifts. Saying, "The view of emptiness fully held by compassion induces buddhahood – it is not otherwise," he cultivates compassion. Considering, "As a result of anger, I shall go to bad migrations and attain a bad complexion – hence, the aryas will not be pleased by that condition," he meditates on patience. Since those [virtues of] morality and so forth that are not fully dedicated to the omniscient state will not uninterruptedly give rise to unimaginable causes of attaining buddhahood and results, he thoroughly dedicates also the roots of virtue to enlightenment in order to liberate migrators.
>
> Having thought, "Excluding the bodhisattvas, others are unable to finely present the self-nature of dependent-arising – the state that is viewed (ultimate truth)," they act to respect the completed bodhisattvas.

If one teaches emptiness to a suitable vessel who possesses the previously mentioned characteristics, there will definitely be a result. To demonstrate this, the root text says: "In him, qualities that follow after that will arise." In fact, many qualities related to the teaching on emptiness will arise; for example, one will think that listening to the teachings on the view of emptiness is like having found a treasure. Such correct vessels then abide in proper ethical conduct in order to prevent the continuity of their view of emptiness from being severed. More specifically, "Always he will dwell having correctly assumed morality" means that a correct vessel for the teachings on emptiness takes the bodhisattva vows. Correct vessels also practice generosity knowing that if they practice ethics alone, although they will be reborn as a human being, they will lack the basic necessities to be able to continue to cultivate the view of emptiness. They think, "If I am poor, due to the endeavor to search for such necessities as food, medicine, robes, and so forth the continuity of listening to emptiness will be cut," and therefore put effort into practicing generosity.

Knowing that to achieve buddhahood it is not sufficient to realize emptiness, correct vessels also develop compassion. They also practice patience through understanding that if they do not, even though due to generosity and ethics they will be reborn as human beings, they will have an ugly body

that will be repulsive to others. Therefore, they practice patience in order to be reborn with a beautiful body. However, they also practice patience in order to avoid rebirth in the lower realms. Those who are correct vessels also make sure to dedicate their roots of virtue to the attainment of enlightenment in order to prevent those virtues from going to waste. Chandrakirti says that a correct vessel "fully dedicates his virtue in order to liberate migrators and pays respect to the completed bodhisattvas." Knowing that only perfect bodhisattvas teach emptiness unmistakenly, those who are correct vessels for the teachings on emptiness pay respect to them.

Aryadeva, in his *Four Hundred Stanzas,* says that one who even develops a doubt thinking that emptiness is feasible creates a great quantity of merit and that therefore there is no need to mention how much merit is created by someone who is free of doubt regarding emptiness. Aryadeva also says that those with little merit do not develop even a doubt about emptiness, whereas the presence of a mere doubt about it shakes or shatters the very foundation of cyclic existence, that being the conception of true existence. For example, it is like when a piece of cloth is used for such a long time that it becomes well-worn and then easily falls apart. In short, having a doubt about emptiness harms the root of cyclic existence. In general we think that phenomena are established as a self. This conception of a self is harmed by the doubt that they are empty of such a self.

In conclusion, as a result of hearing the teachings on emptiness, others create many merits and generate a doubt regarding emptiness, which harms the root of cyclic existence.

Lama Tsongkhapa's *Illumination* (Tib. page 116) (Klein, *Path to the Middle*) says:

> Teaching emptiness to listeners such as are described above will not be fruitless. Why? Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"* says:
>
> *The good qualities that follow [hearing this teaching]*
> *will arise for them.* [6.5d]
>
> Not only will such listeners not incur the disaster generated by erroneous conception of emptiness, but also the good qualities that follow as effects upon [hearing] about the view of emptiness will arise for them.
>
> *Question*: How do these good qualities arise?
> *Answer*: Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"* says:
>
> *Having adopted ethics, they always abide in ethics.*
> *They give gifts, sustain compassion, meditate patience,*
> *And fully dedicate the virtue of these toward enlightenment*
> *For the sake of releasing transmigrating beings.* [6.6]
>
> *They respect the perfect bodhisattvas.* [6.7a]
>
> Those who are vessels [of the teaching of emptiness] consider hearing about the view of emptiness to be like finding a treasure. To prevent that view from deteriorating even in other rebirths, they adopt ethics and always abide in ethics. Concerning this, they think, "If through the circumstance of faulty ethics I fall into a bad transmigration, the continuum of [my] view of emptiness will be severed." Thus, they adopt proper ethics and guard against degeneration.
>
> One need not have sworn to [a code of] ethics previously in order to have faulty ethics. For, *naturally* unseemly [behavior] which is discordant with proper ethics also constitutes faulty ethics.
> [Persons who are vessels of the teaching of emptiness also] think, "Through maintaining proper ethics I will be born in a happy transmigration; yet, if I am poor, I will be bereft of necessities such as food, drink, medicine, and clothing. Due to my being preoccupied with seeking these, the continuum of hearing about the view, meditating on its meaning, and so forth, will be severed." Thus, as explained above [in the section on the perfection of giving], they give gifts to high and low fields [of merit, for such giving acts as a cause of possessing resources in future lives].
> Thinking, "The view of emptiness induces buddhahood when conjoined with the great compassion explained earlier [in the section on compassion] and not otherwise," they sustain familiarization with great compassion, the root.

When emptiness it taught to an intelligent vessel the teachings will not be fruitless, i.e., they will definitely bring about a result. Lama Tsongkhapa clearly sets out these results. First of all, those who are correct vessels for the teachings on emptiness will consider that hearing such teachings is like finding a treasure. They will also understand that it is important to avoid severing the continuity of this view of emptiness and, for this reason, they will engage in safeguarding ethics through understanding that faulty ethics will bring rebirth in a lower realm, whereby the continuity of the view of emptiness will be severed. Faulty ethics does not only involve breaking a vow; there are both *natural* and *formulated* transgressions. Those who have not taken vows create natural transgressions; for example, when a cat kills a pigeon, this is a natural transgression that brings the result of rebirth in the lower realms. In short, a natural transgression is a negative action that does not involve the transgression of a vow. For example, killing is a natural transgression that is a negative action even without one's having taken the vow to abandon killing. On the other hand, formulated transgressions are committed only in relation to vows. For example, in the case of cutting grass, only a fully ordained monk or nun commits a fault that is a formulated transgression, whereas if a lay person cuts grass, there is no fault and no formulated transgression. The ten non-virtuous actions of body, speech, and mind (killing, stealing, sexual misconduct, lying, divisive speech, harsh words, idle talk, covetousness, malice, and wrong view) are all natural transgressions.

Another result of the teachings on emptiness is that correct vessels understand that if they practice ethics but do not practice generosity they will be reborn in the upper realms but will lack the necessities to continually cultivate the view of emptiness; therefore they also practice generosity. Due to not practicing generosity, in a future life one will need to spend one's time working to attain the necessities of life whereby the continuity of the view of emptiness will be cut.

Lama Tsongkhapa then says that the practice of generosity can be done either in relation to higher fields, such as the Three Jewels, and to lower fields, such as beggars. When someone makes offerings to the Three Jewels, is it generosity? It is because it is an action of giving accompanied by the intention to give. Even making water offerings to the Three Jewels is a type of generosity. Atisha himself admired the tradition of making water offerings in Tibet because it is a practice of generosity that can be done without any sense of loss. One should practice as much generosity as possible to both higher and lower fields.

Those who are correct vessels for the teachings on emptiness also cultivate compassion through understanding that with the view of emptiness alone, one cannot attain enlightenment. They understand that emptiness needs to be conjoined with compassion and therefore strive to cultivate compassion. It is important to develop compassion now, since only those with a precious human rebirth possessing the eight freedoms and ten endowments have the opportunity to do so.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Thinking, "Through anger one goes to a bad transmigration [upon rebirth]; virtue is destroyed, and one acquires a very ugly complexion, and because of this, superiors are displeased [and do not teach the view of emptiness to such a person]," they meditatively cultivate patience.
> Ethics, and so forth, that are not dedicated again and again toward [attainment of] omniscience will not become causes of attaining buddhahood and will not uninterruptedly give rise to the immeasurable effects of [a healthy, non-defective] body, resources, and so forth. Therefore, they also fully dedicate the virtue of these ethics, and so forth, toward enlightenment for the sake of releasing transmigrating beings from cyclic existence.
> They see that, except for bodhisattvas, others – that is, hearers, solitary realizers, and so forth – cannot teach the profound dependent-arising as a bodhisattva does. Thus, they greatly respect the perfect bodhisattvas.

Anger brings many unpleasant results. For example, its *fruitional result* is rebirth in the lower realms. Then, even when one is [subsequently] reborn again in the happy migrations, one will have an ugly body, this being a *result similar to the cause*. There is a story in sutra about a person called Pleasant Voice, who had a very attractive voice but an extremely ugly and repulsive body. Upon being asked by others why this had happened, the Buddha responded that his ugly body was the result of anger in a previous life, while his pleasant voice was the result of having offered a melodious bell to a stupa at the time of Kashyapa. Such stories as those that appear in the *Sutra of the Wise and the Foolish* and the *Hundred Action Sutra* can help increase one's belief in the law of actions and results and also help to develop one's mind of enlightenment and patience.

Lama Tsongkhapa then says that due to one's having an ugly complexion, superiors are displeased.

One should immediately dedicate whatever root of virtue one creates to enlightenment. If this is done, those roots of virtue will remain until enlightenment is achieved, just as when a drop of water is put into an ocean it remains as long as the ocean does not dry up. Therefore, it is extremely important to dedicate one's roots of virtue.

Geshe-la: Lama Tsongkhapa says that only complete bodhisattvas teach emptiness perfectly, whereas hearers and solitary realizers do not teach emptiness perfectly. Why do hearers and solitary realizers not teach emptiness perfectly?
Student: Although they do realize emptiness, hearers and solitary realizers cannot present the vast amount of reasonings proving emptiness which are presented in the mahayana.
Geshe-la: That is right.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Once pure understandings, such as these explained above, are generated in beings of the mahayana whose understanding of the view of emptiness has arrived at the essential points, they have great respect for achieving the class of extensive [compassionate deeds of giving, and so forth]. That [combination of the wisdom of emptiness and practice of compassionate deeds] is a source of great praise, for Nagarjuna's *Essay on the Mind of Enlightenment* says:
>
> Resorting to actions and their effects
> Upon understanding this emptiness of phenomena
> Is more wonderful than the wonderful,
> More marvelous than the marvelous.
>
> Such [a combination] comes to those who:
>
> 1. have abandoned the two faults of the two types of non-vessel – (1) forsaking the view because of disbelief or (2) although having a facsimile of belief, [mistakenly] understanding that cause and effect are refuted by the reasoning [establishing emptiness] – and
> 2. in addition realize, in dependence on the view of the emptiness of inherent existence itself, the great feasibility of all actions and agents.

Those who have a good understanding of the view of emptiness will also understand the extensive or vast teachings. Due to this, they will also develop respect for the vast teachings on the grounds and paths. Lama Tsongkhapa says: "That [combination of the wisdom of emptiness and practice of compassionate deeds] is a source of great praise" and then quotes from Nagarjuna's *Essay on the Mind of Enlightenment* to prove this. The text is perhaps a commentary on the second chapter of the *Guhyasamajatantra*.

Nagarjuna says that this combination is 'wonderful' and 'marvelous.' Is there a difference between 'wonderful' and 'marvelous'? In some texts, a difference is clarified but here it is not mentioned. Such texts say that 'wonderful' is said in regard to a perfect cause, whereas 'marvelous' is

said in regard to a perfect result. This is discussed in the context of the fact that when the Buddha turned the wheel of Dharma, the gods proclaimed their amazement saying "A la la ho!"

Lama Tsongkhapa says that such a combination of [the wisdom of] emptiness and [practice of compassionate] actions comes to those who "have abandoned the two faults of the two types of non-vessel – (1) forsaking the view because of disbelief or (2) although having a facsimile of belief, [mistakenly] understanding that cause and effect are refuted by the reasoning [establishing emptiness]" and to those who "realize, in dependence on the view of the emptiness of inherent existence itself, the great feasibility of all actions and agents."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Otherwise, if something else is taken as the manner of having found the view, all presentations of actions and their effects such as ethics [erroneously] come to be [seen as] like counting the creases in the horn of a rabbit. This being so, one [mistakenly] thinks that such [teachings on ethics, and so forth] are for the sake of those who have not understood the definitive meaning [that is, emptiness] but are unnecessary for those who have understood it. For, [one mistakenly thinks that] all these [phenomena of cause and effect] are created by conceptuality and that all conceptual consciousnesses apprehend signs – that is, [wrongly] adhere to true existence – and, like the Chinese Ha-shang, one destroys all virtue.

There are those who think that emptiness means that the vast side of practice, causes and results, is as non-existent as the horns of a rabbit. The creases in the horns of horned animals, when counted, reveal the animals' age, whereas since rabbits do not have horns, the creases of their horns cannot be counted. Likewise, if one misunderstands emptiness, one will think that practicing ethics through observing causes and results is just like counting the creases in the horn of a rabbit! Such a person's wrong idea is that since in emptiness all phenomena are non-existent, it is useless to consider generosity, ethics, and so forth. However, this is a sign that one has not understood the meaning of emptiness.

Others think that all conceptions are conceptions of true existence and that everything is posited by conceptions. As a consequence, they assert that all conceptions are to be eliminated. Such an assertion was made by the Chinese Hashang, who came from China to Tibet at the same time that Kamalashila was invited from India to Tibet. A debate, which was previously prophesied by Padmasambhava, took place between Hashang and Kamalashila at Samye Monastery in Tibet. Hashang asserted that all conceptions – including the mind of enlightenment and compassion – are to be negated, since all conceptions are conceptions of true existence, these being what bind one to cyclic existence. He said that since both white and black conceptions (i.e., positive and negative conceptions) bind us to cyclic existence in the same way that a chain, whether made of gold or iron, binds one to a pole, they are all to be abandoned. He gave the analogy of being bitten by a white dog or by a black dog – in either case one is bitten. Likewise, he said that all conceptions, white and black, are conceptions of true existence and are therefore to be abandoned. On the day of the debate, Kamalashila and Hashang made an agreement in the presence of the king and ministers that if Kamalashila were to lose the debate, he would follow Hashang's position and vice versa. In fact, Hashang lost the debate but as he did not want to follow Kamalashila's position, he quickly escaped, leaving behind one of his shoes. It is said that his leaving behind a shoe is a sign that Hashang's view remains extant in Tibet.

Wednesday afternoon, 5 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Some say that adopting [virtue] and discarding [non-virtue] are done for the time being in the perspective of a mistaken [awareness]. However, if conceptual consciousnesses are [rightly] taken to be of two types – those that do and do not conceive of true existence – it is prattle to say that the reasoning refuting inherent existence refutes all objects. If conceptual consciousnesses are [wrongly] not treated as having those two types, then the two – the conceptual consciousnesses of the view and of the class of [ethical] behavior – [absurdly] would mutually damage each other, like hot and cold [which are such that the one cannot exist unaltered in the presence of the other]; also, there would be no ground for positing (1) the mistaken perspective in which [adopting virtue and discarding non-virtue] are posited, (2) the positer, and (3) those which are posited as such [since all thought would be mistaken]. Hence, such talk is a creation of darkness. Therefore, [those who put forth these notions] are holding the position of the opponents in the above passages [cited from Nagarjuna and Chandrakirti, for they misunderstand the reasonings proving emptiness to be negating cause and effect].

Some say that the adopting of virtue and the discarding of non-virtue only exist to the face of (*or* in the perspective of) a mistaken awareness, which would imply that they do not exist in reality. Lama Tsongkhapa says: "However, if conceptual consciousnesses are [rightly] taken to be of two types – those that do and do not conceive of true existence – it is prattle to say that the reasoning refuting inherent existence refutes all objects." The reasoning refuting inherent existence refutes the referent object of the conception of true existence but it does *not* refute the referent objects of all conceptions. In other words, this reasoning only refutes the referent object of the conception of true existence; it does not refute the referent objects of concordant conceptions, i.e., conceptions that concord with reality. On the other hand, if conceptions are *not* taken to be of two types – those that do conceive of true existence and those that do not conceive of true existence – the conception of the profound, the view, and the conception of the vast, conduct, would contradict each other. Then the ultimate truth, which is the side of the view, and conventional truth, which is the side of conduct, would harm each other. If conceptions are not distinguished into those having the sign of the conception of true existence and those without the sign of conception of true existence, then either *all* conceptions would have to be (1) conceptions of true existence or *all* conceptions would have to be (2) not conceptions of true existence. In short, maintaining that non-inherent existence means non-existence harms conventional truths, because if that were the case, then nothing would exist. Contrarily, maintaining that if things exist they must inherently exist harms ultimate truths. In this way the view and the conduct would harm each other like hot and cold harm each other.

Lama Tsongkhapa says: "also, there would be no ground for positing (1) the mistaken perspective in which [adopting virtue and discarding non-virtue] are posited, (2) the positer, and (3) those which are posited as such [since all thought would be mistaken]. Hence, such talk is a creation of darkness." The Tibetan here actually seems to say "such talk is a *snake* in the darkness." The example of a snake in the darkness is given further on in the *Supplement* in regard to someone who is frightened due to seeing a snake in a dark hole. Someone else dispels his fear, saying, "There is no elephant in here:"

> *Seeing a snake dwelling in a hole in one's house's wall,*
> *Dispelling apprehension saying "there is no elephant in here,"*
> *Acting to abandon even fear of the snake –*
> *Oh my, [it] will just become the jest of others.* [6.141]

> Whoever, although the condition of fear is already close, does not perceive the fear existing in that, and not producing the remedy, due to stupidity, manifests themselves as just fearless – they will be grasped by the snake since they merely find comfort [in the words of another fool], because the fear due to that snake cannot be dispelled by [saying] an elephant does not exist.

Lama Tsongkhapa then says: "Therefore, [those who put forth these notions] are holding the position of the opponents in the above passages [cited from Nagarjuna and Chandrakirti, for they misunderstand the reasonings proving emptiness to be negating cause and effect]."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

3B1C-2B3D Exhortation to vessels to listen [to this explanation of the profound emptiness]

Chandrakirti's autocommentary says:

Thus, having doubtlessly accumulated the collection of virtue without pause over a long time:

Since the beings skilled in the ways of the profound and extensive
Gradually attain the Extremely Joyous Ground,
Those who strive for that should listen to this path. [6.7bcd]

[The last line] means: "those who strive for the Extremely Joyous Ground." "This" [of the words "this path"], has characteristics that will be explained later.

Those who have accumulated merit for a long time are correct vessels and should therefore listen to the teachings on the profound, emptiness, and the vast, the grounds and paths. In other words, those who strive to gradually attain the various grounds, beginning with the Extremely Joyous Ground, should listen to these teachings.

Trainees *intent on* the *Supplement* are definitely bodhisattvas. Trainees *in* the *Supplement*, on the other hand, are not necessarily bodhisattvas. Bodhisattvas intent on the *Supplement* are necessarily ordinary bodhisattvas, as is the case of trainees intent on the *Ornament for Clear Realizations*. A mere trainee in the *Supplement* is anyone who has interest and faith in it, whereas a trainee who is intent on the *Supplement* is one who has generated a path in his continuum.

The words in the root verse "this path" refer to the profound view, which will be explained later on in the context of the ten samenesses, or ten equalities.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"* says:

Beings skilled in the modes of the profound
[meaning of emptiness] and the vast [compassionate deeds]
Will gradually attain the Very Joyous ground.
Hence, those seeking that [ground] should listen to this path. [6.7bcd]

Beings skilled in the modes of the profound and the vast as explained above will definitely accumulate for a long time, without interstice, while on the level of a common being, the collections of virtues in [both] the profound and the vast classes. Thereby, they will attain the Very Joyous ground in stages. Therefore, those seeking the Very Joyous ground should listen to the profound path about to be explained. In this way [Chandrakirti] exhorts one to listen.

Furthermore, Chandrakirti's *Commentary on (Aryadeva's) Four Hundred* (chapter 12), says:

When [persons] develop an interest in discourse on the emptiness of inherent existence, they establish conditions concordant with it so as to increase clarity with respect to emptiness. They are very compassionate and grateful to the Supramundane Victors – the Ones Gone Thus. Due to wishing to abandon completely the causes for [falling into] the great abyss [of bad rebirths], a circumstance that interrupts their [practice of] excellent doctrine, they resort to repentance and give even what is difficult to give [that is, even their own flesh]. They also gather [students] through the four

> modes of gathering. They teach this excellent doctrine with all endeavor to beings who have become vessels for the excellent doctrine.
>
> Accordingly, this doctrine must be taught with great endeavor to those free of the two faults of non-vessels [that is, forsaking the view due to disbelief and, although having a facsimile of belief, mistakenly understanding that cause and effect are refuted by the reasoning establishing emptiness]. Through use of a technique that does not undermine ascertainment of dependent-arising, explanations should be given even to those who, though having belief, do not understand [the view] just as it is.

Those who are skilled in the modes of the profound and vast should listen to the teachings on emptiness. People who accumulate the collections of merit and exalted wisdom over a long period and are interested in attaining the grounds in stages, will gradually attain the path of accumulation, the path of preparation, and then the path of seeing, the first ground. Therefore, Chandrakirti says that they should listen to the teachings on emptiness.

Chandrakirti then says: "When [persons] develop an interest in discourse on the emptiness of inherent existence, they establish conditions concordant with it so as to increase clarity with respect to emptiness." Concordant conditions for the view of emptiness are, for example, clear faith with respect to emptiness, the generation of great compassion, and the thought to repay the kindness of the tathagatas. Those who have the basis of the collections of merit and wisdom are able to understand emptiness properly without falling into the great abyss of the two extremes, the extreme of permanence and the extreme of annihilation (note that "the great abyss" is the two extremes and not bad rebirths, as is said in the annotation above). In short, such persons abide in the middle way free of extremes. In order to do so they must engage in practices in relation to repentance, give away that which is difficult to give, and so forth. In fact, they should engage in the practice of generosity as recounted in the *Birth Tales* [or *Jataka Tales*], the stories of Buddha's previous lives, in which he is said to have given away even his wife, child, and so forth. Likewise, one should also practice giving away even one's own body. One can recite the prayer, the *Blazing of the Doctrine*, in which one prays for the doctrine to blaze or flourish through the giving away of one's daughter, wealth, chariot, and so forth.

Such a correct vessel for the teachings on emptiness should also engage in the four means of gathering disciples:

1. giving gifts,
2. speaking pleasantly,
3. fulfilling their welfare by teaching, and
4. acting according to what one teaches.

One who teaches emptiness should do so only to such suitable vessels. In the teaching on the stages of the path, it is said that a listener should be free from the three faults of an improper vessel, although here it says that the person to whom emptiness is taught should be free of *two* faults:

(1) not believing in the view of emptiness and thereby abandoning it, and

(2) misunderstanding the view of emptiness and thereby deprecating the law of actions and results and so forth.

In the Perfection of Wisdom Sutras, the Buddha says: "Listen well, listen carefully, and retain it in your mind well." In this way Buddha implies that the listener should be free from the three faults mentioned in the *Stages of the Path*:

1. being like a stained vessel,
2. being like a vessel with a hole in it, and
3. being like an upside down vessel.

The first, being like a stained vessel, means that the listener is one who looks for mistakes in the teaching. This person is likened to a stained vessel in that just as a stained vessel spoils whatever food is put into it, likewise whatever such a person hears will be spoiled by his polluted mind. The second, being like a vessel with a hole in it, exemplifies a listener who has forgotten everything by the end of the teaching in that whatever is put into such a vessel leaks out. One who is like an upside-down vessel is a listener who does not even listen to the teachings, or else falls asleep or is completely distracted during the teachings.

To someone who believes in emptiness but is unable to understand it, the teacher should teach dependent-arising very skillfully. Lama Tsongkhapa says: "Through use of a technique that does not undermine ascertainment of dependent-arising, explanations should be given even to those who, though having belief, do not understand [the view] just as it is."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> For those who know how to explain [this topic] well, there is great merit in explaining it to those listeners who are suitable vessels, from the minimally qualified on up. Nagarjuna's *Compendium of Sutra* says:
>
> > Belief in the profound doctrine gathers all virtues. Until the achievement of buddhahood it accomplishes all mundane and supramundane marvels. The *Given by the Precious Child Sutra* says:
> >
> > > Manjushri, whoever listens [even] with doubt to this rendition of the teaching generates much greater merit than a bodhisattva who, lacking skill in means, practices the six perfections for a hundred thousand eons. This being so, what need is there to say anything about a person who listens without doubt! What need is there to say anything about a person who imparts the scripture in writing, memorizes it, and also teaches it thoroughly and extensively to others!

Someone who is skilled in teaching the topic of emptiness even to those who are minimally qualified creates great merit by doing so. A minimally qualified vessel is one who, although he does not understand emptiness well, believes in it. Nagarjuna's *Compendium of Sutra* says that one who has belief in the profound doctrine of emptiness creates much merit. The *Given by the Precious Child Sutra* says that while a bodhisattva who practices the six perfections for a hundred thousand eons creates much merit, even someone who listens to the teachings on emptiness with a doubt creates more merit. Although one does not understand emptiness in accordance with view of the Prasangika Madhyamikas, one can still practice the six perfections, including wisdom, in that it is said to be sufficient to have a wisdom understanding emptiness as it is presented by the lower schools. In fact, even the view of emptiness as presented by the Chittamatra school, non-duality, is said to be a sufficient basis for generating the stages of the tantric path from the illusory body through the meaning clear light. However, to progress further it is necessary to realize emptiness as it is presented by the Prasangika Madhyamikas. It is said in general that when a bodhisattva reaches the tenth ground, he must engage in the stages of the tantric path. At what level of the tantric path does he begin? He begins on the fourth stage, that of meaning clear light. In short, in dependence on the view of the Chittamatrins, one can achieve a union of bliss and the wisdom realizing emptiness.

If, on the other hand, someone listens to the teachings on emptiness without doubt, what need is there to mention the great amount of merit he accumulates? The sutra says: "This being so, what need is there to say anything about a person who listens without doubt! What need is there to say anything about a person who imparts the scripture in writing, memorizes it, and also teaches it

thoroughly and extensively to others!" Similarly, in the *Noble King of Vows of the Conduct of Samantabhadra*, or the *King of Prayers*, it says:

> One may offer supreme ornaments of the buddha fields
> Of the ten directions to the conquerors
> And also offer the highest joys of humans and gods
> For eons numerous as atoms of the world
>
> But to read or hear *The King of Prayers*
> With eyes looking towards supreme illumination
> And faith stirring in one's heart for even an instant
> Gives birth to far more superior merit.
>
> Should anyone recite this aspiration of sublime ways
> They will pass beyond all states of sorrow
> Rise above all inferior beings and gain
> A vision of Amitabha, Buddha of Infinite Light.
>
> Even in this very lifetime
> All sublime joys will be theirs
> The experiences of the all sublime Samantabhadra
> Without obstructions will quickly be theirs.

'Hearing,' 'reciting,' 'memorizing,' 'writing,' and so forth are included in the ten Dharma practices. However, although we engage in such virtuous practices, due to the heavy negative karma we accumulated in the past, we are not able to understand emptiness immediately.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also, the *Diamond Cutter Sutra* says:
>
> > The Supramundane Victor said, "What do you think, Subhuti? If the banks of the river Ganges themselves became as numerous as the grains of sand on the banks of the Ganges, would their grains of sand be many?"
> >
> > Subhuti replied, "Supramundane Victor, since even [the banks] which would be as numerous as the grains of sand of the Ganges would be many, what is there to say about the grains of sand on those [banks]!"
> >
> > The Supramundane Victor said, "Subhuti, I will instruct you; you will understand. If a certain man or a woman completely filled worldly realms as numerous as the grains of sand on those banks of the Ganges with the seven varieties of precious objects and gave these to the One Gone Thus, would that man or woman thereby develop much merit or not?"
> >
> > Subhuti replied, "Supramundane Victor, it would be much; it would be much, One Gone to Bliss."
> >
> > The Supramundane Victor said, "If someone retains [in memory] merely a stanza of four lines from this rendition of the teaching and also teaches it to others, much more merit than that is generated."

Here, the Buddha says that when if someone were to fill the worldly realms with the seven types of precious objects and offer them to the buddhas, he would accumulate a great amount of merit, yet someone who merely memorizes a four-line stanza from the *Diamond Cutter Sutra* creates even more merit. Since this was said by the Supramundane Victor himself, one should not doubt it since a buddha does not deceive others. One should also not doubt the Perfection of Wisdom Sutras. As a preliminary to the recitation of the *Heart Sutra* in Tibetan monasteries, the monks recite a verse that says:

To the perfection of wisdom, inexpressible in words and thought,
The entity of the unproduced and unceasing,
An object of the mind individually cognizing it,
Mother of the conquerors of the three times, I prostrate.

Thursday morning, 6 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also the *Treasury of the One Gone Thus Sutra* lists the ten great non-virtues and then says that:
>
> > A living being – who, possessing all these, enters into the doctrine of selflessness and has faith and belief that all phenomena are from the beginning pure – does not go to a bad rebirth.
>
> Also, the *Chapter on Taming Demons* says that:
>
> > A monk – who knows all phenomena as utterly subdued [of inherent existence] and knows that the extremes, which are the origin of faults, are also devoid of inherent existence – is free of contrition for faults that have occurred and consistently does not commit them. Therefore, if even deeds of immediate retribution [that is, those most vile actions causing one to take rebirth in a hell immediately after death] are overwhelmed [through knowledge of emptiness], what is there to say about [its overwhelming] the trifling [faults] of wrongly engaging in rites and ethics?
>
> And the *Sutra of Ajatashatru* says:
>
> > When someone, who has committed a deed of immediate retribution, enters into and has belief in this excellent doctrine upon hearing it, I do not call that deed a karmic obstruction.
>
> Thus, these are benefits of having belief in and thinking about the profound meaning [of emptiness] on the occasions of hearing and explaining, as well as on other occasions.

The *Treasury of the One Gone Thus Sutra* says that one who commits the ten non-virtues but then engages in the teaching on emptiness will not go to the bad migrations. "Enters into the doctrine of selflessness" is to have faith and belief that phenomena are free from inherent existence from the beginning. This sutra was taught by the Buddha in order to make others engage in the meaning of emptiness. This is not a definitive meaning sutra but an interpretive meaning sutra in that it says: "enters into the doctrine of selflessness and has faith and belief that all phenomena are from the beginning pure – *does not go to a bad rebirth*." It is an interpretive meaning sutra because it says that *by merely having faith in emptiness* one is protected from the bad migrations, whereas this is not the case. What this sutra actually means is that when one engages in the doctrine of selflessness and realizes the reality of phenomena, non-inherent existence, one no longer creates the karma to be reborn in the lower realms.

The *Chapter on Taming Demons* says that since the deeds of immediate retribution are overwhelmed by one's knowing that phenomena are empty, what need is there to mention the karma of trifling wrongs in rituals and ethics? One who knows that faults are empty of true existence is free from contrition for these faults in that he does not develop regret for faults and no longer commits faults. For one who knows the meaning of emptiness, contrition is dispelled and the deeds of immediate retribution are overwhelmed. This does not mean that such a person no longer has

contrition for negative actions, but that, having initially developed contrition, through knowing that the faults do not exist inherently, the contrition for them is dispelled.

The *Sutra of Ajatashastru* says: "When someone, who has committed a deed of immediate retribution, enters into and has belief in this excellent doctrine upon hearing it, I do not call that deed a karmic obstruction." Buddha said this to Ajatashastru, who had killed his own father, a king and foe destroyer. The story is that at the same time as Ajatashastru was planning to kill his father, Devadatta was also planning to kill the Buddha. Ajatashastru had his father put in prison. Meanwhile Devadatta tried by many means to kill the Buddha through, for example, sending many drunken elephants with weapons on their tusks into the road where the Buddha was walking. However, Buddha emanated five huge lions from his fingers and created a wall of fire around the elephants, whereby the elephants were subdued and bowed to the Buddha. Devadatta also catapulted huge boulders at the Buddha but they were unable to harm him because Vajrapani threw his vajra at the boulders and shattered them. (It is said that a fragment of a boulder hit Dzambala and wounded his head, which Buddha then cleansed with water, this being the origin of the ritual of offering water to Dzambala.) Ajatashastru meanwhile developed strong regret for having imprisoned his father and said that anyone who could tell him that his father was not dead would be given half the kingdom in reward. However, this proclamation caused a stampede, the noise of which frightened the king, whereupon he had a heart attack such that when the crowd arrived at his cell he was already dead. Hearing that his father was dead, Ajatashastru's remorse became even greater. Buddha, knowing that this was the right time to subdue him, went to Ajatashastru and taught the *Sutra Dispelling Regret* saying: "Father and mother are to be killed..." Due to hearing this, Ajatashastru was relieved and, emerging from his depression, began to think about the meaning of what the Buddha had said. He came to understand that the Buddha did not mean that one's *actual* father and mother are to be killed but that the father-like karma and the mother-like afflictions are to be killed. In this way, Ajatashastru came to realize selflessness, or the four noble truths. However, as a consequence of his previous actions he experienced the sufferings of the hell realms with his human body. Since he had created the definite karma to experience the suffering of the hells, he had to undergo the suffering of having his human body burned by fire while nothing else around him was burned.

Ajatashastru is said to have created two deeds of immediate retribution: that of killing his father and that of killing a foe destroyer, in that his father was a foe destroyer. However, there is debate as to whether a single base, one human body, can commit two deeds of immediate retribution.

In the *Sutra of Ajatashatru,* the Buddha says: "When someone, who has committed a deed of immediate retribution, enters into and has belief in this excellent doctrine upon hearing it, I do not call that deed a karmic obstruction." Here the 'excellent doctrine' refers to the meaning of emptiness.

Lama Tsongkhapa then says: "Thus, these are benefits of having belief in and thinking about the profound meaning [of emptiness] on the occasions of hearing and explaining, as well as on other occasions." Whatever activity one does, Dharma or not, it is beneficial to think about emptiness. In short, emptiness is extremely important; in fact in one text it says that the best amulet (or protection-knot) against harm is emptiness.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> There are two requirements for obtaining well the benefits of [giving such] an explanation: (1) a pure motivation – not looking for goods, services, fame, and so forth – and (2) non-erroneous explanation of the meaning of the doctrine to be explained without misapprehending it.

There are many benefits to teaching emptiness, but one must do so with a pure motivation and unmistakenly. In other words, one should be free from an afflicted motivation seeking reward and should teach without mistakes.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> For, it is said that an explanation within having either or both of these faults will serve to interrupt [the fruition of] a great deal of merit.

Teaching emptiness with one or both of these two faults hinders the creation of merit.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> In this vein, the master Vasubandhu says:
>
> > Therefore, persons who explain the doctrine erroneously or who – having an afflicted mind – explain it out of desire for goods, services, or fame, cause a large amount of their own merit to degenerate.
>
> It is important that the listener also have a pure motivation for listening and not misapprehend the meaning. Therefore, both [teacher and student] should have the minimum qualifications at the time of explaining and listening.

Vasubandhu says that when someone teaches the doctrine with an afflicted motivation, that teaching becomes a negative action of speech, idle talk. Therefore, it is extremely important to have a pure motivation when teaching the Dharma. In addition, one should explain the Dharma free from mistakes, otherwise, one will degenerate the merit one has already created. However, it can happen that ordinary beings who teach the Dharma sometimes do so erroneously. One day I visited Pembar Geshe in Kathmandu, who said to me that when he teaches those who have studied philosophy he does not worry so much about making mistakes since they can use their own understanding to determine what is right and wrong, whereas he does worry when he teaches those who have not studied philosophy since they uphold these mistaken teachings for the rest of their life. This is something worth thinking about.

Lama Tsongkhapa then says: "It is important that the listener also have a pure motivation for listening and not misapprehend the meaning. Therefore, both [teacher and student] should have the minimum qualifications at the time of explaining and listening." The minimum requirement on both the side of the teacher and the side of the listener is a good motivation. Then it is best if the teacher explains unmistakenly and the listener understand unmistakenly. This is similar to what Dharmakirti says in his promise to compose his *Commentary on [Dignaga's] 'Compendium of Valid Cognition*:

> Since most beings are attached to the ordinary and do not exert effort in wisdom, not only do they not strive for the excellent teachings, they are also full of hatred due to the stains of jealousy. Therefore, even without thinking, "I will benefit others," because of having had the thought for a long time to devote myself to composing this excellent explanation, I generate joy in doing so.

Such persons are faulty vessels, whereas Dharmakirti then sets out the qualities of correct vessels, saying: "Those who are not attached to mundane activities, have a great quantity of merit, are free from jealousy, are interested in the excellent teachings, and are free from hatred, for such people there is benefit to my composing this text." Such vessels are those with a pure motivation.

In short, no matter what kind of activity one is engaged in, listening to or teaching the Dharma or other activities, it is beneficial to think about emptiness. "Other activities" includes the yogas mentioned in various rituals, for example, the yoga of eating food, the yoga of dressing, and so forth. Perhaps it could be said that whenever one thinks about emptiness and does an activity, that activity becomes a yoga. However, one can debate whether it is a yoga if one kills an animal while thinking about emptiness! It can be said that when engaging in the four behaviors (walking, standing, sitting, and lying down), if one strives to not be separated from the mind of enlightenment and the mind thinking about emptiness, they become Dharma practices.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

3B1C-2B3E [Description of] how the suchness of dependent-arising is explained

The presentation of how the suchness of dependent-arising is explained has three parts:

1 How the meaning of reality is explained through scripture
2 Establishing the meaning of scripture through reasoning
3 Explaining the divisions of the emptiness so established

3B1C-2B3E-1 How reality is explained in scripture

This section has two parts:

A Stating how reality is set out in scripture
B Identifying what is discordant with knowing suchness.

3B1C-2B3E-1A How reality is set out in scripture

Chandrakirti's autocommentary says:

Regarding that, this is a brief quotation to indicate the state that views the reality of phenomena, as was taught in the *Exalted Sutra on the Ten Grounds.*

> O children of the Conqueror, the bodhisattva who really fully completed the path on the fifth bodhisattva ground enters into the sixth bodhisattva ground – he enters through ten equalities of phenomena. If asked: what ten? Like this:
>
> 1. the equality of all phenomena as signless;
> 2. the equality of all phenomena as without characteristics; similarly,
> 3. the equality of all phenomena as without production,
> 4. not produced,
> 5. isolated,
> 6. completely pure from the very beginning,
> 7. without elaboration,
> 8. without acceptance or rejection;
> 9. the equality of all phenomena as like illusions, dreams, cairns, echoes, water-moons, reflections, and manifestations;
> 10. the equality of all phenomena in not existing as the two, things and non-things.

> When he thoroughly realizes the self nature of all phenomena like that, through sharpness and harmonious patience, he will subsequently attain the sixth bodhisattva ground, the Manifest.

Phenomena are said to have ten equalities (note that Anne Klein translates the same Tibetan word, *mnyam pa nyid,* as 'samenesses.')

1. The equality of all phenomena in being signless means that all phenomena are the same in lacking the sign of inherent existence.
2. The equality of all phenomena in being without characteristics means that all phenomena are the same in lacking the characteristic of inherent or true existence.
3. The equality of all phenomena in being without production means that all phenomena are the same in being free from inherent production. Note that although they have production, they do not have inherent production.
4. The equality of all phenomena in not being produced means that in the case of compounded phenomena, although they are pervaded by being produced, they are not inherently produced.
5. The equality of all phenomena in being isolated means that all phenomena are the same in being isolated, or devoid, of inherent or true existence.
6. The equality of all phenomena in being completely pure from the very beginning means that all phenomena are the same in not having existed truly from the beginning. (Note that for the Prasangika Madhyamika school 'true existence' and 'inherent existence' are both unacceptable, whereas in the Svatantrika Madhyamika school, true existence is not acceptable while inherent existence is).
7. The equality of all phenomena in being without elaboration means that all phenomena are the same in being free from the elaboration of inherent existence.
8. The equality of all phenomena in being without acceptance or rejection means that although in general there are phenomena to be accepted, or adopted, such as virtue, there is no inherently existent virtue to be accepted or adopted. Likewise, although non-virtue is to be rejected, it is not an inherently existent object to be rejected.
9. The equality of all phenomena in being like illusions, dreams, cairns, echoes, water-moons, reflections, and manifestations involves the seven analogies discussed in the third chapter of the *Ornament for Clear Realizations,* in the context of the seven types of appearances.
10. The equality of all phenomena in not existing as the two – things and non-things – means that all phenomena are the same in not being inherently existent things and non-things.

Thursday afternoon, 6 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The *Sutra on the Ten Grounds* says:
>
> > When fifth-ground bodhisattvas enter the sixth ground, they do so by way of the ten samenesses of phenomena. What are the ten? All phenomena are the same in being signless; all phenomena are the same in being characterless, likewise in being productionless, non-produced, void, pure from the very beginning, without the elaborations [of inherent existence], and non-adopted and non-discarded; and all phenomena are the same in being like a magician's illusions, dreams, optical illusions, echoes, moons in water, reflections, and emanations; and all phenomena are the same in being without the duality of [functioning] things and non[functioning] things. When in that way they thoroughly realize the nature of all phenomena, through sharp and concordant forbearance they attain the sixth bodhisattva ground, the Manifest.

> The word "likewise" [means that] "all phenomena" is to be applied up to [the eighth which is the sameness in being] non-adopted and non-discarded. [With regard to how the list is taken as ten samenesses] those two samenesses [of being non-adopted and non-discarded] are taken as one, and the seven samenesses of being like an illusion, and so forth, are taken as one sameness, and the last two [the sameness of being without the duality of things and non-things] are taken as one.
>
> With respect to the identification of the ten samenesses, even [Vasubandhu's] *Commentary on the "Sutra on the Ten Grounds"* and Asanga's *Bodhisattva Grounds* do not appear to agree. Because these two [texts] do not accord with the mode of commenting on emptiness in this [Prasangika-Madhyamika] system, [the ten samenesses] are explained differently here [in the context of Chandrakirti's Prasangika text].
> Concerning that, the first sameness is that all phenomena are similar in that appearance of [their] dissimilar characteristics does not exist in the perspective of a superior's meditative equipoise. The second is that all phenomena are the same in being without establishment by way of their own character. These two are the general teaching; the other eight are taught in the context of making differentiations within the meaning of the general teaching itself.
> "Productionless" refers to future [production], and "non-produced" refers to the other times [past and present]. That these are the same, or similar, with respect to all phenomena also should be understood with respect to the other [samenesses]. Voidness is an emptiness of the produced and the to-be-produced, i.e., void of [these as] qualified by being established by way of their character as in the context of the second sameness. That such is not created adventitiously by scripture or reasoning but [that phenomena] abide in such purity from the very beginning is the sixth [sameness].
> The seventh [sameness, that all phenomena are the same in] lacking the elaboration of dualistic appearance, applies to the first [sameness in the sense of being that way in meditative equipoise on suchness], whereas [that all phenomena are] the same in being unelaborated by terms and thoughts should be affixed with the qualification of the second [sameness in the sense that all phenomena are the same in that their being elaborated by terms and thoughts is not established by way of its own character]. Such qualification should also be applied to the eighth sameness [that all phenomena are the same in not involving adopting and discarding that exist by way of their own character]. The ninth [sameness] is many forms of examples for ascertaining the meanings explained earlier. The tenth [sameness] is the similarity of all phenomena in not being inherently existent as things or non-things [that is, as inherently existent impermanent functioning phenomena or inherently existent permanent non-functioning phenomena].
> *Sharp* refers to quickness of wisdom. *Concordant* means concordant with an eighth-ground bodhisattva's forbearance with respect to the doctrine of non-production. There appear to be many different [interpretations] of "concordant forbearance" due to [different] contexts [that is, due to its being explained in the context of the different bodhisattva grounds].

Among the ten samenesses, the first two – the sameness of all phenomena in being signless and the sameness of all phenomena in not being established by way of their own character – are general teachings.

1. The sameness of all phenomena in not having signs of inherent existence is in relation to the fact that no signs, such as blue, yellow, and so forth, appear to an exalted wisdom of meditative equipoise. In short, to an exalted wisdom of meditative equipoise there is no appearance of signs, meaning that there is no appearance of conventional truths.

2. The sameness of all phenomena in not being established by way of their own character is also a general teaching. The remaining eight samenesses are particulars, or instances, of these general teachings.

3. The sameness of all phenomena in being productionless refers to future production, meaning that all phenomena are the same in lacking inherently existent future production or that they are the same

in lacking a future production that exists by way of its own character. Future phenomena are those that are yet to be produced due to the causes and conditions for their arisal not having come together.

4. The sameness of all phenomena in being non-produced refers to the other times, past and present, meaning that although phenomena are produced in the past and present, they are not inherently produced in the past and present. A past phenomenon is one that has been produced and has ceased. A present phenomenon is one that has been produced but has not yet ceased.

5. The sameness of all phenomena in being void or isolated means that phenomena are empty or devoid of being an inherently existent 'produced' and devoid of being an inherently existent 'to-be-produced.' Lama Tsongkhapa says: "void of [these as] qualified by being established by way of their character as in the context of the second sameness." This voidness is to be understood in the sense of not being a produced or a to-be-produced that is established by way of its own character.

6. The sameness of all phenomena in being pure from the very beginning is in the sense of their purity not having been created adventitiously by scripture or reasoning, but of their having been pure from the very beginning.

7. The sameness of all phenomena in being free from elaboration has two meanings: the first is that there is no elaboration of dualistic appearance to the face of, or to the perspective of, the exalted wisdom of meditative equipoise, which is related to the first sameness. Lama Tsongkhapa then says: "whereas [that all phenomena are] the same in being unelaborated by terms and thoughts should be affixed with the qualification of the second [sameness]." Thus, the non-elaboration of dualistic appearance is related to the first sameness and the non-elaboration of emptiness in terms of being inexpressible by terms and thoughts is related to the second sameness.

8. The sameness of phenomena in not being adopted and discarded is also related to the second sameness in terms of such phenomena not being established by way of their own character.

9. The sameness of all phenomena in terms of the seven examples (a magician's illusions, dreams, optical illusions, echoes, moons in water, reflections, and emanations) is given in order to ascertain the meanings explained previously. Many examples are given in order to understand that phenomena do not exist inherently and are not established by way of their own character. The seven examples were discussed in the *Ornament for Clear Realizations*. An illusion is an object created by a magician through tricking the eyes with mantras whereby, for example, a clod of earth appears as a horse or elephant. Dreams are well known to us; objects in dreams appear but do not exist. An example of an optical illusion is the appearance of falling hair to someone with cataracts and seeing things move when in fact it is oneself who is moving. An echo appears to be, for example, a sound made by an empty room whereas actually it comes from a previous sound; likewise, all phenomena seem to be inherently existent but are not. A moon in water refers to the reflection of the moon in water, which appears to be an actual moon but is not. A reflection is, for example, the reflection of one's face in a mirror, which appears to be one's actual face although it is not. An emanation is a magical emanation that appears but is not real.

There is a story about the reflection in water regarding an intelligent rabbit and a proud lion. Once there was a lion who thought himself extremely handsome. One day, a rabbit heard an ox bellowing. Upon asking the ox why he bellowed, the ox replied that it was because he was afraid of the lion. So, the clever rabbit went to the lion and said to him that there exists someone far more handsome than him. The lion asked the rabbit where this being was, and the rabbit took him to the edge of a well. When the lion looked into the well he saw a very handsome lion. When the lion puffed

himself up to show off his power and magnificence, so did the lion in the well. The lion became very angry at this "other" lion and, thinking to attack him, jumped into the well and drowned.

10. Lama Tsongkhapa then says: "The tenth [sameness] is the similarity of all phenomena in not being inherently existent as things or non-things."

The ten samenesses are included in each other, the first two being generalities and the remaining eight being particularities. In the Gomang textbook *Analysis of the Limits* (quoted by Hopkins, *Meditation on Emptiness*, page 132), it says that the seventh is included in the first; the third, fourth, and fifth are included in the second; and the rest – the sixth, eighth, ninth, and tenth – are included in both the first and the second. However, here in the *Illumination,* Lama Tsongkhapa says that the seventh and eighth are included in both the first and the second, and the fifth is included in the second.

In the context of "sharp and concordant forbearance," 'sharp' refers to the quickness of wisdom. Dharmakirti, in his *Commentary on [Dignaga's] 'Compendium of Valid Cognition,* says that sharp and dull faculties are related respectively to the quickness and slowness of an awareness in analyzing its object. Lama Tsongkhapa says: "*Concordant* means concordant with an eighth-ground bodhisattva's forbearance with respect to the doctrine of non-production." A sixth ground bodhisattva has a forbearance that is concordant with, or similar to, the forbearance that is gained on the eighth ground with respect to the doctrine of non-production. In a commentary on the *Ornament for Clear Realizations,* there is a passage that sets out three occasions of forbearance:
(1) a sharp-facultied bodhisattva gains forbearance with respect to emptiness on the path of preparation,
(2) a middling-facultied bodhisattva gains forbearance with respect to emptiness on the path of seeing, and
(3) a dull-facultied bodhisattva gains forbearance with respect to emptiness on the eighth ground.
Therefore, by the eighth ground all bodhisattvas have attained this forbearance. There is a reason for positing these three occasions – it is because bodhisattvas, in dependence on their respective faculties, manifest signs of being irreversible from enlightenment on different occasions: the sharp-facultied do so on the path of preparation, the middling-facultied on the path of seeing, and the dull-facultied on the path of meditation. These external signs reveal an internal stable realization of method and wisdom.

Lama Tsongkhapa says: "With respect to the identification of the ten samenesses, even [Vasubandhu's] *Commentary on the "Sutra on the Ten Grounds"* and Asanga's *Bodhisattva Grounds* do not appear to agree. Because these two [texts] do not accord with the mode of commenting on emptiness in this [Prasangika-Madhyamika] system, [the ten samenesses] are explained differently here [in the context of Chandrakirti's Prasangika text]." These two texts do not agree because their respective authors explain emptiness differently, due to which they explain the ten samenesses differently. Also, in the Chittamatra school there is an explanation of the ten samenesses but, although the terms are the same, the meanings are slightly different.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Although there are many scriptures that teach the suchness of phenomena, [the explanation] here is in the context of describing how suchness is realized by a sixth-ground bodhisattva's wisdom; hence [Chandrakirti] cited a scripture that describes entry into the sixth ground by way of the ten samenesses.

Lama Tsongkhapa's commentary then sets out various sections that are not directly related to Chandrakirti's autocommentary. He does so because, in the context of presenting emptiness in relation to the ten samenesses, one has to first understand that all phenomena are the same in not existing inherently and then one has to identify the object of negation. The object of negation is to be identified both from the point of view of the Svatantrika Madhyamikas and from the point of view of the Prasangika Madhyamikas. Shantideva, in the ninth chapter of his *Engaging in the Bodhisattva Deeds,* says that it is necessary to recognize the object of negation because:

> Without making contact with the thing imputed
> [by the mind – that is, true existence]
> The nonexistence of that thing is not apprehended. [IX.140]

In other words, if one does not first recognize the object of negation one will not know what emptiness is. For example, in order to realize that the horns of a rabbit do not exist, one has to first know what a horn is. First one generates a meaning generality of the horns of a rabbit, and then one negates their existence. Another example is if someone says "There is no pot on the table," in order to understand that there is no pot there one first has to know what pot is. In short, it is important to first identify the object of negation. Therefore, Lama Tsongkhapa discusses the identification of the object of negation in the Svatantrika Madhyamika school and the Prasangika Madhyamika school. In the Svatantrika Madhyamika school, the object of negation is true existence. Having understood that, one then needs to understand the measure of true existence for this school, this being: an object established by its own uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness.

Friday morning, 7 April 2000

Lama Tsongkhapa says: "With respect to the identification of the ten samenesses, even [Vasubandhu's] *Commentary on the "Sutra on the Ten Grounds"* and Asanga's *Bodhisattva Grounds* do not appear to agree." The way in which the ten samenesses are presented in the *Illumination* is also different from these two presentations. Lama Tsongkhapa says: "Because these two [texts] do not accord with the mode of commenting on emptiness in this [Prasangika-Madhyamika] system, [the ten samenesses] are explained differently here [in the context of Chandrakirti's Prasangika text]." 'The two texts are Vasubandhu's *Commentary on the "Sutra on the Ten Grounds"* and Asanga's *Bodhisattva Grounds*; they do not accord with the way of presenting emptiness in the Prasangika Madhyamika system. The ten samenesses are also explained in Kunkyen Jamyang Shepa's *Great Exposition of the Middle Way* (page 358):

> The seventh sameness is an attribute of the first; the third, fourth, and fifth are attributes of the second sameness; and the remaining are attributes of both.

It also says (page 359):

> In the *Bodhisattva Grounds* it says: "(1) the sameness of all phenomena of not having signs of the entitiness of existing ultimately; (2) the sameness of not having characteristics of the appearance of thorough application in verbalization; (3) the sameness of not being generated naturally due to not having the characteristics of those; (4) the sameness of not being produced even from causes; (5) the sameness of being thoroughly pacified from the beginning, which is to not be produced from self and causes; (6) the sameness of not being elaborated by a consciousness apprehending an existent functioning thing; (7) the sameness in being free from thorough application in that which is to be adopted and that

> which is to be discarded; (8) the sameness of being devoid or isolated due to their being free from thoroughly afflicted that are afflictions and sufferings; (9) the sameness of entity of imputed objects of knowledge being like illusions and emanations; and (10) the sameness of being without the duality of things and non-things, which are the entity of objects of a non-conceptual exalted wisdom."

It also says (page 360):

> In the *Commentary on the Sutra on the Ten Grounds* it says: "The sameness of being without the imputed entity of all twelve spheres is the sameness of all phenomena in being signless. Furthermore, these are the nine types of antidotes to the different signs."

The presentations of how the ten samenesses are included in each other are also different according to Jedzun Chogyi Gyeltshen and Kunkyen Jamyang Shepa. For example, Jedzun Chogyi Gyeltshen says that the third sameness is included in both the first and second; the fourth, fifth, and sixth are included in the second; the seventh in the first; and although the remaining are not mentioned, they are probably included in both the first and second. This is presented in Jedzun Chogyi Gyeltshen's *General Meaning*.

QUESTIONS AND ANSWERS

Q: According to the Prasangika Madhyamikas, does a foe destroyer still experience the fruitional result of his past karma? For example Maudgalyana, a foe destroyer, was beaten to death. If a foe destroyer does not experience the fruitional result, at which point of the path are these karmic seeds abandoned?
A: A result such as that of Maudgalyana being beaten to death is not a fruitional result. It is a result similar to the cause as an experience, in that it was the result of having beaten his own mother in the past.

Q: In the teachings on the stages of the path, it says that self-cherishing is the root of suffering. What is the relationship between self-cherishing and the ignorance that is the root of cyclic existence? Is this a cause and effect relationship? Do foe destroyers have self-cherishing? What is the pervasion between self-cherishing and self-purpose (one's own welfare)?
A: There is no relationship between self-cherishing and the ignorance that is the root of cyclic existence. This means that they do not have either of the two types of relationships set forth in the texts: a causal relationship and a same-entity relationship. In the *Stages of the Path,* it is said that self-cherishing is the root of suffering in order to set out the disadvantages of self-cherishing in that self-cherishing is the door to one's own and others' downfalls. As Panchen Losang Chogyi Gyeltshen says in the *Guru Puja*: "Cherishing myself is the doorway to all downfalls." Thus, only in the context of showing its faults is self-cherishing said to be the root of suffering.

That ignorance is the root of cyclic existence is explained in many other texts besides those on the stages of the path. Self-cherishing acts to impede the attainment of omniscience, while ignorance acts to impede the attainment of liberation, or nirvana. Self-cherishing does exist in the continuum of a foe destroyer, given that it is not an impediment to liberation. However, self-cherishing is the biggest impediment to entering the mahayana and is therefore worse than ignorance in the context of generating the mind of enlightenment. This is my own personal opinion; I have not seen it written in the texts. However, there is a distinction to be made between theory and practice. Due to the condition of ignorance, one does not know how to enact others' welfare.

Self-cherishing and self-purpose, or one's own welfare, are different. Self-purpose exists in the continua of bodhisattvas, as was said in the *Ornament for Clear Realizations* in the context of discussing whether or not Maitreya has self-purpose or not. In conclusion, it is said that one who says that Maitreya is not striving for his own purpose has not looked carefully at the mahayana scriptures. Maitreya *does* have self-purpose because he is striving to attain the truth body, which is the fulfillment of his own purpose or welfare. The form body, on the other hand, fulfills others' purpose. Therefore, although a bodhisattva does have self-purpose, he does not have self-cherishing. Speaking in general, the stains of self-cherishing can exist in the continuum of a bodhisattva through the seventh ground. In fact, the first seven of the ten grounds are called impure because there still exists the stains of self-cherishing. This stain no longer exists on the eighth ground; therefore the eighth, ninth, and tenth grounds are called pure grounds. The stain of self-cherishing is likened to the stain of the mother's womb. This is explained in the *Grounds and Paths,* and accords with the Svatantrika Madhyamika school. However, according to the Prasangika Madhyamika school, the first seven grounds are called impure because of the presence of afflictions.

A dull-facultied bodhisattva abandons the striving for liberation for oneself alone on the eighth ground, a middling-facultied bodhisattva on the path of seeing, and a sharp-facultied bodhisattva on the path of preparation. This is similar to what was said earlier in the context of the forbearances of the doctrine of emptiness which are generated at different levels.

Q: In the *Stages of the Path,* it is often taught that ignorance is the cause of self-cherishing and that if there is no ignorance, there is no self-cherishing. Is that right?
A: I say NO! In that case it would have to be said that the person is the cause of self-cherishing because if there is no person there is no self-cherishing. Likewise, it would follow that if there is no ignorance there is no self-cherishing. Ignorance is not the cause of self-cherishing.

Q: Jedzunpa gives definitions according to the Prasangika Madhyamikas of an absorption of cessation and an uncommon absorption of cessation, both of which are consciousnesses. Do the Prasangika Madhyamikas assert an absorption of cessation that is a non-associated compositional factor? If so, is it a *common* absorption of cessation?
A: According to the Prasangika Madhyamikas, a common absorption of cessation is the absorption of cessation that exists in the continua of bodhisattvas on all ten grounds, whereas an uncommon absorption of cessation exists only in the continua of bodhisattvas on the sixth ground upward. It is said to be 'uncommon' due to the bodhisattva having attained a surpassing perfection of wisdom. Earlier, I perhaps said that the absorption of cessation explained in the two *Knowledges* is a common absorption of cessation, but it needs to be examined whether or not the Prasangika Madhyamikas assert this to be a common absorption of cessation. When the two *Knowledges* mention "a common absorption of cessation," perhaps their authors mean that this absorption of cessation is common in terms of being common to the hinayana and mahayana. Or it can be said that if it is a common absorption of cessation according to the Prasangika Madhyamikas, it is not *pervaded* by being an absorption of cessation. This implies that common should be understood in terms of being common to the hinayana and mahayana.

There is a discussion about the absorption of cessation in the context of the nine serially abiding absorptions, the last of which is called the absorption of cessation. According to the Svatantrika Madhyamikas, this [absorption of cessation] is a non-associated compositional factor, whereas the first eight absorptions are exalted wisdoms of meditative equipoise realizing emptiness.

Q: Does the overcoming of the deeds of immediate retribution by the view of emptiness occur on the level of an ordinary being or the level of a superior?

A: When the sutra says that the realization of emptiness overcomes the deeds of immediate retribution, I think that this means that their potency is diminished, not that they are completely eliminated. Therefore, even at the level of an ordinary being the realization of emptiness by a meaning generality diminishes the potency of the deeds of immediate retribution.

The *Chapter on Taming Demons* says "A monk – who knows all phenomena as utterly subdued [of inherent existence] and knows that the extremes, which are the origin of faults, are also devoid of inherent existence – is free of contrition for faults..." In general when confessing negative actions, one needs contrition or regret, this being one of the opponent powers for purifying negativities. In this context, contrition means having remorse for faults yet not doing anything about them; this kind of contrition is what is overcome by the realization of emptiness. Since this is overcome even in an ordinary being, there is no need to mention that it is overcome at the level of a superior. It is specified that the opponent power of repudiation or regret is a regret for having done a negative action that acts to bring about the determination to not commit that negative action again in the future. This, in turn, acts as a basis for the application of an antidote. Regret in the context of a negative action is positive, but regret itself is not pervaded by always being positive; for example, someone might regret having made a generous donation the day before. Some people even regret having been a monk or nun in the past because they did not have children!

(Masters Program Correspondence Course participants please note that there were no teachings 10, 11, and 14 April 2000)

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B3E-1B Identifying what is discordant with knowing suchness

Note that there is no corresponding text in Chandrakirti's autocommentary. Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> With regard to settling the absence of true existence in phenomena, if you do not understand well just what true establishment is, as well as how [phenomena] are conceived as truly existent, the view of suchness will definitely go astray. Shantideva's *Engaging in the Bodhisattva Deeds* says:
>
> Without making contact with the thing imputed
> [by the mind – that is, true existence]
> The nonexistence of that thing is not apprehended. [IX.140]
>
> He says that if the thing imputed – the generality [or image] of the object of negation – does not appear to the mind well, it is impossible to apprehend well the nonexistence of the object of negation. Therefore, unless true establishment, which is what does not exist, and the aspect of the object of negation, which is that of which [phenomena] are empty, do not appear, just as they are, as objects of the mind, good ascertainment of the lack of true establishment and of the entity of emptiness cannot occur.
>
> Furthermore, the mere identification of a true existence that is superficially imputed by proponents of tenets and of the consciousness conceiving such true existence is not sufficient. Because of this, it is a very important essential to identify well the innate conception of true existence that has operated beginninglessly and exists both in those whose awarenesses have been affected through [study of philosophical] tenets and in those whose awarenesses have not been affected in this way, and to identify the true existence that is conceived by that mind. For, if you have not identified this, even if you refute an object of negation through reasoning, the adherence to true existence that has operated beginninglessly is not harmed at all; therefore, the meaning at this point would be lost.
> Furthermore, having initially identified the conception of inherent existence in your own [mental] continuum, you should know how the reasonings serve to disprove the object of that [conception] directly and indirectly. For, the refutation and proof of one who is only directed outside is of very little benefit.

The object of negation, which does not exist, must appear clearly as a meaning generality to the mind. If the meaning generality of the object of negation (true existence) is well ascertained, then the emptiness of that will also be well ascertained. As Shantideva's *Engaging in the Bodhisattva Deeds* says: "Without making contact with the thing imputed [by the mind – that is, true existence] the nonexistence of that thing is not apprehended." That which is imputed is true existence; if there is not a clear meaning generality of true existence then its non-existence will not appear to the mind. Here the main point is to identify the object of negation well.

However, Lama Tsongkhapa says: "The mere identification of a true existence that is superficially imputed by proponents of tenets and of the consciousness conceiving such true existence is not sufficient." One has to identify the innate conception of true existence and then ask oneself whether the referent object exists as it is conceived. It does not. It is important to have a clear meaning generality of the non-existence of the referent object of the conception of true existence. As Lama Tsongkhapa says: "It is a very important essential to identify well the innate conception of true existence... and to identify the true existence that is conceived by that mind." The referent object of the

innate conception of true existence does not exist; this very understanding harms this innate conception of true existence. This harm to the innate conception of true existence is what one is striving to accomplish. On the other hand, if one does not identify the non-existence of the referent object of the innate conception of true existence, the point is lost. In Lama Tsongkhapa's *Essence of Eloquence,* it says that there is no point to give a reward to the demons who live in the eastern direction when one means to give it to those who live in the western direction. Likewise, if one does not harm the referent object of the innate conception of true existence, refuting an object through reasoning becomes meaningless. Once the referent object of the innate conception of true existence is identified, one should strive to harm it both directly and indirectly. Lama Tsongkhapa says: "For, if you have not identified this, even if you refute an object of negation through reasoning, the adherence to true existence that has operated beginninglessly is not harmed at all; therefore, the meaning at this point would be lost." If the object of negation is not identified well based on one's own experience, one will not be able to refute it through reasoning, i.e., one will not be able to harm the innate conception of true existence. In one of his many songs, Milarepa says: "Logicians are skilled in establishing sound as impermanent, yet continue to hold themselves to be permanent." Likewise, one can be skilled in identifying the referent object of the conception of true existence and in refuting it through reasoning but, at the same time, continue to hold oneself to be truly existent due to the view of the transitory collection of a real I.

If the conception of true existence exists in the continuum of the person, is there pervasion that the person conceives true existence? There is not. We need to differentiate the way that the person conceives true existence and the way an awareness conceives true existence.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> If you know well the identification of this [conception of true existence and true existence itself] by both the Svatantrika-Madhyamika and Prasangika-Madhyamika systems, you will discriminate them well. Hence, the explanation of these has two parts:
>
> 1 Identification of the conception of true existence in the Svatantrika-Madhyamika School
> 2 Identification of the conception of true existence in the Prasangika-Madhyamika School.

3B1C-2B3E-1B1 Identification of the conception of true existence in the Svatantrika school

This section has three parts:

A Identifying true existence and its conception
B Indicating truth and falsity relative to worldly persons through the example of an illusion
C Applying the example to the meaning

3B1C-2B3E-1B1A Identifying true existence and the conception of true existence

Other reliable sourcebooks of the Svatantrika School do not have a clear identification of the object of negation, but the existence that is the opposite of the mode of conventional existence explained in Kamalashila's *Illumination of the Middle Way* is to be known as ultimate or true existence, and, therefore, let us explain that. Kamalashila's *Illumination of the Middle Way* says:

> The mistaken awareness that superimposes – on things which in reality [or ultimately] are without their own entityness – an aspect opposite to that [absence of ultimate entityness] is called the "concealer" because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness. [*The Descent into Lanka*] *Sutra* also says:

> Things are produced conventionally.
> Ultimately they are without inherent existence.
> That which is mistaken about the lack of inherent existence
> Is asserted as the concealer of reality.
>
> Since [an artificial awareness in the continuum of a Proponent of True Existence] arises from that [conception of true existence], all false things which [such an artificial awareness] sees displayed by that [conception of true existence as if they are truly established] are called "mere conventionalities." Moreover, that [conception of true existence] arises through the maturation of beginningless predispositions for error, whereby all living beings see [phenomena] displayed as if [they had] an [inherently established] nature in reality. Therefore, all entities of false things [which exist] through the power of those [sentient beings' non-defective] thoughts [that is to say, conceptual and non-conceptual consciousnesses unaffected by the conception of true existence] are said "only to exist conventionally."

"The mistaken awareness that superimposes – on things which in reality [or ultimately] are without their own entityness – an aspect opposite to that" refers to [a consciousness that] mistakes what does not ultimately exist inherently to exist ultimately. "... is called a 'concealer' because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness" is the meaning of "the concealer of reality" [in the citation from the *Descent into Lanka Sutra*]. *Samvrti* [here] is taken as [meaning] "obstructor", concealing reality.

Since [an artificial awareness in the continuum of a Proponent of True Existence] arises from that [conception of true existence], that which sees the display by the conception of true existence as if [objects] are truly established is a conceptual consciousness, not a sense consciousness. For, Jnanagarbha's *[Auto]Commentary on "Distinguishing the Two Truths"* explains that true [existence] – the object of negation – does not appear to sense consciousnesses, and it is the same here [in the Yogachara-Svatantrika-Madhyamika School.

"Moreover, that [conception of true existence] arises through the maturation of beginningless predispositions for error" indicates that this conception of true existence [from which the artificial conception of true existence arises] is innate. Therefore, [Kamalashila] speaks of "all living beings."

Here, Lama Tsongkhapa says that Kamalashila's *Illumination of the Middle Way* alone clearly presents the object of negation, true existence, as it is asserted by the Svatantrika Madhyamika school. However, there is debate concerning the statement "Other reliable sourcebooks of the Svatantrika School do not have a clear identification of the object of negation," because there are other such texts.

Lama Tsongkhapa then says that "the existence that is the opposite of the mode of conventional existence explained in Kamalashila's *Illumination of the Middle Way* is to be known as ultimate or true existence." A conventional existent is that which exists through being posited by the force of appearing to a non-defective mind, whereas the opposite is an ultimate existent. The measure of true existence, or the object of negation, is: that which is established by way of its own objective mode of subsistence without being posited by the force of appearing to a non-defective awareness. For the Svatantrika Madhyamika school, all phenomena are established to exist through a combination of existing from the object's side and existing from the subject's side. Therefore, in this school if something does not exist from the object's side but is only posited from the side of the subject it is not established as an existent. Phenomena exist only due to being a combination of both. Existing from the object's side is to exist inherently, while existing from the subject's side is to exist by the force of being posited by for the non-defective awareness of a living being. However, for the Prasangika Madhyamika school there is no such combination in that they say that all phenomena are posited from the side of an awareness and do not exist from the side of the object.

The concealer is that which covers or veils from seeing reality (note that the Tibetan word *kun rdzob* is variously translated as concealer, the conventional, and conventionality, in different contexts). Lama Tsongkhapa says: "is called a 'concealer' because it obstructs [itself] from [perception of]

suchness or because it veils [other awarenesses] from perception of suchness." What is that concealer? Is it a conceptual consciousness or a non-conceptual consciousness? In the Svatantrika Madhyamika school conventionalities (*kun rdzob*) are of two types: real conventionalities and unreal conventionalities. How are these distinguished? The definition of a real conventionality is: that which is either a real or unreal conventionality which cannot be realized by a worldly, ordinary being to not be established as it appears to the mind which takes it as its appearing object; for example, forms, space, and so forth. The definition of an unreal conventionality is: that which is either a real or unreal conventionality and is either (1) that which *can* be realized by a worldly, ordinary being to not be established as it appears to the mind which takes it as its appearing object or (2) that which is harmed by a valid cognizer in regard to its existing nominally; for example, the reflection of a face in the mirror, the self of persons, and so forth.

Q: The *Descent into Lanka Sutra* is translated as saying: "That which is mistaken about the lack of inherent existence is asserted as the concealer of reality." Would 'concealer of reality' (*yang dag kun rdzob*) be better translated as 'real conventionality'?
A: Here the subject of the sutra is an *awareness* that conceals or veils. For the Svatantrika Madhyamika school, conventionality is divided into two: real and unreal conventionalities. Simply put, a real conventionality is an object that appears and *is not* realized by an ordinary being to not exist as it appears. An unreal conventionality is an object that appears and *is* realized by an ordinary being to not exist as it appears. An illustration of an unreal conventionality is the reflection of a face in a mirror in that an ordinary being is able to realize that the reflection of the face does not exist as it appears (i.e., that it is not an actual face). A cup is an illustration of a real conventionality because ordinary beings are not able to realize that it does not exist as it appears. This is because, according to the Svatantrika Madhyamikas, the cup appears to exist truly. Ordinary beings are not able to realize that the cup does not exist as it appears. Note that real and unreal conventionalities are not distinguished in terms of permanence but in terms of true existence.

The Descent into Lanka Sutra says: "Things are produced conventionally. Ultimately they are without inherent existence. That which is mistaken about the lack of inherent existence is asserted as the concealer of reality." Therefore, in this context 'concealer of reality' is correct as a translation. An awareness that is mistaken with respect to the lack of true existence is a concealer of reality, that is, it veils reality.

Regarding the first part of the phrase in Kamalashila's *Illumination of the Middle Way*, "The mistaken awareness that superimposes – on things which in reality [or ultimately] are without their own entityness – an aspect opposite to that," Lama Tsongkhapa says that this "refers to [a consciousness that] mistakes what does not ultimately exist inherently to exist ultimately."

Regarding the second part of the phrase in Kamalashila's *Illumination of the Middle Way* "is called the 'concealer' because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness," Lama Tsongkhapa says that this "is the meaning of 'the concealer of reality.'"

Then in regard to the phrase "Moreover, that [conception of true existence] arises through the maturation of beginningless predispositions for error," Lama Tsongkhapa says that this "indicates that this conception of true existence [from which the artificial conception of true existence arises] is innate."

Wednesday afternoon, 12 April 2000

The conception of true existence is a concealer, or obstructor, to perceiving reality.

Lama Tsongkhapa then says: "Since [an artificial awareness in the continuum of a Proponent of True Existence] arises from that [conception of true existence], that which sees the display by the conception of true existence as if [objects] are truly established is a conceptual consciousness, not a sense consciousness. For, Jnanagarbha's *[Auto]Commentary on 'Distinguishing the Two Truths'* explains that true [existence] – the object of negation – does not appear to sense consciousnesses, and it is the same here [in the Yogachara-Svatantrika-Madhyamika School]." That the object of negation, true existence, does not appear to a sense consciousness but does appear to a conceptual consciousness means that a consciousness that conceives phenomena to exist truly is a conceptual consciousness. Why does the object of negation not appear to a sense consciousness? Do forms appear to be established as external objects to a sense consciousness? Is it the case that forms appear to be external objects to a conceptual consciousness and are apprehended to be such, whereas forms appear to be external objects to a sense consciousness but are not apprehended in this way? Think about this.

If true existence were to appear to a sense consciousness, it would follow that the measure of true existence should appear to a sense consciousness, but it does not. Why does the measure of true existence not appear to it? It is because it is not possible for the measure of true existence – that which is established by way of its own uncommon mode of subsistence without being posited by the force of a non-defective awareness – to appear to a sense consciousness. Jnanagarbha's *[Auto]Commentary on "Distinguishing the Two Truths"* sets out true existence as asserted by the Sautrantika Svatantrika Madhyamika school. This assertion is similar to that of the Yogachara Svatantrika Madhyamika school. However, the difference between the Sautrantika Svatantrika Madhyamika and Yogachara Svatantrika Madhyamika school is that the Sautrantika Svatantrika Madhyamikas assert that forms appear to an eye consciousness to be external objects, but the eye consciousness is not mistaken with respect to that appearance, whereas the Yogachara Svatantrika Madhyamikas assert that forms appear to an eye consciousness as external objects and that the eye consciousness *is* mistaken with respect to that appearance. The Yogachara Svatantrika Madhyamikas assert such because forms that are external objects are a factor of an object of negation. For them, forms appearing to be external objects is a coarse self of phenomena, whereby they assert that the emptiness of forms existing as external objects is the coarse selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The "thoughts" of those living beings are not just conceptual consciousnesses but also refer to non-conceptual consciousnesses. False things which do not exist ultimately but are posited as existing through the force of those two [that is, conceptual and non-conceptual consciousnesses] exist only conventionally. This is the meaning of the statement in the *Descent into Lanka Sutra*, "Things are produced conventionally." Moreover, this does not mean that [such falsities] exist conventionally in the sense of existing for that [sort of invalid] conventional [awareness], which is a consciousness conceiving of true existence. [Rather, they exist for conventional valid consciousnesses.]
> Thus, [in the Svatantrika School] to exist in the manner of an objective mode of subsistence without being posited through appearing to an awareness – or through the force of an awareness – is to exist truly, to exist ultimately, and to exist as [the object's own] reality. Also, conceiving such is an innate conception of true existence.

Lama Tsongkhapa says: "The 'thoughts' of those living beings are not just conceptual consciousnesses but also refer to non-conceptual consciousnesses." Phenomena that are posited by the force of these two, conceptual consciousnesses and non-conceptual consciousnesses, are conventionalities (*kun rdzob*). An existent posited by the force of these two is a conventional existent. Lama Tsongkhapa says: "Moreover, this does not mean that [such falsities] exist conventionally in the sense of existing for that [sort of invalid] conventional [awareness], which is a consciousness conceiving of true existence."

Lama Tsongkhapa then sets out the measure of true existence, ultimate existence, and existence as a reality in the Svatantrika Madhyamika system, saying: "Thus, [in the Svatantrika School] to exist in the manner of an objective mode of subsistence without being posited through appearing to an awareness – or through the force of an awareness – is to exist truly, to exist ultimately, and to exist as [the object's own] reality." This is the referent object of the innate conception of true existence.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> *Objection*: Kamalashila's *Illumination of the Middle Way* says:
> That "ultimately there is no production" is to be explained as [meaning] that "the production of these is not established by a consciousness of reality [that is, a reasoning consciousness]."
>
> Implicitly, [Kamalashila] is explaining that [to be] ultimately existent and ultimately produced [means, to be] established by a reasoning consciousness understanding suchness as existent and as produced. [Since, just above, you have explained the meaning of being ultimately existent and ultimately produced differently] how [do you take Kamalashila's explanation]?
>
> *Answer*: That is true. You need to understand that the qualification "ultimately" is affixed in two [senses] to the object of negation:
>
> 1. The reasoning consciousnesses of hearing, thinking, and meditating are taken as the ultimate, [and thus what is established by them is ultimately existent, and] what is not established by them, as [the objector just] mentioned above, [is not ultimately established].
> 2. Being existent in an objective mode of subsistence without being posited by the force of an awareness is posited as being ultimately existent [and not existing this way is called not being ultimately established].
>
> The first of these two ultimates [that is, a reasoning consciousness of hearing, thinking, or meditating], as well as something that is established in its perspective [namely, emptiness], exists. However, both the latter ultimate [that is, existence in an objective mode of subsistence without being posited by the force of an awareness] and something that exists that way do not occur.
>
> Therefore, although whatever exists ultimately in the latter sense would [hypothetically] exist ultimately in the former sense, the conception of the former type of existence [that is, of an object established for a reasoning consciousness] is not an innate conception of true existence [since, indeed, emptiness exists this way and even it is not truly established, and since conceiving any other phenomenon to be established for such a reasoning consciousness would be an artificial conception of true existence]. To have such an [innate] conception of true existence, one must conceive of the latter type of existence [that is, of an objective mode of subsistence not posited through the force of the mind].

Lama Tsongkhapa says: "the qualification 'ultimately' is affixed in two [senses] to the object of negation." In the first sense, ultimate is a reasoning consciousness of hearing, thinking, and meditating. If a conventionality existed to the perspective of a reasoning consciousness analyzing suchness, it would be ultimately existent, whereby it would be an object of negation, and if the object were not posited by the force of appearing to a non-defective awareness, it would be ultimately existent.

Although there is no conventionality that exists in the perspective of a reasoning consciousness realizing suchness, something does exist for it, this something being emptiness. Lama Tsongkhapa says: "The first of these two ultimates [that is, a reasoning consciousness of hearing, thinking, or meditating], as well as something that is established in its perspective [namely, emptiness], exists." Lama Tsongkhapa then says: "However, both the latter ultimate [that is, existence in an objective mode of subsistence without being posited by the force of an awareness] and something that exists that way do not occur." The second type of ultimate does not exist, this being existence as an objective

mode of subsistence without being posited by the force of appearing to an awareness and that which exists that way.

If something exists as the second type of ultimate (existence as an objective mode of subsistence without being posited by the force of appearing to a non-defective awareness), it should exist in the perspective of a reasoning consciousness realizing suchness. The conception apprehending a conventionality to exist in the perspective of a reasoning consciousness realizing suchness is not an innate conception of true existence; this is because such a reasoning consciousness is of one whose mind has been affected by tenets. Lama Tsongkhapa says: "Therefore, although whatever exists ultimately in the latter sense would [hypothetically] exist ultimately in the former sense, the conception of the former type of existence [that is, of an object established for a reasoning consciousness] is not an innate conception of true existence."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Not differentiating these [two meanings of "ultimate"], many have held that the measure of the object of negation is something able to bear reasoned analysis or something able to bear analysis. In dependence upon this, many appear to have made the mistake of asserting that ultimate truths are not established bases [that is, do not exist] or that they are truly established. If you understand this well, you will understand the essential points that the statements that "nothing exists as [its own] basic disposition" and that "nothing exists ultimately" do not contradict the assertion that the real nature exists and the proposition that it is the basic disposition [of phenomena] and is the ultimate.

If the two ways of setting forth the object of negation are clearly understood, one will not make a mistake concerning the meaning of ultimate. However, there are many who have held that the measure of true existence, the object of negation, is that which is able to bear analysis or that which is able to bear reasoned analysis. Such mistaken ideas lead them to say that ultimate truths are not established bases. They say that since true existence is able to bear reasoned analysis, it is an object of negation and therefore cannot be an established base. Due to being unclear about the object of negation, some also say that ultimate truth is truly existent because ultimate truth is able to bear reasoned analysis.

Lama Tsongkhapa then says: "If you understand this well, you will understand the essential points that the *statements* that 'nothing exists as [its own] basic disposition' and that 'nothing exists ultimately' do not contradict the assertion that the real nature exists and the proposition that it is the basic disposition [of phenomena] and is the ultimate." Real nature, or reality (*chos nyid*), exists and is the basic disposition (*gzhi lugs*) and the ultimate. However, 'existing as the basic disposition' and 'existing ultimately' do not exist. However, this does not contradict the assertion that the real nature (reality) exists and is the basic disposition and the ultimate. If phenomena existed as the basic disposition, they would exist by way of their own mode of subsistence without being posited by the force of appearing to a non-defective awareness. Likewise, if phenomena existed ultimately, they would exist by way of their own mode of subsistence without being posited by the force of appearing to a non-defective awareness. Such modes of existence do not exist, yet reality exists. This real nature, or reality, is the basic disposition and the ultimate.

Q: What does basic disposition (*gzhi lugs*) mean?
A: It means actuality or reality. In the Tibetan colloquial language, this word refers to a person's natural disposition.

When Lama Tsongkhapa says "is the ultimate," it refers to ultimate truth. How is ultimate truth defined? Ultimate truth is defined as: that which is a truth in the perspective of an ultimate, a

superior's exalted wisdom of meditative equipoise. Conventional truth is defined as: that which is a truth in the perspective of a concealer, the conception of true existence.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B3E-1B1B Indicating truth and falsity relative to worldly persons through the example of illusion
>
> Since using the example of a [magician's] illusion is praised for understanding the status of existence that is posited through the force of an awareness and of existence that is not posited through the force of an awareness, let us explain it. When a magician causes a pebble, twig, or the like to appear as a horse or elephant, there are three [types of persons present]:
>
> 1. the magician
> 2. the audience whose eyes have been affected [by the mantra the magician has cast]
> 3. a person [who comes later and thus] whose eyes have not been affected [by the mantra].
>
> For the first [that is, the magician] there is the mere appearance as a horse or elephant, but he/she does not adhere to such [as being true]. The second [the audience whose eyes have been affected] have both the appearance [as horse or elephant] and adherence to that appearance. The third [a person whose eyes have not been affected] has neither the appearance as a horse or elephant nor adherence to it.
>
> When, for example, a rope is mistaken for a snake, it is said that the rope is a snake in the perspective of that consciousness but in general is not a snake. However, it is not suitable to say that similarly, when a basis of conjuring appears as a horse or elephant, the appearance as a horse or elephant is only in the perspective of a mistaken consciousness but in general the basis of conjuring *does not appear* as a horse or elephant [because it does]. Even though that qualification [that is, "in general"] is not affixed, it must be asserted that the basis of conjuring does appear as a horse or elephant [even though it only appears so for a mistaken consciousness]. For, if this were not the case, mistake regarding appearances would not occur.

There are three types of persons in the context of the example of a magician's illusion:
(1) An ordinary being who has realized emptiness by way of a meaning generality, he being likened to the magician.
(2) An ordinary being who has not realized emptiness and has the appearance of true existence, he being likened to a spectator whose eyes have been affected by the mantras of the magician.
(3) A superior who has realized emptiness directly, he being likened to a person who comes later and whose eyes have therefore not been affected by the mantras.

When a magician creates an illusion, it also appears to him. When he, for example, transforms a pebble into a horse, the horse appears to him but he does not adhere to it as being a real horse. Those who have realized emptiness by means of a meaning generality are likened to the magician in that although they have the appearance of true existence, they do not adhere to it. To those who come later, whose eyes have not been affected by mantra, neither the horse or elephant, nor the basis of conjuring, appears. If the basis of conjuring appears, there is pervasion that the horse and elephant appear. When a pebble becomes a basis of conjuring, the eyes of the spectators have already been tricked. Thus, those who come later do not see the pebble because it has already been affected by the conjuration. If the pebble appears, there is no pervasion that the basis of conjuring appears. This is because if the basis of conjuring appears, then those who come later would see a horse and an elephant. One can debate: "Does there exist the pebble that is a basis of conjuring?" If one says that it does, then one says: "Does it appear to a buddha superior? If it appears to a buddha superior, does it appear as a horse or elephant because the basis of conjuring is appearing to him?" If someone says that the basis of conjuring does not appear to a buddha superior, then one asks: "Is the basis of

conjuring not an established base? Do not all established bases appear to a buddha?" However, debate aside, for the spectators there is the appearance of the basis of conjuring as a horse or elephant, whereas those who come later do not have the appearance of the basis of conjuring. How does the magician affect the mind of the spectators? In order to make that basis appear as a horse or elephant does the magician only affect the eyes of the spectators or does he first affect the substance and only then the eyes? I myself attended a magic show when I was in hospital in India after escaping from Tibet. The magician was able to draw milk from his elbow until it filled a bucket; he then transformed the milk into flowers and scattered it on the audience. I kept one flower and watched it but nothing happened, other than that it wilted like any normal flower!

Thursday morning, 13 April 2000

Jedzun Chogyi Gyeltshen's *Ocean of Sport* (vol. I, page 172) says:

> The definition of a conventional truth is: that which is realized in terms of being together with dualistic appearance by the direct valid cognizer directly realizing it. When divided nominally, there are two kinds of conventional truths: (1) real conventionality and (2) unreal conventionality.
> The definition of a real conventionality is: that which is either a real or unreal conventionality, which cannot be realized by a worldly ordinary being to not be established as it appears to the mind that takes it as its appearing object; for example, forms, space, and so forth.
> The definition of an unreal conventionality is: that which is either a real or unreal conventionality and is either (1) that which can be realized by a worldly ordinary being to not be established as it appears to the mind which takes it as its appearing object or (2) that which is harmed by a valid cognizer in regard to its existing nominally; for example, the reflection of a face in the mirror, the self of persons, and so forth.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Therefore, that the basis of conjuring can be posited as appearing as a horse or elephant is, according to the magician, through the force of appearing that way to a mistaken awareness; it is not posited otherwise through the force of the mode of subsistence of the basis of conjuring itself. As for the audience, the appearance as a horse or elephant does not seem to be posited through the force of an internal awareness; rather, they conceive that there is a fully qualified horse or elephant dwelling on that place where the appearance is, covering that spot.
> In terms of an example, those are how something is conceived to be posited by the force of an awareness and is conceived not to be posited by the force of an awareness. When a basis [that is, an object] appears in a certain way, there are two [types] – those that do and do not correspond with the mode of subsistence as it appears.
> When you understand well this [presentation of how phenomena are posited through the force of the mind according to the Svatantrika School], you will come to differentiate the two positions [of the Svatantrika School and the Proponents of True Existence which some] confuse. They think:
>
> > Objects of comprehension [that is, all objects] are posited through the force of valid cognitions, and since valid cognitions are awarenesses, the positing of objects of comprehension through them is a case of positing [objects] through the force of an awareness. Hence, even the systems of the Proponents of True Existence refute true establishment.
>
> [However,] that objects of comprehension are posited [that is, certified] through the force of valid cognitions means that valid cognitions realize the mode of subsistence of the two [types of] objects of comprehension [specifically and generally characterized objects or impermanent and

> permanent objects or manifest and hidden objects]. Therefore, the two – this [meaning of positing, or certifying, objects of comprehension according to the Proponents of True Existence] and the former [meaning of positing objects through the force of an awareness according to the Svatantrika School] are utterly dissimilar.

The magician understands that the basis of conjuring, a pebble, appears as a horse or elephant by the force of a mistaken awareness. He understands that they do not exist from the side of the basis. For the audience, the existence of horse or elephant is posited from the side of the basis and not in terms of an inner awareness that is mistaken. In other words, the audience thinks that there is a real horse or elephant existing from the side of the basis. This is the way of positing things in terms of an awareness or not in terms of an awareness in relation to this example. Lama Tsongkhapa says: "In terms of an example, those are how something is conceived to be posited by the force of an awareness and is conceived not to be posited by the force of an awareness."

When a basis appears in a certain way it can either correspond or not correspond with the mode of subsistence as it appears. Lama Tsongkhapa says: "When a basis [that is, an object] appears in a certain way, there are two [types] – those that do and do not correspond with the mode of subsistence as it appears." For example, when a horse appears from the side of the basis, the magician understands that the horse exists by the force of appearing to a mistaken awareness and that it does not exist from the side of the basis; this corresponds with its actual mode of subsistence. On the other hand, the audience does not understand that the horse exists by the force of appearing to a mistaken awareness but thinks that the horse exists from the side of the basis; this does not correspond with its actual mode of subsistence.

It follows that the Proponents of True Existence, the Vaibhashikas and Sautrantikas, refute true existence in that they assert that an object of comprehension is posited by a valid cognizer and that a valid cognizer is an awareness. According to our own system, this is not correct because the mode of positing by a valid cognizer and the mode of positing by an awareness are different. The realist schools accept that an object of comprehension is posited by a valid cognizer and posited by an awareness because in one of their texts it says: "Because there are two objects of comprehension, there are two valid cognizers." This is in relation to the fact that the Sautrantikas posit ultimate truth as that which is ultimately able to perform a function and conventional truth as that which is not ultimately able to perform a function.

Lama Tsongkhapa says: "[However,] that objects of comprehension are posited [that is, certified] through the force of valid cognitions means that valid cognitions realize the mode of subsistence of the two [types of] objects of comprehension [specifically and generally characterized objects or impermanent and permanent objects or manifest and hidden objects]."

The definition of a specifically characterized phenomenon is: a phenomenon which is established by way of its own character without being merely imputed by a term or thought consciousness.

The definition of a generally characterized phenomenon is: a phenomenon which is merely imputed by a term or thought consciousness and is not established as a specifically characterized phenomenon.

The definition of a manifest object is: an object explicitly realized by a direct valid cognizer.

The definition of a hidden object is: an object realized in a hidden manner by a thought consciousness apprehending it.

Another definition of manifest object is: an object realized independently by one's own experience without depending on a sign.

Another definition of a hidden phenomenon is: an object realized by depending on a sign.

In conclusion, the mode of positing an object by the force of a valid cognizer is not the same as the mode of positing an object by the force of an awareness.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> According to the Yogachara-Svatantrika-Madhyamika School [which does not assert external objects], the appearance of such an illusion is established [or certified] by a self-knowing direct perception, and according to the Sautrantika-Svatantrika-Madhyamika School, which asserts external objects, the appearance of such an illusion is established [or certified] by a sense direct perception apprehending the basis – for instance, the area [on which the illusion appears] or intermediate space [in which it appears].
> With respect to its not existing in accordance with how it appears, [that the illusory horse or elephant exist as they appear] is refuted with signs [that is, reasons] such as, "If it did exist that way, it would be seen by those whose eyes are not affected [by the mantra], but they do not see it." At this time, a combination of the two – appearing that way and an emptiness of that – is established, whereby [the illusion] is established as a falsity relative to an ordinary conventional awareness which is not involved in [philosophical] tenets. Hence, the awarenesses that establish [or certify] this [composite of appearance and emptiness] and a reflection's emptiness of what it appears to be are not asserted to be either coarse or subtle reasoning consciousnesses.

According to the Yogachara Svatantrika Madhyamikas, illusory appearance is established by a direct self-cognizer. How does a direct self-cognizer realize the illusion that is a horse or elephant? Some say that the appearance of illusory horse or elephant appears to the eye consciousness and that a direct self-cognizer explicitly realizes that eye consciousness, implicitly realizing the appearance. On the other hand, Bhavaviveka says that it is enough for someone who sees the place at which the appearance took place to remember that this was the place where he saw an illusory horse. In other words, the eye consciousness perceives the place where the illusion was seen and the person thinks, "There I saw a horse." According to the Sautrantika Svatantrika Madhyamikas, that appearance of illusory horse is established by a direct sense perceiver apprehending the spot or the intermediate space in which the illusory horse appeared. Lama Tsongkhapa says: "the appearance of such an illusion is established [or certified] by a sense direct perception apprehending the basis – for instance, the area [on which the illusion appears] or intermediate space [in which it appears]." In the *Clarification of the Path to Liberation*, a commentary on the *Compendium of Valid Cognition*, it says: "The proponents of reasoning repeatedly say that the objects of apprehension of conception are the objects of comprehension of a direct self-cognizer." An object of apprehension and an appearing object are mutually inclusive for a conception. This is discussed in *Collected Topics*.

If an illusory horse or elephant exists as it appears, it would also be seen by those who come later, whose eyes have not been affected by mantra; however, it is not. Lama Tsongkhapa says: "At this time, a combination of the two – appearing that way and an emptiness of that – is established, whereby [the illusion] is established as a falsity relative to an ordinary conventional awareness which is not involved in [philosophical] tenets." Anything which is a combination of the two, appearing in one way and being empty of existing in that way, is a falsity in the perspective of those whose minds have not affected by tenets. In other words, those whose minds are not affected by tenets can realize it to be false, as appearing and being empty of existing as it appears; for example, the realization that the appearance of a reflection of a face in a mirror is empty of being a face. That reflection is said to be "established as a falsity relative to an ordinary conventional awareness which is not involved in [philosophical] tenets." The awareness realizing the combination of the appearance of the reflection of a face and the emptiness of it being a face, or the combination of the appearance of a horse or elephant and the emptiness of it being a real horse or elephant, is not any of the reasoning consciousnesses. Lama Tsongkhapa says: "Hence, the awarenesses that establish [or certify] this [composite of appearance and emptiness] and a reflection's emptiness of what it appears to be are not asserted to be either coarse or subtle reasoning consciousnesses." Although one could understand this to mean that such an awareness cannot be a coarse or subtle reasoning consciousness, it actually means that they cannot be a coarse or subtle consciousness realizing selflessness.

Q: In the context of reasoning consciousness (*rigs shes*) what is the meaning of the Tibetan word *rigs* translated here as 'reasoning'?
A: The word *rigs* can also mean sign or type. In general, a *rigs shes* is a consciousness thinking about the meaning of selflessness. When the term *rigs shes* is translated as 'reasoning consciousness,' it gives the false impression that it is a consciousness generated in dependence on reasoning. If that were the case one could debate whether an inferential valid cognizer is pervaded by being a reasoning consciousness. One can ask: "Is the inferential valid cognizer understanding that there is fire on the other side of a hill by the presence of smoke a reasoning consciousness?" In short, according to my understanding of English, translating the term *rigs shes* as reasoning consciousness is perhaps not completely accurate in that it does not bear debate. One meaning of *rigs* is reason or sign, another is type or kind. In this context is should be understood as type, a consciousness which is a type. What type is it? In this case it is one that does not realize selflessness. There are two types of objects, the conventional and ultimate. Here in this context it is not a consciousness realizing the ultimate. In conclusion, it is not a consciousness realizing either of the two objects, coarse or subtle selflessness.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Even with respect to what is truly established in terms of a conventional ordinary awareness, if [an object] appears as something, it could not be empty of that, and also if it is empty of something, it could not appear that way. Hence, if a combination of those two [that is, appearing one way and existing another] occurs, it is only a falsity in terms of an ordinary awareness.

Is there a difference between an ordinary awareness and an ordinary awareness of a worldly being? There is in that an ordinary awareness is an awareness not realizing emptiness, whereas an ordinary awareness of a worldly being is a mind that has not been affected by tenets.

When something appears to a conventional ordinary awareness to be truly established, that conventional awareness is not able to realize it as being empty of that. On the other hand, when there is the appearance of that object as empty, there is no appearance of that object as being truly established. Lama Tsongkhapa says: "Hence, if a combination of those two [that is, appearing one way and existing another] occurs, it is only a falsity in terms of an ordinary awareness." What is a falsity? Something is a falsity when the way in which it appears and the way in which it exists do not correspond. On the other hand, something is a truth when the way in which it appears and the way in which it exists correspond. In short, conventional truths are falsities, and ultimate truths are truths. This is the conclusion of this passage.

Whether the way of appearing and the way of existing of a phenomenon correspond or do not correspond is mainly in terms of the mind to which it appears. To which main mind does an ultimate truth appear? That mind is a mind directly realizing emptiness or a superior's mind of meditative equipoise on emptiness. In the perspective of a mind directly realizing emptiness, ultimate truth or emptiness exists as it appears, i.e., the way in which it appears and the way in which is exists correspond. A superior's exalted wisdom of meditative equipoise is unmistaken.

A mind realizing conventional truth is posited in different ways. For example, in regard to a mind that takes a table as its object, what is posited as the main mind perceiving table? Is the main mind the eye consciousness perceiving table or the conception apprehending table?
Student: It is the eye consciousness.
Geshe-la: The table does not exist as it appears in the perspective of the eye consciousness. This is the position of the Prasangika Madhyamikas, who say that when the table appears to the eye consciousness, it appears to exist from its own side, so the eye consciousness is mistaken with respect to the appearance. The Yogachara Svatantrika Madhyamikas say that when the table appears to the eye consciousness it appears to be an external object, therefore the eye consciousness is mistaken with

respect to this appearance because the table does not exist as an external object. In both cases, the table does not exist as it appears to the main mind, the eye consciousness. If it is said that the Sautrantika Svatantrika Madhyamikas say that the eye consciousness is not mistaken with respect to the table, which appears to exist from its own side, what is the consequence?

The discussion here regards falsity and truth. In each school, falsity and truth are defined differently. The Madhyamika schools in general say that an ultimate truth is a truth and a conventional truth is a falsity. A table, for example, which is a conventional truth, is said to be a truth in the perspective of a concealer, the conception of true existence. However, it is only a truth in that perspective; it is not a truth in general. Although the table appears to be a truth for that concealer it is not actually a truth.

Thursday afternoon, 13 April 2000

In both *General Meaning* by Jedzun Chogyi Gyeltshen and the *Great Commentary* by Lama Tsongkhapa, the measure of true existence in the Svatantrika Madhyamika system is abbreviated. In Lama Tsongkhapa's *Illumination* (Tibetan, page 126), the measure of the object of negation is given as (Klein, *Path to the Middle*):

> [That which] exists in an objective mode of subsistence without being posited by the force of an awareness is posited as ultimately existent.

In the *Ornament for Clear Realizations* true existence is defined as: that which is established by its own uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness. In *General Meaning* (page 204) it says:

> An object established by way of its own objective mode of subsistence without being posited by the force of appearing to an awareness is the object of negation in analyzing for the ultimate. This is the explanation of Lama Tsongkhapa and his son. It is the final thought of the Svatantrika Madhyamika texts: "Just as it appears the conventional is only that, the other is the contrary."

This means that which is posited by the force of appearing to the mind alone is the conventional, the other is the ultimate. This quotation is taken from the *Two Truths of the Middle Way* by Jnanagarbha.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B3E-1B1C Applying the example to the meaning
>
> When external and internal phenomena appear as truly existent, sentient beings, like the audience of magic whose eyes are affected [by the mantra cast by the magician], conceive that a mode of subsistence of those phenomena that is not posited by the force of an awareness exists. This conception is the innate conception of true existence, which has operated beginninglessly.
> What the Svatantrikas posit this way is very coarse relative to the Prasangikas' apprehension of the object of negation; hence, it is not the innate subtle conception of true existence [according to the Prasangikas].
> When the true existence apprehended by the conception of true existence is refuted through reasoning, one – like the magician – does not conceive of external and internal phenomena as having a mode of subsistence that is not posited through the force of an internal awareness; rather, one understands [phenomena] as mere existents posited through the force of an awareness. Moreover, those [phenomena] posited through the force an awareness not damaged by valid

> cognition are asserted as conventionally existent; however, everything posited through the force of an awareness is not asserted as existing conventionally.
> Although the production of a sprout from a seed is posited through the force of an awareness, it is not contradictory that the sprout also is produced from the seed from its own side. This is like the fact that there is an appearance as a horse or elephant even from the side of the basis of conjuring [that is, a pebble or twig]. Through that, all conventionally existent phenomena are to be understood.
> Even reality is posited as existing through the force of the awareness to which it appears. Hence, it is not an exception to being posited as conventionally existent.
> Therefore, the significance of applying the example – a magician's illusion – to the meaning – other phenomena – is not at all that just as a magician's illusion appears to be a horse or elephant but is empty of being such, so all phenomena such as pots appear to be pots, and so forth, but are empty of being pots, and so forth. For, if that were the case, being that phenomenon [for example, being a pot] would not occur, and the application of the example to the meaning would be that [phenomena] appear to be such-and-such but are not the actual thing.
> When the non-conceptual exalted wisdom of meditative equipoise is generated, in its perspective all dualistic appearances are extinguished. This is like one whose eyes, not having been affected [by the magician's mantra], have neither the illusory appearance nor adherence to it.

Here, the example is connected to the meaning. The first example is the audience whose eyes have been affected by mantra. They have the appearance of horse or elephant and adhere to that appearance as true. The meaning of this example is that ordinary sentient beings have the appearance of phenomena as truly existent and adhere to phenomena as existing by their own uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness. This is the innate conception of true existence, which has been present in sentient beings since beginningless time. This is the way in which the Svatantrika Madhyamikas posit the measure of true existence. Such an object of negation is coarse compared to that posited by the Prasangika Madhyamikas. In other words, the conception of true existence that is explained here is not the subtle conception of true existence explained by the Prasangika Madhyamikas.

The meaning of the example of a magician is that ordinary beings who negate the referent object of the conception of true existence – who are likened to a magician – have the appearance of phenomena being truly existent but do not adhere to it.

Lama Tsongkhapa says: "When the non-conceptual exalted wisdom of meditative equipoise is generated, in its perspective all dualistic appearances are extinguished." To a non-conceptual exalted wisdom of meditative equipoise there is no appearance of true existence and there is no adherence to it; this is likened to the spectators whose eyes have not been affected by the magician's mantra [in that the illusory horse or elephant do not appear to them and there is no adherence to this].

Lama Tsongkhapa says: "Moreover, those [phenomena] posited through the force an awareness not damaged by valid cognition are asserted as conventionally existent; however, everything posited through the force of an awareness is not asserted as existing conventionally." What could one posit as that which is posited through the force of an awareness but does not exist conventionally? One can posit the horns of rabbit. Are they posited by the force of an awareness?

Student: They are.

Geshe-la: How?

Student: They appear to a conception and are apprehended but are harmed by a valid cognizer and are therefore not conventionally existent.

Geshe-la: Is true existence posited by the force of an awareness?

Student: It is.

Geshe-la: If it is selfless is it pervaded by being posited by the force of an awareness? One would have to say that it is. There was once a debate in which the challenger asked: "If it is selfless is it pervaded by being perceived by conception?" To this, the respondent replied that it is. Then the challenger asked: "Is there a conception that a huge yak is entering your mouth?" The respondent replied, "There

is;" the challenger then asked: "Who has this conception,?" to which the respondent replied: "You do, since you asked the question!"

Lama Tsongkhapa says: "Although the production of a sprout from a seed is posited through the force of an awareness, it is not contradictory that the sprout also is produced from the seed from its own side." This is an assertion of the Prasangika Madhyamikas. Lama Tsongkhapa then says: "This is like the fact that there is an appearance as a horse or elephant even from the side of the basis of conjuring [that is, a pebble or twig]. Through that, all conventionally existent phenomena are to be understood." This last phrase is the cause of a lot of debate. There are two terms in this context, *conventionally existent* and *nominally existent*. In this context, the Tibetan term *tha snyad du yod pa* has been translated as 'conventionally existent,' but could have been translated as 'nominally existent.' Lama Tsongkhapa says: "Even reality is posited as existing through the force of the awareness to which it appears. Hence, it is not an exception to being posited as conventionally existent."
Student: But do all phenomena not exist conventionally?
Geshe-la: Even ultimate truth, emptiness, exists conventionally, but it is not a conventional truth.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> There is no indication later [in Chandrakirti's text] of the Svatantrikas' uncommon mode of refutation [of true existence] by reasoning; therefore, let us express briefly and [in words] easy to understand how in this system all phenomena are caused to appear as like illusions.
> Objects of knowledge are inclusively divided into the two: [functioning] things and non[functioning] things [or impermanent and permanent phenomena]. Let us explain [emptiness] with respect to [functioning] things first. [Functioning] things are inclusively divided into the physical and nonphysical. Applying the refutation, as explained elsewhere, of physical things that are directionally partless – eastern direction, and so forth – and of consciousnesses that are temporally partless, [the Svatantrikas] prove that [functioning] things necessarily have parts. Then, if parts and whole were different entities, they would be unrelated; thereby [such] is refuted, and [parts and whole] are shown to be one entity.
> At that time, no matter how the mind looks into it, it is undeniable that, although the mode of being [of parts and whole] is to be one entity, in their mode of appearance [to thought] they appear to be different entities. Thereby, it is settled that [functioning things] are, like a magician's illusions, a combination of the two – appearing one way and being empty of [existing] that way.
> Then, although such is not contradictory in the context of the mode of subsistence of a falsity posited through the force of appearing to an awareness, if a certain base [that is, a certain phenomenon] had a mode of subsistence not posited through the force of appearing to an awareness, [such a combination of appearance and emptiness] would not at all be suitable because discordant modes of abiding and of appearance cannot occur in what is truly established such as was explained earlier. For, if something is truly established, it must abide in a manner devoid of falsity in all respects, and [since appearance and being would necessarily be concordant] the awareness to which [parts and whole] appear as different entities would have to be unmistaken, thereby damaging their being one entity.
> Once this is established, in dependence on that reasoning it can be refuted that non[functioning] things are truly established. For, even with respect to uncompounded space, it must be asserted that it pervades certain physical objects, and it must be further asserted that it has a part pervading the east and parts pervading the other directions.

Although there is no further presentation by Chandrakirti of the way of refuting the object of negation according to the Svatantrika Madhyamika system, Lama Tsongkhapa presents it here. What reasonings are there for refuting the object of negation in the Svatantrika Madhyamika system? There are different types of reasonings presented in various texts such as in the *Two Truths of the Middle Way*, *Illumination of the Middle Way*, and *Ornament for the Middle Way*. The five main reasonings were already discussed in the *Ornament for Clear Realizations*. The first of these is the reasoning of being free from

one and many, which analyzes the entity of phenomena. This reasoning is extensively explained in the *Ornament for the Middle Way* by Shantarakshita. This reasoning can be summarized in a syllogism: things as propounded by the non-Buddhist schools and our own lower schools, as the subject; they do not exist truly because they are free from being a truly existent one and free from being a truly existent many; for example, like the reflection of a face in a mirror. 'Things' are objects of knowledge. Objects of knowledge can be inclusively divided into two: functioning things and non-functioning things (or things and non-things). The definition of a functioning thing as given in *Collected Topics* is: that which is able to perform a function. The definition of a non-functioning thing is: that which is empty of being able to perform a function. A non-functioning thing is not pervaded by being permanent; for example, the horns of a rabbit or the tail of a human being. Functioning things are inclusively divided into: physical functioning things and non-physical functioning things. Physical functioning things are pervaded by having parts, such as an eastern part. Since all physical things have parts, they are pervaded by not being a truly existent one. Since they have parts, they exist in dependence on parts whereby they cannot be an independent one. This is asserted because if things were a truly existent one they should be an independent one.

Physical things are pervaded by having parts because they are composed of atoms. On the basis of an atom there is an upper direction, a lower direction, an eastern direction, and so forth. If it is a physical thing it has parts; if it has parts it depends on parts; if it depends on parts it is a dependent-arising; if it is a dependent-arising it is not a truly existent one; and if it is not a truly existent one it cannot be a truly existent many. If a physical thing is not a truly existent one or a truly existent many, it cannot be truly existent.

Consciousnesses that are temporally partless are asserted by the Vaibhashikas; these too are refuted by the Svatantrika Madhyamikas. In short, functioning thing is pervaded by having parts. Lama Tsongkhapa says: "Then, if parts and whole were different entities, they would be unrelated; thereby [such] is refuted, and [parts and whole] are shown to be one entity." That parts and whole are different entities is negated, whereby parts and whole are established to be one entity, although they are two different isolates. Lama Tsongkhapa says: "No matter how the mind looks into it, it is undeniable that, although the mode of being [of parts and whole] is to be one entity, in their mode of appearance [to thought] they appear to be different entities." Parts and whole have the mode of being of being one entity, but they appear to thought as being different entities. Lama Tsongkhapa says: "Thereby, it is settled that [functioning things] are, like a magician's illusions, a combination of the two – appearing one way and being empty of [existing] that way." For example, a cup is a whole which has parts, such as a rim, a handle, sides, and so forth. When the cup is seen, the parts, such as the rim, handle, and so forth, appear separately. These parts are all one entity with the cup. Note that it cannot be said that the parts of the cup are one entity, but rather that they are one entity with the cup. Likewise, one can discuss the eastern direction of the cup, as well as its western, northern, and southern directions, these being different. If someone touches the eastern part of the cup is he also touching the parts of the other three directions? He is not. If while someone is touching the eastern part he is simultaneously touching the other three parts, they would be one, but they are not. These parts are not one but are many, there being an eastern part and so forth.

(Masters Program Correspondence Course participants please note that there were no teachings 17 and 21 April 2000)

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Likewise, reality [or emptiness] also has many parts pervading [phenomena], as well as many different parts realized by different earlier and later awarenesses. Also, other uncompounded [phenomena] are similar. Therefore, since the two, the many parts and the whole – are not fit to be different entities, they are one entity. Also, that [same discrepancy between modes of being and of appearance] is suitable in a falsity but not suitable in what is truly established. Hence, [the true establishment of uncompounded phenomena] is refuted as before [with compounded phenomena], whereby all objects of knowledge are established to be without true existence. Since this treatment is the assertion of the father Shantarakshita and his spiritual son Kamalashila, reckoning part and whole only for [functioning] things is a flaw of those with small intelligence.

Parts and whole also apply to the non-physical such as space and reality. Reality also has parts in the sense of the reality realized by a former moment of awareness and the reality realized by a later moment of awareness. In this way parts also exist on the basis of uncompounded phenomena, such as a part realized by a first moment of awareness but not realized by a later moment of awareness. Therefore since it is unsuitable to assert parts and whole to be different entities, they are one entity. Possessing parts applies to those phenomena that are falsities but not to those that are truly existent. Since true existence does not exist at all it does not have a part realized by a former moment of awareness but not realized by a later moment of awareness.

Lama Tsongkhapa says: "Hence, [the true establishment of uncompounded phenomena] is refuted as before [with compounded phenomena], whereby all objects of knowledge are established to be without true existence." The analysis set out forth here is an assertion of the father Shantarakshita and his spiritual son Kamalashila. Shantarakshita in his *Ornament for the Middle Way* and his commentary extensively sets forth the reasoning of freedom from one and many. This is further discussed by Kamalashila in his *Illumination of the Middle Way*. Earlier it was said that other than the *Illumination of the Middle Way* no text clearly identifies the object of negation in the Svatantrika Madhyamika system.

Lama Tsongkhapa then says that if someone thinks that the discussion of parts and whole is only relative to functioning things that person is of little intelligence.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The falsity renowned among those whose minds have not been affected by tenets is not the same in meaning as the falsity asserted by the Madhyamika School. Although [a falsity such as a magician's illusion, which is renowned as false among those whose minds have not been affected by tenets], is posited by an awareness, [the status of being posited by an awareness] is in accordance with how that is renowned to those [whose minds have not been affected by tenets]. In the [Svatantrikas'] own system it is not merely that status which is asserted as [the meaning of being] posited by an awareness.

There is a falsity renowned to worldly beings whose minds have not been affected by tenets but it is different from the falsity asserted by those whose minds have been affected by tenets. Examples of falsities renowned to worldly beings whose minds have not been affected by tenets are the reflection of a face in a mirror and the reflection of the moon in water, in that in order to understand that these

are false one does not need to have studied tenets. In the Svatantrika Madhyamika system such mere falsities are not asserted as [the meaning of] being posited by an awareness.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Thus, even though there is no mode of subsistence not posited by the force of appearing to an awareness, in this system it is not contradictory for there to be a mode of subsistence posited by the force of that but which is not merely nominally imputed. Hence, the objects of negation in the two Middle Way Schools come to differ greatly for the mind.

There is no mode of subsistence that is not posited by the force of appearing to an awareness. However, there is a great difference between the object of negation in the Svatantrika Madhyamika system and that in the Prasangika Madhyamika system.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Having seen that contemporary persons – who have been briefly instructed well in [the Svatantrikas'] identification of true [existence] and [their estimation of] the conception of true existence, as well as [their] reasonings refuting those – discern the Prasangikas' view well when, afterwards, that system is taught, [I] have explained it here.

One should teach someone the identification of the true existence and the conception of true existence according to the Svatantrika Madhyamika system, before teaching him these according to the Prasangika Madhyamika system.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 206-8) discusses this saying:

> In dependence on this passage from *Illumination of the Middle Way* many assertions arise regarding the measure of the object of negation being to bear reasoned analysis and the things that bear analysis. Some, such as the Great Translator, through holding that even ultimate truth does not exist in the perspective of a reasoning consciousness analyzing suchness, say that ultimate truth is not an object of knowledge. Some, such as Jampa Chogyi Sengge, through holding that ultimate truth does exist in the perspective of a reasoning consciousness analyzing suchness, assert the ultimate to be truly existent. However, they are incorrect.

Both the assertion that the ultimate is not an object of knowledge and the assertion that the ultimate is truly existent are incorrect. The refutation of these assertions is discussed extensively in Lama Tsongkhapa's *Great Exposition of the Stages of the Path of Enlightenment* in the sections on refuting an object of negation that is overly broad and refuting an object of negation that is too narrow. An object of negation that is overly broad is one that it is so extensive that ultimate truth becomes an object of negation which is not an object of knowledge. On the other hand, if the object of negation is too narrow it follows that things have the three attributes of inherent existence.

The Svatantrika Madhyamika system has two subdivisions:
1. the Yogachara Svatantrika Madhyamika system and
2. the Sautrantika Svatantrika Madhyamika system.

The reasoning proving that phenomena are free from being a truly existent one and a truly existent many belongs to the Yogachara Svatantrika Madhyamika system. Within this system there are said to be two sets of fathers and sons:

(1) the father Shantarakshita and the son Kamalashila and
(2) the father Arya Vimuktisena and the son Haribhadra.
However, Haribhadra was also a disciple and therefore a son of Shantarakshita. In general it is said that Shantarakshita had two main disciples, Kamalashila and Haribhadra. In fact the texts say that Haribhadra devoted himself to the great abbot Vairochana, also called Shantarakshita, for a period of thirteen or seventeen years. For this reason, Haribhadra also refutes the object of negation using the reasoning of freedom from being one and many in his commentary on the *Ornament for Clear Realizations*, called the *Commentary Clarifying the Meaning*,, which says:

> Also followers of Dharma generate extremely clear faith by means of the valid cognition of [reasonings] such as "because of being free of an entitiness of one or many;" not seeing defects in the mother characterized in the meaning of the stanzas, thoroughly understanding the non-generation of bases, paths, and aspects; the entity of the exalted knower of all, the perfection of wisdom which possesses the three modes; definitely apprehending that "the three exalted knower-mothers without doubt give birth to the buddhas" and so forth."

On the other hand, Kamalashila's *Illumination of the Middle Way* presents the reasoning refuting production of an existent and non-existent which is for analyzing results. He says that products do not exist ultimately: existents are not ultimately produced and non-existents are like a flower in the sky. This when summarized means that a result is not produced as an existent at the time of the cause and a result is produced without existing at the time of the cause but not ultimately.

The reasoning refuting production from the four alternatives, which is for analyzing causes and results, is explained in the *Two Truths of the Middle Way* by Jnanagarbha. This reasoning says that a single cause does not produce a single result, a single cause does not produce many results, a single result does not arise from a single cause, and many results do not arise from a single cause. This reasoning belongs to the Svatantrika Madhyamika system.

The reasoning of diamond slivers, which is for analyzing causes, is set forth by Nagarjuna in *Fundamental Wisdom*. Nagarjuna's pays homage at the beginning of the his text: (Garfield, *The Fundamental Wisdom of the Middle Way*) saying:

> I prostrate to the perfect buddha
> The best of teachers, who taught that
> Whatever is dependently arisen is
> Unceasing, unborn,
> Unannihilated, not permanent,
> Not coming, not going,
> Without distinction, without identity,
> And free from conceptual construction.

This is followed by a verse that sets forth the diamond slivers reasoning:

> Not from self, not from other,
> Not from both, not causelessly;
> Production of any thing anywhere
> Does not exist ever.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

3B1C-2B3E-1B2 Identification of the conception of true existence in the Prasangika-Madhyamika school

With respect to this, if you understand how in this system phenomena are assigned as merely posited through the force of conceptuality, you will easily understand the conception of true existence that conceives the opposite of this. Therefore, the presentation of the identification of the conception of true existence in the Prasangika School has two parts:

A How phenomena are posited through the force of conceptuality
B The conception of true existence that conceives the opposite of this

3B1C-2B3E-1B2A How phenomena are posited through the force of conceptuality

The *Questions of Upali Sutra* says that phenomena are posited through the force of conceptuality:

Here the various mind-pleasing blossoming flowers
And attractive, shining, supreme golden houses
Have no [inherently existent] maker at all.
They are posited through the power of conceptuality.
Through the power of conceptuality the world is imputed.

There are also many other statements that all phenomena are merely imputed by conceptuality or that they are posited through the force of conceptuality.

The *Questions of Upali Sutra* says that the mansions, groves, and so forth of the gods have no maker at all, they are only posited through the force of conceptuality. In other words, they are merely imputed by conception; not even a single atom of them exists from its own side. Thus, beginning with the phenomena of the god realms and progressing down through the phenomena of the human realm to those of the hell realms, all of them are merely imputed by conception and do not exist from their own side. Therefore, in the Prasangika Madhyamika system the object of negation is that which exists from its own side without being merely imputed by conception. In general the Svatantrika Madhyamika system asserts that all phenomena are merely imputed by conception, however the way in which they are imputed differs from the way in which they are imputed according to the Prasangika Madhyamika system. For example, according to the Svatantrika Madhyamika system all phenomena are merely imputed by conception but they are not merely imputed over there by conception, whereas in the Prasangika Madhyamika system all phenomena are merely imputed over there by conception. Although some scholars say that the Svatantrika Madhyamika system does not assert that phenomena are merely imputed by conception this is not correct.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

Furthermore, Nagarjuna's *Sixty Stanzas of Reasoning* says:

The perfect buddha stated that the world
Has the condition of ignorance.
Therefore, how could it not be feasible
That this world is [imputed by] conceptuality?

The meaning of this statement is explained in Chandrakirti's commentary as being that the worlds [that is, beings and environments] are imputed by conceptuality, not established by way of their own entities.

Nagarjuna says that "the world has the condition of ignorance," meaning that the world arises from ignorance. "The world" is of two types: the sentient beings who are the inhabitants and the external environment. Both of these arise through the condition of beginningless ignorance because due to the ignorance of not knowing actions are created which bring the results of sentient beings and the environment. Vasubandhu's *Treasury of Knowledge* (v. 4.1) says: "The various worlds are produced

from actions." The world does not exist by way of its own entity but arises through conceptuality. When the world is taught to be merely imputed by conceptuality it indicates conventionalities, the opposite of that indicates the object of negation. How could it not be feasible that the world be merely imputed by conceptuality? Lama Tsongkhapa says: "The meaning of this statement is explained in Chandrakirti's commentary as being that the worlds [that is, beings and environments] are imputed by conceptuality, not established by way of their own entities."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also, Aryadeva's *Four Hundred* says:
>
> Since desire, and so forth,
> Do not exist without conceptuality,
> Who with intelligence would hold
> That these are real objects and are [also] conceptual? [VIII.3]
>
> Also, Chandrakirti's *Commentary on (Aryadeva's) "Four Hundred"* says:
>
> Those that exist only when conceptuality exists and do not exist when conceptuality does not exist are undoubtedly ascertained as not established by way of their own entity, like a snake imputed to a coiled rope.
>
> "Real objects" are those established by way of their own entity. "Conceptual" [means] "produced in dependence upon that [conceptuality]."

Something exists due to being imputed by conceptuality. If they were no imputing conceptions there would not be any existents, phenomena would be like a snake imputed to a coiled rope. The imputation of snake to a coiled rope is made by a mistaken conception, yet causes the person to be frightened. The analogy of a snake imputed to a coiled rope is set out by the Prasangika Madhyamika system in order to prove that phenomena are merely imputed by conceptuality and do not exist from their own side. This is because there is nothing about the rope which is a snake. This analogy of a snake imputed to a coiled rope is said to be better than the illustration of a magic show. Seven analogies, like illusions and so forth, were set out previously, but they do not include the analogy of the coiled rope.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The statement in the commentary that *desire, and so forth* are [imputed] like the imputation of a snake to a rope is just an illustration; all other phenomena are also explained to be posited by conceptuality like the imputation of a snake to a rope.
> [The rope's] speckled color and mode of coiling are similar to those of a snake, and when the rope is perceived in a dim area, the thought arises, "This is a snake." As for the rope, at that time [when it is imputed to be a snake], the collection and parts of the rope are not even in the slightest way positable as an illustration of a snake [that is, as a snake]. Therefore, that snake is merely imputed by conceptuality.

The conception of a snake arises due to the presence of a coiled rope in a dim area but there is not even the slightest atom of the rope which exists as a snake.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> In the same way, when the thought, "I," arises in dependence upon the [mental and physical] aggregates, nothing in terms of the aggregates – neither the collection which is the continuum of the earlier and later [moments], nor the collection [of the parts] at one time, nor the parts of those

> [mental and physical aggregates] – is even in the slightest way positable as an illustration of that I [that is, as I]. This will be explained at length below.

Likewise, when the thought "I" arises, it is only imputed in dependence on the aggregates, there is no part of the aggregates nor the whole that is exists as I. For this reason, when the I is sought on the base of imputation it cannot be found. On the other hand, if it were the case that the I is found within the base of imputation it would be a truly existent I or an inherently existent I. Such an I is never found. This assertion is uncommon to the Prasangika Madhyamika system, the other schools say that if a phenomena is not found within the base of imputation when sought it is non-existent. Thus, all the lowers schools say that the imputed object is found by thorough analysis. This is the main difference between the assertions of the Prasangika Madhyamika system and the remaining schools. If it is asked "Is there a thought thinking 'I'?" there is because there is an I. Then it can be asked: "How does this I exist? Which parts of the aggregates are the I?" The lower schools say that if when one searches within the basis of the five aggregates the I is not found how can the I be imputed to the five aggregates? Can it be imputed to the feeling aggregate? The discrimination aggregate? The consciousness aggregate? Is the person not imputed on the basis of one of the five aggregates? Why can a table not be taken as a basis for imputing I? What would the problem be? The lower schools ask how it is feasible to impute the I on the aggregates but not on the table? The Prasangika Madhyamika system says that the I cannot be imputed on the table because the table is not conjoined with consciousness. The lower schools say that that it follows that that which is conjoined with consciousness is a suitable basis for imputing I, therefore, it follows that the eye organ is a basis for imputing the I. This is how the lower schools refute the Prasangika Madhyamikas assertions regarding the I. The lower schools say that the Prasangika Madhyamikas are wrong in saying that something does not exist objectively but exists merely through being imputed. The Prasangika Madhyamikas maintain that their assertion that although phenomena are only merely imputed they can still perform various functions. However, the Chittamatrins say that the Prasangika Madhyamikas have fallen to the extreme of annihilation, while the Vaibhashikas have fallen to the extreme of permanence. Thus, each school considers its tenets to be the best.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Because of this and because there is not even the slightest something that is an entity different from the parts of the aggregates or the whole and that is apprehendable as an illustration of that [I], the I is merely posited by conceptuality in dependence upon the aggregates; it is not established by way of its own entity. This is also said in Nagarjuna's *Precious Garland*:
>
> A being is not earth, water,
> Fire, wind, nor space,
> Not consciousness and not all of them;
> What being is there other than these? [80]
>
> In that, a "being" is a person, sentient being, I, and self. "...not earth, water, fire, wind, nor space, not consciousness" refutes positing the parts – which are the six constituents of a sentient being – as a person, and "...not all of them" refutes positing the collection of the constituents as a person. "What person is there other than these?" refutes positing something that is a different entity from the constituents as a person.

The Prasangika Madhyamikas say that the I is imputed to the aggregates in dependence on the aggregates; the aggregates themselves do not claim to be an I. In the case of the I imputed by conceptuality, the conception is a valid cognizer. It can be asked: "Is it a conception that is concordant with reality or is it merely a valid cognizer?"

A being is composed of six constituents or elements: earth, water, fire, wind, space, and consciousness. It can be asked: "Is the earth constituent the person? Is the water constituent the person?" and so forth. In conclusion, none of the six constituents are the person. This is what is set forth by Nagarjuna in his *Precious Garland*. which says that none of the individual constituents nor the collection of the constituents is the person and then asks: "What being is there other than these?" The response to this, comes in the subsequent lines which say that the being is imputed upon the aggregation of the six constituents (A. Klein, *Path to the Middle*):

> Just as the person is not [established as its own reality]
> Because of being [only imputed in dependence upon]
> an aggregation of the six constituents,
> So each of the constituents also
> Is not [established as its own] reality because of being
> [imputed in dependence upon] an aggregation. [81]

In brief, the person, the being, and the I are imputed on a composite of the six constituents.

Lama Tsongkhapa sets out various synonyms saying: "a 'being' is a person, sentient being, I, and self." Is there a difference between these? The person is defined in *Awarenesses and Knowers* as: the I which is merely imputed in dependence on any of the five aggregates. "On any" is mentioned in order to include the beings in the formless realm who do not have a form aggregate. The etymology of the word "being" is: one possessing potential or energy. This is because in Sanskrit the word for a being is *parusha* which means "possessing potential."

Tuesday afternoon, 18 April 2000

Lama Tsongkhapa says that the being is a person, sentient being, I, and self. If it is a person is it pervaded by being a sentient being? If someone says that there is pervasion, one asks: "Are buddha superiors sentient beings?" If they were then there would be no distinction between buddha and sentient being. However, sentience, literally possessing a mind (*sems can*), is not enough to qualify someone as a sentient being. Therefore, one possessing a mind is not pervaded by being a sentient being; for example, a buddha.

The etymology of the Tibetan word *gang zag*,, usually translated as 'person,' literally means "full" and "fall," indicating that due to the consciousness being filled with afflictions one falls into the mire of cyclic existence.

Q: Why is a buddha superior a person (*gang zag*)?
A: Because he is an I that is merely imputed on any of his aggregates. A buddha superior is a person but is not a sentient being.

What is a sentient being? A sentient being is a person possessing a mind that is together with stains.

The being is also I (*nga*) and self (*bdag*), which are the same. In *Awarenesses and Knowers* it says that the I, self, person, and being are mutually inclusive. The terms 'I' and 'self' indicate a particular individual, it excludes others. Generally speaking we are concerned about the I and neglect others.

Lama Tsongkhapa then says: "'... not earth, water, fire, wind, nor space, not consciousness' refutes positing the parts – which are the six constituents of a sentient being – as a person, and '...not all of them' refutes positing the collection of the constituents as a person." The individual constituents are not the person, nor is the collection of the constituents the person. In other words, the person is not any one of the six constituents, nor is it the group of six constituents.

Lama Tsongkhapa says: "'What person is there other than these?' refutes positing something that is a different entity from the constituents as a person." This last line of Nagarjuna's verse from *Precious Garland* refutes the person being a different entity from the six constituents. Thus, the being is one entity with the six constituents.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Nevertheless, it is not that persons are not asserted [to exist]. Also, a mind-basis-of-all, and so forth, are not asserted to be persons. Therefore, in accordance with the commentary by the commentator [Chandrakirti], superiors are also asserted.

(Note: The phrase "By the commentator [Chandrakirti], superiors are also asserted" could perhaps be translated as "Just as the commentator [Chandrakirti] commented so too does the superior [Nagarjuna] assert.")

It is not that in the Prasangika Madhyamika system persons are not asserted; however, they do not assert a mind-basis-of-all to be the person.

The Svatantrika Madhyamika system posits the sixth consciousness, the mental consciousness, as the illustration of the person. The mental consciousness is defined as: a consciousness that is the basis for depositing the latencies of virtue and non-virtue. Not all sixth consciousnesses, i.e., all mental consciousnesses, are the illustration of the person. In other words, if it is a sixth consciousness, a mental consciousness, it is not pervaded by being the illustrative mental consciousness which is the person.

According to the Svatantrika Madhyamikas the sixth consciousness, the mental consciousness, is self sufficient substantially existent. However, although the illustrative mental consciousness is self sufficient substantially existent, the person is not self sufficient substantially existent. This will be discussed later on. Acharya Bhavaviveka in his *Blaze of Reasoning* says: "I am not harmed in accepting..."

The Chittamatrins posit the mind-basis-of-all, the seventh consciousness, as the illustration of the person. The mind-basis-of-all is defined as: an unspecified mental consciousness which is the basis for depositing the latencies of virtue and non-virtue. The mind-basis-of-all is a different entity from the collection of the six consciousnesses.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> When the mode of positing persons through conceptuality is understood in this way, the mode of positing all other phenomena through conceptuality is also similar to that. The *King of Meditative Stabilizations Sutra* says:
>
> Just as you have known the discrimination of self,
> Apply this mentally to all [phenomena].

Through understanding that a person is merely imputed, one will understand that all phenomena are also merely imputed. Likewise, through understanding the selflessness of persons, one will understand the selflessness of phenomena. Therefore, having understood that the person does not exist truly or inherently, one can apply this understanding to other phenomena, such as the aggregates, without the need to apply other reasonings.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also, the *Superior Sutra of the Condensed Perfection of Wisdom* says:

> Understand all sentient beings as like the self,
> Understand all phenomena as like all sentient beings.

Understanding that the self does not exist truly, one will understand that other sentient beings do not exist truly. Then understanding that sentient beings do not exist truly, one will also understand that all phenomena do not exist truly.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also, Nagarjuna's *Precious Garland* clearly says:
>
> Just as the person is not [established as its own reality]
> Because of being [only imputed in dependence upon]
> an aggregation of the six constituents,
> So each of the constituents also
> Is not [established as its own] reality because of being
> [imputed in dependence upon] an aggregation. [81]

This is the stanza that follows the verse that was quoted earlier:

> A being is not earth, water,
> Fire, wind, nor space,
> Not consciousness and not all of them;
> What being is there other than these? [80]

Thus, the answer to the question "What being is there other than these?" is that the person is imputed in dependence on the aggregation of the six constituents. The collection of the six constituents exists in dependence on its many parts and each constituent also exists in dependence on its many parts; therefore, they do not exist from their own side.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The meaning of the second line [that is, "because a person is an aggregation of the six constituents"] is "because a person is imputed in dependence upon an aggregation of the six constituents." The meaning of the third and fourth lines is that, because there is no occurrence of [a phenomenon] devoid of parts and a whole, each of the constituents is also imputed in dependence upon an aggregation of its own many parts and, therefore, is not established as [its own] reality – that is to say, is not established by way of its own entity.

(Note "the second line" of the English translation is actually the first line in the Tibetan text.)

Lama Tsongkhapa says that in the third and fourth lines of this verse Nagarjuna indicates that there is nothing which is devoid of parts and a whole. Therefore, everything that exists has parts and a whole. Because everything is imputed in dependence on its parts it is not established as its own reality or by way of its own entity. The Svatantrika Madhyamikas define a dependent-arising as: that which is established in dependence on its own parts. The Prasangika Madhyamikas would also similarly define a dependent-arising. On the other hand, the Chittamatra and Sautrantika schools define a dependent-arising as: that which is produced by its respective causes and conditions. Therefore, according to these two schools dependent-arisings do not include uncompounded phenomena. In short, there are different ways of asserting dependent-arising in the various schools.

According to the Vaibhashikas functioning things are not pervaded by being compounded phenomena. This is because they assert that functioning thing and existent are mutually inclusive in that the Sanskrit word for functioning thing *bhava* can mean both functioning thing and existent. Thus,

they assert that even uncompounded space is a functioning thing that is able to perform a function, this being to allow movement. For example, space allows us to stretch our legs, build a house, and so forth. The Vaibhashikas posit three types of uncompounded phenomena: (1) space, (2) non-analytical cessations, and (3) analytical cessations. They say that an analytical cessation is a functioning thing because it functions to cease the objects of negation which are the contaminations. A non-analytical cessation is a functioning thing which acts to hinder the production of the object of negation. The objects of negation of non-analytical cessations include both contaminated and uncontaminated phenomena. The Vaibhashikas posit two types of substrata: a future substrata that will be produced and a future substrata that will not be produced. An example of a non-analytical cessation is that now we are born as human beings we have a non-analytical cessation of rebirth in the lower realms.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Furthermore, with regard to whatever is imputed in dependence upon an aggregation of parts, the parts or the whole are not suitable to be posited as an illustration of it [that is, as something that is it], and anything that is a different entity from those two also could not be an illustration of it either.

(Note: "the parts or the whole are not suitable to be posited as an illustration of it [that is, as something that is it], and anything that is a different entity from those two also could not be an illustration of it either" is more literally translated as "the parts or the whole are not suitable to be posited as a basis of it, and anything that is a different entity from those two also could not be a basis of it either.")

Being imputed upon an aggregation of parts is explained in connection with the person. For example, a being is imputed on the aggregation of parts which are the aggregates. The meaning of "the parts or the whole are not suitable to be posited as an illustration of it" is that since the person exists only in dependence on its parts, the parts themselves as well as the whole cannot be taken as the illustration of the person. Anything which is a different entity from the parts and whole also cannot be an illustration of it either.

Wednesday morning, 19 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The mere factor of how a pot, and so forth, are posited by conceptuality is similar to the imputation of a rope as a snake. However, whether those two – a pot, and so forth, and a rope-snake – exist or do not exist, are able or unable to perform functions, and so forth, are not at all similar. This is because they are in all ways not equivalent in terms of whether or not the designations of those two must be made, whether or not making those designations is invalidated [by conventional valid cognition], and so forth.

Rope-snake is posited as an illustration of truly existent pot but this does not mean that the example is equivalent in all ways to a truly existent pot. The way in which objects such as a pot are merely designated is similar to the way in which conceptuality, although mistaken, designates snake to a rope. However, when one designates pot and so forth to a [correct] basis of imputation such imputed objects are able to perform their respective functions, whereas in the case of designating a snake to a rope, the rope is not able to perform the function of a snake. The name "pot" can be applied to a golden flat-bottomed bulbous bellied water holder and the imputed object is able to perform the function of pot, whereas when the name "snake" is applied to a speckled coiled rope the imputed object is not able to perform the function of snake. The application of this convention "pot" to a

golden flat-bottomed bulbous bellied water holder cannot be harmed by a valid cognizer in terms of its ability to perform the function of pot, whereas the application of the convention "snake" to the rope can be harmed by a valid cognizer in terms of its ability to perform the function of a snake.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The feasibility of [an object's] respective functionality within the context of being posited by conceptuality is an uncommon mode of commentary by Buddhapalita, Shantideva, and this master [Chandrakirti] from among the commentators on the words and meaning [of the works] of the two – the father, the superior [Nagarjuna], and his spiritual son [Aryadeva]. Just this is also the final difficult point in the view of the Madhyamika School.

That phenomena posited by conceptuality are feasible as agents, actions, and objects is taught by Buddhapalita, Shantideva, and Chandrakirti. The assertion that although phenomena are merely imputed by conceptuality agents, actions, and objects operate is an uncommon assertion of the Madhyamika school. The five masters mentioned here, Buddhapalita, Shantideva, Chandrakirti, Nagarjuna, and Aryadeva, are in many contexts called the five masters including father and son.

Lama Tsongkhapa says that the assertion that all phenomena are merely imputed over there and do not exist from their own side is "the final difficult point in the view of the Madhyamika School."

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) (Tibetan text page 134) says:

> This being the case, Nagarjuna's *Precious Garland* says that even mere nominality does not exist ultimately and that nothing exists except for only being posited conventionally through the force of nominal conventions:
>
> Because the phenomena of forms are only names,
> [Uncompounded] space too is only a name.
> Without the elements how could forms exist?
> Therefore, even name-only-ness does not [inherently] exist. [99]
>
> Feelings, discriminations, compositional factors,
> And consciousnesses are to be considered
> As like the elements and the self.
> Hence the six constituents are selfless. [100]

"The phenomena of forms" refers to the form aggregate. Just as the form aggregate is only merely imputed by name and does not exist from its own side, likewise space too is only a name and does not exist from its own side.

Nagarjuna then says: "Without the elements how could forms exist?" If elements exist inherently how could there be forms and so forth which are derived from the elements? That forms and so forth derive from the elements is explained in *Collected Topics*.

Nagarjuna then says: "Therefore, even name-only-ness does not [inherently] exist." Even names do not exist inherently. Just as the imputed name does not exist inherently, likewise the base of imputation to which the name is imputed does not exist inherently.

Having presented the form aggregate, Nagarjuna then presents the remaining four aggregates saying: "Feelings, discriminations, compositional factors, and consciousnesses are to be considered as like the elements and the self." Feeling is that which is merely imputed on experience. Discrimination is that which is merely imputed on the apprehension of signs or the apprehension of distinctions; it does not exist from its own side. Therefore, there are two types of discrimination: one that apprehends signs and one that apprehends distinctions. The definition of discrimination as the apprehension of

signs is from Vasubandhu's *Treasury of Knowledge*. It is also defined similarly in the *Supplement* (v. 6.202) which says:

> *Form has the definition: suitable as form.*
> *Feeling has the nature of experience.*
> *Discrimination apprehends signs.*
> *Compositional factors strongly compose.* [6.202]
>
> *Individually cognizing objects*
> *Is the specific definition of consciousness..* [6.203ab]

The apprehension of distinctions means that discrimination apprehends its object clearly.

In short, all five aggregates are merely imputed and do not exist from their own side. Nagarjuna says that the five aggregates are to be considered "as like the elements and the self," meaning that just as the self and the elements are empty of inherent existence so too are the five aggregates empty of inherent existence.

Nagarjuna in conclusion says: "Hence the six constituents are selfless." Each of the six constituents individually cannot be posited as a self.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> And:
>
> Except for being a convention designated,
> What world exists in fact (that is, ultimately)
> Which would be "is" or "is not"? [114bcd]
>
> As Nagarjuna says, [phenomena] abide as mere nominal imputations.

The world itself is only imputed by convention and does not exist by way of its own entity.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> If you understand those [points] well, you will understand well:
> 1. that all phenomena must be posited dependently,
> 2. that because they are just dependently imputed and dependently produced, they are not established by way of their own entity and do not have a self-powered entity which is not posited through the force of conventions which are other [than themselves], and
> 3. that no matter what phenomenon is posited as existing, it is posited in the context of not seeking the object imputed.

A phenomenon that is posited as existing is posited by a non-analytical, conventional, innate awareness that is not seeking it. Phenomena are not imputed by an analytical awareness seeking them. In this context the assertions of the Svatantrika Madhyamika system and those of the Prasangika Madhyamika system differ:

- The Svatantrika Madhyamika system says that when an imputed object is sought it is found to exist within the basis and that the mind seeking the imputed object is an awareness analyzing for a conventionality.
- The Prasangika Madhyamika system says that when the imputed object is sought it is not found and that the mind seeking the imputed object is an awareness analyzing for the ultimate. When the imputed object is sought, it is sought with a reasoning awareness.

In short, according to the Svatantrika Madhyamika system an awareness seeking an imputed object is a valid cognizer analyzing for a conventionality whereas according to the Prasangika Madhyamika system it is a valid cognizer analyzing for the ultimate.

Note that one needs a great collection of merit in order to understand the teachings on emptiness. At Worka Cho Lung in Tibet Lama Tsongkhapa himself made many mandala offerings on a stone base and did many prostrations together with the *Confession of a Bodhisattva's Downfalls* until the stones themselves were worn by his hands and body while requesting the deities to enable him to realize the profound meaning. Having done such practices Lama Tsongkhapa actually saw and talked with Manjushri and the thirty-five buddhas. He received many instructions on emptiness from Manjushri. In fact it is said that Lama Tsongkhapa had a very clear and precise realization of emptiness.

In sutra it says "Not seeing is holy seeing." This means that when the imputed object is sought with thorough analysis and is not found, this 'not seeing' is holy seeing. One then meditates on that which is not seen, this being the meditation on emptiness. One should look for the "I" with an awareness analyzing for the ultimate. When this I is not found, one has found the mode of abidance of the I. One should then meditate on it.

Wednesday afternoon, 19 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> 3B1C-2B3E-1B2B The conception of true existence that conceives the opposite of this
>
> The conception of existence not posited merely through the force of nominal conventions explained above is the innate conception of true establishment, ultimate establishment, or establishment as [the object's own] reality, as well as the innate conception of existing by way of [the object's] own entity, existing by way of [the object's] own character, and existing inherently. The referent object conceived by that [consciousness] is the hypothetical measure of true [establishment].

The referent object of the conception of true existence is the measure of true existence. The referent object or the object of the mode of apprehension of the conception of true existence does not exist. According to the Prasangika Madhyamika system the following terms are synonymous:

- true existence or true establishment,
- ultimate existence or ultimate establishment,
- existence as reality or establishment as [the object's own] reality,
- establishment by way of its own entity,
- establishment by way of its own character, and
- inherent existence.

However, according to the Svatantrika Madhyamikas although phenomena do not have true existence, ultimate existence, and existence as reality, they are established by way of their own entity, established by way of their own character, and exist inherently.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The need to know the two modes of the ultimate in the qualification of the object of negation with [the term] "ultimately" is also the same here [in the Prasangika School as in the Svatantrika School, explained in the previous chapter]. However, although the Svatantrika-Madhyamikas assert that true, ultimate, and real establishment do not occur in objects of knowledge, they assert that the three – establishment by way of [the object's] own entity, establishment by way of [the object's] own

> character, and inherent establishment – exist conventionally. This is seen as a very skillful means for leading those who are temporarily unable to realize easily the very subtle suchness to that [realization of suchness].

The qualification of the object of negation with the term "ultimately" is the same as in the case of the Svatantrika Madhyamika system. That there are two modes of the ultimate in the qualification of the object of negation means that there are two ways of applying the term 'ultimately,' this being the case for both the Svatantrika Madhyamika system and the Prasangika Madhyamika system. This was set out previously by Lama Tsongkhapa in the context of the Svatantrika Madhyamika system saying (Klein, *Path to the Middle*):

> You need to understand that the qualification "ultimately" is affixed in two [senses] to the object of negation:
>
> 1. The reasoning consciousnesses of hearing, thinking, and meditating are taken as the ultimate, [and thus what is established by them is ultimately existent, and] what is not established by them, as [the objector just] mentioned above, [is not ultimately established].
> 2. Being existent in an objective mode of subsistence without being posited by the force of an awareness is posited as being ultimately existent [and not existing this way is called not being ultimately established].

Likewise, for the Prasangika Madhyamika system:
(1) if a conventionality were to exist in the perspective of a reasoning consciousnesses (consciousnesses of a type) of hearing, thinking, and meditating it would be ultimately existent and
(2) an object existing by way of an objective mode of subsistence without being posited by the force of an awareness is ultimately existent.
The Svatantrika Madhyamikas accept that phenomena exist inherently, are established by way of their own entity, and are established by way of their own character. This is because Buddha taught his various disciples very skillfully with the intention to lead them gradually to the realization of subtle selflessness by teaching them that although phenomena do not have true existence, ultimate existence, and existence as reality, they are established by way of their own entity, established by way of their own character, and exist inherently.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> In this way, just that inherent existence which is an entity of phenomena not depending on or not posited through the force of another – that is, a subjective terminological conceptual consciousness – is called the self that is the object of negation. The nonexistence of just this with a person as the substratum is said to be a selflessness of persons, and the nonexistence of it with a phenomenon such as an eye or ear [as the substratum] is said to be a selflessness of phenomena.

Lama Tsongkhapa identifies inherent existence – "an entity of phenomena not depending on or not posited through the force of another" – and then says that the lack of inherent existence on the basis of the person is the selflessness of persons and the lack of inherent existence on the basis of a phenomenon is the selflessness of phenomena. In short, the non-inherent existence of persons is the selflessness of persons, and the non-inherent existence of phenomena is the selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Thereby, it is implicitly understood that the conceptions of that inherent existence as existing in persons and in phenomena are the conceptions of the two selves [of persons and other phenomena].

Through presenting the two selflessnesses, the conceptions of the two selves are indirectly presented. The conception of the person as inherently existent is the conception of a self of persons, whereas the conception of the eye, ear, and so forth as inherently existent is the conception of a self of phenomena.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> It is as Chandrakirti's *Commentary on (Aryadeva's) "Four Hundred"* says:
>
> > Here "self' is inherent existence, an entity of things that does not depend on another. Its non-existence is selflessness. This [selflessness] is understood as twofold through a division into persons and [other] phenomena – a selflessness of persons and a selflessness of phenomena.

This is quite clear in itself. Chandrakirti says that selflessness is of two types: (1) the selflessness of persons and (2) the selflessness of phenomena. Selflessness is only of two types because the bases on which non-inherent existence is established is of only two types: (1) the person and (2) the aggregates, the eye, ear, and so forth. In the Prasangika Madhyamika system the two selflessnesses are differentiated in terms of the substratum of emptiness and not in terms of the object of negation. In the Svatantrika Madhyamika system it is the different; the two selflessnesses are differentiated in terms of the object of negation and not in terms of the substratum of emptiness. The Svatantrika Madhyamikas say that the object of negation of the selflessness of persons is a self sufficient substantially existent person while the object of negation of the selflessness of phenomena is true existence. For them the emptiness of true existence of the person is a subtle selflessness of phenomena. The emptiness of self sufficient substantial existence of the basis of imputation of the person, the five aggregates, is the selflessness of persons. A subtle selflessness of persons can be posited in relation to all phenomena because not existing as an object of use of a self sufficient substantially existent person can be posited in relation to all phenomena. A selflessness of persons is not pervaded by being a subtle selflessness of persons. The subtle selflessness of persons is a non-affirming negative which is the emptiness of the person of being self sufficient substantially existent, whereas the coarse selflessness of persons is the emptiness of the person of being permanent, unitary, and independent.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also, just this [*Entrance* VI.179bc] says, "Through a division of persons and [other] phenomena, it is said to be of two aspects." [Chandrakirti] speaks of the two selflessnesses as divided not by way of the object negated but by way of the subject that is the substratum [of selflessness – persons and other phenomena].

This will be discussed later in the *Supplement* in the context of differentiating the selflessness of persons and the selflessness of phenomena in relation to which Chandrakirti's root text says:

> *This non-self, in order to completely liberate migrators,*
> *Is taught two ways: by divisions [of] phenomena and persons.* [6.179ab]

Buddha taught two types of selflessness in order to liberate sentient beings from cyclic existence: the selflessness of persons and the selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> With respect to the innate view of the transitory collection which is a conception of [an inherently existent] self, in the root text [Chandrakirti's *Entrance to (Nagarjuna's) "Treatise on the Middle Way"*] it is refuted that the object of observation is the [mental and physical] aggregates, and in the commentary [Chandrakirti] says that the self imputed in dependence [upon the aggregates] is the object of observation. Therefore, the mere I or mere person, which is the object of observation generating the mere thought "I," is to be taken as the object of observation.

Chandrakirti refutes the aggregates as being the observed object of the innate view of the transitory collection. The observed object of the innate view of the transitory collection is the mere I. The innate view of the transitory collection is a conception of a self of persons. Thus, the aggregates are not taken as the observed object of the view of the transitory collection. Lama Tsongkhapa says: "in the commentary [Chandrakirti] says that the self imputed in dependence [upon the aggregates] is the object of observation." Thus the observed object of the view of the transitory collection is the mere I. The innate view of the transitory collection can be divided into two:
(1) a view of the transitory collection apprehending I and
(2) a view of the transitory collection apprehending mine.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> With respect to the subjective aspect [of a consciousness misconceiving the inherent existence of the I], Chandrakirti's *Autocommentary on the "Entrance to (Nagarjuna's) 'Treatise on the Middle Way'"* says:
>
> > Having imputed that a self which is [actually] nonexistent exists, a [consciousness] conceiving I adheres to just this as true.
>
> Hence, it conceives the I to be truly established.

The view of the transitory collection observes the mere I and adheres to it as existing inherently or truly. Adhering to it as existing inherently or truly is the subjective aspect. This was discussed in the *Ornament for Clear Realizations* in the context of the 173 aspects of the three exalted knowers. The subjective aspect refers to the subject, the consciousness, which is an apprehender, whereas the objective aspect refers to the object, the apprehended. The aspect of the apprehender and the aspect of the apprehended are explained differently in *Awarenesses and Knowers* as being respectively a self-cognizer and an other-cognizer.

In the context of the view of the transitory collection the truly existent I is the aspect of the apprehended and the view of the truly existent I is the aspect of the apprehender.

Thursday morning, 20 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Moreover, Chandrakirti's [*Auto*]*Commentary* says:
>
> > With respect to that, the view of the transitory collection is an afflicted intelligence which is engaged in such thoughts of [inherently existent] I and mine.
>
> Thus, the object of observation of an innate view of the transitory collection must be something that naturally generates an awareness thinking "I"; therefore, the innate conception of persons – who are of a different continuum [from your own continuum] – as established by way of their own

> character is an innate conception of a self of persons but not an innate view of the transitory collection [as an inherently existent I].
>
> [In the citation, just above, from Chandrakirti] "...engaged in such thoughts of I and mine" does not indicate that mere I and mere mine are the objects of the subjective aspect of the mode of apprehension. Rather, it indicates that [a view of the transitory collection] has the aspect of conceiving those two to be established by way of their own character.

The innate view of the transitory collection takes the mere I and mere mine as its observed objects. The objective aspect of the innate view of the transitory collection is the mere I and mine established by way of their own character. The subjective aspect of the innate view of the transitory collection is the intelligence apprehending the mere I and mere mine established by way of their own character. There is debate concerning this, for example: "If the innate view of the transitory collection takes the mere I as its observed object, what is the innate view of the transitory collection taking the mere mine as its observed object?" Think about it. How is a distinction made between the innate view of the transitory collection apprehending I and the innate view of the transitory collection apprehending mine?

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The object of observation of an innate view of the transitory collection conceiving [inherently existent] mine is just the mine; it should not be held that one's own eyes, and so forth, are the object of observation. The subjective aspect is, upon observing that object of observation, to conceive the mine to be established by way of its own character.

There are two terms for mine in Tibetan, *bdag gi ba* and *nga gi ba*, however, the meaning is the same. The mere mine is the observed object of the innate view of the transitory collection conceiving mine, it is not the eyes and so forth. This is because if the innate view of the transitory collection were to take 'my eyes' and so forth as its observed object, then it would apprehend my eyes and so forth to be established by way of their own character whereby it would be a conception of a self of phenomena, which is not a view of the transitory collection.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> *Objection*: In Chandrakirti's own commentary on "This is mine," [which is the last line of stanza 3:
>
> *Homage to that compassion for transmigrators who are*
> *Powerless like a bucket traveling in a well*
> *Through initially adhering to a self, an "I,"*
> *And then generating attachment for things, "This is mine."]*
>
> he says, "Thinking, 'This is mine,' one adheres to all aspects of things other than the object of the conception of an [inherently existent] I." [Given your explanation above that the object of observation of a false view of the transitory collection as inherently existent mine is not eyes, and so forth, but the mine itself,] how can you take [Chandrakirti's] explanation that upon observing a base, such as an eye, adherence to it thinking, "This is mine," is a conception of [inherently existent] mine?
>
> *Answer*: This refers to adherence to the mine as truly established *upon perceiving eyes, and so forth, as mine*; it does not indicate that eyes, and so forth, which are illustrations of the mine are the object of observation. For, if that were not the case, the two – the view of the transitory collection and the conception of a self of phenomena – would not be mutually exclusive [whereas they are].

Are my eyes, my nose, and so forth mine? They are. However, my eyes and so forth are not observed objects of the innate view of the transitory collection conceiving mine. In short, the observed object of

the innate view of the transitory collection conceiving mine is just mine, it is not my eyes and so forth. If the innate view of the transitory collection conceiving mine were to take my eyes and so forth as its observed object, it would follow that the innate view of the transitory collection and the conception of a self of phenomena would not be mutually exclusive, whereas they are. This is because the view of the transitory collection is pervaded by being a conception of a self of persons. There is a difference between a conception of a self of persons and a conception of a self of phenomena. The conception of a self of phenomena is a conception conceiving phenomena, from within the distinction of the two, persons and phenomena, to exist inherently. On the other hand, a conception of a self of persons is a conception conceiving persons, from within the distinction of the two, persons and phenomena, to exist inherently.

In conclusion, what is the mine? According to Kunkyen Jamyang Shepa the mine is the I, whereby it is the person. On the other hand, my eyes, nose, and so forth are not persons. According to other scholars the mine is not the person, from within the distinction of the two, persons and phenomena, and it is not a phenomenon, from within the distinction of the two, persons and phenomena. This is perhaps asserted by Khedrup Je in *A Dose of Emptiness*.

Q: If the mine is not the person from within the distinction of the two, persons and phenomena, and it is not a phenomenon from within the distinction of the two, persons and phenomena, what is it?
A: In general even person is a phenomenon. If it is an established base it is pervaded by being a phenomenon, because if it is an established base it upholds its own entity, this being the definition of phenomenon. However, in the context of a person from within the distinction of the two, persons and phenomena, and a phenomenon from within the distinction of the two, persons and phenomena, Khensur Pema Gyeltshen says that the mine is neither. In fact, there is a long discussion about this in his text which quotes extensively from *Engaging in the Bodhisattva Deeds*, the *Great Exposition of the Stages of the Path of Enlightenment*, the *Great Commentary on Fundamental Wisdom*, and so forth.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The objects of observation of an innate conception of a self of phenomena are the form aggregate, and so forth, and eyes, ears, and so forth, in your own and others' continuums, as well as the environment that is not included in the [personal] continuum. Its subjective aspect is as explained before [to conceive these to be established by way of their own character].

The observed objects of the innate conception of a self of phenomena are the form aggregate and so forth, the eyes, ears, and so forth, in one's own continuum and others' continuum, as well as the environment not included in the personal continuum, such as mountains, trees, and so forth. The conception of a self of phenomena is to apprehend phenomena as established by way of their own character.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> In this way, the conception of the two selves [of persons and other phenomena] is the ignorance binding one in cyclic existence. Nagarjuna's *Seventy Stanzas on Emptiness* says:
>
> That which conceives things produced
> From causes and conditions to be real
> Was said by the Teacher to be ignorance.
> From it the twelve links arise.
>
> The conception that a thing that is a phenomenon [other than a person] is established as [its own] reality is said to be the ignorance that is the root of cyclic existence. Since the ignorance that

> is the conception of a self of persons arises from the conception of a self of phenomena, the twelve [links of dependent arising] are described as arising from it.

The two conceptions, the conception of a self of phenomena and the conception of a self of persons, are the root of cyclic existence. In Lama Tsongkhapa's *Essence of Eloquence* it says:

> That a consciousness conceiving a self of phenomena acts as the basis of a consciousness conceiving a self of persons is also asserted by those Proponents of the Middle [that is, Autonomists] who assert that hearers and solitary realizers do not have realization of the selflessness of phenomena. Concerning that, when the conception of a self of phenomena is extinguished, the conception of a self of persons is overcome, but if the conception of a self of phenomena has not been extinguished, it is not that the conception of a self of persons has not been overcome. Hence, it is not contradictory for one to have been released from cyclic existence although the *final* basis of cyclic existence has not been overcome.

Both the Chittamatra and Svatantrika Madhyamika systems accept that the conception of a self of persons is the root of cyclic existence. The conception of a self of phenomena is the basis of the conception of a self of persons. This can be understood on the basis of the example of what happens when we see a complete stranger for the first time. Immediately upon seeing his aggregates an innate conception of his aggregates as existing inherently is generated. Then, when he introduces himself to us as Dorje Namgyel we think that he, Dorje Namgyel, exists inherently; this is the innate conception of a self of persons. Thus, for the person to appear to the mind, the aggregates must first appear to the mind. When the aggregates appear the conception of a self of phenomena arises, and then when the person appears the conception of a self of persons arises. In his *Middling Stages of the Path* Lama Tsongkhapa says that from the point of view of the production of the two conceptions, the conception of a self of persons and the conception of a self of phenomena, first a conception of a self of phenomena is produced and then a conception of a self of persons, whereas from the point of view of realizing the two selflessnesses, the selflessness of persons and the selflessness of phenomena, one first realizes the selflessness of persons and then the selflessness of phenomena. Lama Tsongkhapa says that they are realized in this order because it is easier to identify the substratum of the selflessness of persons than to identify the substratum of the selflessness of phenomena. Why is this? When the person is realized what is realized? When the person is realized, it is realized to depend upon the aggregates. Understanding the person to be dependent on the aggregates, one understands that the person is not independent and that the person is merely imputed by an imputing conception. There are two types of existence: substantial existence and imputed existence. For the Prasangika Madhyamika system there is no substantial existence, only imputed existence. However, the lower schools also assert substantial existence. The Prasangika Madhyamikas do not assert substantial existence because they say that if phenomena were substantially existent they would exist by way of their own entity and independently.

On the other hand, it is said that when a yogi meditates on selflessness, he first settles the meaning of the self in terms of his own person. Having settled the selflessness of his own person, he then applies this to other phenomenon. However, in terms of reasoning the order is perhaps different. A yogi first establishes selflessness in terms of himself in order to harm his own conception of a self of persons which is the cause of his wandering in cyclic existence. This conception of a self of persons is the view of the transitory collection and the root of cyclic existence. Further on in the *Supplement* Chandrakirti says:

With intelligence, having seen afflictions and defects without exception
As arisen from the view of the transitory collection and
Having realized the self as its object,
The yogi acts to refute the self. [6.120]

"Having realize the self as its object" means that the yogi first realizes the self that exist conventionally and then strives to refute the conception that this self exists inherently. The yogi therefore first identifies the observed object, the self, and then refutes the subjective aspect, the conception of the self to be inherently existent.

Lama Tsongkhapa says: "Since the ignorance that is the conception of a self of persons arises from the conception of a self of phenomena, the twelve [links of dependent arising] are described as arising from it." "From it" refers to the conception of a self of phenomena. The first of the twelve links is ignorance. The twelve links from the point of view of the Prasangika Madhyamika system are discussed in the twenty-sixth chapter of Nagarjuna's *Treatise on the Middle Way*.

Thursday afternoon, 20 April 2000

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> In order to overcome this ignorance, it must be seen that [phenomena] are empty of how they are conceived by that [conception of inherent existence], and it must be seen that self [that is, inherent existence] conceived in this way does not exist. Nagarjuna's *Seventy Stanzas on Emptiness* says:
>
> If through seeing reality one knows well
> That things are empty, ignorance does not arise.
> That is the cessation of ignorance,
> Whereby the twelve links cease.

When one realizes that the referent object of the conception of true existence does not exist, the conception of true existence ceases and ignorance is removed. Due to this, the next link, karmic formations, and then the successive links no longer arise, whereby the twelve links cease.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also, Nagarjuna's *Praise of the Element of Reality* says:
>
> Through the conception of "I" and "mine"
> All external [phenomena] whatsoever are imputed
> [to inherently exist].
> When the two aspects of selflessness are seen,
> The seeds of cyclic existence are ceased.

When the referent objects of the conception of a self of persons and the conception of a self of phenomena are realized to not exist, the selflessness of persons and the selflessness of phenomena are realized, whereby the seeds of cyclic existence are ceased.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Also:
>
> The supreme doctrine purifying the mind
> Is the absence of inherent existence.

"Supreme doctrine," literally the supreme phenomenon (*mchog tu... chos*), for purifying the mind is to realize the absence of inherent existence.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Furthermore, Aryadeva's *Four Hundred* says:
>
> When selflessness is seen in objects,
> The seeds of cyclic existence are ceased. [XIV.25cd]
>
> Also:
>
> Therefore, all afflictions are destroyed
> By destroying obscuration.[VI. 10cd]
>
> When dependent arising is seen,
> Obscuration does not arise.
> Therefore, with all endeavor here
> Just discourse on this should be proclaimed. [VI. 11]

When objects – persons and phenomena – are realized to be selfless the seeds of cyclic existence are ceased. This could be more precisely translated as: "When selflessness is seen in objects, the seeds of cyclic existence *will* cease" (the verb being in the future case). This is because when the selflessness of objects is seen directly, the seeds of cyclic existence gradually cease in that first the acquired conception of true existence is abandoned and later the innate conception of true existence.

Aryadeva then says: "Therefore, all afflictions are destroyed by destroying obscuration." This means that when confusion or ignorance (*ti mug*), here translated as obscuration, is destroyed, all other afflictions, attachment, hatred, pride, and so forth, are destroyed. This confusion or obscuration is the conception of true existence of a self; when it is abandoned all other afflictions, such as attachment for friends, hatred for enemies, and so forth, are abandoned. Here the word "therefore" follows from the previous lines of the stanza (*Illumination* Tibetan text page 183): "Just like the body sense power regarding the body, confusion is the abode for all." Here Aryadeva mentions the fifth sense power, the body sense power, from among the eye, ear, nose, tongue, body, and mental sense powers because when the body sense power is destroyed all the other sense powers are destroyed, and, similarly, all afflictions, attachment, hatred, and so forth, are destroyed when confusion is destroyed. In other words, when the conception of true existence is abandoned all the afflictions supported on it are also abandoned.

Aryadeva says: "When dependent arising is seen, obscuration does not arise. Therefore, with all endeavor here just discourse on this should be proclaimed." This means that when one sees dependent-arising, confusion no longer arises. Therefore, one should put effort into settling the meaning of dependent-arising.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Since the obscuration mentioned [in that stanza] is on the occasion of identifying the obscuration that is one of the three poisons [desire, hatred, and obscuration], it is afflictive ignorance. Also, it is stated that in order to overcome this ignorance one must realize the meaning of profound dependent arising in which emptiness appears as the meaning of dependent arising.

The word "obscuration" (*ti mug*) is perhaps better translated as confusion in that the mental poisons desire, or attachment, and hatred are also obscurations. Also the Tibetan word *'dod chags*, translated here as desire is not a completely accurate translation because desire is not always negative (note that

this word is often translated as 'attachment'). One can ask: "If it is desire is it necessarily included in the three poisons? Is the desire to attain enlightenment one of the three poisons? The Tibetan word *'dod* alone is usually translated as desire. Think about these doubts.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Furthermore, the commentator [Chandrakirti] says that [when his *Entrance* (VI.120d) says] "The yogi refutes self," [this means] that selflessness must be realized in the manner of eradicating the object of the conception of self [that is, inherent existence]. Therefore, although, without eradicating the object of the conception of self, you merely withdraw the mind here from going there to objects, through this it cannot be posited that you are engaged in selflessness.

It is important to refute the referent object of the conception of a self because if it is not eradicated selflessness cannot be realized. In Dharmakirti's *Commentary on [Dignaga's] 'Compendium of Valid Cognition* it says: "Without eliminating the referent object of that (the conception of true existence), one will not be able to abandon that (the conception of a self)." In order to abandon the conception of a self one has to realize selflessness, and in order to realize selflessness one has to realize the non-existence of the referent object of the conception of self.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> The reason is this: When the mind operates on an object, there are three [modes of conception]:
> 1. conceiving that the object of observation is truly established
> 2. conceiving that it is not truly established
> 3. conceiving it without qualifying it as either of these two.
>
> Hence, although [the object] is not conceived to be without true establishment, it is not necessarily conceived to be truly established. Similarly, although [when merely withdrawing the mind in meditation] you are not engaged in [conceiving] the two selves, you are not necessarily engaged in the two selflessnesses. For, there are limitless [ways of] abiding in a third category of awareness.

When the mind engages an object it can do so without the object being qualified either by true existence or by non-true existence; for example, when one thinks "How pitiful sentient beings are." This is the third possibility, that is, the object being free from being qualified by either true existence or non-true existence. Lama Tsongkhapa says that there are limitless examples of this.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Having identified the two conceptions of self in your own continuum, you need to settle that the bases with respect to which you make the mistake [of apprehending the two selves] do not exist as they are apprehended. Otherwise, refutation and proof that are directed outward are like searching for a robber on the plain after he has gone to the woods and hence are not to the point.

As in the analogy of looking for but not finding a robber on the plain after he has gone to the woods, one should ensure that one directs the analysis looking for the self inward and not outward, otherwise it will miss the point. Analysis should be directed inward in the sense that one should look for the self in one's own continuum.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> When, in that way, you have identified well the conception of true existence, you will understand that there are many conceptions that are not the two conceptions of self. Consequently, all wrong ideas of asserting that the reasoning analyzing suchness refutes all objects apprehended by conceptuality will be overcome.

If one does not identify the conception of true existence well, one could come to think that all conceptions are conceptions of true existence. This is incorrect because there are positive conceptions and negative conceptions which are not conceptions of true existence.

Lama Tsongkhapa's *Illumination* (Klein, *Path to the Middle*) says:

> Although there are many [points] stemming from these [topics] that should be explained, I will not elaborate on them here as some have already been explained at length elsewhere [in my *Great Exposition of the Stages of the Path to Enlightenment*, *The Essence of the Good Explanations*, and *Explanation of (Nagarjuna's) "Treatise on the Middle Way"*] and some will be discussed below.

This concludes Anne Klein's translation of the first part of the sixth chapter in *Path to the Middle*.

One should think about what to do with all this information. As a result of hearing these teachings one should meditate on the two selflessnesses in order to abandon the conception of true existence, ignorance. The great lamas say that of the two types of meditation, analytical meditation and stabilizing meditation, analytical meditation is more important. This is because analytical meditation leads to stable ascertainment. There are some who disregard analytical meditation and say that meditation is only stabilizing meditation, but this is not correct. To support this idea they say, for example, that Milarepa meditated without having studied yet gained realizations. It should be examined as to whether or not Milarepa studied or not. The Kadampa lamas say: "One who meditates without hearing is like someone trying to climb a rock cliff without hands." One should follow the advice of Lama Tsongkhapa who said: "In the beginning, I sought much hearing. In the middle, I strove to see all the teachings as personal advice. In the end, I practiced all the teachings I had heard day and night and dedicated all this merit to the flourishing of the Buddha's teachings."

END

Tuesday afternoon, 2 May 2000

(Masters Program Correspondence Course participants please note that there were no teachings 1 and 5 May 2000)

(Note: From here on Lama Tsongkhapa's *Illumination* is a provisory translation prepared for the Masters Program by Joan Nicell, Thubten Sherab, and Jampa Gendun.)

Lama Tsongkhapa's *Illumination* (Sera Mey Computer Centre text, 1998, page 138) says:

3B1C-2B3E-2 Establishing the meaning of the scriptures through reasoning

A Establishing the selflessness of phenomena through reasoning
B Establishing the selflessness of persons through reasoning

3B1C-2B3E-2A Establishing the selflessness of phenomena through reasoning

1 Refuting production from the four extremes with regard to both truths
2 Dispelling arguments regarding those refutations
3 How to cease wrong conceptions that hold to an extreme by means of the production of dependent-arising itself
4 Identifying the result of reasoned analysis

3B1C-2B3E-2A1 Refuting production from the four extremes with regard to both truths

A Positing the theses regarding non-inherent production
B Indicating the proof established by that reasoning
C The meaning established by refuting production from the four extremes

3B1C-2B3E-2A1A Positing the theses regarding non-inherent production

Chandrakirti's autocommentary (G. Churinoff, 1994) says:

> Therefore, here it is intended that the other equalities be easily indicated by merely indicating, through reasoning, only the equality of phenomena as unproduced, since the Acharya [Nagarjuna] finely set forth at the beginning of the *Treatise on the Middle Way* [1.1]:
>
> > Not from self, not from others, not from both, nor without cause.
> > Production is not ever existing, anywhere of anything.
>
> "Not ever" means "at no time whatsoever." The locative case term "anywhere" – synonymous with the term "somewhere" – explains place, time and tenet. The locative case term "anything" expresses outer and inner things. Hence one should arrange like this: "outer and inner things are not possibly produced from self in any place, time, or tenet."

Nagarjuna's thought is that when the equality, or sameness, of phenomena in not being inherently produced is indicated the remaining nine samenesses are easy to understand. Therefore, he mentions only this sameness in his root verse from the *Treatise on the Middle Way* which is cited above. Nagarjuna sets out non-inherent production here because there are various schools that assert inherent production saying:

1. phenomena are produced from self,
2. phenomena are produced from other,
3. phenomena are produced from both self and other, and
4. phenomena are produced causelessly.

The Prasangika Madhyamikas say that all these are incorrect because in order to establish a thesis the reason (or sign) must be established, whereas in all these cases it is not since inherent production does not exist.

The Samkhya system is a non-Buddhist school that asserts production from self. The Nigrantha system asserts production from both self and other, while the Charvaka system asserts causeless production. Chandrakirti upholds the Prasangika Madhyamika position saying that these assertions are incorrect because the reason is not established since inherent production does not exist at any time, in any place, and for any tenet. In short, inherently existent production does not exist at all. For example, although crops are produced in summer but not in winter, they are not inherently produced at any time. Likewise, certain fruits are produced in valleys but not on mountain peaks, but they are not inherently produced anywhere. In addition, inherent production does not exist for any acceptable tenet.

The Samkhyas accept a general principal which is the creator of all. This general principal is partless, possesses five attributes, and produces all results. They say that a result exists at the time of its cause although it is not yet apparent. Later on when the result is produced it becomes apparent. The Samkhyas also assert twenty-five types of objects of knowledge which can be condensed into four types:

1. those that are only causes,
2. those that are only results,
3. those that are both cause and result, and
4. those that are neither.

That which is only a cause is the general principal; that which is only a result is the sixteen transformations; that which is both cause and result is the seven, such as the great one (or intellect); and that which is neither is the person (self, consciousness, and knower). This is explained in Ishvarakrishna's *Tantra* which says (L. Sopa, *Cutting Through Appearances*):

> The fundamental nature is not a transformation.
> The seven – the great one and so forth – are natures and transformations.
> Sixteen are transformations.
> The person is not a nature and not a transformation.

This is set forth in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*. The Samkhyas assert that the person attains liberation. He does so through analyzing who is the creator of phenomena whereupon he discovers that they are created by the general principal. Upon being discovered, the general principal becomes embarrassed and dissolves into a rainbow whereby all transformations are withdrawn. When this happens only the person remains; at this time the person has attained liberation.

Chandrakirti's autocommentary says:

> Here, this [phrase of negation] "is not," establishing the state of existence, is not an existence related with production from self because the refutation of that is established implicitly. This should also be applied similarly to the three assertions.

What is refuted here is production from self which is used as a proof by the Samkhyas to establish that there *is* inherent production. Although inherent production is not explicitly refuted, through refuting production from self it is implicitly refuted. Chandrakirti then says: "This should also be applied similarly to the three assertions." This statement is to be applied respectively to the three remaining assertions as follows:

- "Here, this [phrase of negation] "is not," establishing the state of existence, is not an existence related with production from *other* because the refutation of that is established implicitly."
- "Here, this [phrase of negation] "is not," establishing the state of existence, is not an existence related with production from *both* because the refutation of that is established implicitly."
- "Here, this [phrase of negation] "is not," establishing the state of existence, is not an existence related with *causeless* production because the refutation of that is established implicitly."

Lama Tsongkhapa's *Illumination* (Tibetan text page 138) says:

> Thinking that the other samenesses of phenomena are easily indicated through presenting by way of reasoning just the sameness of non-inherent production from among the ten samenesses that were explained previously, Arya [Nagarjuna] clearly states at the beginning of his *Treatise on the Middle Way*:
>
> > Not from self, not from other,
> > Not from both, not causelessly;
> > Production of any thing anywhere
> > Does not exist ever.
>
> 'Not... ever' is synonymous with 'never.' The term 'anywhere' is synonymous with the term 'somewhere.' The locative, indicating the bases, which are productionless, explains place, time, and tenet. The locative term 'any' referring to whatever is productionless with respect to the three bases expresses outer and inner things.

This is similar to what Chandrakirti says in his *Supplement*. Lama Tsongkhapa says: "'Not... ever' is synonymous with 'never.' The term 'anywhere' is synonymous with the term 'somewhere.'" This means that there is no inherent production at any time and in any place. Lama Tsongkhapa says: "The locative, indicating the bases, which are productionless, explains place, time, and tenet." This means that inherent production does not exist at any place, at any time, and for any tenet. The term 'any' refers to outer and inner things. Outer things are those things, such as houses, mountains, and so forth, which are not included in the continuum whereas inner things are those things, such as the body, hands, and so forth, which are included in the continuum. All these phenomena are not produced from self.

Lama Tsongkhapa's *Illumination* says:

> Therefore, the meaning of the phrases 'from self' and so forth are to be explained through affixing them as [follows]: "It is not possible for outer and inner things to be produced from self in any place, at any time, for any tenet." This applies similarly to the other three assertions: "It is not possible for things ever to be produced from other, from both, or causelessly." Although the [Tibetan] translation [of Nagarjuna's verse] in *Clear Words* says 'any thing from self,' this translation is the best.
>
> From the point of view of place thinking, for example, there is no production of saffron in any place, and, from the point of view of time, thinking there is no production of crops at any point in time, are refuted saying 'in any place, at any time.' Therefore, to say 'not... ever' is not meaningless.

Lama Tsongkhapa says that although in the Tibetan translation of *Clear Words* it says 'any thing from self,' the way in which this verse from Nagarjuna's *Treatise on the Middle Way* is translated here is the best.

Nagarjuna's text says: "Does not exist ever." This is what is discussed here saying "Therefore, to say 'not... ever' is not meaningless."

Lama Tsongkhapa's *Illumination* (Tibetan text page 139) says:

> Although there is no production from the point of view of the Middle Way tenets, thinking there is production from the point of view of the realists' tenets is refuted by saying 'any tenet.' Therefore, 'non-production in the realists' system' is not indicated.
>
> [Chandrakirti's] autocommentary says:
>
> > Here 'does not' [in the above verse from the *Treatise on the Middle Way*] establishes just existence, not existence in relation to production from self since the refutation of that is established by the meaning.
>
> The meaning of this is that the last two lines, ["Production of any thing anywhere / Does not exist ever,"] indicate the thesis and the first two lines, ['Not from self, not from other, / Not from both, not causelessly,'] indicate the reason. Without individually delineating them as explained, production from self "does not exist" – that which is to be conjoined – is to be conjoined similarly to the other three.

Dividing the four lines of the stanza from Nagarjuna's *Treatise on the Middle Way* into two saying that the first two lines indicate the reason and the last two lines indicate the thesis is incorrect according to Lama Tsongkhapa because the theses are:

1. things are not produced from self,
2. things are not produced from other,
3. things are not produced from both, and
4. things are not produced causelessly.

These are the four extremes that were mentioned earlier. This discussion comes in the context of the outline "Positing the theses regarding non-inherent production" in the section "Refuting production from the four extremes with regard to both truths."

Lama Tsongkhapa's *Illumination* (Tibetan text page 140) says:

> If inherent production did exist, for it to be established it would be necessary to assert production from one of the four extremes, thereby what need would there be to mention establishing its existence? If production from the four extremes is refuted, the refutation of inherent production is implicitly established as well. In affixing in this way there is not the fault of not establishing the non-existence of inherent production – this being the meaning of the final line [of Nagarjuna's verse, "Does not exist ever"].

If inherent production did exist it would be established by asserting production from one of the four extremes. On the other hand, through refuting production from the four extremes inherent production is also refuted.

Does the syllogism "outer and inner things, as the subject, are not produced inherently because they are not produced from self, other, both, and causelessly" have a correct reason? In general, it is a correct reason yet it is not how the syllogism should be set out in this context. Rather, in regard to production from self the syllogism is:

> Outer and inner things, as the subject, are not produced from self because production is purposeful and has an end.

In regard to production from other the syllogism is:

> Outer and inner things, as the subject, are not produced from other because they are not produced from everything.

Likewise, there are specific reasons or signs for the remaining two syllogisms regarding production from both and causeless production. The Prasangika Madhyamikas refute the Samkhyas' assertion of production from self by flinging the consequence:

> A sprout, as the subject, it follows that its production is purposeless and endless because it is produced from self.

In short, here the theses regarding non-inherent production are set forth, whereas later on in the text the various consequences that the Prasangika Madhyamikas fling are set forth.

Lama Tsongkhapa's *Illumination* says:

> Therefore, as explained in [Kamalashila's] *Illumination of the Middle Way*, taking that as a reason refuting production from the four extremes is not to say "It is unsuitable in establishing the non-existence of inherent production," since, as before, the individual delineation of them is not the purpose of this passage.

The syllogism "a sprout, as the subject, is not produced inherently because it is not produced from self, other, both, and causelessly" in general has a correct reason. However, the Svatantrika Madhyamikas have to specify:

> A sprout, as the subject, is not produced ultimately because it is not produced from self, it is not produced *ultimately* from other, it is not produced from both, and it is not produced causelessly.

They have to affix the word 'ultimately' to the phrase "not produced from other," saying "not produced *ultimately* from other," because although they refute production from self in terms of both the conventional and the ultimate, they only refute production from other in terms of the ultimate and not in terms of the conventional. They say that conventionally there is production from other because causes established by way of their own character produce results established by way of their own character. On the other hand, production from both and causeless production are refuted in terms of both the conventional and the ultimate.

Lama Tsongkhapa's *Illumination* says:

> "It is not feasible for things to be produced from other in any place, at any time, or for any tenet" is to be affixed [to each]. Also *Clear Words* says:
>
> > The establishment of conventional phenomena is asserted by way of mere conditionality, not by way of asserting the four positions because of the [absurd] consequence in advocating that things have inherent existence.
>
> Production from other is not a scriptural designation but a designation of proponents of tenets. Moreover, if it is asserted due to thinking about an other established by way of its own character, then because of advocating [that things] have inherent existence there would be no production from other in this system even conventionally.

The Prasangika Madhyamikas refute production from other even conventionally because they refute the existence of an other established by way of its own character. However, the Svatantrika Madhyamikas assert the existence of causes established by way of their own character and production established by way of its own character. This should be kept in mind as the discussion of production from other is a distinctive feature in comparing the Prasangika Madhyamikas and Svatantrika Madhyamikas. The Svatantrika Madhyamikas debate with the Prasangika Madhyamikas saying: "It follows that smoke is not produced from fire. Are fire and smoke not other? Are they one? Are mother and son other or one? If mother and son are not other it would follow that they are one." To this the Prasangika Madhyamikas would respond: "Otherness does not refer to just not being one, it refers to otherness that is inherently existent and established by way of its own character."

Wednesday morning, 3 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 140) says:

> Although the two, causes and results, are indeed asserted to be different entities conventionally, simply that is not the meaning of production from other. Although conventionally every phenomenon that holds each of the two entities, as is said, has an established entity, it is not asserted to be the entity of inherent production.

In general cause and result are different entities conventionally [but "simply that is not the meaning of production from other"]. Conventionally all phenomena have or hold each of the two entities, the conventional truth and ultimate truth. Further on the *Supplement* Chandrakirti says:

> *All things – things found by perfect*
> *And false perception – possess two entities.*
> *Any object of perfect perception is thusness,*
> *That of false perception is said to be conventional truth.* [6.23]

Lama Tsongkhapa's *Illumination* (Tibetan text page 140-1) says:

> In *Clear Words* the thesis regarding the non-production of things from self is explained to be a non-affirming negative, as are the other three theses. Therefore, that which is to be established in the context of settling non-inherent existence is a non-affirming negative that is the mere elimination of the object of negation.
>
> As *Clear Words* says:
>
> > Since statements such as 'In this world whatsoever terms exist, all are insubstantial, nothingness' which occur in *Clear Words* and so forth state non-affirming negatives, therefore, the meaning of insubstantiality is the meaning of non-inherent existence.

The thesis or probandum that is presented in *Clear Words* regarding production from self, "a sprout, as the subject, is not produced from self," is a non-affirming negative. The reason in this case is "because production is purposeful and has an end." Together the subject and predicate of the syllogism form a non-affirming negative. Just as the thesis of the first of the four positions is a non-affirming negative so too are the theses of the remaining three, although the reason differs for each. The syllogism regarding production from other is: a sprout, as the subject, is not produced from other because everything is not produced from everything. In short, the theses regarding non-production from the four extremes are all non-affirming negatives because when these types of production are negated nothing else is suggested in their place.

To prove that non-production from the four extremes are non-affirming negatives Lama Tsongkhapa quotes Chandrakirti's *Clear Words*, a commentary on the *Treatise on the Middle Way* which says: "In this world whatever there is that exists as a term, all are insubstantial, nothingness." This means that all objects expressed by terms do not exist inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 141) says:

> The autocommentary says "After having stated the four theses, they are explained in order to establish them through reasoning," and later taking the refutation of production from the four extremes as a reason, things are said to be free from inherent production. Also *Clear Words* says:
>
> > At the conclusion of refuting production from the four extremes stating 'Therefore, production does not exist' establishes that [things are free from inherent production].

Through refuting production from the four extremes inherent production is refuted. Although the Prasangika Madhyamikas later on in the text take 'freedom from inherent production' as a thesis, here they take production from the four extremes as the theses. "Later taking the refutation of production from the four extremes as a reason" means that later on there is the syllogism: all things are free from inherent production because they are free from being produced from the four extremes. To prove this Lama Tsongkhapa cites *Clear Words* saying: "At the conclusion of refuting production from the four extremes stating 'Therefore, production does not exist' establishes that [things are free from inherent production]."

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Therefore, it is not that the non-existence of inherent production of things is not asserted to be established. *Clear Words* says:
>
> > ... because of possessing the result of simply refuting the theses of other logicians.
>
> These syllogisms simply refute the theses of opponents regarding inherent existence. The meaning is that nothing other than that is proven. The proof which is a mere refutation is not refuted.

The Prasangika Madhyamika system says that a valid inferential cognizer can be generated by means of stating a consequence, whereas the Svatantrika Madhyamika system says that it is necessary to state a correct reason which is an autonomous reason in order for a valid inferential cognizer to be generated. In other words, the Prasangika Madhyamikas say that by flinging a consequence the opponent can generate a valid inferential cognizer. This generation of a valid inferential cognizer is a result of setting forth a mere consequence. Therefore, the Prasangika Madhyamikas say that through setting forth syllogisms the opponents' theses regarding inherent production are refuted. Syllogisms in this context are those that refute production from the four extremes. When these syllogisms are set forth they just refute the opponents' theses regarding inherent production without establishing anything in its place.

Lama Tsongkhapa's *Illumination* (Tibetan text page 141) says:

> Similarly, it is also said:
>
> > We do not establish non-existence or existence, rather we refute that which others impute as existent and non-existent because, through eliminating the two extremes, we claim to establish the middle path.

"We refute that which others impute as existent and non-existent" describes the positions of others who impute inherently existent production and those who impute non-existence thinking that if phenomena do not exist inherently they do not exist at all. "Eliminating the two extremes" refers to eliminating the extreme of permanence and the extreme of annihilation.

In regard to this Lama Tsongkhapa's *Illumination* says:

> The mere elimination of the two extremes – of existence and non-existence – asserted by opponents is the meaning of "Except for that, nothing else is established." However, it is not simply that by refuting the two extremes they are not established, for it is said that through eliminating the two extremes the middle path is established.

"It is not simply that by refuting the two extremes they are not established" means that by refuting the two extremes that which is established is the middle path.

Lama Tsongkhapa's *Illumination* says:

> In addition, if inherent existence is not non-existent, since there is no third possibility inherent existence would exist because [Nagarjuna's] *Refutation of Objections* clearly says:
>
> > If it is not inherently existent how does it rule out non-inherent existence? If non-inherent existence is overturned, inherent existence is thoroughly established.

The opposite of inherent existence is non-inherent existence, thus if inherent existence is overturned non-inherent existence is established as there is no third possibility. Inherent existence and non-inherent existence are direct contradictions. For example, when a pot is ruled out as being permanent it is established to be permanent. On the other hand, if pot is held to be permanent it cannot be held to be impermanent, there being only two possibilities – it is either permanent or impermanent.

Lama Tsongkhapa's *Illumination* says:

> Although asserting such a thesis and proof, the reason that one does not become a Svatantrika is not elaborated since it has already been explained extensively and repeatedly elsewhere.

By asserting such a thesis and proof one does not become a Svatantrika Madhyamika in that the Prasangika Madhyamikas also assert such a thesis and proof. This is explained extensively and repeatedly by Lama Tsongkhapa himself in other texts such as in his *Great Commentary* on the *Treatise on the Middle Way*.

Why does one not become a Svatantrika Madhyamika? A Svatantrika Madhyamika is defined as: a middle wayer who accepts the three modes of a correct reason as autonomous (the three modes are: the presence of the reason in the subject, the forward entailment, and the reverse entailment). The consequence "a sound, as the subject, it follows that it is a non-product because it is permanent" is a correct consequence that suggests the proof "sound, as the subject, is impermanent because of being a product." A Svatantrika Madhyamika asserts that the three modes implied by a consequence are autonomous. Therefore, the mere acceptance of a thesis and proof is not sufficient to become a Svatantrika Madhyamika, one has to fulfill the above definition.

Lama Tsongkhapa's *Illumination* says:

> QUESTION: Well then, what are the definitions of the two negatives?
> REPLY: In general, a negative phenomenon is an object realized by an awareness upon the explicit elimination of an object of negation. Therefore, the mere elimination of an object of negation in regard to things, such as the elimination of it not being itself, is not a negative. Although an object of negation is not explicitly eliminated by terms such as "reality" or "ultimate truth," when its meaning appears to the mind it is a negative appearing as having an aspect of the elimination of elaboration.

The definition of a negative phenomenon is: an object realized by an awareness upon the explicit elimination of an object of negation.

Lama Tsongkhapa says: "Therefore, the mere elimination of an object of negation in regard to things, such as the elimination of it not being itself, is not a negative." For example, the word 'thing' eliminates it not being itself, i.e., it not being a thing. Is thing a negative phenomenon or a positive phenomenon? It is not a negative phenomenon because in order to realize thing there is no need to eliminate an object of negation. Although the word 'reality,' like the word 'thing,' is not a negative word, when reality appears to an awareness it has an aspect of the elimination of an object of negation. This is because when reality appears to an awareness it appears as an aspect of the *absence* of inherent existence.

Lama Tsongkhapa's *Illumination* says:

> From among the two [negatives], a non-affirming negative (*med dgag*) is: upon explicitly eliminating the object of negation by an awareness another phenomena *is not* suggested nor established. For example, when asked whether it is suitable or not for brahmins to drink beer, the statement "They do not drink beer" merely eliminates their drinking beer but does not establish either "they do drink" or "do not drink" drinks other than that.

Saying that brahmins do not drink beer does not establish that brahmins drink tea or juice. It merely negates that brahmins drink beer, nothing else is established in its place. This is an example of a non-affirming negative. It is called a non-affirming negative because the phrase, for example, "Brahmins do not drink beer" is a negative such that when the object of negation is refuted another phenomenon is not established.

Lama Tsongkhapa's *Illumination* says:

> An affirming negative (*ma yin dgag*) is: upon eliminating an object of negation by an awareness another phenomenon *is* suggested or established. For example, when wishing to indicate someone as being of the servant caste the statement "He is not a brahmin" does not merely negate him being a brahmin but [suggests that] he is other than a brahmin; through hearing other than that and so forth, he is established as being of the low servant caste.

If in regard to a certain person someone says "He is not a brahmin" this does not only negate him being a brahmin but also indicates that he is of a lower caste. This is because in India the highest of the four castes is the brahmin caste. The four castes are: the brahmin caste (*bram ze*), the royal caste (*rgyal rigs*), the servant caste (*dmang rigs*), and the cobbler caste (*rdol rigs*) [or the brahmin caste (*bram ze*), the royal caste (*rgyal rigs*), the merchant caste (*rje'u rigs*), and the servant caste (*dmang rigs*)].

Lama Tsongkhapa's *Illumination* says:

> In regard to suggesting another phenomenon there are three [ways of] suggesting it:
> (1) explicitly,
> (2) implicitly, and
> (3) contextually.
>
> (1) [Explicit suggestion]: for example, the single phrase "selflessness exists" establishes both the elimination of an object of negation and the suggestion of another phenomenon.

The statement "selflessness exists" acts to eliminate the object of negation and to suggest another phenomenon.

Lama Tsongkhapa's *Illumination* says:

> (2) [Indirect suggestion]: indicates [something] by way of the meaning, for example, "Corpulent Yajmana does not eat during the day."

Saying that fat Yajmana does not eat during this day indirectly implies that he eats at night.

Lama Tsongkhapa's *Illumination* says:

> These two respectively suggest explicitly and implicitly.

The statement "selflessness exists" is an explicit suggestion, whereas the statement "Corpulent Yajmana does not eat during the day" is an implicit suggestion.

> [A negative] possessing both [explicit and implicit suggestions] is, for example, "Corpulent Yajmana who does not eat during the day is not emaciated."

"Corpulent Yajmana who does not eat during the day" suggests implicitly that he eats at night, whereas saying that he "is not emaciated" suggests this explicitly.

> (3) [Contextual suggestion]: in the context of having ascertained someone to be either of the royal or brahma lineage but not ascertaining the particular one, for example, the phrase "He is not a brahmin" itself does not indicate [that he is of the royal lineage, but does so in the context].
> These are drawn from the explanation in [Avalokitavrata's] *Commentary on [Bhavaviveka's] 'Lamp for [Nagarjuna's] "Wisdom"'* which says:
>
> > Negatives that indicate by the meaning,
> > Establish with a single phrase,
> > Possess [both of] them, do not indicate by the phrase itself;
> > Those other than the affirming are the other.

This verse sets out the three types of affirming negatives. The definition of an affirming negative is: a term that in negating an object of negation suggests another phenomenon. This topic is discussed in *Collected Topics* and *Tenets*.

Wednesday afternoon, 3 May 2000

Lama Tsongkhapa's *Illumination* says:

> Some say that if the basis is combined with an affirmative phenomenon it is incorrect to say that it is not a non-affirming negative because the affirmative phenomenon, brahmin, does not negate; it merely eliminates the object of negation, brahmins do not drink beer. For example, sound being a manifest phenomenon does not negate impermanent sound being a hidden phenomenon.

Some say that if a basis is combined with an affirmative phenomenon it is incorrect to say that it is not a non-affirming negative because a basis such as a brahmin is an affirmative phenomenon whereas "A brahmin does not drink beer" is a non-affirming negative. For example, a sound is a manifest phenomenon, whereas impermanent sound is a hidden phenomenon, however, "sound being a manifest phenomenon does not negate impermanent sound being a hidden phenomenon." Sound is a manifest phenomenon because it can be realized by experience without depending on a base which is a reason, whereas impermanent sound is a hidden phenomenon in that in order to realize it one must depend on a base which is a reason.

Lama Tsongkhapa's *Illumination* says:

> Others say that it is also incorrect to say that if the basis is combined with an affirmative phenomenon another phenomenon is suggested because brahmin, for example, is the basis of judging the suggesting or non-suggesting of another phenomenon, it is not a different phenomenon which is suggested.

Some say that in the phrase "A brahmin does not drink beer" brahmin is the basis of judging the suggesting or non-suggesting of another phenomenon but it is not the phenomenon suggested.

Chandrakirti's autocommentary says:

> Having re-expressed the four assertions, it is explained:
>
> *That itself does not arise from that, how could it from others?*
> *Neither is it from both, how could it exist without cause?* [6.8ab]
>
> That which is the meaning of, "is not produced from self" is, "that itself does not arise from that." This should be applied similarly to the rest.

Lama Tsongkhapa's *Illumination* says:

> Chandrakirti says:
>
> *That itself does not arise from that. How can it from other?*
> *Neither does it from both. How can it causelessly?* [6.8ab]
>
> Thus, Arya [Nagarjuna's] four theses are set out here [as follows]. *That* result *itself does not arise from* the entity of *that*. *How can* a cause which is established by way of its own character arise *from other*? It does not. *Neither does it* arise *from both* self and other. *How can it* arise *causelessly*? It does not.
> If inherently established things existed they would be pervaded by being produced from one of the [following] four extremes: inherent production is fixed as two – having and (1) not having a cause; having a cause is fixed as three – produced respectively from (2) self or (3) other, and produced from (4) a combination of both, whereby four theses are sufficient [in refuting all possibilities of inherent production].

The root text cited here is Chandrakirti's commentary in the *Supplement* on the verse from Nagarjuna's *Treatise on the Middle Way*:

> Not from self, not from other,
> Not from both, not causelessly;
> Production of any thing anywhere
> Does not exist ever.

These lines set out the four theses regarding non-inherent production: things are not produced from self, from other, from both, and causelessly. Having posited the theses, they are then proved by reasonings.

Lama Tsongkhapa's *Illumination* says:

> 3B1C-2B3E-2A1B Indicating the proof established by that reasoning
>
> 1 Refuting production from self
> 2 Refuting production from other
> 3 Refuting production from both
> 4 Refuting production causelessly

Production from self is asserted by the Samkhyas. Production from other is asserted by the Svatantrika Madhyamikas and the other lower schools because they say that a cause that is established by way of its own character produces a result that is established by way of its own character. Production from both is asserted by the Nigranthas, a non-Buddhist school. For example, they say that a clay tile is produced from itself, i.e., the clay, and produced from other, i.e., the tile makers and so forth. Based upon this reasoning a clay tile is said to be produced from both self and others.

Causeless production is asserted by the Charvakas who say that phenomena, such as the sharpness of thorns, the roundness of peas, the design of a peacock's feathers, and so forth are without cause.

These four types of production are refuted by our own system.

Lama Tsongkhapa's *Illumination* (Tibetan text page 144) says:

3B1C-2B3E-2A1B-1 Refuting production from self

A Refuting [production from self] by the reasonings in the composed commentary
B Refuting [production from self] by the reasonings in *Fundamental Wisdom*

3B1C-2B3E-2A1B-1A Refuting [production from self] by the reasonings in the composed commentary

1 Refuting the system of tenet holders who assert the realization of thusness
2 Indicating [production from self] as non-existent even conventionally for those whose minds have not been affected by tenets
3 Summarized meaning of such refutations

3B1C-2B3E-2A1B-1A1 Refuting the system of tenet holders who assert the realization of thusness

A Refuting production from causes that are same entity as itself
B Refuting that the two, cause and result, are one entity

3B1C-2B3E-2A1B-1A1A Refuting production from causes that are the same entity as itself

1 The consequent of being purposeless if produced from causes that are the same entity
2 It contradicts reasoning if produced from the same entity
3 Refuting the response that dispels their faults

3B1C-2B3E-2A1B-1A1A-1 The consequent of being purposeless if produced from causes that are the same entity

Chandrakirti's autocommentary says:

> Further, if asked: from where is this ascertained?
> Like this:
>
> *If it arises from that, there is not any quality,*
> *And there is just no reason for the produced to be produced again.* [6.8cd]
>
> "It" means "the sprout," that being produced, the agent of the action of being produced. "From that" means "from the self-entity of that itself generating." Therefore, "that itself, the essential nature of the sprout, does not arise from that itself, the sprout's own essential nature." This is the meaning of the assertion.
>
> If asked: why?
> Because that itself attained its own existence while existing the sprout's own essential nature. There does not exist any special quality regarding arising from that itself because the state of existence was already attained before.

What does it mean that a sprout is produced? A sprout being produced means that it attains its entity and becomes existent.

The Samkhya position is as follows. They assert that a result already exists at the time of its cause but is not apparent at that time. When a sprout is produced it becomes apparent, at this time it is said that a sprout has been produced. Therefore, according to them a result already exists at the time of its

cause. In addition, they say that a general principal, which is unitary in that it is partless, pervades everything. All results are one nature in the sense of being here and there. The general principal is one nature; however, temporally it has many aspects. For example, there are many types of sprouts yet their nature is all one – the general principal. Such a general principal is composed of three qualities: particles, essential power, and darkness. When these three qualities are balanced there is one nature. The general principal gives rise to the intellect, or the great one. From those two come pride, which is of three types: pride of transformation, pride of essential power, and pride of darkness. Out of the pride of transformation come the five mere objects: forms, sounds, odors, tastes, and tangible objects. From these five come the five elements: earth, water, fire, wind, and space. Out of the pride of essential power come eleven powers: the five bodily powers, the five powers of awareness, and the mental power. The five bodily powers are: speech, arms, legs, anus, and genitalia. The five powers of awareness are: eye, ear, nose, tongue, and body. To these is added the person who is the self, consciousness, and knower. Ishvarakrishna's *Tantra* says (L. Sopa, *Cutting Through Appearances*):

> The fundamental nature is not a transformation.
> The seven – the great one and so forth – are natures and transformations.
> Sixteen are transformations.
> The person is not a nature and not a transformation.

The fundamental nature is the general principal. The seven are the great one, pride, and the five mere objects: forms, sounds, odors, tastes and tangible objects. These seven are natures because they are causes and transformations because they are results. The sixteen transformations, the eleven powers and five elements, are only results, they are not causes. The being or person composed of self, consciousness, and knower is not a nature because it is not a cause and it is not a transformation because it is not a result.

This is the way in which the Samkhyas present the twenty-five objects of knowledge. Some say that particles, essential power, and darkness refer to the three mental poisons: darkness being ignorance; essential power, hatred; and particles, attachment. The Samkhyas say that when the being and the general principal meet attachment is produced in the self. Due to the production of this attachment the general principal creates the objects of this attachment, the five sense objects. The subject and object having been produced, the being enjoys the five sense objects. When a being enjoys the five sense objects for a long time slowly the desire for them diminishes. When the being becomes tired of these objects he begins to investigate who created the five sense objects and discovers that they were created by the general principal. When the general principal is thus discovered, it becomes embarrassed and as a result disappears in the form of a rainbow withdrawing the transformations, the five sense objects. In addition, the arm power and so forth are withdraw whereby only the being remains; this is the attainment of liberation.

This is a brief presentation of the Samkhyas' assertions. The existence of a result at the time of its cause is refuted with sharp reasonings in Shantideva's *Engaging in the Bodhisattva Deeds* and Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*. Shantideva says that if a result exists at the time of its cause it follows that when eating food one is eating excrement because you Samkhyas assert that a result exists at the time of its cause, the result of eating food being excrement. Dharmakirti says that if a result exists at the time of its cause it follows that you Samkhyas would have to say that a hundred elephants exist on the tip of a blade of grass. The Samkhyas would respond that they do exist but are not visible. This discussion arises from the fact that on the tip of a blade of grass there could be an ant in whose continuum there is the potency to take rebirth as an elephant a hundred times, whereby there would be a hundred elephants existing on the tip of the grass because the Samkhyas assert that if a result does not exist at the time of its cause it cannot be produced. Dharmakirti is saying that since an ant can be supported on the tip of a blade of grass

likewise a hundred elephants can be supported on it because the ant has the potency to be reborn a hundred times as an elephant. In this way the position of the Samkhyas is refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 144) says:

> Chandrakirti says:
>
> *If that were to arise from that, there would not exist any of the qualities.* [6.8c]
>
> QUESTION: Through what reason is this non-production from self of things ascertained?
> REPLY: While being produced *if that*, the sprout, *were to arise* from *that*, the agent of the action of production, *there would not exist any of the* special *qualities* which must occur in arising thus because the self-entity of the sprout has already been attained at the time of the former cause [the seed].

If the sprout were to exist already at the time of the seed what special qualities would arise at the time of the sprout? This is the meaning of Chandrakirti's saying: "If that were to arise from that, there would not exist any of the qualities." This refutes production from the same entity. In other words, the production of a sprout is its arisal from the planting of a seed whereas if the result, the sprout, were to exist at the time of its cause, the seed, there would be no reason for the sprout to be produced.

Lama Tsongkhapa's *Illumination* says:

> Regarding this, the Samkyas [claim] that mutually different individual causes and conditions have a single shared result. And, moreover, causes and conditions indispensably involve the unitary principal which is of a single nature. Therefore, that which is the nature of barley, the cause, is also the nature of water, manure, and so forth, the conditions. And, similarly, the nature of a sprout and the nature of its causes and conditions are asserted as being here and being there [since] such is asserted as the nature of all transformations.

The Samkhyas say that causes and conditions are of a single nature. Among the twenty-five objects of knowledge that they assert, the first and last are not transformations, i.e., results, whereas the other twenty-three are transformations. They are a single nature because although being here and there they mutually cooperate with each other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 144-5) says:

> Therefore, since they merely assert seed and sprout to be mutually different, they do not claim that a sprout is produced from a sprout. However, in propounding that a sprout is produced from a seed and [the seed's] nature, the two natures are one. Therefore, production from its own nature and production of a sprout that exists non-apparently at the time of the cause is the mode of asserting production from self.

That a result exists non-apparently at the time of its cause is the meaning of production from self. Production refers to its actual appearance. There are two types of sprouts: the apparent and the non-apparent. An apparent sprout is a manifest sprout while a non-apparent sprout is the sprout that exists at the time of the seed. The Samkhyas go on to assert that a clearly apparent sprout is not produced from self, whereas a non-apparent sprout is produced from self. Therefore, they say that a non-apparent sprout is produced from self but an apparent sprout is not produced from self. An apparent sprout is the actual green sprout that is seen to grow in a field, whereas the non- apparent sprout is that which exists in the seed under the ground.

In short, while our system does not say that a cause, such as a barley seed, contains a barley sprout, the Samkhyas says that it does although it is not yet seen. To debate this assertion one can

posit, for example, that in the body of a human being there is the potency to be reborn as a sheep. One can then ask the Samkhyas whether a sheep exists in the human being's body saying that it must because if the potency exists the result exists. One can also say to the Samkhyas: "Do you have a tail? Do you have horns? You should accept that you do because the tail and horns of a sheep exist in you in a non- apparent way."

Thursday morning, 4 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 145) says:

> Some specific Samkhyas do not propound production but assert that from a cause the previously non- apparent is later apparent; however, the meaning is the same. By this, the generality and instances are asserted to be the same entity and are also such. However, the Buddhists' assertion that thing and pot are the same entity is not at all similar. Thus, if everything which is the entity or nature of a sprout were to exist at the time of the seed, even a apparent sprout which is a different object from the entity of sprout would not be feasible. Therefore, at the time of the cause not only do the nature or entity of the sprout exist, but the sprout necessarily exists as well. Therefore, at that time, it is utterly purposeless to it being produced again after it has [already] been established.

Within the Samkhya school there are two subdivisions: the theistic and non-theistic. One subdivision says that the sprout is not produced but becomes apparent later on after not having been apparent at the time of its cause. Our own system says that whether you Samkhyas say that a sprout is produced at the time of its cause and later becomes apparent or that it is not produced at the time of its cause but later becomes apparent the meaning is the same. Lama Tsongkhapa says that the Samkhyas' assertion that the generality and instances are one entity is completely different from the Buddhists' assertion that thing and pot are one entity. For the Samkhyas the partless generality is one nature and all the instances that are the nature of the partless generality are mutually one nature. For example, they say that a horse and donkey are mutually one nature, a pillar and pot are mutually one nature, a man and a woman are mutually one nature, and so forth. The Buddhist schools say that thing and pot are one entity but a pot is a distinct instant of thing. Also a pillar is a distinct instant of thing but a pillar and a pot are not mutually one nature, a horse and a donkey are not mutually one nature, and so forth. For this reason there is a great difference between the assertions of the Samkhyas and the Buddhist schools.

The Samkyas say that a sprout exists at the time of its cause. Our system says that if a sprout exists at the time of the seed it would be impossible for an apparent sprout which is different from the entity of sprout to exist. In other words, if the nature of the sprout exists at the time of the cause what kind of apparent sprout exists that is different from the sprout? Such an apparent sprout is not feasible.

Our own system says that the sprout having already been produced there is no purpose to it being produced again. In other words, since the sprout already exists at the time of the seed there is no purpose to it being produced again.

Lama Tsongkhapa's *Illumination* (Tibetan text page 145) says:

3B1C-2B3E-2A1B-1A1A-2 It contradicts reasoning if produced from the same entity

Chandrakirti's autocommentary says:

> The statement, "this position of production from self is also contradictory with reasoning," is explained [in 6.8d]: *and there is just no reason for the produced to be produced again.*
>
> But since this is no more than a mere assertion, from the point of view of reasoning:

> *If the already produced is imagined to be produced again,*
> *Production of sprouts and so forth would not be found here.* [6.9ab]
>
> – is mentioned.
>
> If the seed that had already been produced is asserted as being produced again, due to what [reason] would one be made to think that this [seed] stops its production and then the sprout is produced? What obstacle exists to that [seed] being produced again? Its sprout, stalk, skin and so forth would not be produced at all.

Asserting production from self contradicts reasoning because if something is already produced there is no purpose to it being produced again. In other words, since something is already produced why would it be produced again? This would be meaningless.

Our own system having set out the thesis "there is just no reason for the produced to be produced again" in the previous stanza (v. 6.8d), Chandrakirti follows upon this saying: "If the already produced is imagined to be produced again, production of sprouts and so forth would not be found here." This means that there would be no end to production as the seed would be produced again and again.

Lama Tsongkhapa's *Illumination* (Tibetan text page 145) says:

> Chandrakirti says:
>
> *Also there is no reason for the produced to be produced again.* [6.8d]
>
> *There is no reason for* that which has already been *produced to be produced again*, that is, to be reproduced after it has already been produced. The term '*also*' [in the root verse indicates] production from its own nature as just meaningless. Also if one holds to the position of the apparent:
> (1) if the apparent result exists at the time of the cause, it would contradict the assertion, and
> (2) if [the apparent result] does not exist [at the time of the cause], the two – the appearance of the result and the nature of the result – would be refuted in analysis as being one and different.

Lama Tsongkhapa sets out the two assertions of the Samkhyas:

(1) the apparent result exists at the time of cause and
(2) the apparent result does not exist at the time of the cause.

Lama Tsongkhapa says: "Also if one holds to the position of the apparent: (1) if the apparent result exists at the time of the cause, it would contradict the assertion." The assertion that is contradicted is the position that the sprout is not apparent at the time of the cause but becomes apparent later. Lama Tsongkhapa then says: "If [the apparent result] does not exist [at the time of the cause], the two – the appearance of the result and the nature of the result – would be refuted in analysis as being one and different." This analysis refers to analyzing whether the apparent sprout is the same or a different entity from the seed. The Samkhyas' position is that causes are natures and results are transformations. One analyzes whether the apparent sprout is one nature or a different nature from the cause. If one says that it is not one nature with the cause this would contradict the Samkhyas' assertion that all, both causes and results, are one nature. If one says that the apparent sprout is a different entity from the sprout this would contradict their assertion that all results exist non-apparently at the time of their cause. The Samkhyas cannot say that they are different natures because they assert that all results are created by a partless unit whereby all results are one nature with the creator.

Lama Tsongkhapa's *Illumination* says:

Chandrakirti says:

> *If that already produced is thoroughly conceived to be produced again*
> *Production of the sprout and so forth would not be found here.* [6.9ab]

Since "production from self contradicts reasoning" is nothing but a mere thesis, the presentation of the reasoning that refutes [production from self is as follows]. *If* the seed which has *already* been *produced is thoroughly conceived*, i.e., asserted, *to be produced again*, by what reason is it asserted that upon the seed being prevented from reproducing the sprout is produced? What hindrance is there to the seed being produced again? There is none, whereby, [production of] stalks, husks, and so forth, through *the production of the sprout and so forth*, *would not be found here* in the world ever.

If something already produced is produced again and again then in the world there would be no occasion for production because everything produced would be produced again and again.

Chandrakirti's autocommentary says:

Furthermore:

The seed would alone be produced until the end of existence, [6.9c]

– because of the very cause that was explained.

Here Chandrakirti sets out the second part of consequence that if there is production from self production would be not only be purposeless but it would also be *without an end*. In this case, production of the seed would continue without end until the end of existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 145) says:

Chandrakirti says:

> *The seed would be strongly produced until the end of existence.* [6.9c]

There is also another fault. *The seed* itself *would be strongly produced* uninterruptedly *until the end of existence* because that which has already been produced must be produced again.
Having presented the two faults – (1) those that accord with the reasoning of results, non-production, and (2) those that accord with the reasoning of causes, uninterrupted production – [production from self] is said to contradict reasoning.

If there were production from self it would follow that production would be purposeless and endless. A consequence can be set out as follows: a sprout, as the subject, it follows that its production is purposeless and endless because it is produced from itself. The faults are set out in Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 216):

1 Reasoning refuting production from self
A. How the reasoning refuting production from self is set forth in the commentary by Acharya Buddhapalita
B. The manner in which its faults are exposed by Bhavaviveka
C. How Buddhapalita does not incur those faults
D. Indicating the faults incurred by Bhavaviveka himself in his commentary on the refutation of production from self

A How the reasoning refuting production from self is set forth in the commentary by Acharya Buddhapalita

Buddhapalita says:

> Things are not produced from self because their production would be purposeless and because there would be an extremely absurd consequence. There would be no purpose to those things existing as their own entity being produced again. Supposing that they exist [as their own entity] if produced they would never not be produced.

QUESTIONS AND ANSWERS

Student: It was said that karmic seeds are deposited on the mere I which is imputed on the basis of the aggregates. At the time of death the aggregates are abandoned so how does a mere I that is imputed on them transport the karmic seeds?
Geshe Jampa Gyatso: First of all, for the Prasangika Madhyamika system there is no need to posit a basis for the latencies of actions because the disintegratedness of the action is itself a functioning thing that can bring about a result. However, they also say that the latencies of actions are deposited on the mere I. The present I is merely imputed on the basis of the collection of the five aggregates. When one dies, although it is true that the physical form aggregate is abandoned, the remaining aggregates are not abandoned. The I that is imputed on these aggregates is what continues on to the next life. The Prasangika Madhyamikas say that there is:

1. an I that pervades all lives,
2. an I that comes from a past life to the present life,
3. an I that goes from this life to another life, and
4. an I that is qualified by this present life.

The I qualified by this life stops at death. For example, the I qualified by this life that is a fully ordained monk stops at death. Likewise, the Maurizio qualified by this life stops at death. However, there is an I that continues from this life to the next life. These various types of I are discussed in the *Treatise on the Middle Way* in the context of the refutation of a self of persons. The conclusion is that there does not exist the fault that the latencies of actions stop at death because, although the I qualified by this life stops, the latencies continue in that they are deposited on the I that goes from this life to the next life.

Student: Is a cause destroyed before, during, or after its result?
Geshe Jampa Gyatso: According to the Prasangika Madhyamika system a cause ceases upon the arising of its result whereas according to the Samkhyas a result exists at the time of cause. [For the Prasangika Madhyamikas] when a seed is planted, having become dregs, the sprout arises. For the Prasangika Madhyamikas cause and result do not exist simultaneously, first the cause exists and then subsequently the result arises. This is accepted in the majority of Buddhist schools except for the Vaibhashika school which asserts the simultaneous existence of cause and result. They assert a simultaneously-arising cause and a concomitant cause which exist simultaneous with their results. However, in the case of a fruitional cause and an ever-functioning cause they say that the result arises after the cause.

Student: If a cause terminates before the result arises then there could not be a result in that there is no longer any cause.
Geshe Jampa Gyatso: Although a cause no longer exists at the time of its result, the cause does exist. In terms of time first there is a cause and then its result. This can be experienced in terms of planting a seed in a field, watering and fertilizing it, whereby a result arises. However, there is debate about this. For example, are mother and son cause and effect? Do they exist simultaneously or not? The answer is the time of the existence of the mother and the time of the existence of son are different in that first

there is the existence of the mother and then the existence of the son. A question arises: "Can mother and son not exist together?" They do.

The conclusion of the discussion of production from self is that if there were production from self it would follow that production would be purposeless and endless. The consequence of Buddhapalita's reasoning is: a sprout, as the subject, it follows that its production is purposeless and endless because it is produced from self. When the consequence is transformed into a reason: a sprout, as the subject, is not produced from itself because it has already achieved its own nature. When Buddhapalita set forth such reasoning Bhavaviveka countered it saying that the way Buddhapalita refutes production from self is incorrect. Bhavaviveka pointed out three faults in Buddhapalita's reasoning refuting production from self. One fault is the fault of not being able to eliminate the question asked by the Samkhyas: "When you say a sprout is not produced from itself does this mean that an apparent sprout is not produced from itself or that a non-apparent sprout is not produced from itself?" Bhavaviveka says that Buddhapalita's reasoning does not answer this question.

Thursday afternoon, 4 May 2000

In short, these faults do not actually occur in Buddhapalita's presentation but occur in Bhavaviveka's. However, we will discuss this later on when concluding the discussion of production from self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 146) says:

3B1C-2B3E-2A1B-1A1A-3 Refuting the response that dispels these faults

Chandrakirti's autocommentary says:

> Suppose [a Samkhya] considers: the beneficial conditions for the production of the sprout, such as water, season, and so forth, act to completely transform the seed and act to produce the sprout. The sprout, moreover, because of the contradiction in abiding together with the agent (the seed), acts to destroy the seed and arises. Therefore, there is no occasion of the mentioned faults and, because the seed and the sprout are just not other, there is not non-production from self either.
>
> This too is unsuitable, because:
>
> *How will that itself act to destroy it?* [6.9d]
>
> Because the seed and the sprout are just not other, it is also unreasonable for the sprout to destroy it, thinking, "like a self nature [destroyed] by itself."

The Samkhyas respond that there is no fault in asserting production from self. They say that conditions such as springtime, water, and so forth act to transform the seed and produce the result. They say that the sprout abiding together with the seed contradicts reasoning, therefore the sprout acts to destroy the seed whereby it ceases and the sprout arises, this not being contradictory to reasoning. The Samkhyas say that the seed and the sprout are not different entities in that they are the same entity, therefore the sprout is produced from itself. Our own system refutes this response saying that it is not feasible for the sprout to destroy the seed because according to you Samkhyas the seed and the sprout are not different. It is not feasible for the sprout to destroy the seed because the sprout does not destroy itself, its own nature. In other words, because the seed is the nature of the sprout itself the sprout does not destroy itself. For this reason, Chandrakirti says: "thinking, "like a self nature [destroyed] by itself."

Lama Tsongkhapa's *Illumination* says:

> [The Samkhyas] think: "Conditions that assist the production of the sprout, such as water, springtime, and so forth, act to completely transform the seed into dregs, for example, and act to produce the sprout. Because it is contradictory for the sprout to abide simultaneously with the seed, its producer, [the sprout] acts to cease the seed and arises. Therefore, there is no context for the errors mentioned [above], the two faults of contradicting reasoning. Also since the seed and the sprout are not different natures or entities, it is not that there is no production from self."

"The two faults" are the faults mentioned before by our system regarding the Samkhyas assertion of production from self:

1. it follows that production is purposeless and
2. it follows that production is endless or uninterrupted.

Here the Samkhyas respond that no such fault is incurred. They say: "Also since the seed and the sprout are not different natures or entities, it is not that there is no production from self." Thus, the Samkhyas say that seed and sprout are one nature or one entity.

The Samkhyas say: "Because it is contradictory for the sprout to abide simultaneously with the seed, its producer, [the sprout] acts to cease the seed and arises." They say that the seed ceases whereupon the sprout arises. Thus, they say that the seed and sprout are one nature yet accept that the sprout arises only upon the transformation of the seed. The transformation of the seed into dregs and the arisal of the sprout is due to the conditions of springtime, water, and so forth. The Samkhyas say that because the seed and sprout are one nature there is production from self in that the sprout is the nature of the seed and is produced from it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 146) says:

> Chandrakirti says:
>
> *How does that itself act to destroy that?* [6.9d]
>
> REPLY: That too is unsuitable. Since the two natures of the two, the seed and the sprout, are one in all ways *how does that* sprout *itself act to destroy that* seed? It does not; the thought being "The sprout does not act to destroy the sprout."

Our own system says that the sprout destroying the seed is unsuitable because it would be like thinking that the sprout acts to destroy itself. For the Samkhyas the seed and sprout are one nature in all ways. In that case since the sprout destroys the seed it would also destroy itself; this is what is unsuitable.

Lama Tsongkhapa's *Illumination* says:

> Although such harm is seen, it is not averted because it is a foolish disputant who thinks, "The sprout destroying the seed is in terms of transformation, therefore how could it be like itself destroying itself?" If all the entities or natures were over there and over here, even transformation would not be established individually, whereby harm could not be abandoned.

The Samkhyas say that a sprout destroying a seed is in terms of the transformation of the seed which is not the same as a sprout destroying itself. However, the Prasangika Madhyamikas say such thinking is foolish. If the Samkhyas try to abandon the harm this cannot be done because "if all the entities or natures were over there and over here, even transformation would not be established individually." The Samkhyas say that everything is of the same entity, therefore they do not recognize the harm. The Samkhyas turn back the harm to their assertions against our own system. However,

although there are faults in their assertion of production from self when our own system points them out they are not recognized by the Samkhyas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 146) says:

3B1C-2B3E-2A1B-1A1B Refuting that the two, cause and result, are one entity

1 Since it follows that the shape and so forth of the two, the seed and the sprout, would not be different, refuting [that the two, cause and result, are one entity]
2 Refuting the response that rejects these faults
3 Since it follows that both would be similarly apprehended and not apprehended on each of the two occasions, refuting [that the two, cause and result, are one entity]

3B1C-2B3E-2A1B-1A1B-1 Since it follows that the shape and so forth of the two, the seed and the sprout, would not be different, refuting [that the two, cause and result, are one entity]

Chandrakirti's autocommentary says:

Furthermore:

For you there would not exist differences of shape, color, taste, potential, and Maturation of the sprout different from those of the seed, the creative cause. [6.10ab]

Here, shape means long, round, and so forth. Color means yellow and so forth. Taste means sweet and so forth. Potential means distinctions of capacity – particulars of ability – for example, like hemorrhoid medicine eliminates hemorrhoids due to mere proximity to the body and [like] traveling in space by merely holding the essential medicine and so forth. Maturation means a distinction of the substance to be attained through complete transformation: for example, as *piper-logam* and so forth are sweet.

Our own system says that if seed and sprout are one nature in all ways it follows that they would not have different shapes, colors, and so forth. In other words, it follows that the sprout would not be different from the seed in terms of shape, being long, round, and so forth, because it is one nature with the seed, its cause. It also follows that the sprout would not be a different color from the seed. Chandrakirti only mentions yellow but color includes green, white, and so forth. It also follows that there would be no difference between the taste of the sprout and the taste of the seed because sprout is one nature with the seed. In addition, there would be no difference in their potential because the seed and the sprout are one nature in all ways. It would follow either that there is no potential in hemorrhoid medicine or that everything would have the potential to cure hemorrhoids. Chandrakirti also mentions: "traveling in space by merely holding the essential medicine." According to the Samkhyas everyone would have the ability to travel in space by merely holding the particular essential medicine. In short, according to the Samkhyas' assertions it follows that medicines would not have the ability to cure particular sicknesses because they would be one with their causes.

Chandrakirti says: "Maturation means a distinction of the substance to be attained through complete transformation: for example, as *piper-logam* and so forth are sweet."

Chandrakirti's autocommentary says:

If the seed and sprout are just not other (i.e., are identical states), the shape and so forth [existing] with the sprout would also be observed as undifferentiated like [the shape etc.] existing with the self-nature of the seed. Yet, it is not observed. Therefore, like sprouts of banana and so forth from seeds of white garlic and so forth, [seed and sprout] are unreasonable as just not other.

According to you Samkhyas seed and sprout should be observed to be undifferentiated, whereas they are observed to be different. To point this out Chandrakirti says: "Therefore, like sprouts of banana and so forth from seeds of white garlic and so forth, [seed and sprout] are unreasonable as just not other." In short, a banana tree cannot be produced from a white garlic seed and likewise a white garlic sprout cannot be produced from a banana seed. [The Prasangika Madhyamikas say that] according to you Samkhyas a banana tree should be produced form a white garlic seed and a white garlic sprout from a banana seed because according to you seeds and sprouts are one nature. Although you Samkhyas say that seed and sprout are one nature but this is not the actual case.

Lama Tsongkhapa's *Illumination* (Tibetan text page 146) says:

> Chandrakirti says:
>
> > *For you the differences of shape, color, taste, potential, and ripening of the sprout*
> > *Which are different from those of the seed, the cause that produces it, would not exist.*
> > *[6.10ab]*
>
> There is also another fault. *For you the differences of shape*, length and so forth, *color*, green and so forth, *taste*, sweet, sour, and so forth, *potential*-strength, *and ripening of the sprout which are different from* the color, shape, and so forth *of the seed*, *the cause that produces* the sprout, *would not exist* because the entity and nature of the two, the seed and the sprout, are not differentiated in all ways.

In general some barley seeds, for example, are short, some are round, some are dark, some are light, some are very small and so forth. Due to there being these different types of seeds there are different types of results. The Prasangika Madhyamikas therefore say that according to you Samkhyas it follows that there would not be long and short seeds and long and short sprouts and so forth because everything is one nature. This reasoning further refutes production from self.

Lama Tsongkhapa's *Illumination* says:

> This would follow even though they are not observed to be identical. Saying "The entities of the two are also not completely the same" suggests the opposite.

According to the Samkhyas assertion these consequences follow but in reality seed and sprout are not like this. In short, seed and sprout are not observed to not be different, i.e., they are not observed to be one in all ways. Suggesting the opposite means that they are different.

Lama Tsongkhapa's *Illumination* says:

> There is a very great difference between suggesting the opposite and suggesting an autonomous opposite.

"Suggesting the opposite" means that one sets forth a consequence by means of which the opposite is suggested. In the Prasangika Madhyamika system it is possible to suggest an opposite but not an autonomous opposite, the three modes of which are established by way of their own character.

Lama Tsongkhapa's *Illumination* says:

> In regard to that, 'potential-strength' is like hemorrhoid medicine which heals that illness by mere proximity to the body and like traveling in the sky by merely holding some elixir and so forth.

Different types of medicines have different types of potential such as being able to cure hemorrhoids, enabling one to fly, and so forth.

Lama Tsongkhapa's *Illumination* says:

> 'Ripening' is to become a distinct substance through dissimilar conditions such as ***kyurura*** through sprinkling it with milk and piper longum and so forth becoming sweet tasting.

Dissimilar conditions refers to, for example, the fact that when *kyurura* trees are planted in a field if they are sprinkled with milk their fruit becomes sweet whereas usually it is sour. There is a discussion about this in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* saying: "*Kyurura* trees sprinkled with milk, as the subject,..." *Kyurura* is a small fruit used to cleanse the blood and to cure back pain. Likewise, piper longum is generally sour but it too can be transformed into a sweet taste.

(Masters Program Correspondence Course participants please note that there were no teachings Monday, 8 May 2000)

Lama Tsongkhapa's *Illumination* (Tibetan text page 147) says:

> 3B1C-2B3E-2A1B-1A1B-2 Refuting the response that rejects these faults

Chandrakirti's autocommentary says:

> Suppose it is considered: having given up the state of a seed, by attaining another state, the seed itself is transformed into a sprout.
>
> If like that, also:
>
> *If, having dispelled the previous property of the self, it transforms into*
> *An entity other than that, then, how would its [nature] be that itself?*[15] [6.10cd]
>
> The "property of" that means, "that itself just not being other [than] that." Since it is impossible for the sprout's state of not being other [to be different] than this concept, it's state of not being other is damaged.
>
> Suppose it is considered: even if the shape and so forth of the seed and sprout are different, [it is not contradicted by being] undifferentiated substances.
>
> It is not like that, because, if the shape and so forth are not perceived, the substance is not perceived.

If the Samkhyas say that the entity of the seed is transformed into the entity of the sprout because the state of the seed having been given up the state of the sprout arises, our own system responds that this is also incorrect. If it were so, it would follow as Chandrakirti says: "Having dispelled the previous property of the self, it transforms into an entity other than that, then, how would its [nature] be that itself?" In other words, if it were so, how could the nature of the seed transform into the nature of the sprout? It is not feasible. Chandrakirti says: "The 'property of' that means, 'that itself just not being other [than] that.'" The property of the seed means that itself. The property of the seed and the property of the sprout are not different because the nature of the seed and the nature of the sprout are the same.

Chandrakirti says: "Since it is impossible for the sprout's state of not being other [to be different] than this concept, it's state of not being other is damaged." The Samkhyas assert that the seed and sprout have different shapes and so forth but that they are not different substances, i.e., they are one nature. Our own system says that this is incorrect because shape and so forth are that which differentiates phenomena because, without apprehending different shapes and so forth, one cannot apprehend different substances. The Samkhyas say that seed and sprout do have different shapes and so forth but are one substance or one nature. They accept a partless unit that pervades all, both generalities and particularities. On the other hand, our own system says that a sprout is posited only upon the basis of its shape and color. For example, when a barley seed is roasted and ground into tsampa is it still the substance of the barley seed? Is the tsampa the substance of the barley seed? Is it the substance of the sprout? What is the difference between the seed and the substance of the seed? Think about it.

[15] How would the nature of the seed become that nature of the sprout itself.

Lama Tsongkhapa's *Illumination* (Tibetan text page 147) says:

> [The Samkhyas] say: Since through giving up the state of the seed there is transformation into other, the state of the sprout, because of the mere different states of the two, seed and sprout, there is the transformation of that very seed into a sprout.
> Chandrakirti says:
>
> > *If, having eliminated the thing which is the self of the previous,*
> > *It transforms into an entity other than that, at that time how is that that itself?*
> > *[6.10cd]*
>
> REPLY: *If, having eliminated* the state of *the thing which is the self of the previous* seed, *it transforms into the entity* of the state of the sprout which is *other than that* state [of the seed], *at the time of* asserting such *how is* it logical to say "The very nature of *that* seed is *that*, the nature of the sprout, *itself*" because that very thing which is the state of that is the very thing which is that, and because there is nothing that is that which is a different object from the entity of that?

The Samkhyas say that the state of the seed is given up and then there is the state of the sprout. This too is incorrect. If it were the case that upon the state of the seed having been given up there arises the state of the sprout, then how could the nature of the sprout be the nature of the seed? This is not feasible, because the nature of the seed has been eliminated. The thing that is the *state* of the seed is the very thing that *is* the seed; this it what is eliminated. If the nature of the seed has become non-existent, how can it be transformed into sprout? Asserting that when the state of the seed is eliminated there arises the state of the sprout, as well as saying that the nature of the sprout is the nature of the seed is incorrect because the nature of the seed has ceased, whereby it cannot transform into the sprout.

Lama Tsongkhapa's *Illumination* (Tibetan text page 147) says:

> Therefore, [the thesis] that the entity of the two, the seed and the sprout, is not different in all ways is damaged.

The Samkhyas' position or thesis that the entity of the two is not different in all ways is damaged.

Lama Tsongkhapa's *Illumination* (Tibetan text page 147) says:

> [The Samkhyas] think: Although the shape and so forth of the seed and sprout are different, this is not incompatible with them not being different substances.
> REPLY: That is not suitable because if the shape and so forth are not apprehended then also the substance which is the seed and sprout is not apprehended.

The Samkhyas assert that although the seed and sprout are different in terms of their shapes and so forth, they are not different substances. They say that these two positions are not incompatible. One can ask: "What substances are apprehended without apprehending their shapes and so forth?" Here the words 'and so forth' includes color, taste, and so forth. For example, a pen as a substance is apprehended on the basis of its color, shape, parts, and so forth. On the other hand, it cannot be apprehended without apprehending its color, shape, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 147) says:

> 3B1C-2B3E-2A1B-1A1B-3 Since it follows that both would be similarly apprehended and not apprehended on each of the two occasions, refuting [that the two, cause and result, are one entity]

Chandrakirti's autocommentary says:

Furthermore:

> *If your seed and sprout are not other here,*
> *Like the seed, the so-called sprout would not exist to perception or*
> *Alternatively, since they are one, just like the sprout,*
> *That also would exist to perception. Therefore, this is not accepted.* [6.11]

Just as on the occasion of the sprout, the essence of the seed does not exist to perception by its own entity, likewise because of just not being other than the seed, also the self-essence of the sprout, like the self-essence of the seed, would not exist to perception.

Alternately, just as the sprout exists to perception, likewise also the seed, like the self-essence of the sprout, would exist to perception, because of just not being other than the sprout and so forth.

Since desiring to fully reject [their] following as faulty, the seed and the sprout are not to be accepted as just not being other.[16]

(Note: 'The self-essence of the sprout' (*myu gu gyi rang gi bdag nyid*) could be translated as 'the sprout's own essence.')

In response to the Samkhyas' assertion that the seed and the sprout are not other, i.e., they are not different, our system flings two consequences at them:

1. it follows that just as the seed is not apprehended at the time of the sprout, so too the sprout would not be apprehended at the time of the sprout because the seed and the sprout are the same substance and
2. it follows that just as the sprout is apprehended at the time of the sprout so too the seed would be apprehended at the time of the sprout, because the seed and the sprout are the same substance.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Chandrakirti says:
>
> *If for you seed and sprout are not different here,*
> *The seed and likewise the sprout would not be apprehended, or,*
> *Alternatively, due to their being one, in the case of the sprout likewise*
> *That [seed] would also be apprehended. Because of that this is not to be asserted.* [6.11]
>
> There is also another fault. *If*, as *for you*, the two entities of *seed and sprout are not different* entities *here* in the world: (1) just as on the occasion of the sprout the *seed* is not apprehended, *likewise the sprout would* also *not be apprehended,* '*or,*' that is, *alternatively*, (2) *since their* entities, those of the seed and sprout, *are one* in all ways, *just as* on the occasion of *the sprout* that sprout is apprehended, *likewise that* seed *would also be apprehended* by a sense consciousness. *Because of that* not existing, these two errors are asserted to be abandoned, therefore *this* – that the entities of the two, the seed and the sprout, are not different – *is not to be asserted*.

In short, Lama Tsongkhapa says that one should give up asserting that the seed and sprout are not different substances.

Lama Tsongkhapa's *Illumination* (Tibetan text page 148) says:

[16] I.e., they are not to be accepted as non-diverse states.

> If these reasonings are well realized, all the wrong conceptions which assert that all substrata are mutually different entities and all their realities are one in being over there and over here and those that assert the reality at the time of a previous state to be the reality at the time of a later state will be averted.

Wrong conceptions are, for example, thinking that all substrata – phenomena ranging from forms through the exalted knower of all aspects – are different entities but that their realities are one. An example is the assertion that the reality of a pot is the reality of a pillar, and vice versa. Understanding well the reasonings set forth previously, such wrong conceptions will be averted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 148) says:

> 3B1C-2B3E-2A1B-1A2 Indicating [production from self] as non-existent even for the conventions of those whose minds have not been affected by tenets

Chandrakirti's autocommentary (Tibetan text page 57) says:

> Therefore, having averted production from self that is imputed in other systems (e.g. Samkhya) that assert thusness as understood like that, in order to indicate, "this concept is inadmissible even in the conventions of the worldly whose minds are not trained in other systems [of tenets]," – it is explained:
>
> *Because even the worldly do not accept that "they are one"*
> *Because of seeing its effect even if the cause has disintegrated,* [6.12ab]
>
> Like this: although the cause called "the seed" has already ceased, the effect called "the sprout" is seen. Therefore, even the worldly do not see seed and sprout as states of not being other (non-diverse states), for if they were just one, like the cause, the effect would also not be seen – yet it is seen. Therefore, they are not states of not being other.

The assertion of production from self is refuted by Chandrakirti, who says that it is not even accepted by worldly beings, such as farmers, whose minds have not been affected by tenets. In other words, even those who have not studied any tenets, whether the Samkhya or Buddhist tenets, would not say that seed and sprout are one. Thus, farmers and so forth who have not studied either non-Buddhist or Buddhist tenets do not accept production from self in that they do not say that seed and sprout are one. Instead, they say that upon the seed having been transformed into a dreg the sprout is produced, in that they see that upon the seed having degenerated there is the arisal of a green sprout in a field. Thus, the Prasangika Madhyamikas say that the Samkhyas' assertion of production from self is not even accepted by those who are not trained in tenets.

Lama Tsongkhapa's *Illumination* (Tibetan text page 148) says:

> Chandrakirti says:
>
> *Therefore, because of seeing the result of that even when the cause has disintegrated,*
> *Even the worldly do not assert "They are one."* [6.12ab]
>
> Therefore, having refuted the production from self – which is imputed differently in the Buddhist system – [asserted] by the Samkhya system which asserts thusness as conceived in this way, it is indicated that even for the conventions of worldly beings whose minds have not been affected by other tenet systems the conception of production from self is incorrect. *Therefore*, *because of seeing the result of that* seed *even when the cause*, the seed, *has disintegrated*, *even the worldly do not assert* "*They*, the seed and the sprout, *are one* entity."

Production from self is not feasible in that even worldly beings do not accept that seed and sprout are one; they instead accept that upon the disintegration of the seed, there is the arisal of the green sprout.

Because The Prasangika Madhyamikas do not deny but accept the conventions of the world, they are also sometimes called "Madhyamikas who take what is well known in the world" (*'jig rten grags sde spyod pa'i dbu ma pa*).

Lama Tsongkhapa's *Illumination* (Tibetan text page 148) says:

3B1C-2B3E-2A1B-1A3 Summarized meaning of such refutations

Chandrakirti's autocommentary (Tibetan text page 57) says:

Because, according to both positions, production from self contradicts reasoning:

Therefore, this firm conception that "things arise from self"
Is unreasonable in thusness and also in the world. [6.12cd]

Therefore, the Acharya [Nagarjuna], not distinguishing, refuted production in general, saying, "not from self."

There is someone (Acharya Bhavaviveka) who says:

Things are not *ultimately* produced from self because of existing, like a possessor of mind.
The qualification "ultimately" which he takes as the distinction should be considered "meaningless."

Production from self is not acceptable and contradicts reasoning from the point of view of both the conventional and the ultimate. With respect to this, Chandrakirti says: "This firm conception that 'things arise from self' is unreasonable in thusness and also in the world." Here 'thusness' refers to the ultimate and 'in the world' to the conventional.

Acharya Bhavaviveka applies the qualification 'ultimately' to production from self, saying "Things are not ultimately produced from self," whereas Chandrakirti does not. The passage cited here by Chandrakirti is from Bhavaviveka's *Lamp for [Nagarjuna's] 'Wisdom,'* which criticizes Buddhapalita's commentary, saying that it possesses three fallacies or faults:
(1) it does not state a reason and an example,
(2) it does not eliminate the fallacies adduced by others (the Samkhyas), and
(3) it affords the opportunity for censure.

Bhavaviveka says that if, for example, the Samkhyas were to ask Buddhapalita "When you say that a sprout is not produced from self, do you mean an already clearly apparent sprout or a non-apparent sprout?", then Buddhapalita's commentary does not answer this hypothetical question. Bhavaviveka also says that Buddhapalita's statements afford an opportunity for defeat on particular occasions, in that he contradicts the tenets of Arya Nagarjuna. In this way Bhavaviveka tries to demonstrate that Buddhapalita is wrong, whereas in fact he is right. Bhavaviveka's *Lamp for [Nagarjuna's] 'Wisdom'* (Hopkins, *Meditation on Emptiness*, page 463)"says:

That is not suitable (1) because [Buddhapalita] does not express a reason [capable of proving that there is no production from self] as well as an example; (2) because [the reasoning as Buddhapalita states it] does not avoid the fallacies adduced by another, [that is, the fallacies that a Samkhya would be expected to adduce]; and (3) because [Buddhapalita's] words afford an opportunity [to an opponent to expose contradiction within his own system].

In short, Bhavaviveka says:

> The twenty-three objects of knowledge asserted by the Samkhyas, as the subject, are not ultimately produced from self because of existing, like a possessor of mind. The reason that I set forth does not raise questions by the Samkhyas.

The Samkhyas accept that the being who is the self, consciousness, and knower is not produced from self.

Student: What is the difference between a possessor of mind (*sems pa can*) and a sentient being (*sems can*)?
Geshe Jampa Gyatso: Possessor of mind is a synonym of self, consciousness, knower, and being.

Tuesday afternoon, 9 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 148) says:

> Chandrakirti says:
>
> > *Therefore, thoroughly imputing "Things arise from self"*
> > *Is not appropriate to either thusness or the worldly.* [6.12cd]
>
> For this reason, according to both the sides of the ultimate and of worldly conventionalities, production from self contradicts reasoning. *Therefore*, *thoroughly imputing "*Outer and inner *things arise from self" is not appropriate with respect to either thusness*, the ultimate, *or worldly* conventionalities. Therefore, Arya Nagarjuna in refuting production from self does not apply the qualifications 'ultimately' and 'conventionally' but refutes production from self in general, saying "Not from self."

According to the Prasangika Madhyamikas, when refuting production from self there is no need to apply the qualification 'ultimately' or 'conventionally' to the non-production of self. Rather, it is sufficient to just say that there is no production from self. However, according to other systems there exist phenomena that are conventionally produced from self but are not ultimately produced from self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 148) says:

> Then, Acharya Bhavaviveka made a distinction saying: "Things are not *ultimately* produced from self because of existing, like a possessor of mind," however, the qualification 'ultimately' is to be considered "meaningless."

In the context of refuting production from self there is no need to apply the qualification 'ultimately,' saying that "ultimately there is no production from self." However, in the case of production from other, it is necessary to apply the qualification 'ultimately.' There is no need for the qualification 'ultimately' in the case of production from the other three extremes – production from self, production from both, and causeless production – because these are also refuted conventionally. It can be asked: "When the Svatantrika Madhyamikas apply the term 'ultimately,' does it mean that Bhavaviveka asserts production from self conventionally?" Since there is no such production, the Prasangika Madhyamikas say that Bhavaviveka's "qualification 'ultimately' is to be considered 'meaningless.'" In short, Chandrakirti says that the fallacies that Bhavaviveka points out in Buddhapalita's refutation of production from self do not exist in Buddhapalita's refutation but instead exist in Bhavaviveka's own refutation.

Lama Tsongkhapa's *Illumination* (Tibetan text page 149) says:

3B1C-2B3E-2A1B-1B Refuting [production from self] by the reasonings in *Fundamental Wisdom*

Chandrakirti's autocommentary (Tibetan text page 58) says:

Furthermore:

If production from self is asserted, the object to be produced, producer,
Action, and also agent would be identical, yet they are not identical –
Hence, production from self is not to be accepted
Because the faults that were abundantly explained would follow. [6.13]

As taught [in *The Treatise on the Middle Way*, 20.19]:

A oneness of cause and effect would never be admissible.
If cause and effect were oneness, producer and produced would become one.

Oneness does not exist because father and son or eye and consciousness would also follow as identical. Therefore, it is taught [in *The Treatise on the Middle Way*, 10.1]:

If the wood were the fire, agent and action would become one.[17]

Therefore, out of fear of the consequence of faults like that and so forth, since desiring to realize the two truths non-distortedly, things should not be accepted as produced from self.

Chandrakirti says that if it is asserted that the sprout is produced from itself, it follows that producer and produced, as well as agent and object, are one. In other words, the producer, the seed, and the produced, the sprout, would absurdly follow as being one. In addition, the object, the sprout, and the agent, the seed, would also absurdly follow as one. The seed is the agent which brings about the sprout, the object. If sprout is produced from itself then also a pot, the object, and the potter, the agent, would be one. Chandrakirti says that therefore it is not appropriate to accept that sprout is produced from self, as there would follow the many fallacies that were set out before.

Nagarjuna, in his *Treatise on the Middle Way,* says: "A oneness of cause and effect would never be admissible." In other words, cause and effect being one is not feasible. "Would never be admissible" indicates that there is no reasoning whatsoever that can establish cause and effect as one. Nagarjuna continues: "If cause and effect were oneness, producer and produced would become one." Chandrakirti gives the examples that if producer and produced are one then it would follow that father and son are one and eye and eye consciousness are one. Having demonstrated the faults of asserting production from self, Chandrakirti says "things should not be accepted as produced from self."

The *Treatise on the Middle Way* says: "If the wood were the fire, agent and action would become one." This means that if the agent, the burner, the fire itself, and the object of the action of burning, the wood, were one it would follow that agent and object of the action are one. However, agent and object of the action cannot ever be one, just as wood and fire cannot be one.

Such consequences are set forth to demonstrate the faults of the Samkhyas' thesis that a partless unit produces everything. Chandrakirti says: "out of fear of the consequence of faults like that and so forth, since desiring to realize the two truths non-distortedly, things should not be accepted as produced from self."

[17] According to the order of the words, the wood would be an agent of fire. One possible meaning might be, that wood used to create fire by friction – an indirect agent of the fire. Alternatively, some Tibetan masters explain that the term 'action' sometimes refers to the object acted upon. In that case, the fire would be the agent and the wood, the object acted upon, however, the order of the words would be reversed since the wood would be the object acted upon (the second term) and the fire would be the agent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 149) says:

> Chandrakirti says:
>
> > *If asserted as produced from self, that which has been produced, that which produces,*
> > *Action, and also agent would be identical,*
> > *Yet they are not identical. Therefore, production from self is not to be asserted*
> > *Because the faults that are extensively explained would follow.* [6.13]
>
> There is also another fault. *If* results are *asserted as produced from self*, (1) the result, *that which has been produced*, (2) the cause, *that which produces*, (3) whatever *action* is done, and (4) *also* whatever *the agent* that acts *would be identical, yet they are not identical. Therefore, production from self is not to be asserted because the faults that are extensively explained* in this treatise and *Fundamental Wisdom would follow*.

"The faults that are extensively explained" refers to the faults set out at length in Chandrakirti's *Supplement* and Nagarjuna's *Fundamental Wisdom*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 149) says:

> With respect to the first fault, *Fundamental Wisdom* says:
>
> > Cause and result being identical
> > Is never correct.
> > If cause and result were identical
> > Producer and produced would be one.
>
> This says that if cause and result were one entity, father and son, or eye and eye consciousness, would be identical.

The meaning of this was explained previously.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> With respect to the second fault, *Fundamental Wisdom* says:
>
> > If wood were fire
> > Agent and action would be one.

This means that if wood and fire were one, the agent and the *object* of the action would be one.

Lama Tsongkhapa's *Illumination* (Tibetan text page 149) says:

> If it is said "If refuted in this way, also the pair father-son and agent-action would follow as being one entity," this is acceptable [to the Samkhyas], however, if it is said that in general, they follow as one, their response is "There is no pervasion."

If the Prasangika Madhyamikas fling the consequence "agent and action, as the subject, it follows that they are one because they are produced from self," the Samkhyas would respond "There is no pervasion." This is because they say that if it is produced from self, there is no pervasion that the agent, the fire, and the object of the action, the wood, are one.

Lama Tsongkhapa's *Illumination* (Tibetan text page 149) says:

> However, if they are asserted as one nature in accordance with the previous explanation, the reasoning that is able to impel even the transformations as being one cannot be abandoned.

When the Samkhyas say that there is no pervasion, this cannot dispel the faults in their thesis that the general principal produces everything and that all transformations, here and there, are one. This is because the Samkhyas cannot say that they are all one nature but are not one, because if they accept that the nature is partless, then they cannot say that it has parts.

Lama Tsongkhapa's *Illumination* (Tibetan text page 149) says:

> In regard to [Chandrakirti's] statement "Therefore, fearing the above mentioned faults and wishing to realize unerringly the two truths do not assert production from self," since existence and non-existence of production from self are also a direct contradiction wherein excluding one, it being non-existent, the other of the pair is established, you should definitely assert that there is no production from self.

Production from self and non-production from self are direct contradictions, wherein when the non-existence of production from self is established, the existence of production from self is refuted.

This concludes the presentation of the refutation of production from self according to both the *Supplement* and *Fundamental Wisdom*. We will now discuss some points regarding the refutation of production from self that are not covered in these texts.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 216) says:

> Middle Way Opposite of the Consequences – Reasonings Refuting Production From Self
> What are the reasonings refuting production from the four extremes?
> 1. Reasoning refuting production from self
> 2. Reasoning refuting production from other
> 3. Reasoning refuting production from both
> 4. Reasoning refuting causeless production

Production from self is asserted by the Samkhyas, production from others by the Svatantrika Madhyamikas downward, production from both by the Nigranthas, and causeless production by the Charvakas. In the context of the Samkhyas' assertion of production from self, 'self' is the nature which is a partless unit. In the case of production from other, 'other' refers to a cause established by way of its own character which produces a result established by way of its own character. The Nigranthas give the example of a gold pot as that which is produced from both self and other, saying that it is produced from itself in that it is produced from gold, the cause, which brings the result, pot, and that it is produced from other in that it is produced by the work of the goldsmith. The Nigranthas say that a person who makes a gold pot is other than the gold; for this reason, they assert production from both. This assertion can be applied to any object.

As examples of causeless production, the Charvakas mention, for example, the roundness of peas, the sharpness of thorns, and the eyes of a peacock's feathers. They posit these as examples because they say that no one has acted to bring these about.

All four types of production are refuted by the Prasangika Madhyamikas.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 216) continues:

> 1 Reasoning refuting production from self

A. How the reasoning refuting production from self is set forth in Acharya Buddhapalita's commentary

B. The manner in which the fallacies are exposed by Bhavaviveka

C. How Buddhapalita does not incur those fallacies

D. Indicating the fallacies incurred by Bhavaviveka himself in his commentary on the refutation of production from self

A How Acharya Buddhapalita's commentary sets forth the reasoning refuting production from self is

Buddhapalita says:

> Things are not produced from self because their production would be purposeless and because there would be an extremely absurd consequence. The production again of things [already] existing in their own entities is purposeless. If, though existent, they are produced, they would never not be produced.

The consequence is: things, as the subject, it follows that their production is purposeless and endless because they are produced from self.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 218) continues:

Our own system

The meaning of the commentarial speech of Buddhapalita is [as follows]. The Samkhyas say:

> Since it is incorrect for things to be produced without existing at the time of their cause, all results exist in a manner of not being clearly apparent in the entity of their own cause. A result that is established in a manner of being clearly apparent is designated 'produced.' That which is already apparent does not need to be produced again.

This passage sets out the thesis of the Samkhyas.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 218-9) continues:

The way in which that previous commentarial speech is refuted is:

> A sprout, as the subject, it follows that its production again is purposeless because it has already attained its own entity.

If [the Samkhyas] say that there is no pervasion:

> It follows that it is produced again endlessly because although it has already attained its own entity it needs to be produced again.

When this is condensed it is [as follows]:

> A sprout, as the subject, it follows that its production again is purposeless because it is existent.

If [the Samkhyas] say no pervasion:

> A sprout, as the subject, it follows that it is produced endlessly because though existent, it needs to be produced again.

Buddhapalita says that if things are produced from self, it follows that their production is purposeless and endless. To prove these two consequences, Buddhapalita then says "If, though existent, they are produced, they would never not be produced." In other words, if though already existent they are produced again, it would follow that they are produced again and again forever.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 219) continues:

Furthermore, the *Great Commentary on Fundamental Wisdom* says:

> The consequence expressing the contradiction between the two, (1) production again being purposeful and (2) an existent, is able to refute production from self. If it could not, even though an autonomous [syllogism] were set forth it could not [refute production from self]; therefore, there is no need to state an autonomous reason and example.

Lama Tsongkhapa's *Great Commentary* says that Bhavaviveka's criticism of Buddhapalita is not correct because if production from self cannot be refuted by a consequence expressing the contradiction between the two, it cannot be refuted by way of stating an autonomous reason and example. Therefore, there is no need for Buddhapalita to have stated such.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 219) continues:

Acharya Bhavaviveka, not understanding that presentation, the consequence which was just explained by Acharya Buddhapalita's commentarial speech, but understanding it as presenting the consequence,

> a sprout, as the subject, it follows that its production is purposeless and endless because it is produced from self,

expresses the fallacies that are explained below.

Buddhapalita's commentary sets out a consequence which does not say "it follows that its production *again* is purposeless and endless," although this is the meaning. Due to this, Bhavaviveka takes the consequence "it follows that its production is purposeless and endless" literally and criticizes Buddhapalita based on this.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 219) continues:

The *Great Commentary on Fundamental Wisdom* says:

> Bhavaviveka, not understanding the consequence that is flung as being "production *again* is purposeless and endless," through taking the consequence that is flung to be "production in general is purposeless and endless," presents this, saying that it is necessary to assert the opposite meaning.

Bhavaviveka says that "it is necessary to assert the opposite meaning," due to thinking that otherwise Buddhapalita would contradict Nagarjuna's tenets.

Wednesday morning, 10 May 2000

Jedzun Chogyi Gyeltshen's *General Meaning* (page 219) continues:

B The manner in which the fallacies are exposed by Acharya Bhavaviveka

Bhavaviveka's *Lamp for [Nagarjuna's] 'Wisdom'* says (Hopkins, *Meditation on Emptiness*, page 461):

> About this, the other, [Buddhapalita], makes the explanation, "Things are not produced from their own entities because their production would be just senseless and because production would be endless." That is not suitable (1) because [Buddhapalita] does not express a reason [capable of proving that there is no production from self] as well as an example; (2) because [the reasoning as Buddhapalita states it] does not avoid the fallacies adduced by another, [that is, the fallacies that a Samkhya would be expected to adduce]; and (3) because [Buddhapalita's] words afford an opportunity [to an opponent to expose contradiction within his own system. His explanation affords such an opportunity] because since [the thesis and the reason must] be reversed from what is explicitly stated, what emerges is the opposite of the thesis and the property of that thesis (the reason) – that things are produced from other because production is fruitful and because production has an end – due to which he would contradict [Madhyamika] tenets.

Bhavaviveka says that in Buddhapalita's commentarial speech which refutes production from self, a reason and an example are not set out. In other words, Bhavaviveka says that Buddhapalita does not set out a reason and an example. Bhavaviveka also says that Buddhapalita does not eliminate the fallacies adduced by others. Here the word 'others' refers to the Samkhyas, who can question the Prasangika Madhyamikas, saying: "When you say that there is no production from self does it mean that an apparent result is not produced from self or that a non-apparent result is not produced from self?" Bhavaviveka says that the answer to this question is not clearly stated by Buddhapalita. If it is said that a non-apparent result is not produced from self, then the Samkhyas would accept this but (Meditation on Emptiness page 456) if it is said that an apparent result is not produced from self then this would not be acceptable to them. In addition, Bhavaviveka says that Buddhapalita affords an opportunity for censure by others.

According to Bhavaviveka, Buddhapalita says (see Hopkins, *Meditation on Emptiness*, page 456):

> Things are not produced from self because it follows that their production would be purposeless and endless.

However, Bhavaviveka says that the reason should be the opposite: "because it follows that their production is purposeful and has an end." Having reversed the reason, the thesis – "things are not produced from self" – should also be reversed to: "things are produced from other." In conclusion, Bhavaviveka says that the correct syllogism is:

> Things are produced from other because their production is purposeful and has an end.

Thus, Bhavaviveka says that Buddhapalita's syllogism contradicts Nagarjuna's tenets because Nagarjuna said that when the Prasangika Madhyamika system refutes production from the four extremes, the thesis should always be a non-affirming negative. Buddhapalita's thesis, however, is not a non-affirming negative but an affirming negative in that it suggests "things are produced from other." In short, Bhavaviveka says that Buddhapalita's syllogism "things are not produced from self because their production is purposeless and has an end" implies "things are produced from other" because the reason is "because their production is purposeless and has an end." Bhavaviveka

considers Buddhapalita a Svatantrika Madhyamika who accepts production from other, although he is in fact a Prasangika Madhyamika.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 220) continues:

1 The meaning of this as posited by our own system

2 Refuting the way in which the meaning of other scriptures are explained

1 The meaning of this as posited by our own system

Bhavaviveka says:

> The commentarial speech of Buddhapalita is not suitable:
>
> (1) because that commentarial speech does not state a correct reason and example which are able to refute production from self and
>
> (2) because, having investigated the thesis, it does not eliminate the criticism of the Samkhyas, who say:
>
> > If the meaning of the statement "not produced from self" is "a result is not produced from an [already] apparent entity" then that already established is [again] established, whereas if the meaning is "[a result] is not produced from the entity of a potency, a non-apparent cause," then it contradicts the pervasion.

Bhavaviveka says that in regard to Buddhapalita's statement that "things are not produced from self because it follows that their production is purposeless and endless," the Samkhyas can ask:

> Do you mean that an apparent result is not produced from self or that a non-apparent result is not produced from self? If you say a non-apparent result is not produced from self, this does not need to be established since it is already established for us. Therefore, there would be the fallacy that that already established is established again. However, if you mean that an apparent result is not produced from self, it follows that the reason contradicts the pervasion.

When Bhavaviveka says "having investigated the thesis, it does not eliminate the criticism," it refers to Buddhapalita's thesis, "things are not produced from self."

Jedzun Chogyi Gyeltshen's *General Meaning* (page 220) then sets out the third fallacy:

> (3) Moreover, [Buddhapalita's] commentarial speech is not suitable because it affords an opportunity for censure by other opponents. How does it afford this opportunity? Since [the thesis and the property of the thesis] must be reversed from what is explicitly stated in the commentarial speech, it affords that opportunity because:
>
> (i) due to the thesis and the property of the thesis emerging as the opposite of the reason explicitly stated in the commentarial speech, it becomes a correct reason establishing that production is fruitful and has an end, things not being produced from self, and...

When the reason is reversed, the syllogism having a correct reason is:

> It follows that things are not produced from self because their production is purposeful and has an end.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 220) continues:

> (ii) due to the emerging of the opposite of the thesis, the thesis of this context becomes an affirming negative in the sense of the words of the thesis "things are not produced from self" implicitly flinging "things are produced from other,"...

In short, Buddhapalita says:

> Things are not produced from self because it follows that their production is purposeless and endless.

Whereas Bhavaviveka says that the thesis and reason should be reversed to say:

> Things are produced from other because their production is purposeful and has an end.

Since the thesis "the production of things is not the mere elimination of production from self" implies "things are produced from other," the thesis is not a non-affirming negative but an affirming negative.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 221) continues:

> ...whereby it contradicts the tenets of the protector Nagarjuna.

In conclusion, Bhavaviveka says that while Nagarjuna's tenet is that when refuting production from the four extremes the thesis must always be a non-affirming negative, Buddhapalita sets out a thesis which is an affirming negative.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 221) continues:

> The way of reversing the explicitly stated reason [is as follows]. The purposeless and endless production explicitly stated in the commentarial speech is not a correct reason proving that things are not produced from self because the production of things *is* purposeful and *has* an end. If produced from self, production that is purposeful and has an end, rather than production that is purposeless and endless, is also not a correct reason proving that things are not produced from self. This is because when the reason establishes the property of the subject of that, it also definitely establishes the thesis.

When the reason establishes the property of the subject, the thesis is also necessarily established. Therefore, when the production of things is established as being purposeful and having an end, things are necessarily established as not being produced from self.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 221) continues:

> Therefore, Buddhapalita actually asserts the opposite meaning – "production is purposeful and has an end" – as a correct reason proving that things are not produced from self. This is because when the consequence, "a sprout, as the subject, it follows that its production is purposeless and endless because it is produced from self," is the explicitly presented consequence that refutes production from self in the context of the commentarial speech, the proof flung by this consequence is implicitly flung by the potential of the two phrases, the former and later: (1) "because [their production] would be [purposeless]" and (2) "because there would be [an extremely absurd consequence]."

> It also follows that the thesis explicitly stated in the commentarial speech must be reversed, it being necessary to reverse the reason explicitly stated in that. This is because if it is necessary to reverse the reason explicitly stated in that, it is also necessary to reverse the thesis explicitly stated in that. [Lama Tsongkhapa's] *Ocean of Reasoning* says:
>
> > If it is necessary to reverse the explicitly stated reason, it is also necessary to reverse the explicitly stated thesis because they are concordant.

Buddhapalita's explicitly stated reason is "because their production would be purposeless and endless" and his explicitly stated thesis is "things are not produced from self." When the reason is changed to "because their production is purposeful and has an end" the thesis must be explicitly changed to "the production of things is not the mere elimination of production from self" whereas implicitly it is changed to "things are produced from other."

Jedzun Chogyi Gyeltshen's *General Meaning* (pages 221-2) continues:

> If that is accepted, it follows that [the production of] things is not the mere elimination of production from self is the opposite meaning of the explicitly stated thesis that establishes things are not produced from self. This is asserted because that things are produced from self is not the opposite meaning of the explicitly stated thesis. Furthermore, the *Great Commentary on Fundamental Wisdom* says:
>
> > Regarding that, since it is not like the reversed reason, the opposite meaning is not the mere elimination of production from self.

The opposite of the thesis "things are not produced from self" is not "things are produced from self." Rather, it is "the production of things is not the mere elimination of production from self," which implies "things are produced from other."

Jedzun Chogyi Gyeltshen's *General Meaning* (page 222) continues:

> If that is accepted, through the words of the thesis "things are not produced from self," it follows that the production which is not the mere elimination of the production of things from self, from the point of view of flinging a thesis proving that things are not produced from self, implicitly suggests that things are produced from other.

Bhavaviveka says that while Nagarjuna sets out a thesis refuting production from self which is a non-affirming negative, Buddhapalita sets out an affirming negative, this being "the production of things is not the mere elimination of production from self."

Jedzun Chogyi Gyeltshen's *General Meaning* (page 222) continues:

> If that is accepted, it contradicts Arya Nagarjuna's explanation that the thesis establishing that things are not produced from self is a non-affirming negative.

In short, Bhavaviveka criticizes Buddhapalita's commentary, saying:

1. it does not present a correct reason and a correct example,
2. it does not eliminate the fallacies adduced by others,
3. it affords an opportunity for censure by other disputants.

Bhavaviveka says that Buddhapalita's explicit words are not correct because he literally says: "Things are not produced from self because their production would be purposeless and endless." Therefore, in order to give this statement sense, Bhavaviveka says that the explicitly stated reason must be reversed, whereby the syllogism becomes: "Things are not produced from self because their production is

purposeful and has an end." Then, since the explicitly stated reason has been reversed, the thesis must also be reversed because when the reason is reversed the thesis cannot remain as originally stated. Therefore, having made these changes, the statement becomes: "The production of things is not the mere elimination of production from self because their production is purposeful and has an end; therefore, things are produced from other." When the thesis is changed to "The production of things is not the mere elimination of production from self," the thesis is no longer a non-affirming negative but is an affirming negative in that it suggests another phenomenon, [production from other]. The definition of an affirming negative is: that which, upon eliminating the object of negation by an awareness, suggests or establishes another phenomenon.

In conclusion, Bhavaviveka says that Buddhapalita contradicts Nagarjuna's tenets because Nagarjuna says that the thesis in negating production from the four extremes must be a non-affirming negative whereas Buddhapalita sets forth an affirming negative.

This discussion of Bhavaviveka's criticism of Buddhapalita's commentary comes in the context of the reasoning refuting production from self that is opposite of the consequences. In order to explain this section, Jedzun Chogyi Gyeltshen received a vision of Dharmaraja [Kalarupa]. Now comes the section explaining how Bhavaviveka's criticism does not apply to Buddhapalita.

Wednesday afternoon, 10 May 2000

To review: in the context of the discussion of the Opposite of the Consequences, the commentary by Buddhapalita is divided into two: (1) a brief presentation and (2) an extensive explanation. Buddhapalita's brief presentation is:

> Things are not produced from self because their production would be purposeless and because there would be an extremely absurd consequence.

Buddhapalita's extensive explanation is:

> The production again of things [already] existing in their own entities is purposeless. If though existent, they are produced, they would never not be produced.

Bhavaviveka does not understand that the term 'again,' which is explicitly stated in the extensive explanation, is also implied in the brief presentation (i.e., "because their production *again*") and therefore criticizes Buddhapalita. Bhavaviveka says that the reason "because their production would be purposeless and because there would be an extremely absurd consequence" is not related to the thesis, "Things are not produced from self," nor is it established. He says that because the reason is not related to the thesis it has to be reversed. When the subject and predicate, i.e., the thesis, remain the same but the reason is reversed, it becomes: "Things are not produced from self because their production is purposeful and has an end." However, when the reason is reversed, the thesis cannot remain the same but must also be reversed. The mere opposite of the thesis "things are not produced from self" would be "things are produced from self" but this is not correct, therefore, the opposite of the thesis is: "The production of things is not the mere elimination of production from self." Thus, when the thesis is reversed it becomes an affirming negative because it suggests that things are produced from other, this being the production that is not the mere elimination of production from self. Due to this, Bhavaviveka then says that Buddhapalita contradicts the tenets of Nagarjuna because according to Nagarjuna the thesis for refuting production from self must be a non-affirming negative, whereas Buddhapalita sets out an affirming negative. According to Bhavaviveka, production is delimited to either production from self or production from other (see Hopkins, *Meditation on Emptiness*, page 461). Therefore, since there is no production from self there is production from other. Thus, in Bhavaviveka's *Lamp for [Nagarjuna's] 'Wisdom'* it says that it appears that Buddhapalita accepts production from other. This is a brief presentation of Bhavaviveka's criticism of Buddhapalita.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 241) says:

C How Buddhapalita does not incur those fallacies

[Chandrakirti's] *Clear Words* (Hopkins, *Meditation on Emptiness*, page 474) says:

> I view all of these fallacies as not being reasonable. How? His saying "because [Buddhapalita] did not express a reason [capable of proving that there is no production from self] as well as an example" is not reasonable. Why? [Buddhapalita] is inquiring in the following way of an opponent who asserts production from self:
>
> > You [Samkhyas] propound that "from self" [means] that the existence [of things that involve production acts] as a cause and that just it, [i.e., the existent], is produced. However, we do not see that there is purpose in the production again of the existent, and we also see that [such production] would be endless. However, you [Samkhyas] do not assert that the already produced is produced again and also do not assert that [the production of a thing] is endless. Therefore, your debate, [that is to say, your position of production from self,] is devoid of correctness and contradicts your own assertions.
>
> When [Buddhapalita] debates through just these [consequences] which have the effects [derived] from stating a reason and example, would the opponent not accept it? However, if the opponent is not overcome even through debate by way of contradicting his own assertions, then due to [his] shamelessness he also just would not be overcome by [stating] reasons and examples. We [Prasangikas] do not debate with the crazily stubborn. Therefore, when the master [Bhavaviveka] sets out inferences at inappropriate times, he is manifesting just his own liking for inference.

Chandrakirti says that the fallacies expressed by Bhavaviveka do not exist in the commentary by Buddhapalita. He asks Bhavaviveka: "When you say that reasons and examples are not established in this commentary does it mean that autonomous reasons and examples are not established or do you mean that reasons and examples renowned to others are not established?" Chandrakirti says that Buddhapalita's commentarial speech does not establish autonomous reasons but merely eliminates the others' position, that of the Samkhyas, by revealing inner contradictions. In other words, Buddhapalita eliminates the Samkhyas' position by means of consequences that establish contradictions in their assertion of production from self. In dependence on the consequences set forth by Buddhapalita, a Samkhya is able to generate an inferential cognizer.

Buddhapalita demonstrated the inner contradictions in production from self with two consequences (see Hopkins, *Meditation on Emptiness*, page 470). The first consequence is:

> A sprout, as the subject, it follows that its production again is purposeless because of already existing in its own entity.

[If it is answered that the consequence is not entailed by the reason], the second consequence is:

> A sprout, as the subject, it follows that its production is endless because though it already exists in its own entity, there is a need for its re-production.

Chandrakirti says: "However, if the opponent is not overcome even through debate by way of contradicting his own assertions, then due to [his] shamelessness he also just would not be overcome by [stating] reasons and examples." This means that if the Samkhyas' own assertions are shown to be contradictory and they perceive these contradictions yet they persist in their error, they are crazy. The Prasangika Madhyamikas do not debate with such crazy people.

In short, Chandrakirti says that Buddhapalita's commentarial speech does not have these fallacies in that, [although it does not set forth autonomous reasons and examples,] it sets forth reasons and examples renowned to the other, the Samkhyas. For example:

> A non-apparent sprout, as the subject, it follows that it is not produced from self because its own entity has already been attained; for example, like an apparent sprout.

'Apparent,' or manifest, refers to a thing that is visible to the eye sense consciousness, for example, the green sprout growing in a field. The Samkhyas do not assert that an apparent sprout is produced from self. However, they do assert that a non-apparent sprout is produced from self. The above consequence demonstrates inner contradictions in the Samkhyas' assertions in that they assert both a sprout that is produced from self and a sprout that is not produced from self, both of which are established in their own entities.

In the consequence above there is a reason, or sign, and an example, therefore Chandrakirti says that there is no fallacy with respect to there not being a reason and an example. The conclusion is that Buddhapalita's commentarial speech does not have the fallacy of not stating a reason and example *renowned to the other*, the Samkhyas.

The second consequence set out by Buddhapalita is:

> A sprout, as the subject, it follows that its production is endless because though it already exists in its own entity, there is a need for its re-production.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 242) says:

> The meaning of that it [as follows]. It is not appropriate for Bhavaviveka to criticize Buddhapalita's commentarial speech in terms of his not stating a reason and example, either saying "because he does not state an autonomous reason and example" or because he does not state a correct reason and example renowned to the other. Regarding the first case, there is no fault of Buddhapalita's commentarial speech not stating an autonomous reason and example because, although it does not state an autonomous reason and example, through eliminating the Samkhyas' wrong conception asserting the existence of production from self in dependence on contradictory consequences, they are able to generate an inferential cognizer in their continua realizing the non-existence of production from self. [Thus,] it presents the two contradictory consequences that refute production from self.

Chandrakirti says that although Buddhapalita's commentarial speech does not state an autonomous reason and example, it is able to generate an inferential cognizer realizing the non-existence of production from self through presenting the two types of contradictory consequences refuting production from self. In short, according to the Prasangika Madhyamika system one can generate an inferential cognizer in dependence on a mere consequence. In fact, they are called 'Consequentialists' (Prasangikas) because they hold that an opponent can generate an inferential cognizer realizing a thesis in dependence on a mere consequence.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 242) says:

> OBJECTION: In dependence on a contradictory consequence, it is not possible to generate an inferential cognizer realizing that there is no production from self. In order to generate such an inferential cognizer it is necessary to definitely set out an autonomous reason.

The 'Autonomists' (Svatantrikas) are so-called because they assert that an opponent necessarily generates an inferential cognizer realizing the thesis in dependence on an autonomous reason possessing all three modes.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 242-3) says:

ANSWER: Well then, if the wrong conception asserting production from self is not overturned in dependence on a contradictory consequence, even by setting out an autonomous reason it will not be averted. If those who assert production from self, although seeing the inner contradictions in their assertions, do not avoid the wrong conception asserting production from self, the Madhyamikas do not debate with such opponents. Therefore, *Clear Words* says:

> We do not debate with the crazily stubborn.

Furthermore, that commentarial speech does not have the fallacy of not stating an autonomous correct reason and example because if one is a Madhyamika there is pervasion that it is not suitable to assert autonomous reasons. This is because if one is a Madhyamika, there is pervasion that it is not suitable to assert phenomena established by way of their own character. *Clear Words* says:

> If one is a Madhyamika it is also not suitable to make autonomous syllogisms because of not asserting other positions.

'Other position' refers to asserting true existence.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 243) continues:

> Therefore, if one is a Madhyamika, although there is pervasion that it is not suitable to assert autonomous reasons, there is no contradiction that there are Madhyamikas who assert them; for example, if one is a fully ordained monk possessing precepts, although there is pervasion that it is not suitable to transgress the Buddha's precepts, there are fully ordained monks possessing precepts who have transgressed them.

It is not suitable for a fully ordained monk with the 253 vows to break his vows, yet there are fully ordained monks who do break them.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 243) says:

> Regarding the second case, there is no fallacy in Buddhapalita's commentarial speech not stating a correct reason renowned to the other, [the Samkhyas]. This is because in general, in order to generate an inferential cognizer realizing the non-existence of production from self, it is not necessary to explicitly set out a reason renowned to the other (an other-approved reason). But even if it were necessary, the commentarial speech does not have the fallacy of not presenting a reason renowned to the other because it is purposeless for things that [already] exist in their own entity to be produced again. Therefore, the commentarial speech that is the extensive explanation which says this does present a correct reason renowned to the other.

General Meaning (page 225) describes Jedzun Chogyi Gyeltshen's vision of Dharmaraja, which he had while composing this section on the Opposites of the Consequences.

Thursday morning, 11 May 2000

Jedzun Chogyi Gyeltshen's *General Meaning* (page 244) says:

> Well then, how does [the commentarial speech] present a reason renowned to the other? The way it does so [is as follows]. The brief presentation is:
>
> > Things are not produced from self because their production would be purposeless and because there would be an extremely absurd consequence.

The extensive explanation is:

> Things existing in their own entities do not need to be produced again. If though existing they are produced, they would never not be produced.

Furthermore, the statement in the brief presentation, "Things are not produced from self," is explained in the extensive explanation, saying "Things existing in their own entities." The statement "because [their] production would be purposeless" is explained in the extensive explanation, saying "[they] do not need to be produced again." The statement "because there would be an extremely absurd consequence" is explained in the extensive explanation, saying "If though existing they are produced, they would never not be produced."

Here, Jedzun Chogyi Gyeltshen shows how the brief presentation and extensive explanation are related.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 244) says:

> [The word] "things" in the brief presentation presents the subject, which is that things are not produced from self, whereas [the word] "their" presents the reason and concordant example. This is because in the extensive explanation [the phrase] "Things existing in their own entities" presents the three, the subject, reason, and concordant example, which establish that things are not produced from self, this passage being the extensive explanation of "their production" and so forth. The way in which this passage in the extensive explanation presents the three is:
>
> - [the word] "things" of "things existing in their own entities" presents the subject that is the basis of the debate;
> - "existing in their own entities" presents the reason; and
> - the pluralizing particle (*rnams*) presents the concordant example.

Within the extensive explanation "things existing in their own entities" presents (1) the subject which is the basis of debate, (2) the reason, and (3) the concordant example. "Things" presents the subject that is the basis of dispute; "existing in their own entities" presents the reason; and the pluralizing particle presents the concordant example. A consequence presenting the three, subject, reason, and concordant example, is:

> A non-apparent sprout, as the subject, it follows that it is not produced from self because its own entity has already been attained; for example, like an apparent sprout.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 245) continues:

> The pluralizing particle presents the concordant example because when explaining the meaning of "existing in their own entities" *Clear Words* (Hopkins, *Meditation on Emptiness*, page 484) says:
>
> > In [Buddhapalita's longer statement], "already existing in their own entities" bears the reason.
>
> In terms of bearing the reason, it is necessary to explain it through eliminating [the word] "thing" and the pluralizing particle. *Clear Words* says:
>
> > The passage which was just explained..
>
> In addition, *Clear Words* (Hopkins, *Meditation on Emptiness*, page 484) says:
>
> > [In the shorter statement itself] "because production would be just senseless" holds the predicate of the probandum [once it is changed to "production again is senseless" in accordance with the longer statement].

In:

> A sound is an impermanent thing because products are [necessarily] impermanent things. It is seen that products are impermanent things, as in the case, for example, of a pot. Likewise a sound is also a product. Therefore, because of being a product, [a sound] is an impermanent thing.

product which is manifested, due to its connection [with the predicate of the probandum], is the reason.

In short: sound is impermanent because of being a product, for example, like a pot.

Jedzun Chogyi Gyeltshen's *General Meaning* (Hopkins, *Meditation on Emptiness*, page 484) continues:

Just so, here also [the syllogism] is:

> Things (such as a non-manifest pot and so forth) are not produced from self because the production again of what already exist in their own entities is just senseless. Just as it is seen that pots and so forth which already abide in front [of oneself] and which already exist in their own manifest entities do not rely on being produced again...

The Samkhyas assert that an apparent, or manifest, pot abiding in front of oneself is not produced from self.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 245) says:

> Shang-tang-sag-pa says: The statement presenting a pervasion presents a concordant example because a statement presenting a concordant example is included in a statement that presents a pervasion.

Shang-tang-sag-pa says that a statement presenting pervasion presents a concordant example. Shang-tang-sag-pa was from Gomo Tulku's monastery, Pemba Ganden Chö Kor, in Tibet.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 245) says:

> Matishila says: The commentarial speech demonstrates a concordant example in the perspective of a Samkhya's mind because it is explained in the Samkhyas' scriptures that the phrases that demonstrate a pervasion which are limited to five members – "sound is impermanent because product is impermanent" – present a concordant example because the Samkhyas' scriptures explain:
>
> The non-existence of a reason, thesis,
> Forward [and counter pervasion] is not stated.
> The fifth states an example.
> Through connecting the reason...

The Samkhyas set out a syllogism having five members that will be explained later on (see Hopkins, *Meditation on Emptiness*, page 729). The five members are:
(1) thesis,
(2) pervasion,
(3) example,
(4) exemplification (Likewise, a sound is also a product), and

(5) summary (Therefore, because of being a product, [a sound] is an impermanent thing). Such a syllogism possessing the five members is a correct statement of proof. An example of a correct statement of proof is:

> Whatever is a product is pervaded by being impermanent, for example, a pot. Likewise, a sound is also a product.

This is how the five are presented in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*. However, according to Dharmakirti a correct statement of proof has only two members (see Hopkins, *Meditation on Emptiness*, page 730):

1. the expression of pervasion and
2. the expression of the presence of the reason in the subject.

Dharmakirti's definition of a correct statement of proof is: a correct statement possessing two members presenting the three modes without remainder. An example of a correct statement of proof is:

> Whatever exists in its own entity is pervaded by not being produced from self; for example, an apparent sprout. A non-apparent sprout also exists in its own entity.

Within this correct statement of proof there are the two members:
(1) pervasion –
This is presented by "Whatever exists in its own entity is pervaded by not being produced from self."
Through this, the forward pervasion is presented, whereby the counter pervasion is also presented.
(2) property of the subject –
This is presented by "A non-apparent sprout also exists in its own entity."
In this the way the three modes are presented without anything missing.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 246) continues:

> That is unsuitable because when explaining a concordant example of our own system, it is inappropriate to quote what is made known in a scripture of the Samkhyas. If by stating "things are not produced from self" and so forth, Buddhapalita presents a reason renowned to the other, how is it presented? [It is presented by] a syllogism of example and a syllogism of meaning.
>
> The first, [the syllogism of] example, is:
>
> > Sound is impermanent because if it is a product it is pervaded by being impermanent. If it is a product it is pervaded by being impermanent, for example, a pot. Just as a pot is a product, likewise, sound is a product. Therefore, because sound is a product, sound is impermanent.

All five members of a correct statement of proof are present in this syllogism of example because:

1. The thesis is presented by: "sound is impermanent"
2. The pervasion is presented by: "because if it is a product it is pervaded by being impermanent"
3. The concordant example is presented by: "if it is a product it is pervaded by being impermanent, for example, a pot."
4. The exemplification is presented by: "Just as a pot is a product, likewise, sound is a product."
5. The summary is presented by: "Therefore, because sound is a product, sound is impermanent."

Jedzun Chogyi Gyeltshen's *General Meaning* (page 246) says:

> The second, the syllogism of meaning possessing the five members, is:
>
> > Things being produced again is purposeless because if they have already attained their own entity, their production again is pervaded by being purposeless. There is pervasion because – for example, a sprout which is

> already clearly apparent – just as an already clearly apparent sprout has already attained its own entity, likewise, things have attained their own entities. Therefore, because things have already attained their own entities, things being produced again is purposeless.

The five members are:

1. "Things being produced again is purposeless" presents the thesis,

2. "because if they have already attained their own entity their production again is pervaded by being purposeless" presents the pervasion,

3. "There is pervasion because – for example, a sprout which is already clearly apparent" presents the example through connecting the pervasion and the example,

4. "just as an already clearly apparent sprout has already attained its own entity, likewise, things have attained their own entities" presents the exemplification,

5. "therefore, because things have already attained their own entities, things being produced again is purposeless" presents the summary.

When condensed [it is as follows]:

> Things, as the subject, there is no purpose in them being produced again because they have already attained their own entities; for example, a sprout which is already clearly apparent.

Moreover, *Clear Words* (Hopkins, *Meditation on Emptiness*, page 483) says:

> [Bhavaviveka] might say, "Nevertheless, [the fault of] contradicting one's own inference (that is to say, an inference acceptable to a Samkhya) must, without question, be expressed."
>
> [ANSWER:] The master Buddhapalita also just expressed such. How? For he said, "Things are not produced from self because their production [again] would be just senseless." In that, the [word] 'their' [in the reason clause] holds (or indicates) "those which already exist in their own entities." Why? This is because [Buddhapalita's subsequent statement] "The production again of things already existing in their own entities is purposeless," is [his] commentary on that abbreviated statement [and we must, therefore, carry it over to the shorter statement]. Also, this [longer] statement ("those which already exist in their own entities") bears a concordant example ("a manifest pot") renowned to the other [party, the Samkhya,] which possesses the qualities of [the predicate] of the probandum ("senseless production again") and the proof ("already existing in its own entity").

Chandrakirti says that the fallacies expressed by Bhavaviveka are not incurred by Buddhapalita. One such fallacy is that Buddhapalita's commentarial speech does not eliminate the fallacies adduced to the Samkhyas. However, Chandrakirti says that even though Buddhapalita does not set out an autonomous reason, his consequences eliminate such fallacies. In other words, when Buddhapalita sets forth his consequence in which the reason and example are known to the other, the Samkhyas,

they cannot question it because Buddhapalita takes a non-apparent sprout as the subject and an apparent sprout as an example and thereby refutes the Samkhyas' position. In other words, when the consequence refuting production from self is flung at them, the Samkhyas cannot ask Buddhapalita whether he is referring to an apparent sprout or a non-apparent sprout because he sets these two out separately in that he takes a non-apparent sprout as the subject and an apparent sprout as the example. Therefore, Chandrakirti says that there is no fallacy in Buddhapalita's statement of not eliminating the fallacies adduced to the other.

Thursday afternoon, 11 May 2000

Here we will leap over an objection and continue the text a little further on. Jedzun Chogyi Gyeltshen's *General Meaning* (page 248) says:

> The second fallacy, [that of not eliminating the fallacies adduced by the other party, the Samkhyas]:
> Regarding the thesis, in terms of not eliminating the thesis adduced by the other [party, the Samkhyas,] Buddhapalita does not have this fallacy because, due to his not asserting an autonomous reason refuting production from self, it is not necessary to eliminate the fallacies adduced by the other [party, the Samkhya.] This is because in regard to a correct reason renowned to the other, which was explained above, the fallacies adduced by the other [party, the Samkhya,] are not incurred. This is because he takes the sprout which is asserted by the Samkhyas to exist in a non-apparent manner at the time of its cause as the subject and the sprout which is already clearly apparent as the concordant example. *Clear Words* (Hopkins, *Meditation on Emptiness*, page 485) says:
>
> > Not only is it just not that a reason and example were not expressed, but also it is not that the fallacies adduced by the other [party, the Samkhya] were not avoided. How? For, the Samkhyas do not assert that a pot dwelling in front [of oneself] which has a manifest form manifests again, and [thus] here it is an entity established as an example [of something which already exists in its own entity and is not produced again]. Since the probandum is:
> >
> > > those which are potential entities and do not have a manifested nature, predicated with a negation of production,
> >
> > how could [the Samkhyas] have the qualm that [Buddhapalita's syllogism has] the fault of a position (thesis) that is proving what is already established [for them] or has the sense of a contradictory reason [proving for them not that things are not produced from self but that they are]?
> >
> > Therefore, even if [Buddhapalita] did express contradiction [of the Samkhya view] through self-[renowned] inference (that is, a syllogistic statement approved by the Samkhyas), they would not set forth the fallacies that [Bhavaviveka] mentioned. Hence, it is just not that [Buddhapalita] did not avoid fallacies adduced by the other [party since they would not adduce them]. For these reasons, it should be known that these [two] objections [to Buddhapalita's remarks by Bhavaviveka] are just senseless.

Chandrakirti says that Buddhapalita does not have the fallacy of not eliminating the fallacies adduced by the other party because Buddhapalita does not set forth an autonomous reason and the reason that

was stated before does not have such faults. Bhavaviveka's objections are senseless because Buddhapalita takes a result that is non-apparent at the time of its cause as the subject that is the basis of debate and an apparent result as the concordant example, whereby there is no reason for the Samkhyas to question Buddhapalita as to which type of result he is referring to. The Samkhyas accept that an apparent result does not need to be produced again. In other words, an apparent result is not produced from self. On the other hand, the Samkhyas say that a non-apparent result is produced from self. Our own system refutes this, saying that a non-apparent result does not need to be produced again since it is already existent. In this way, our own system negates production from self.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 249) says:

> The third fallacy, [that of affording an opportunity for censure, i.e., that since it is necessary for Buddhapalita to assert the opposite of his thesis and reason, he contradicts the Madhyamika tenet that the refutation of the four extreme types of production is a non-affirming negative]:
> In terms of asserting the opposite meaning, Buddhapalita does not have a fault. The way that the fault is not incurred in the commentary by Buddhapalita is presented in *Clear Words* (Hopkins, *Meditation on Emptiness*, page 492) saying:
>
> > The opposite meaning of the consequences [– that things are produced sensibly and not endlessly –] is related only with the other [party, the Samkhya], not with us because we do not have [such] a thesis. Therefore, how would we be contradicting the [Madhyamika] tenet [that the refutation of production is a non-affirming negative]?

Bhavaviveka says that Buddhapalita asserts the opposite meaning of the consequences. This would mean that Buddhapalita asserts the opposite reason; i.e., instead of asserting "because their production would be purposeless and endless," he asserts "because their production is purposeful and has an end." In other words, Bhavaviveka interprets Buddhapalita as saying: "Things are not produced from self because their production is purposeful and has an end." Then, having reversed the reason, the thesis must also be reversed because, having reversed the reason, the predicate cannot remain the same. In short, Bhavaviveka says that the thesis "things are not produced from self" must be changed to "the production of things is not a mere elimination of production from self." The reason remains: "because their production is purposeful and has an end." Bhavaviveka says that therefore Buddhapalita indirectly suggests a thesis which is an affirming negative, and that this contradicts Nagarjuna's tenets that all theses in the context of refuting production from self should be non-affirming negatives.

Chandrakirti then says Buddhapalita does not have any such fault because the opposite meaning is related only to the opponent, the Samkhyas, and is not Buddhapalita's thesis; therefore, Buddhapalita does not contradict Nagarjuna's tenets.

This concludes the discussion of the way in which Buddhapalita does not incur the fallacies indicated by Bhavaviveka.

Since Bhavaviveka criticized Buddhapalita when he was still alive, why did Buddhapalita not respond? One way of explaining this is to say that it is because Buddhapalita was a commoner while Bhavaviveka was born in the royal family. Bhavaviveka criticized Buddhapalita as if he too were a Svatantrika Madhyamika. On the other hand, if Bhavaviveka had known that Buddhapalita was a Prasangika Madhyamika, he would not have understood how to debate with him.

Chandrakirti is said to be the opener of the chariot track of the Prasangika Madhyamika system in that prior to him, no one clarified the fact that a consequence is correct while an autonomous reason is not. Some say that Chandrakirti was Buddhapalita's incarnation. In that case, it

can be asked how Chandrakirti and Buddhapalita could have both been disciples of Nagarjuna? However, it is possible because Nagarjuna is said to have lived for six hundred years.

Chandrakirti then points out that Bhavaviveka's commentary on the refutation of production from self has the very fallacies he accuses Buddhapalita of having. This is the next topic.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 249) says:

COMMONLY APPEARING SUBJECTS

D Indicating the manner in which the fallacies are incurred by Bhavaviveka himself in his commentary on the refutation of production from self

Buddhapalita's commentarial speech refuting production from self does not have any fallacies, whereas Bhavaviveka's own commentarial speech refuting production from self has faults because it is not correct to apply the qualification 'ultimately' saying:

> Ultimately the inner spheres are not produced from self because of existing, like an existent consciousness.

Applying the qualification 'ultimately' to the thesis is also not correct because applying it to the subject is not correct.

Applying the qualification 'ultimately' to the subject is to say:

Ultimately the inner spheres, as the subject, are not produced from self because of existing, like existent consciousness.

Applying the qualification 'ultimately' to the thesis is to say:

The inner spheres, are not *ultimately* produced from self because of existing, like existent consciousness.

In both cases the application of the qualification 'ultimately' is incorrect. In short, Chandrakirti says to Bhavaviveka that applying the qualification 'ultimately' to the subject or to the predicate is incorrect.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 250) says:

Clear Words (Hopkins, *Meditation on Emptiness*, page 500) says:

> Furthermore, the logician, [Bhavaviveka], while wishing merely to demonstrate that he has great skill in treatises of logic, expresses autonomous syllogisms which are realized to be the locus of collections of a great many fallacies, despite his asserting the Madhyamika view. How? Respectively, here he states this syllogism:
>
> > Ultimately the internal sources are not produced from self because of existing, like existent consciousness.

In short, Chandrakirti says that Bhavaviveka is showing off his knowledge in setting out a syllogism based on the Samkhyas' assertion:

The inner spheres, as the subject, are not produced from self because of existing, like existent consciousness.

The "inner spheres" or "internal sources" are the twenty-three objects of knowledge, such as the eleven powers, asserted by the Samkhyas. Bhavaviveka takes these as a subject because the Samkhyas accept that these twenty-three as produced from self, whereas they assert the [first, the general principal,] and the twenty-fifth, the being, to not be produced from self. The word 'existing' in "Because of existing" refers to the general principal, it being like existent consciousness. In this way, Bhavaviveka shows that he knows the Samkhya scriptures very well. Bhavaviveka is a Svatantrika Madhyamika, but to prove his point quotes from these non-Buddhist scriptures. Chandrakirti says

that when Bhavaviveka presents such autonomous syllogisms, it brings many faults. This is because when such a syllogism is made there is no subject that commonly appears to both himself, Bhavaviveka, and the Samkhyas. In general, in order to debate, one needs to have a commonly appearing subject. This topic of commonly appearing subjects can be discussed at length.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 250) says:

The meaning is [as follows]. Bhavaviveka says:

> The inner spheres, such as the eye, are not ultimately produced from self because of existing; for example, like a possessor of mind. When refuting production from self, the qualification 'ultimately' is definitely to be applied.

That is not correct because either the qualification 'ultimately' is applied to the thesis or the qualification 'ultimately' is applied to the subject. If it is the first case, applying it in that way is not correct because applying [the qualification 'ultimately' to the thesis] is purposeless for the first opponent, a Madhyamika, and is also purposeless for the second opponent, the Samkhya. The first is established because it is suitable for a Madhyamika to refute production from self even conventionally. The second is established because it is suitable for the Forder system, which has degenerated from both truths, to refute both truths. Moreover, *Clear Words* (Hopkins, *Meditation on Emptiness*, page 502) says:

> Why is the qualification 'ultimately' put in this [syllogism]?
>
> [Hypothetical answer by Bhavaviveka: It is affixed to the predicate] because production which is asserted in accordance with worldly conventions is not to be refuted and because if it were refuted [conventionally], it would follow that one would be damaged by [one's own] assertion [of conventionally existent production].
>
> RESPONSE: This is not suitable because [a Madhyamika] does not assert production from self even conventionally. [The *Rice Seedling*] *Sutra* says:
>
> > Also, when a sprout arising from its cause – a seed – is produced, it is not created by self, not created by [naturally existent] others, not created by both, not created by Ishvara, and not metamorphosed by time. It does not arise from particles, does not arise from the nature, does not arise from its own entity, and is not produced causelessly.

Chandrakirti says that it is not correct to apply the qualification 'ultimately' to the thesis because then it appears that production from self exists conventionally. In other words, applying the qualification 'ultimately' to the thesis (for example, "The inner spheres, such as the eye, are not ultimately produced from self") is incorrect for the Madhyamikas because they refute production from self even conventionally. Applying the qualification 'ultimately' is also senseless in relation to the Samkhyas because there is value in refuting the Samkhyas, who have fallen from the two truths, both ultimately and conventionally. They are said to have fallen from the two truths in that they do not know how to posit the presentation of the two truths.

The *Rice Seedling Sutra* says that a sprout is not created by self, not created by others, not created by both, not created by Ishvara, not metamorphosed by time, not arisen from particles, does not arise from the nature, does not arise from its own entity, and is not produced causelessly. In this way, the *Rice Seedling Sutra* refutes the assertion of opponents who variously assert that a sprout is (1) created by self, (2) created by naturally existent others, (3) created by both, (4) created by Ishvara, (5)

metamorphosed by time, (6) arisen from particles, (7) arisen from the nature, (8) arisen from its own entity, and (9) produced causelessly. Thus, there are nine different assertions regarding production, all of which are wrong.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 251) (Hopkins, *Meditation on Emptiness*, page 502) says:

> Similarly, [the *Extensive Sport Sutra*] says:
>
> If a seed exists, the sprout does also.
> The sprout is not what the seed is.
> It is not [inherently established] as other than it or just it.
> Hence, the nature of phenomena is not permanent and not annihilatory.

This means that if the seed exists, so does the sprout. "The sprout is not what the seed is" means that the sprout is not the seed. "It is not other than it or just it" means it is not inherently established as other than it or just it. The nature of phenomena, reality, is free from the two extremes of permanence and annihilation. It is free from permanence because it is not inherently or truly existent and it is free from annihilation because it exists conventionally.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 251) (Hopkins, *Meditation on Emptiness*, page 502) says:

> Also, this very [text, Nagarjuna's *Treatise on the Middle Way*] says:
>
> Whatever arises dependently is respectively
> Not just that and is not
> Also other than that. Hence, it is
> Not annihilatory or permanent.

Since such-and-such arises in dependence on such-and-such, it is not inherently existent. Reality is neither annihilatory nor permanent.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 251) (Hopkins, *Meditation on Emptiness*, page 502) says:

> [Hypothetical response by Bhavaviveka:] The qualification is made relative to the others' (that is, the Samkhyas') system.
>
> ANSWER: That also is not suitable because their presentations are not asserted [by Madhyamikas] even conventionally. It is to be realized that it is advantageous to refute in both ways (that is, conventionally and ultimately) the Forders who have fallen from non-erroneous perception of the two truths. Thus, to express the qualification relative to the others' system is also not suitable.

It is also best not to apply the qualification 'ultimately' in relation to the Samkhyas because they have fallen from non-erroneous perception of the two truths.

Therefore, it is senseless to apply the qualification 'ultimately' to the thesis in the cases of both the Madhyamikas and Samkhyas. Next comes a discussion as to why it is senseless to apply the qualification 'ultimately' to the subject.

Friday morning, 12 May 2000

Jedzun Chogyi Gyeltshen's *General Meaning* (page 251) says:

In the second case above (the application of the qualification 'ultimately' to the subject), someone says:

> Stating "Ultimately the inner spheres, such as the eyes, as the subject" is to apply the qualification 'ultimately' to the subject.

RESPONSE: That too is not suitable because there is the fault that that subject is not established with respect to the first opponent, the Madhyamikas. *Clear Words* (Hopkins, *Meditation on Emptiness*, page 504) says:

> ANSWER: Then, you would have a fallacious position (thesis) in which the base (subject) is not established and a fallacious reason in which the base (subject) is not established since you do not assert sources – eyes and so forth – ultimately.

Chandrakirti says that if Bhavaviveka applies the qualification 'ultimately' to the subject there is also a fault because for a Madhyamika there is the fault that this subject is not established because for them "Ultimately [existent] inner spheres, such as the eyes," do not exist. Because they do not exist, the reason cannot be established. If the reason is not established, the property of the subject cannot be established. Chandrakirti says that Bhavaviveka has the fault of the subject not being established because he takes ultimate inner spheres and so forth as a subject, although they do not exist for his school.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 251) says:

> Also taking eyes and so forth which are mere conventionalities as the subject is not suitable because there would be the fault that the subject is not established with respect to the second opponent, the Samkhyas. *Clear Words* says:
>
> > Since there would be the fallacious position of the basis not being established for the other, [party, the Samkhya,] it is not suitable.

The Samkhyas do not assert eyes and so forth that are mere conventionalities. Thus, if the following syllogism is made:

> The eyes and so forth, which are mere conventionalities, as the subject, are not produced from self because of existing,

is set forth for the opponents, the Samkhyas, they would say that the reason is not established.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 252) says:

> When Bhavaviveka states:
>
> > The inner spheres, the eyes and so forth, as the subject, are not ultimately produced from self because of existing, like a possessor of mind,
>
> the mere eyes and so forth that are established to commonly appear to both the first and second opponents, [the Madhyamikas and Samkhyas,] without being qualified by either of the two, truth or falsity, are suitable to be taken as the subject because, for example, when the lower Buddhists prove sound is impermanent in the perspective of the Vaisheshikas, they take mere sound that is established to commonly appear to both the first and second opponents without being qualified by either permanence or impermanence as the subject.

When the lower Buddhist schools prove that sound is impermanent to the Vaisheshikas, who assert that sound is permanent, they do so by taking mere sound as the subject without qualifying it by saying 'permanent sound' or 'impermanent sound.'

Jedzun Chogyi Gyeltshen's *General Meaning* (page 252) says:

Moreover, *Clear Words* (Hopkins, *Meditation on Emptiness*, page 507) says:

> [Hypothetical response by Bhavaviveka: For example,] in [the proof] that sound is an impermanent thing, just generalities are to be taken as the subject and the predicate, not specified [with the particular tenets of the debaters]. If specifics were used, the conventions of inference, [that is, inferring consciousness,] and object inferred would be non-existent. For, if [as the subject] one used 'sound which is derived from the elements', it would not be established for the other party [the Vaisheshika]. However, if one used 'sound which is a quality of space', it would not be established for oneself, the Buddhist.
>
> Similarly, even when a Vaisheshika posits the thesis that sound is an impermanent thing, if [as the subject] he used 'sound which is a product', it would not be established for the other [party, the Jaina]. However, if [the subject were specified as 'sound] manifested [by conditions]' it would not be established for himself.
>
> Similarly, [in the case of the non-apparent] if the predicate is taken as "has a cause" it would not be established for the Buddhist himself. However, if [it were specified as] causeless, it would not be established for the other party (a Samkhya). Therefore, just as here [in these examples] mere generalities are to be used as the subject and the predicate, so here also [in the refutation of production from self] a mere subject devoid of qualification is to be used.

When a Buddhist tenet-holder debates with the Vaisheshikas in order to prove that sound is impermanent, he should not take specific types of sound as the subject, such as "sound derived from the four great elements" or "sound which is a quality of space," but should take sound in general as the subject. This is because, for example, if he takes "sound derived from the four great elements" as the subject it is not established for the Vaisheshikas. On the other hand, if he takes "sound which is a quality of space" as the subject it is not established for the Buddhist himself. Therefore, mere sound without any qualifications should be taken as the subject. This is an example that indicates that a Madhyamika such as Bhavaviveka should not qualify the subject "eye" by saying "ultimate eye" or "the eye which is a mere conventionality," but should take the mere generality of the eye as the subject because in the first case, "ultimate eye," it is not established for the Madhyamikas and in the second case, "the eye which is a mere conventionality," it is not established for the Samkhyas.

Here the discussion concerns the need for a commonly appearing subject. With respect to this, one needs to understand the presentation of objects according to the different schools. As was mentioned previously, the Samkhyas assert that all object of knowledge are enumerated in twenty-five categories. The Vaisheshikas, on the other hand, assert that all objects of knowledge are included among six categories of existents (see Sopa, *Cutting Through Appearances*, page 156):

1. substance,
2. quality,
3. activity,
4. generality,
5. particularity, and
6. inherence.

According to the Vaisheshikas, a generality is a common cause of designating terms and engaging an awareness in a similar way with regard to a class of phenomena. A generality is of two types: the all-pervasive and a single restricted basis. The all-pervasive is called "existence itself," whereas a single restricted basis refers to particular objects such as Jampa himself, Sherab himself, pot itself, and so forth. With respect to, for example, a pillar, the causes for designating the term 'pillar' are the all-pervasive and the pillar itself. Substance is further divided into nine types: earth, water, fire, wind, space, time, direction, self, and mind. Quality is of twenty-five types. The Vaisheshikas say that the substance is the basis of qualities; therefore, the qualities are the supported and the substance the support. This is related to the discussion of "sound which is a quality of space." The Vaisheshikas say that sound abides in the sphere of space and is a quality of space, which is permanent.

QUESTIONS AND ANSWERS

Student: Regarding the magician's illusion:

a) How much of the appearance of the horse and elephant comes from the side of the basis of conjuring? How much comes from the side of the mind?
b) What role does the mind play in establishing the existence of the horse and elephant? What is the role of the mind besides merely certifying the existence of the object?
c) What is the factor that comes from the side of the object?

Geshe Jampa Gyatso: The appearance of horse and elephant cannot come from the side of the basis of conjuring alone. It comes about due to various conditions: the magician's mantra, medicine, and his tricking of the eyes of the spectators. It was said before that if the basis of conjuring appears, horse and elephant definitely appear. That appearance of horse and elephant does not come from the side of the basis of conjuring, a pebble, alone because it is necessary for the pebble to have had mantras blown on it and so forth. Is the appearance of horse and elephant only from the side of the mind? It is not because the appearance comes about due to the pebble having been conjured by the magician's mantra. Therefore, there are various factors necessary for the appearance of horse and elephant: the magician's mantra, medicine, and the tricking of the eyes of the spectators. More specifically, the pebble from its own side does not appear as a horse and elephant. This is because if one's eyes have not been affected by the magician's mantra there is no appearance of horse and elephant on the place of the pebble. Therefore, the appearance of horse and elephant does not come from the pebble alone. The appearance of horse and elephant also does not come from the side of the mind alone because if the eyes have not been affected by the magician's mantra one does not have the appearance of horse and elephant. Therefore, the appearance of horse and elephant does not arise from the side of the basis of conjuring nor the side of the mind alone, but comes from affecting the pebble and affecting the mind.

Student: During the previous explanation it was said that the pebble and the basis of conjuring are different because when there is the pebble there is no pervasion that there is the appearance of horse and elephant, but when there is the basis of conjuring, there is pervasion that there is the appearance of horse and elephant.

Geshe Jampa Gyatso: That is correct.

Student: Which part of the magician's analogy illustrates the inherent quality that comes from the side of the object?

Geshe Jampa Gyatso: There are three factors in the analogy of the magician:

(1) appearance but not adherence,
(2) both appearance and adherence, and
(3) neither appearance nor adherence.

These are represented by respectively:
(1) the magician himself, who has the appearance of horse and elephant but does not adhere to them as true;
(2) the spectators, who have the appearance of horse and elephant and adhere to them as true; and
(3) the latecomer, who has neither the appearance of horse and elephant nor the adherence to them as true.

- The magician is analogous to ordinary beings who have realized emptiness by way of a meaning generality, in that such ordinary beings have the appearance of true existence but do not adhere to phenomena as truly existent.
- The spectators are analogous to ordinary beings who do not have a realization of emptiness in that they have the appearance of true existence and adhere to phenomena as truly existent.
- The latecomer is analogous to superiors in meditative equipoise who are directly realizing emptiness in that they do not have the appearance of true existence and do not adhere to phenomena as truly existent.

Student: What, exactly, does the latecomer observe?
Geshe Jampa Gyatso: Only the pebble appears to him. The basis of conjuring does not appear to him because it is said that if the basis of conjuring appears to him it is pervaded by horse and elephant appearing. Therefore, there is a distinction made between "the pebble" and "the pebble which is the basis of conjuring." Thus, either the latecomer sees the pebble or he is merely bewildered by the whole magic show!

Student: The magician's illusion is taken by the Svatantrika Madhyamika system as an example of the absence of true existence, but if the Prasangika Madhyamika system were to make the same analogy for the absence of inherent existence what would change?
Geshe Jampa Gyatso: The Prasangika Madhyamika system uses a speckled, coiled rope as an example of the lack of inherent existence. They give the analogy of a speckled, coiled rope in a dim area which is mistakenly taken to be a snake. The Prasangika Madhyamika system also takes the magician's illusion as an analogy in Nagarjuna's *Refutation of Objections* in terms of a magically produced woman. There is a story about this. Once there was a young man who went with his father to a magic show. The magician created a beautiful young woman. Upon seeing her the son asked his father to arrange a marriage with her. The father said he could not do so because she was not real. However, the son insisted. Nagarjuna gives this analogy in his text in order to present the lack of inherent existence. We have the appearance of inherent existence and adhere to this appearance, to illustrate this Nagarjuna gives the example of the young man who falls in love with a magically created woman. From the side of the object there is no such beautiful woman, just as there is no horse and elephant in the other analogy. This is taken as an example of the lack of inherent existence in the Prasangika Madhyamika system.

Student: What is the meaning of inherent existence according to Svatantrika?
Geshe Jampa Gyatso: The meaning of inherent existence for the Svatantrika Madhyamikas is existence itself. For them, if it is existent it is pervaded by being inherently existent, being established by way of its own character, and being established by way of its own entity..

Student: What is the difference between conventional analysis and ultimate analysis according to Svatantrika?
Geshe Jampa Gyatso: According to the Svatantrika Madhyamika system, conventional analysis is analyzing whether an object exists from its own side or is established by way of its own character

using reasoning analyzing for the conventional. In general, conventional analysis also means to analyze whether sound is impermanent or permanent. Such analysis is conventional for this school.

Ultimate analysis is to analyze whether or not things exist ultimately; for example, to analyze whether a pot is established by way of its own uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness. Such an analysis is ultimate analysis. Ultimate analysis also includes analysis of the four types of production: production from self, production from other, production from both, and causeless production. One analyzes whether phenomena are produced ultimately from self, from other, from both, or causelessly. Ultimate analysis includes the five types of reasonings analyzing the reality of phenomena.

Student: Could Geshe-la please give some examples of production from self in our continuum?
Geshe Jampa Gyatso: Since there is no production from self, there are no examples of it! Production from self means production from the nature which is a partless unit. There is nothing in our continuum which arises from such a partless unit. However, in the case of gaining realizations, for example, one could say that they are produced from a self which is a person, but not from a self which is the nature. Also by thinking too much, for example, one comes to experience suffering, this too is produced from oneself! If by the self one means person, then there are some examples of production from self, but in the context of production from the four extremes, production from self does not exist.

Student: On which occasion on the various grounds is there meditation on the thirty-seven harmonies with enlightenment, the four noble truths, and the twelve links?
Geshe Jampa Gyatso: They can be meditated on at any time! When meditating on the four close placements of mindfulness, one engages the four noble truths. The close placement of mindfulness on the body engages true sufferings, the close placement of mindfulness on the feelings engages true origins, the close placement of mindfulness on the mind engages true cessations, and the close placement of mindfulness on phenomena engages true paths. The four noble truths and thirty-seven harmonies with enlightenment are meditated beginning from the path of accumulation. In terms of the subtle thirty-seven harmonies with enlightenment, the subtle four noble truths, and the subtle twelve links, they are meditated on respectively the fourth, fifth, and sixth grounds as is taught in the *Supplement*.
Student: Are they meditated on in subsequent attainment or meditative equipoise?
Geshe Jampa Gyatso: They are meditated during both occasions.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 253) says:

1 Response to that

A Refuting the meaning
B Refuting the example

A Refuting the meaning

Clear Words (Hopkins, *Meditation on Emptiness*, page 508) says:

> That is not so, because at the time [of proving that eyes and so forth are without truly established production] when it is just the case that a negation of production is asserted as the predicate of the probandum, [Bhavaviveka] himself just asserts the degeneration (or non-establishment) of the entity of subjects (eyes and so forth) – the basis of that [predicated, non-production from self] – which are found by a mere erroneous [consciousness. Bhavaviveka instead holds that the subjects of his syllogism, eyes and so forth, are found by a non-erroneous consciousness in which case they would not be falsities; however, they *are* falsities since they appear to exist inherently but do not, and thus the subject is not established.] The erroneous and the non-erroneous are different (that is, a dichotomy).

The meaning of this is [as follows]. It is not suitable for Acharya Bhavaviveka, when proving to the Samkhyas that the eyes and so forth are not ultimately produced from self, to use as a subject the eyes and so forth established as commonly appearing to both the first party, [himself,] and the second party, [the Samkhyas,] without being qualified either by being truths or falsities because, if it were suitable to use such [a subject], those eyes and so forth would have to be a common locus of being:

(1) an object found by a non-erroneous valid cognizer comprehending the mode of abidance of the eyes and so forth and

(2) an object found by an erroneous valid cognizer in the continuum of a Samkhya,

whereas they are not.

Bhavaviveka sets out the syllogism:

> The inner spheres, the eyes and so forth, as the subject, are not ultimately produced from self because of existing, like possessor of mind.

Here the subject, the mere eyes and so forth, are not established as commonly appearing to Bhavaviveka and the Samkhyas because for Bhavaviveka they are falsities whereas for the Samkhyas they are truths.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 253) continues:

> The first is necessarily not so because if such [a subject] is used, those eyes and so forth would also have to be the object found by a non-erroneous valid cognizer comprehending the mode of abidance of the eyes and so forth.

If the mere eyes and so forth are used as a subject they would have to be apprehended by a valid cognizer comprehending the mode of abidance of the eyes and so forth, whereas they are not. The mere eyes and so forth cannot be taken as a subject because they should commonly appear to both

Bhavaviveka and the Samkhyas, whereas they do not. Therefore, in this context a subject that is not qualified by either being a falsity or a truth cannot be used as a subject. If the eyes and so forth which are true are used as a subject they would be found by a valid cognizer comprehending the mode of abidance of the eyes and so forth.

In short, the eyes and so forth would have to be an object of both a non-erroneous consciousness and an erroneous consciousness, whereas this is not possible. If something is found by an erroneous valid cognizer it cannot be found by a non-erroneous valid cognizer and vice versa. There is no subject that is established as commonly appearing to both Bhavaviveka and the Samkhyas.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 253) continues:

> If such [a subject] is used it would also have to be the object found by an erroneous valid cognizer in the continuum of a Samkhya. The latter is established because when Acharya Bhavaviveka proves to the Samkhyas that the eyes and so forth are not ultimately produced from self, the eyes and so forth commonly appear to both the acharya and the Samkhyas in the way they are established by a valid cognizer.

For there to be a commonly established subject, the eyes and so forth would have to be established by way of their own character. If the eyes and so forth are established by way of their own character, they should be found by a non-erroneous valid cognizer comprehending the mode of abidance of the eyes and so forth. This is because if the eyes and so forth are established by way of their own character, their mode of appearing and their mode of existence would be concordant. If these are concordant then the eyes and so forth would be truths. In this case the eyes and so forth would be ultimate truths, but this is not so.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 253) continues:

> [Hypothetical objection by Bhavaviveka]: Regarding the first reason, the eyes and so forth are not objects found by a valid cognizer comprehending the mode of abidance of the eyes and so forth.
>
> RESPONSE: The eyes and so forth, as the subject, it follows that for you they are objects found by a valid cognizer comprehending the mode of abidance of the eyes and so forth because for you they are established by way of their own character. The reason has been accepted.

According to Bhavaviveka, a Svatantrika Madhyamika, the eyes and so forth are established by way of their own character. The Prasangika Madhyamikas refute this, saying that in this case the eyes and so forth would be found by a non-erroneous valid cognizer comprehending the mode of abidance of the eyes and so forth, whereas they are not. Debate arises concerning the fact that the eyes and so forth are not found by a valid cognizer comprehending the mode of abidance of the eyes and so forth; for example, it can be asked: "Are the eyes and so forth not found by an omniscient mind?" They must be an object found by an omniscient mind because they are objects found by an omniscient mind analyzing the ultimate. There is also the following debate: "If it is not an object found by a valid cognizer analyzing conventionalities is it not an object found by a valid cognizer analyzing the ultimate? If it is not one, is it not the other? A syllogism can be set out: The eyes and so forth, as the subject, it follows that they are found by a valid cognizer analyzing the ultimate because they are found by an omniscient mind analyzing modes. Is there anything that is not found by an omniscient mind analyzing modes? Is it not that if it is an omniscient mind it is pervaded by realizing all phenomena? Is the definition of omniscient mind not a fully-developed exalted knower directly realizing all phenomena, such as mind generation?

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 254) continues:

B Refuting the example

Clear Words (Hopkins, *Meditation on Emptiness*, page 514) says:

> There also is no similarity with the example. Even if there [in the example] a generality of sound and a generality of impermanence which are not asserted as qualified [with particular tenets] do exist for both [the Buddhist and the Vaisheshika], nevertheless proponents of emptiness and proponents of non-emptiness do not [agree on] asserting a generality of eyes as conventionally [existent in the sense of not being established by way of its own character] or as ultimately [existent]. Hence, there also is no similarity with the example.

The meaning [is as follows]. The example and meaning [which are respectively]:

- when the lower Buddhists prove sound is impermanent to the Vaishashikas they use as the subject mere sound which is established to commonly appear to both the first party, [the Buddhist,] and the second party, [the Vaishashikas,] without being qualified by either permanence or impermanence and
- when Acharya Bhavaviveka proves to the Samkhyas that the eyes and so forth are not ultimately produced from self he uses as the subject the mere eyes and so forth which are established to commonly appear to both the first party, [himself,] and the second party, [the Samkhyas,] without being qualified by either truth or falsity

are not similar because such an example is suitable, but such a way of using the meaning is not suitable.

When the lower Buddhists prove sound is impermanent to the Vaishashikas it is not correct to use mere sound as the subject. This is because the Vaishashikas do not accept mere sound. Thus, if the Buddhists use mere sound as the subject the Vaishashikas would ask whether this refers to impermanent sound or permanent sound. For this reason Chandrakirti says: "Hence, there also is no similarity with the example." In short, both the example and the meaning are refuted.

This example was mentioned by Jedzun Chogyi Gyeltshen's *General Meaning* previously, saying (page 252):

> for example, when the lower Buddhists prove sound is impermanent in the perspective of the Vaishashikas, they take as the subject mere sound which is established to commonly appear to both the first and second opponents without being qualified by either permanence or impermanence.

To repeat:

- The example is: When the lower Buddhists prove to the Vaishashikas that sound is impermanent, they use mere sound as the subject without it being qualified by impermanence or permanence.
- The meaning is: When Bhavaviveka proves to the Samkhyas that the eyes and so forth are not ultimately produced from self, he uses as the subject the mere eyes and so forth without their being qualified as either falsities or truth.

Both the example and the meaning are incorrect because in both cases the subject is not established as commonly appearing to the two parties.

Jedzun Chogyi Gyeltshen says: "because such an example is suitable but such a way of using the meaning is not suitable." Using sound that is not qualified by impermanence and permanence as the subject is a suitable example [of a non-commonly appearing subject]. The example given in *Clear Words* is suitable but the way Bhavaviveka uses the meaning of that example is not suitable.

This concludes the discussion in Jedzun Chogyi Gyeltshen's *General Meaning*. To review, this arose in relation to the outlines:

1 Reasoning refuting production from self

A. How the reasoning refuting production from self is set forth in Acharya Buddhapalita's commentary

B. The manner in which the fallacies are exposed by Bhavaviveka

C. How Buddhapalita does not incur those fallacies
(Here Chandrakirti shows how the fallacies indicated by Bhavaviveka are not actually incurred by Buddhapalita.)

D. Indicating the fallacies incurred by Bhavaviveka himself in his commentary on the refutation of production from self
(Here Chandrakirti points out Bhavaviveka's own fallacies.)

Buddhapalita's commentarial speech is divided into a brief presentation and an extensive explanation. When Bhavaviveka criticizes Buddhapalita he makes the mistake of only doing so in terms of the brief presentation without referring to the extensive explanation.

Buddhapalita's brief presentation is:

> Things are not produced from self because their production would be purposeless and because there would be an extremely absurd consequence.

Buddhapalita's extensive explanation is:

> The production again of things [already] existing in their own entities is purposeless. If though existent they are produced, they would never not be produced.

One of Bhavaviveka's criticisms of Buddhapalita's commentarial speech is based on the following syllogism:

> Things are not produced from self because their production would be purposeless and endless.

Bhavaviveka says that this statement is senseless [in that production is purposeful and does have an end]. He says that the reason "because their production would be purposeless and endless" needs to be changed to: "because their production is purposeful and has an end." In this way the syllogism becomes:

> Things are not produced from self because their production is purposeful and has an end.

Then Bhavaviveka says that the reason having been changed, the thesis also has to be changed because the thesis mentioned before cannot remain as it is. When the thesis is changed it cannot be changed to merely the opposite of "Things are not produced from self," which would be "Things are produced from self." Rather, the thesis should be changed to: "The production of things is not the mere elimination of production from self." Thus, Bhavaviveka says that in this way Buddhapalita sets forth a thesis which is an affirming negative, whereby he contradicts Nagarjuna's tenets in that Nagarjuna says that the thesis in the context of refuting production from self must be a non-affirming negative.

Bhavaviveka also says that Buddhapalita's commentarial speech does not eliminate the fallacies adduced to the other, the Samkhyas. This is because Bhavaviveka says that when Buddhapalita takes sprout as a subject in order to prove that there is no production from self, the Samkhyas would ask Buddhapalita whether he is referring to an apparent or non-apparent sprout but Buddhapalita's commentarial speech does not respond to this question.

In this way, Bhavaviveka says that Buddhapalita's commentarial speech affords an opportunity for censure. Chandrakirti, however, says that Buddhapalita's commentarial speech does not have such a fallacy.

In short, Bhavaviveka says that Buddhapalita's commentarial speech has the fallacies of:
1. not stating a reason and example
2. not eliminating the fallacies adduced by the other, and
3. affording an opportunity for censure.

In the context of Bhavaviveka's criticism of Buddhapalita's commentarial speech as not stating a reason and example, Chandrakirti asks Bhavaviveka whether he means that Buddhapalita does not state an autonomous reason and example or does not state a reason and example renowned to the other. Chandrakirti says that if Bhavaviveka means that Buddhapalita's commentarial speech does not state an autonomous reason and example there is no fault because a Prasangika Madhyamika does not assert autonomous reasons and examples. On the other hand, Chandrakirti says that if Bhavaviveka means that Buddhapalita's commentarial speech does not state a reason and example renowned to the other then the reason is not established because a reason and example renowned to the other are stated.

In conclusion, Chandrakirti says that if the Samkhyas do not accept the fallacies of the inner contradictions in their own assertions after they have been pointed out, then the Prasangika Madhyamikas no longer debate with the crazy. In brief, having flung two consequences revealing the inner contradictions in the Samkhyas' assertions, Chandrakirti says that if they still do not recognize their faults then there is no point to debating with them any longer.

The first consequence (see Hopkins, *Meditation on Emptiness*, page 470) is:

> A sprout, as the subject, it follows that its production again it purposeless because of already existing in its own entity.

The second consequence is:

> A sprout, as the subject, it follows that its production is endless because though it already exists in its own entity, there is a need for its re-production.

Chandrakirti says that there is no fallacy in the syllogism set out by Buddhapalita:

> A non-apparent sprout, as the subject, it follows that it is not produced from self because its own entity has already been attained; for example, like an apparent sprout.

Chandrakirti says that Buddhapalita's consequence does not have any fault because that consequence is only related to the Samkhyas and not to the Prasangika Madhyamikas since no Buddhist asserts production from self. This consequence is related only to the Samkhyas because it must be made to someone who asserts production from self. This comes in the context of Bhavaviveka's criticism of Buddhapalita that the reason and then the thesis must be reversed.

In conclusion, Chandrakirti says that Bhavaviveka's commentary has fallacies. For example, Bhavaviveka sets out the syllogism:

> Ultimately the inner spheres, the eyes and so forth, are not produced from self because of existing, for example, like possessor of mind.

Chandrakirti questions Bhavaviveka asking him whether he applies the qualification 'ultimately' to the subject or to the predicate. Chandrakirti says that if Bhavaviveka applies the qualification 'ultimately' to the subject (saying 'ultimately the inner spheres,' as above) this would be senseless for both the first party, the Buddhists, and for the second party, the Samkhyas. Thus, if Bhavaviveka applies the qualification 'ultimately' to the subject, the eyes and so forth, there is the fault that the subject is not established. On the other hand, Chandrakirti says that if Bhavaviveka applies the qualification 'ultimately' to the thesis (saying 'the inner spheres, the eyes and so forth, are not ultimately produced from self') this would also be unsuitable because production from self is to be refuted both conventionally and ultimately. Therefore, applying the qualification 'ultimately' to the

thesis is senseless because production from self is refuted even conventionally. In conclusion, Chandrakirti says that Bhavaviveka's syllogism for refuting production from self is faulty.

This concludes the discussion regarding the refutation of production from self. The next topic in Chandrakirti's *Supplement* and Lama Tsongkhapa's *Illumination* is the refutation of production from other.

Tuesday morning, 16 May 2000

PRODUCTION FROM OTHER

Lama Tsongkhapa's *Illumination* (Tibetan text page 150) says:

3B1C-2B3E-2A1B-2 Refuting production from other

A Expressing the previous positions
B Refuting those systems

3B1C-2B3E-2A1B-2A Expressing the previous positions

Chandrakirti's autocommentary says:

> [Some Buddhist sects propounding things say:] Here, regarding this statement: "things will not arise from self" being definite, if it is also just reasonable, that which was mentioned previously: *How could it [arise] from others?* [v. 6.6a], is unreasonable.
>
> Through relying on scriptures that say:
>
> > Like this: the four conditions that transform into others [are] causal, referent, immediate, and likewise dominant, hence conditions are the generators of things.
>
> – one must accept production from others although not desiring to.
>
> There, someone says:
>
> 1. Causal conditions are the five causes, excluding acting cause.
> 2. There, since objects to be referred to are referents, the referents of any of the six consciousnesses – all phenomena – are referent conditions.
> 3. The minds and mental factors other than the mind that enters the nirvana without the remainder of the aggregates are immediate conditions.
> 4. Acting cause is the dominant condition.

The lower Buddhist schools say that although there is no production from self, no production from both, and no causeless production, there is production from other. They assert this because there is production from the four conditions. They say that since there are causes established by way of their own character from which arise results established by way of their own character, there is production from other. The lower Buddhist schools set out four conditions which are other:

1. causal condition,
2. observed object condition or referent condition,
3. immediate condition, and
4. empowering or dominant condition.

The causal condition is five of the six causes, excluding the acting cause. In general, there are six causes:

1. acting cause,

2. simultaneously occurring cause,
3. concomitant cause,
4. congruent or equal fortune cause,
5. ever-functioning or omnipresent cause, and
6. fruitional or fully-ripening cause.

(1) acting cause
Here, the five causes included in the causal condition are the six, excluding the acting cause. The acting cause is excluded because it is not an actual cause. An acting cause is any phenomenon that does not act to interfere with the production [of a result]. Terminologically acting cause has two divisions: an acting cause possessing ability and an acting cause not possessing ability. An acting cause not possessing ability is not an actual cause, therefore acting causes are not causes.

(2) simultaneous occurring cause
A simultaneous occurring cause is that which assists the phenomenon to be produced; for example, the four elements and the four characteristics of compounded phenomena that exist in the pot and the collection of pot are a simultaneous arising cause.

(3) concomitant cause
An example of concomitant causes are the five omnipresent mental factors because they arise concomitantly and assist each other. Concomitant causes have five similarities or concomitances:
1. base,
2. observed object,
3. aspect,
4. substance, and
5. time.

Concomitant observed object means that the main mind and the mental factors in its retinue both observe the same observed object. Concomitant aspect means that, for example, a blue aspect is apprehended by both the main mind and the mental factors in its retinue. Concomitant base means that the same sense power is the base for both the main mind and the mental factors in its retinue. Concomitant substance means that the main mind and the mental factors in its retinue share the same substance. Concomitant time means that the main mind and the mental factors in its retinue arise, abide, and cease simultaneously.

(4) congruent cause
Congruent or equal fortune cause is a cause that is of a similar type to its result. In other words, a previous type brings a later type that is similar to itself.

(5) ever-functioning cause
An ever-functioning or omnipresent cause is an affliction that acts to produce a later affliction.

(6) fruitional cause
A fruitional or fully-ripening cause is a specified cause included in either contaminated virtue or non-virtue.

Excluding acting causes, the other five causes are posited as causal conditions.

Regarding the definition of observed object or referent condition, Chandrakirti says: "the referents of any of the six consciousnesses – all phenomena – are referent conditions." Similarly, in the *Ornament* it was said that observed objects, or referents, are all phenomena.

The immediate condition is defined by Chandrakirti as: "The minds and mental factors other than the mind that enters the nirvana without the remainder of the aggregates are immediate conditions." This is the definition of immediate condition according to the Vaibhashikas, who say that the mind and mental factors present just before entering a nirvana without remainder are not immediate conditions because in the second moment, one attains a nirvana without remainder in which all minds and mental factors are annihilated. In order to posit an immediate condition it must bring a result, whereas there is no result of the minds and mental factors that are present just before entering a nirvana without remainder.

According to Vasubandhu's *Treasury of Knowledge*, an acting cause is the empowering or dominant condition. In general the definition of an empowering condition is: that which generates by its own power. However, according to the Vaibhashikas an acting cause is the empowering condition.

Chandrakirti's autocommentary says:

> Others say:
>
> 1. Through the definition, "that which establishes is the cause," whatever abides as the entity of the seed – the generator of that – is its causal condition.
> 2. Like the elderly getting up, mind and mental factors are produced from causes. The referent, like a supporting staff by which there will be production, is the referent condition, the meaning of saying, "it is the support of phenomena that are generating."
> 3. The cause just now ceased is the [immediate] condition that produced the result. As, for example, the seed just now ceased is the condition of immediate similarity with the sprout.
> 4. If something exists, that which issues forth that is the dominant condition of that. Also, those other conditions produced together, produced afterwards and so forth – they also are included within these.

This is another way of defining the four conditions. Here cause is defined as "that which establishes." These people say that "whatever abides as the entity of the seed – the generator of that – is its causal condition." This means that since the entity of the seed is that which produces the sprout, the seed is the causal condition of the sprout.

The observed object condition is described as like a supporting staff which enables an elderly person to stand, in that due to it there is the production of minds and mental factors. In order for minds and mental factors to arise, it is necessary to have the support of an observed object condition.

Here the immediate condition is defined as a cause which has just ceased; for example, a seed that has just ceased is the immediate condition for the sprout.

The empowering or dominant condition is that which issues forth something that exists. In addition, Chandrakirti says: "those other conditions produced together, produced afterwards, and so forth – they also are included within these."

Chandrakirti's autocommentary says:

> [Bhavaviveka] mentioned:
>
> > "Ishvara and so forth are not conditions, therefore, a fifth condition does not exist," is definitely apprehended.

This statement proves that there does not exist more than four conditions. The Buddhist schools do not accept Ishvara to be the creator of the world since he is permanent and eternal and therefore cannot be a condition. 'And so forth' includes the general principal, which is a partless unit, and others.

Lama Tsongkhapa's *Illumination* (Tibetan text page 150) says:

> The realists in our own school say: "Since production from self is purposeless, production from self is not suitable. Since that does not exist, production from both is also not suitable. If causeless [production] is also suitable to be decisively refuted, it is not suitable to refute production from other saying '*How can it from other?*' because in dependence on scriptures that teach the four conditions – which are other by way of their own character – as being the producer of things, even unwillingly one would have to assert production from other."
> How are the four conditions posited? Some sects say: "Causal conditions as said in the *Treasury of Knowledge* (v. 2.62b) are: 'The "causal" are the five causes,' that is, they are the five causes which exclude the acting cause. Observed object conditions as said (*Treasury of Knowledge* v. 2.63a) are: 'Observed objects are all phenomena,' that is, all phenomena are the observed objects of the six consciousnesses. Immediate conditions as said (*Treasury of Knowledge* v. 2.62cd) are: 'Produced minds and mental factors, not the final, but the similar and immediate,' that is, minds and mental factors that were produced previously which are other than those that enter a nirvana without remainder. Empowering conditions as said (*Treasury of Knowledge* v. 2.63B) are: '"The acting cause" is explained as the empowering,' that is, they are asserted as explained to be the acting causes. The six causes are as said in the *Treasury of Knowledge* (v. 2.49cd-2.50ab):
>
> > Acting cause, simultaneously occurring,
> > Congruent, concomitant,
> > Ever-functioning, and fruitional:
> > These are asserted as the six types of causes.

From the point of view of the Prasangika Madhyamikas, how many among the six causes are actual causes and how many are terminologically causes? According to this school congruent causes, ever-functioning causes, and fruitional causes are actual causes. A fruitional cause is an actual cause because it brings about a fruitional result; for example, a virtuous fruitional cause brings the result of rebirth as a human being, the fruitional result. An ever-functioning cause is also an actual cause because a previous affliction brings the result of a later affliction. A congruent cause is also an actual cause because, for example, a rice seed brings about a rice sprout that is of similar type. Another example of a congruent cause is the development of mind generation from a mind of compassion. However, there is debate about congruent causes, such as the question: "If a human being dies and is reborn as a horse, is the previous human being a congruent cause of the horse?" Think about it.

For the Prasangika Madhyamikas acting causes, simultaneously occurring causes, and concomitant causes are only terminological or nominal causes, i.e., they are not actual causes.

Lama Tsongkhapa's *Illumination* (Tibetan text page 150) says:

> Some sects present the definition of cause as: that which acts to establish. From this, whatever abides in the entity of the seed, the producer of that, is the causal condition of that. The produced minds and mental factors, which are like an old person standing up, are produced by any observed object, which is like a supporting cane; this being their observed object condition.

The definition of cause as "that which acts to establish" means "that which acts to produce" or "the producer," this being the usual definition of cause. Minds and mental factors necessarily arise due to observed objects. For example, for the arisal of an eye consciousness apprehending blue there is need of blue, the observed object. In the texts it is said that the aggregation of three conditions is needed for the arisal of a consciousness. These three conditions are:

1. the observed object condition,
2. the immediate condition, and
3. empowering condition.

The fourth condition, the causal condition, is included in these three. This subject is discussed in detail in the first chapter of *Fundamental Wisdom*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 151) says:

> The cause that has just ceased is the immediate condition that produces the result; for example, the seed that has just ceased is the condition for the arisal of the sprout. For example, the autocommentary says: "The seed that has just ceased is the immediate condition concordant with sprout." Also *Clear Words* says that on the occasion of the cessation of the immediate condition, the immediate condition concordant with the sprout ceases. Since Buddhapalita also makes a similar assertion, there is a system that asserts an immediate condition concordant even with form.

According to this there exists an immediate condition concordant with sprout and an immediate condition concordant with form. This would seem to imply that even form has an immediate condition, although this would be contrary to what is usually asserted. According to this passage a seed is an immediate condition concordant with sprout, specifically this being the seed that has just ceased. In the text *Awarenesses and Knowers* it specifies that an immediate condition is a mind. In one text in the context of the twelve links there arises the question: "When the links are connected serially, in dependence on what conditions are they connected? If the previous link is form and the subsequent link is a consciousness, how many conditions are present? If the previous link is a consciousness and the subsequent link form, how many conditions are present?" In this discussion it is not said that form has an immediate condition.

What "system" is referred to here? Is it that of the Vaibhashikas, Sautrantikas, Chittamatrins, or Svatantrika Madhyamikas? When this statement is discussed some say that even the Prasangika Madhyamikas accept that form has a concordant immediate condition. Here a distinction needs to be made between "an immediate condition" and "a concordant immediate condition."

Tuesday afternoon, 16 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 151) says:

> If something exists, whatever issues it forth is its empowering condition. *Clear Words* says that even that which was produced previously, that which is produced simultaneously, that which is produced later, and so forth are included in these [empowering conditions]. Also the autocommentary, except for the first (that which was produced previously), makes a similar statement. This is translated in [Bhavaviveka's] *Lamp for [Nagarjuna's] 'Wisdom'* as:
>
> > The conditions which are imputed by other sects are that which is produced in front, the existent, and the non-existent.
>
> Although the meaning is the same, this translation is the best. The meaning of this, as explained in [Jayananda's] *Commentarial Explanation* (*'grel bshad*), is that the imputed conventions of the Staviras are that:
>
> the condition that is produced in front is the observed object condition, which is produced directly in front of the sense powers;
>
> the existent condition is the causal and the empowering conditions; and
>
> the non-existent condition is the immediate condition.
>
> Those [conditions] that do not accord with such mere conventions, when investigated in terms of their defining characteristics are condensed into the four (causal condition, observed object condition, immediate condition, and empowering condition). That "Ishvara and so forth are not

conditions, therefore there does not exist a fifth condition" is definitely to be apprehended. In the *Treasury of Knowledge* (v. 2.64cd-2.65ab) a similar explanation is asserted:

> By four, minds and mental factors;
> By three, the two types of absorptions;
> Others are produced from the two;
> Not by Ishvara and so forth because they are serial and so forth.

"By four, minds and mental factors" means that minds and mental factors arise from four conditions: (1) the causal condition, (2) observed object condition, (3) immediate condition, and (4) the empowering condition.

In the line "By three, the two types of absorptions," the two types of absorptions are: (1) the absorption without discrimination and (2) the absorption of cessation. These absorptions arise in dependence on three conditions: the causal condition, immediate condition, and the empowering condition. They do not have an observed object condition because these two absorptions are not consciousness. They have an immediate condition because they arise from mental application.

In the line "Others are produced from the two," 'others' are forms and non-associated compositional factors, which arise from two conditions: an empowering condition and a causal condition. They do not arise from an observed object condition and an immediate condition. Thus, Vasubandhu's text, *Treasury of Knowledge*, does not posit an immediate condition for form. Therefore, when it was said above that a form has an immediate condition it is not clear whose system this is.

This concludes the section on "Expressing the previous positions," which sets out the assertion of the lower Buddhist schools that phenomena *are* produced from other, 'other' being the four conditions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 151) says:

3B1C-2B3E-2A1B-2B Refuting those systems

1 Refuting the position asserting production from other in general
2 Refuting the Chittamatrin system in particular

3B1C-2B3E-2A1B-2B1 Refuting the position asserting production from other in general

A The actual refutation of production from other
B Dispelling harm from the world regarding the refutation

1 The actual absurd consequences
2 Critical analysis of those [absurd consequences]

3B1C-2B3E-2A1B-2B1A-1A1 The actual absurd consequences

Chandrakirti's autocommentary (page 59) says:

> This [production from others] is not to be presented, because of contradicting reasoning and scripture. There, expressed from the viewpoint of reasoning:
>
> *If another arises in dependence on others,*
> *Then dense darkness would arise even from a flame and* [6.14ab]
>
> because of being just other. This is not seen nor is it reasonable – therefore, it does not exist. Therefore, it is taught [in *The Treatise on the Middle Way*, 20.19cd]:
>
> Cause and effect as otherness would never be admissible.
> – [and in verse 20cd:]
>
> If cause and effect were just other (i.e., otherness), cause and non-cause would be similar.

Chandrakirti says that is not admissible to posit production from other because this would contradict both reasoning and scripture. The reasoning is set out by Chandrakirti in the root text, saying: "If another arises in dependence on others, then dense darkness would arise even from a flame." In other words, if a result established by way of its own character arises from a cause established by way of its own character, it follows that dense darkness arises from a flame. Thus, it follows that from causes and non-causes there arise results and non-results. If there is production from other then everything would arise from everything. If it were so, darkness would arise from lighting a lamp and so forth because a result established by way of its own character arises from a cause established by way of its own character. Chandrakirti says "This is not seen nor is it reasonable." In other words, dense darkness arising from a flame is not seen and is not reasonable. Therefore, there is no production from other. For this reason, the *Treatise on the Middle Way* says: "Cause and effect as otherness would never be admissible" and "If cause and effect were just other (i.e., otherness), cause and non-cause would be similar." This means that from cause and non-cause would come results and non-results. In other words, it follows that from a barley seed there would arise the result of peas and wheat. A barley seed is an example of a non-cause of peas and wheat.

Lama Tsongkhapa's *Illumination* (Tibetan text page 152) says:

> Production from other cannot be posited because it contradicts reasoning and scripture. The latter is, for example, the *Rice Seedling Sutra*, which says:
>
> Even the sprout of name and form is not produced by self nor is it produced by other.
>
> [Production from other] contradicts many such later scriptures.
> Chandrakirti says:
>
> *If in dependence on other there arises another,*
> *In that case even from tongues of fire there would arise thick darkness.*
> *Also from all, all would be produced. Because of that*
> *There would not be anything at all that acts to produce and they would be similar to otherness.* [6.14]

Chandrakirti first sets out the reasoning refuting production from other, whereas Lama Tsongkhapa first sets out a scriptural citation refuting production from other. The scripture in this case is the *Rice Seedling Sutra*, which says: "Even the sprout of name and form is not produced by self nor is it produced by other." In short, Buddha clearly said that a sprout is not produced from self or other.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 251), quoting *Clear Words* (Hopkins, *Meditation on Emptiness*, page 502), says:

[The *Rice Seedling*] *Sutra* says:

> Also, when a sprout arising from its cause – a seed – is produced, it is not created by self, not created by [naturally existent] others, not created by both, not created by Ishvara, and not metamorphosed by time. It does not arise from particles, does not arise from the nature, does not arise from its own entity, and is not produced causelessly.

Although this is not exactly the same quotation from the *Rice Seedling Sutra* the meaning is similar.

Lama Tsongkhapa's *Illumination* (Tibetan text page 152) says:

> [The refutation of production from other] from the point of view of reasoning is stated [as follows]. *If in dependence on other*, a cause which is established by way of its own entity, *there arises another*, a result which is established by way of its own entity, *in that case even from* blazing *tongues of fire* (that which dispels) *there would arise thick darkness* (that which is dispelled). Furthermore, *also from all* causes and non-causes, *all* things and non-things which are results *would be produced*. Why is that? *Because of that*:
> *there would not be anything at all that acts to produce* those results and the two would be asserted as causes and results, and
> they would be *similar to otherness* that is established by way of its own character.
> These are the two very absurd consequences that are based on the signs (*gtan tshig*) asserted by others.

In short, if there is production from other it follows that "from all causes and non-causes, all things and non-things which are results would be produced." This is because a result would come from both that which produces it and that which does not produce it. 'Causes' are causes that established by way of their own character, and 'non-causes' are non-causes that are established by way of their own character. For the Prasangika Madhyamikas this is refuted because there are no phenomena that are established by way of their own character. If causes are established by way of their own character, then it follows that everything is produced from everything. The two absurd consequences posited here are based on the signs asserted by others, the Svatantrika Madhyamikas.

Chandrakirti's autocommentary (page 59) says:

> Furthermore:
>
> *Everything would also be produced from everything...* [6.14c]
>
> Also, from everything that is a cause and a non-cause, every functioning thing that is an effect and a non-effect would be produced.
>
> If asked: why?
>
> *Because all that does not create production*
> *Is also similar in otherness.* [6.14cd]
>
> Just as the rice seed that creates production is just other than its effect, the rice sprout, likewise, non-producers, such as fire, coal, barley seed, and so forth, are also [just other]. Also, just as the rice sprout is produced from what is other – the rice seed – likewise, it would also [be produced] from fire, coal, barley seed, and so forth. Also, just as the rice sprout arises from a rice seed that is other, likewise, vase, cloth, and so forth would also, but that too is not perceived, therefore, this too is not so.

In short, if there is production from other it follows that everything is produced from everything. A rice seed is an established-by-way-of-its-own-character-other-than-a-rice-sprout. A non-producer of a rice sprout is, for example, fire, coal, barley seed, and so forth. It follows that a rice sprout is produced from such non-producers. In short, if a rice seed established by way of its own character produces a rice sprout established by way of its own character then it follows that a rice sprout is produced from a fire, coal, barley seed, and so forth. ("Fire, coal, barley seed, and so forth" are non-producers of a rice sprout.) This is because they too are an other established by way of its own character. The absurd consequence is:

> It follows that a rice sprout is produced from a rice seed, which is a producer, and it follows that a rice sprout is produced from fire, coal, barley seed, and so forth, which are non-producers.

In short:

> It follows that everything is produced from producers and non-producers.

Although fire can be produced from a rice seed, as can coal when it is burned, a barley sprout cannot be produced from a rice seed.

Chandrakirti says: "Also, just as the rice sprout is produced from what is other – the rice seed – likewise, it would also [be produced] from fire, coal, barley seed, and so forth." Then he says: "Also, just as the rice sprout arises from a rice seed that is other, likewise, vase, cloth, and so forth would also." Just as a rice sprout arises from a rice seed, so too would vase, cloth, and so forth arise from a rice seed; however, this does not happen. This consequence comes about from the fact that production arising from a cause established by way of its own character is independent production. The cause is independent and the result is independent, therefore from an independent cause comes an independent result. Since cause and result are independent, from a rice seed there would be the production of vase, cloth, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 152) says:

> If these two consequences are explained [it is as follows]. Just as the seed that produces the rice would be an established-by-its-own-character-other-than-the-rice-sprout which is its result, likewise, that which does not produce the rice sprout, even fire, coal, a barley seed, and so forth, is an established by its own character other than the rice sprout. This is the way of asserting of the proponents of production from other.

If a rice sprout arises from a rice seed established by way of its own character then it should also arise from fire, coal, a barley seed, and so forth because they too are established by way of their own character and are independent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 152) says:

> If [production from other] is asserted to accord with the two modes of being other, it accords with the following. Just as a rice seed produces a rice sprout through transforming into other, likewise, there would be the production of a rice sprout even from fire, coal, and so forth. Also just as the rice sprout transformed into other is produced from the rice seed, so too pot, woolen blanket, and so forth would be produced from the rice seed.

It follows that a result would be produced from causes and non-causes.

Lama Tsongkhapa's *Illumination* (Tibetan text page 153) says:

> *Fundamental Wisdom* says:

> Cause and result are
> Never correct as other.
> If cause and result were other
> Cause and non-cause would be similar.

> These are the reasonings that teach the absurd consequences regarding production from other. The explanation in the [auto]commentary suggests the opposite of both these consequences.

"The explanation in the commentary" refers to the autocommentary. In relation to "suggests the opposite of both these consequences" there arises a long discussion concerning the two consequences (see below).

The discussion of the "critical analysis of those absurd consequences" is divided into two sections: "The reason for entering into the absurd consequences regarding production from other" and "Not contradicting the assertion opposite to those consequences." In these sections Lama Tsongkhapa sets out a series of analyses that are not discussed by Chandrakirti in his autocommentary. There are various opinions of past Tibetan scholars regarding this discussion.

What is the fault of asserting production from other? Production from other is the production of a result established by way of its own character from a cause established by way of its own character. If production from other is not qualified by 'established by way of its own character,' there is no discussion since things *are* produced from other. The Prasangika Madhyamika system simply says there is no production from other. Because they do not qualify 'other' with "establishment by way of its own character," the lower schools debate them saying, for example: "Is a son not produced from a mother? Is smoke not produced from fire? Are smoke and fire one or other? Are mother and son one or other?" In response to these questions, one would have to say that they are other. In this way the lower schools debate with the Prasangika Madhyamikas. The lowers schools also take the example of a sprout growing in a field due to the work of the farmer, and ask: "Are the farmer and the sprout not other?"

Wednesday morning, 17 May 2000

Lama Tsongkhapa says: "The explanation in the [auto]commentary suggests the opposite of both these consequences."

The <u>first consequence</u> is:

> A sprout, as the subject, it follows that from luminous flames arises darkness because a cause established by way of its own character produces a result established by way of its own character.

The <u>second consequence</u> is:

> A sprout, as the subject, it follows that it is produced from causes and non-causes because a cause established by way of its own character produces a result established by way of its own character.

The <u>opposite suggested by the first consequence</u> is:

> A sprout, as the subject, a cause established by way of its own character does not produce a result established by way of its own character because dense darkness does not arise from tongues of fire.

Or:

> Object of knowledge, as the subject, a cause established by way of its own character does not produce a result established by way of its own character because dense darkness does not arise from tongues of fire.

The opposite suggested by the second consequence is:

> Object of knowledge, as the subject, a cause established by way of its own character does not produce a result established by way of its own character because everything that is cause and non-cause does not produce results and non-results.

Or:

> Object of knowledge, as the subject, a cause established by way of its own character does not produce a result established by way of its own character because everything does not produce everything.

When the *Illumination* says that Chandrakirti's autocommentary suggests the opposite of these two consequences it is referring to these two.

Lama Tsongkhapa's *Illumination* (Tibetan text page 153) says:

> 3B1C-2B3E-2A1B-2B1A-1A2 Critical analysis of those [absurd consequences]
>
> A The reason for incurring the absurd consequences regarding production from other
> B Not contradicting the assertion opposite to those consequences
>
> 3B1C-2B3E-2A1B-2B1A-1A2A The reason for incurring the absurd consequences regarding production from other
>
> With respect to the reason for incurring the faults of the absurd consequences regarding the assertion of production from other here, some Tibetans say that it is due to the fact that cause and result are pervaded by being sequential as otherwise they would necessarily occur at the same time. However, this is extremely unsuitable
> because all the faults [pointed out by them in] refuting that would be incurred similarly upon themselves and
> because if that is denied saying "We do not accept that" there would be the meaningless fatigue of searching for a reason for that.

Some Tibetans say that cause and result arise sequentially in that first there is the cause and then the result, as otherwise they would occur simultaneously. However, by saying that, all the previously mentioned faults incurred by those who assert production from other would come back upon them. Also if they deny this there would be the meaningless fatigue of searching for reasons to refute production from other. (See Cabezon, *A Dose of Emptiness*, page303.)

Lama Tsongkhapa's *Illumination* (Tibetan text page 153) says:

> Also many Tibetans say: "When a logician establishes that "the existence of the instance smoke is pervaded by the existence of fire" and "product is pervaded by impermanence," they are established unmistakenly in regard to all places and times. When this is established, through establishing them in terms of a single isolated case (*nyi tshe ba*), for example, [fire and smoke in regard to] a kitchen and [product and impermanence in regard to] a pot, then for the reason that [the specific pervasions] and the two pervasions in regard to other places and times are a similar [type of] reasoning, those two pervasions are asserted to be unmistakenly established in terms of all places and times. In this case, [Chandrakirti] flings absurd consequences by means of the reason of the similarity with respect to being *mere* other. This kind [of reasoning is called] *induction* (*ldog pa gcig pa'i dpung 'phul ba*)."

Some Tibetans say that when someone proves that "product is pervaded by impermanence" and "the existence of smoke is pervaded by the existence of fire" they are established unmistakenly in all places and times. In general if there is smoke there is fire. However, in relation to a particular time, at the time of the smoke (the result), the fire (its cause) has ceased because a result arises upon the ceasing of

its cause. In this way cause and result are sequential. Therefore, when establishing cause and result in terms of time it cannot be established that if there exists smoke there exists fire because at the time of the smoke the fire no longer exists and at the time of the fire the smoke does not yet exist. Therefore, that they are unmistakenly established in relation to all times is not correct.

Likewise, the cause, fire, and the result, smoke, are not established unmistakenly in all places because, for example, it follows that fire exists in the mouth of a smoker because smoke exists there. The existence of fire can in general be established by the existence of smoke but it cannot be established in relation to a specific place, for example, the mouth of a smoker. Also, for example, smoke exists in a chimney but fire does not exist in it. Therefore, the establishment of the cause, fire, and result, smoke, in relation to all times and places is not correct. However, if they are established in relation to a particular place such as kitchen it is correct because in a kitchen there is both fire and smoke. Also in relation to a pot, [a single isolated case,] the pervasion of product by impermanence can be established; for example: a pot, as the subject, is impermanent because of being a product.

These Tibetans continue: "In this case, [Chandrakirti] flings absurd consequences by means of the reason of the similarity with respect to being *mere* other. This kind [of reasoning is called] *induction*. (*ldog pa gcig pa'i dpung 'phul ba*)." The Tibetan phrase *ldog pa gcig pa'i dpung 'phul*, here translated as "induction," means that someone collects many reasons which are then used to defend their position, such as establishment in all times and places. The phrase "induction" is discussed in Lama Tsongkhapa's *Great Exposition of the Stages of the Path of Enlightenment*. Thus, by means of the reason of similarity with respect to being *mere* other, many absurd consequences are suggested. This is not correct.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> CLARIFICATION: Furthermore, you have not ascertained the meaning of the passage and this is illogical talk because the two, the instance smoke and product, are unmistakenly established in regard to fire and impermanence in general without the qualification of place and time. Therefore, the qualm thinking "Even though 'the existence of fire' and 'being impermanent' are opposed, is it not possible that the two stated as a reason are not ruled out?" can be readily resolved. Although two phenomena are precluded as being cause and result, since there are many who take them to be mere other how can there exist an occasion of those two being similar? Therefore, that, the very phrase "induction," clarifies it as a repudiation of one who does not know reasoning. This has already been explained extensively elsewhere.

Lama Tsongkhapa says that these Tibetans have not understood the meaning of "induction." They only know the name. Lama Tsongkhapa says that he has already explained the meaning of this extensively in other texts, such as his *Essence of Eloquence* and the *Great Exposition of the Stages of the Path of Enlightenment* in the section on special insight.

Although the two, pillar and pot, are ruled out as being cause and result they abide as mere other. Saying that many absurd consequences follow due to the two being *mere* other is not correct. This is because if things are mere other they are not necessarily cause and result; for example, saying: "Because they are mere other such-and-such produces such-and-such" is incorrect. If someone says for example that "Pot produces pillar because it is mere other," such a statement is inadmissible. The person who says this thinks that he is using the technique of induction, however, the absurd consequence applies only to an other established by way of its own character (i.e., not to a mere other). Therefore, Lama Tsongkhapa says that such Tibetans use the term "induction" but have not understood its actual meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

How is this? *Clear Words* says:

> Due to its mere conditionality [a thing] is asserted to be conventionally established. It is not due to asserting the four positions because it would follow that things have inherent existence and because that too is unsuitable. When this mere conditionality is asserted, the two, cause and result, because of being mutually dependent, are not established by way of their own entity, whereby things do not appear as having inherent existence.

> With respect to the two distinctions of asserting and not asserting production from self and the reasons for these two, it is said that if one asserts production from the four positions one must propound inherent existence. Therefore, it is clearly said that if production from other is asserted it is necessary to assert inherent production, whereas if mere production, which is a dependent-arising, is asserted it is not necessary to assert inherent production.

In general, conventionalities arise from mere conditions. Nevertheless, there is no need to assert production from any of the four positions: production from self, production from other, production from both, and causeless production. If any of these four positions are accepted it follows that things are inherently produced, whereas this is not suitable. If conventionalities arise from mere conditions then cause and result are dependent. Since conventionalities, such as causes and results, depend on each other they are not established by way of their own entities. Therefore, they are not inherently produced. Chandrakirti says: "Whereby things do not appear as having inherent existence." "Things do not appear as having inherent existence" means that they do not have inherent existence, although they do appear to us as having inherent existence.

To review, there are those who assert production from self and those who do not. Those who assert production from self in the context of the four positions, or four extremes, must say that things are inherently produced. Likewise, those who assert production from other have to assert inherent production. On the other hand, those who assert production that is a dependent-arising do not need to assert inherent production. It is necessary to make this distinction.

Lama Tsongkhapa's *Illumination* (Tibetan text page 155) says:

> Therefore, the *other* of production from other is not a mere other but is an inherently existent other, whereby in asserting [production from an inherently existent other] an absurd consequence is suggested, whereas in asserting [production from a] mere other it is not suggested at all.

There are two types of other:

1. a mere other and
2. an established by way of its own character other.

The assertion that a result is produced from a mere other is correct but asserting that a result is produced from an established by way of its own character other has many absurd consequences. For example, if a cause established by way of its own character produces a result established by way of its own character then it follows that tongues of fire produce dense darkness because the two are not related.

Lama Tsongkhapa's *Illumination* (Tibetan text page 155) says:

> Also further on [in Chandrakirti's *Supplement*] it is asserted that, although former and later moments are different, they are one continuum. It says:
>
> > *Those individual [phenomena] established by way of their own character*
> > *Are not suitable to be included in one continuum.* [v.6.61cd]

Here Lama Tsongkhapa quotes Chandrakirti's *Supplement* (G. Churinoff's translation, 1994), which says:

> *The qualities based on Maitreya and Upagupta*
> *Are not included in one continuum because of otherness.*
> *Whatever is distinct by their own characteristic,*
> *They are illogical to include in one continuum.* [6.61]

Lama Tsongkhapa's *Illumination* (Tibetan text page 155) continues:

> This says that if they are individual [phenomena] which are established by way of their own character, it is unsuitable for former and later [moments] to be included in one continuum, whereas they would be suitable as two. Furthermore, if they are an established by way of its own character other, their relationship of dependency can be refuted. If it becomes a different unrelated object, then if one result is produced from its respective cause it would also be produced from all non-causes. Also if one cause produces its respective result, then all things that are results which are not its results would be produced. These absurd consequences would be incurred.

Lama Tsongkhapa quotes the *Supplement* regarding former and later moments being included in one continuum. If two things are established by way of their own character they cannot be included in one continuum. If a cause established by way of its own character produces a result established by way of its own character, then it is not related to its result. For example, the mental continuum that comes from a past life to a future life is composed of different moments. These different moments of a single continuum are not established by way of their own character. Likewise, two persons, such as Maitreya and Upagupta, have different continua that are not one. Are these two continua established by way of their own character? They are not. In terms of a single physical basis, such as Maitreya, there is a process of aging in terms of the different moments of the continuum. For example, there are the moment of being a child, those of being a youth, those of being an adult, and so forth. All these different moments are part of the same continuum. Therefore, this single continuum is not established by way of its own character. On the other hand, if the different moments of Maitreya's continuum were established by way of their own character, then the continuum at the time of his childhood would be different from his present continuum and so forth. In short, if two individual things are established by way of their own character they cannot be one continuum. Lama Tsongkhapa says: "Furthermore, if they are an established by way of its own character other, their relationship of dependency can be refuted." If this were the case there would be the following absurd consequences:

- "if one result is produced from its respective cause it would also be produced from all non-causes" and
- "if one cause produces its respective result, then all things that are results which are not its results would be produced."

Lama Tsongkhapa's *Illumination* (Tibetan text page 155) says:

> Therefore, not understanding such reasonings well is the fault of not analyzing well the two individual presentations of:
> apprehending the measure of conceiving the object of negation which is to be refuted like that explained previously and
> dependent-arising which is so asserted.
> Therefore, when refuting the object of negation be mindful of the explanation apprehending the measure of the object of negation.

There are two individual presentations:

1. the measure of conceiving the object of negation and
2. dependent-arising.

Through not understanding them many absurd consequences arise.

To review, production from other is:

> production of a result established by way of its own character from a cause established by way of its own character.

If there were such a result produced from such a cause, many absurd consequences would follow, such as tongues of fire producing dense darkness, everything being produced from everything, and so forth. However, this is not the case, therefore the conclusion is that there is no production from other. However, there are two types of production from other:

1. production from a mere other and
2. production from an established by way of its own character other.

If one accepts production from an established by way of its own character other, then many absurd consequences follow. On the other hand, if one asserts production from mere other it is not pervaded by asserting production from other. Yet, the Prasangika Madhyamikas merely say "production from other."

Due to asserting production from other, many absurd consequences arise such as that the continua of Maitreya and Upagupta are one, whereas this is not the case. In terms of a single person it can be asked: "Is his continuum one with the continuum of another?" It is not. However, the continuum of a single person is one. It can be asked: "Is Maitreya's continuum the continuum of the six classes of beings?" This question arises because a single person, such as Maitreya, has been all six classes of beings due to having taken different types of rebirth. Thus, there is no type of rebirth that Maitreya has not taken.

Some say that when a sentient being becomes buddha all his continua become one, and that the continua of all buddhas is one. Others say that this is not so. If the continua of all the buddhas were one, many absurd consequences follow. I myself would never say that the continua of all the buddhas are one but some scholars do say this.

Wednesday afternoon, 17 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 155) says:

> 3B1C-2B3E-2A1B-2B1A-1A2B Not contradicting the assertions opposite to the consequences
>
> QUESTION: If the meaning which is opposite to the two consequences explained above is asserted in what sense are [the following] statements quoted? *Clear Words* says:
>
> > The meaning opposite to the consequences is also related to the opponent and not to us because we do not have this thesis.
>
> And:
>
> > If the proponents of non-inherent existence establish a consequence in regard to the proponents of inherent existence, how can it follow as meaning the opposite to the consequence?
>
> And:
>
> > Therefore, because establishing a consequence has the result of merely refuting the opponents' thesis, it does not become the meaning opposite to the consequence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 156) says:

> RESPONSE: There is no fault. The meaning of the first citation [from *Clear Words*] is [as follows]. Teaching in this way is only in the context of refuting production from self. Therefore, they are not at all consequences flung by the Middle Wayers but are the two consequences that refute production from self. The predicate (*thal chos*) is not that production follows as being merely purposeless and endless, but that *repeated* production is purposeless and endless. The opposite meaning to that predicate – repeated production which is meaningful and has an end – is only an assertion of the Samkyas. For the reason that we do not have their thesis, it does not contradict the tenets that we accept.

In the first citation from *Clear Words* above, the meaning opposite to the consequences refers to the two consequences set out in the context of refuting production from self:

1. it follows that their production is purposeless and
2. it follows that their production is endless.

These two consequences were set out for those who assert production from self. On the other hand, for the Prasangika Madhyamikas, who do not accept production from self, there is no reason to assert the opposite thesis. This is because the opposite thesis, "repeated production which is meaningful and has an end," is only related to the Samkhyas who assert that, although a sprout has already attained its own entity, it needs to be produced again. The Samkhyas say that a result exists at the time of its cause without being clearly apparent. Their thesis is that if a result did not exist at the time of its cause in a non-apparent way it could not be produced later on. The Prasangika Madhyamikas do not have the thesis "repeated production which is meaningful and has an end," therefore, there is also not the fault of their contradicting Nagarjuna's tenets.

Likewise, when a Prasangika Madhyamika flings the consequences "it follows that everything is produced from everything" and "it follows that dense darkness arises from a flame" [at the lower Buddhist schools who accept production from other], he does so only in the context of refuting production from other. It is not necessary that he accept the opposite consequence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 156) says:

> Buddhapalita also mentions the term 'again' stating that "production again is purposeless" and in *Clear Words* the term 'again' is also mentioned. Since here [in the *Supplement*] it also says "If [that already produced] is thoroughly conceived to be produced again," the two, existence and *repeated* production, would be contradictory, whereas existence and production are not contradictory. Similarly, existence and *repeated* production having an end would be contradictory, whereas existence and production having an end are not contradictory.

Chandrakirti's *Supplement* previously said:

> *If that already produced is thoroughly conceived to be produced again*
> *Production of the sprout and so forth would not be found here.* [6.9ab]

In short, there is nothing that already exists yet needs to be produced again. There exists a common locus between existent and production, for example, a sprout. A sprout is a production because it is produced from a seed and an existent because of existing. Is a sprout produced again? It is not. That which already exists but needs to be produced again is contradictory. Existent and *repeated* production having an end are contradictory, whereas existent and production having an end are not. Does the production of sprout have an end? It does. Does the sprout exist? It does. That sprout exists and is a production having an end are not contradictory.

This concludes the explanation of the first quotation from *Clear Words*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 156) says:

> The meaning of the second citation [from *Clear Words* is as follows]. When the Middle Way proponents of non-inherent existence fling the two consequences explained before to the Samkya proponents of inherent existence, they do not desire to assert an implied meaning opposite to [their own system]. It is also not that this is done without independence. Therefore, this is the meaning of saying "They do not assert the opposite to those two consequences."

The second citation from *Clear Words* is:

> If the proponents of non-inherent existence establish a consequence in regard to the proponents of inherent existence, how can it follow as meaning the opposite to the consequence?

In short, the Prasangika Madhyamikas do not have the Samkhya's thesis.

Lama Tsongkhapa's *Illumination* (Tibetan text page 156) says:

> The meaning of the third citation [from *Clear Words* is as follows]. Although the reason of repeated production which is purposeful and has an end – the opposite meaning to the predicate of the two consequences – does not establish the non-existence of production from self, it is not meaningless. Since it establishes the purposeless and endless production which the Samkyas do not assert, it has the purpose of establishing the mere elimination of production from self which is the thesis of the Samkyas.

The third citation is:

> Therefore, because establishing a consequence has the result of merely refuting the opponents' thesis, it does not become the meaning opposite to the consequence.

The third citation means that when a consequence is flung it is done in order to refute the opponent's thesis; it does not imply that the challenger has to accept the meaning opposite to the thesis. For example, when one who asserts non-inherent existence flings a consequence at someone who asserts inherent existence it is not necessary for the challenger to accept the meaning opposite to that consequence. In short, the Prasangika Madhyamikas do not need to accept the meaning opposite to the consequence that they fling since the Samkhyas alone accept the meaning opposite to the consequence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> In regard to the two absurd consequences, through our asserting the meaning opposite to the consequences, the meaning that is opposite to the consequences is to be understood as the two, asserted and not asserted, by us.

The Prasangika Madhyamikas do not need to accept the opposite to the two absurd consequences that are set out in the context of refuting production from self, whereas in the context of refuting production from other the Prasangika Madhyamikas do accept the opposite to the consequence. The opposite meaning to the two consequences in refuting production from other that they accept are:

1. dense darkness is not produced from tongues of fire and
2. everything is not produced from everything.

Lama Tsongkhapa says: "the meaning that is opposite to the consequences is to be understood as the two, asserted and not asserted." This means that the Prasangika Madhyamikas accept the meaning opposite to the two consequences in the context of refuting production from other but do not accept the meaning opposite to the two consequences in the context of refuting production from self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

3B1C-2B3E-2A1B-2B1A-1B Refuting the response that dispels the faults

1 The response dispelling the faults
2 Refuting that response

3B1C-2B3E-2A1B-2B1A-1B1 The response dispelling the faults

Chandrakirti's autocommentary says:

> [An objection] is mentioned here. Although the two, cause and effect, have otherness, everything arising from everything will also not follow because of seeing the certainty [of individual causes and effects]. Here, this is certain because:
>
> *If said: "Able to be fully created, therefore, definitely expressed as the*
> *Effect and that which is able to produce it, even if other, is the cause –*
> *Produced from [that] belonging to one continuum and the producer,*
> *Therefore, a rice sprout is not thus [produced] from barley and so forth."* [6.15]

This passage is a response according to the Svatantrika Madhyamikas and the other lower Buddhist schools. They say that although a cause established by way of its own character produces a result established by way of its own character there is no pervasion that everything produces everything because it is seen to be definite. It is seen to be definite in the sense that it is seen that a particular cause brings a particular result. There are in fact individual causes because when a pea is planted in a field the result of a pea sprout is seen to be definite. Likewise, when a barley seed is planted that the result is a barley sprout is seen to be definite.

Chandrakirti says: "Able to be fully created, therefore, definitely expressed as the effect and that which is able to produce it, even if other, is the cause." This means that a cause is able to produce a certain result. "Even if other" means an other qualified by being established by way of its own character, that other is able to produce a result. "Produced from [that] belonging to one continuum and the producer" means that a rice sprout is produced from the rice seed, a producer, which is the same continuum as itself. "Therefore, a rice sprout is not thus [produced] from barley and so forth," means that the lower schools assert that a rice sprout is not produced from a non-producer, a barley seed and so forth.

Chandrakirti's autocommentary says:

> Here, "effect" possesses the active affix (*kritya-praryaya*) with regard to the sense of ability. That itself which is able to be created by something is its effect. That which is able to produce this effect, even if held as being other, is the cause. Hence, solely due to a special otherness are things cause and effect, not due to a general otherness.

Here Chandrakirti explains that the word 'effect' in Sanskrit possesses the active affix among the twenty-two affixes. Chandrakirti says: "That itself which is able to be created by something is its effect. That which is able to produce this effect, even if held as being other, is the cause." Although a cause that is able to bring about a result is other it is still its cause. Chandrakirti then says: "Hence, solely due to a special otherness are things cause and effect, not due to a general otherness." Only due to a specific or particular otherness are things posited as cause and result, things that are general otherness are not posited as such. A specific otherness is, for example, a barley seed that brings the result of a barley sprout. What is an example of general otherness? For example, the generality object

of knowledge and the instance pot, they are general otherness that cannot be posited as cause and result.

Chandrakirti's autocommentary says:

> Although there is production from that belonging to the same continuum and a producer, there is neither [production] from that belonging to another continuum, a barley seed and so forth, nor from that belonging to the same continuum but not creating production, [such as] the former instant not being [produced] from the latter instant. Hence, the consequence that everything would arise from everything – this is inappropriate. It is like this: "the cause of the rice sprout is only the rice seed, there is no other. The effect of the rice seed is only the rice sprout, there is no other."

A barley sprout is not produced from a rice seed because they are different continua, likewise a rice sprout cannot arise from a barley seed. There are also cases of two things being the same continuum but not being cause and effect, for example, a latter instant does not produce a former instant of the same continuum. Chandrakirti says: "Hence, the consequence that everything would arise from everything – this is inappropriate."

In conclusion Chandrakirti says: "It is like this: 'the cause of the rice sprout is only the rice seed, there is no other. The effect of the rice seed is only the rice sprout, there is no other.'" In this way the lower schools dispel faults but the Prasangika Madhyamikas say that they do have faults.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> Chandrakirti says:
>
> > *"That which can be strongly created, therefore, is said to definitely be a result and*
> > *Whatever is able to produce that, even if other, is a cause.*
> > *Because included in the same continuum and produced from a producer,*
> > *A rice sprout is not, as is that, from barley and so forth."* [6.15]
>
> Here we [the proponents of production from other] say: "Although the two, cause and result, are an otherness that is established by way of its own character, everything does not arise from everything because cause and result are seen to be definitely distinct. Furthermore, it is so because any thing that *can be strongly created* by anything *is* itself *said to definitely be a result* of that; therefore, results are definite.
>
> [The word] 'therefore' [in the root text] does not accord with the commentary.

The lower schools say that although cause and result are an otherness established by way of its own character it does not follow that everything arises from everything because cause and result are seen to be definitely distinct. A specific cause brings a specific result, for example, a barley seed produces a barley sprout, and rice seed produces a rice sprout. It is not the case that a barley seed is seen to produce a rice sprout and so forth.

Perhaps the comment "[The word] 'therefore' [in the root text] does not accord with the commentary" means that the word 'therefore,' which exists in the *Supplement*, does not exist in the autocommentary. Perhaps Lama Tsongkhapa means that the word "therefore" does not appear in autocommentary but is used in a slightly different way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> *Whatever* cause *is able to produce that* result, *even if* it is an *other* that is established by way of its own entity, *is a cause*; therefore, causes are definite.

For all the lower schools from the Svatantrika Madhyamikas down a cause established by way of its own character is feasible. However, it is not feasible for the Prasangika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> Thus, only particular others are posited as cause and result; general otherness due to being mere other is not posited as cause and result.

This was also clearly set forth in the autocommentary. A particular other such as fire is posited as a cause of its result, smoke. General otherness, just being mere other, is not posited as cause and result, for example, fire and the tangible object cold are other but cannot be posited as cause and result. This is because from fire only the tangible object heat can arise.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> Furthermore, a rice sprout is produced from a rice seed *included in the same continuum* as itself, it is not produced from [something included in] a different continuum, such as a barley seed and so forth.

The meaning of this is quite clear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> Although the same continuum, a later moment, a non-producer, does not produce a former [moment]. Therefore, a later moment is *produced from* a former [moment] of the same continuum, *a producer*.

Although they are the same continuum a former moment can produce a later moment but a later moment cannot produce a former moment.

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> *Because of that*, a *rice sprout is not* produced, *as is that* barley sprout and so forth, *from barley and so forth*. Therefore, everything is not produced from everything."

A rice sprout is not produced from a barley seed and a barley sprout is not produced from a rice seed. Since even farmers know this there is no need to say anything more!

Thursday morning, 18 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

> 3B1C-2B3E-2A1B-2B1A-1B2 Refuting that response

Chandrakirti's autocommentary says:

> At first, one should ask this propounder of cause and effect just this: "This [statement of yours] which is a certainty, from what [reasoning] is it [derived]?"
>
> If the propounder says: Because of perceiving the certainty.
>
> Again, why? If such a statement, "perceiving the certainty," is debated and investigated, by mentioning merely that much, "because the certainty is perceived, therefore, the certainty is

perceived," one is not able to abandon, even slightly, the faults that were already explained as the cause of the certainty is not indicated.

Furthermore, in order to indicate that "not distinguishing the common and particular otherness, this overly renowned one itself is present as the harmer to his exact assertion," it is explained:

Just as barley, kesara, kimshuka, *and so forth*
Are not asserted as producers of the rice sprout, do not have the capacity,
Do not belong within the same continuum and are just not similar,
Likewise, the rice seed is also not of it, because of otherness. [6.16]

The Prasangika Madhyamikas ask the Svatantrika Madhyamikas: "What is your reason for saying that a rice seed and rice sprout are an established by way of its own character other? Why do you say that although cause and result are individually established by way of their own character everything does not arise from everything?" To this the Svatantrika Madhyamikas respond: "Because of perceiving the certainty." The Prasangika Madhyamikas then ask: "What is the certainty that is perceived?" The Svatantrika Madhyamikas respond: "The certainty is perceived." The Prasangika Madhyamikas say: "Saying that cannot dispel the faults of everything arising from everything, which were explained before. You do not have a reason that supports your assertion that everything does not arise from everything. Your assertion is harmed by that renowned in the world."

Barley, *kesara* (stamens), *kimshuka* (flowers), and so forth do not produce a rice sprout. 'Kesara' are the stamens or anthers that serve in the reproduction of a plant. Barley and so forth are:

1. not producers of a rice sprout,
2. do not have the capacity to produce a rice sprout,
3. do not belong to the same continuum as a rice sprout, and
4. are not of similar type to a rice sprout.

The *Supplement* says: "Likewise, the rice seed is also not of it, because of otherness." In the same way, a rice seed cannot produce a rice sprout because they are an established by way of its own character other. According to the Prasangika Madhyamikas a cause which is established by way of its own character cannot produce a result.

Chandrakirti's autocommentary says:

Just as barley, *kesara* (stamens), *kimshuka* (flowers), and so forth, because of being other,

- are not asserted as the agent producing a rice sprout,
- do not have the capacity of producing a rice sprout,
- do not belong to the same continuum, and
- are not similar,

likewise, the rice seed will also not be distinguished by the qualities that were explained for that [sprout], because of being just other.

Barley and so forth because of being other are not able to produce a rice sprout and so forth. Chandrakirti says: "likewise, the rice seed will also not be distinguished by the qualities that were explained for that [sprout], because of being just other."

Lama Tsongkhapa's *Illumination* (Tibetan text page 157) says:

[To this the Prasangika Madhyamikas say:] To those who propound that causes and results are established by way of their own entity one should ask the question: "For what reason are a rice seed and sprout definitely distinct?" [The autocommentary says:]

> If the propounder responds, "Because they are seen to be definite," again one asks: "Why?" If the statement "they are seen to be definite" is examined and investigated as it is, merely stating "Because they are seen to be definite, therefore, they are seen to be definite" is not even slightly able to abandon the errors that were already explained without presenting the reason for their being definite.

> This means that since the reason, that although their being other by way of their own character does not contradict their being seen to be definite, is not indicated, it is not a response that dispels the faults [of production from other].

In brief, the Prasangika Madhyamikas say that the response of the Svatantrika Madhyamikas does not dispel the faults of asserting production from other. The Svatantrika Madhyamikas say that a rice seed and rice sprout are an established by way of its own character other, for the Prasangika Madhyamikas this means that they are unrelated. However, their not being related is harmed by that which is renowned in the world, i.e., that there is no production from an unrelated other. For example, it is well known that a rice seed does not produce a barley sprout and that a barley seed does not produce a rice sprout.

Lama Tsongkhapa's *Illumination* (Tibetan text page 158) says:

> Moreover, the explanation [in the autocommentary] that the highly renowned otherness established by way of its own character that is not differentiated as being common or particular in regard to all that is and is not cause and result harms the assertion of those disputants is [as follows].
> Chandrakirti says:
>
> *Just as barley, kesara, kimshuka and so forth*
> *Are not asserted to be producers of a rice sprout, do not have that ability,*
> *Are not included within the same continuum, and are not similar, likewise,*
> *A rice seed also would not be of that because of otherness.* [6.16]
>
> *Just as*, for example, *barley and kesara* – the stamens of lotuses and so forth, *and kimshuka* flowers *and so forth*, because they are other,
> *are not asserted to be producers of a rice sprout*,
>
> *do not have the ability* to produce a rice sprout,
>
> *are not included in the same continuum*, and
>
> *are not* previous [moments] of *similar* type,
>
> *likewise, a rice seed also would* not possess the four features in relation to *that* rice sprout *because* they would be an *otherness* that is established by way of its own entity. Furthermore, this is a reasoning that is not able to posit different unrelated objects as having or not having the four features.

The four features can be understood in a positive sense in the case of the relationship between a rice seed and rice sprout or in a negative sense in terms of a barley seed and rice sprout. In the case of a barely seed and rice sprout, the barley seed:

1. is not a producer of a rice sprout,
2. does not have the ability to produce a rice sprout,
3. is not included in the same continuum, and
4. is not a previous moment of similar type.

The Prasangika Madhyamikas say that if the barley seed does not have these four features in relation to the rice sprout, it follows that the rice seed would also not have them because they too are unrelatedly other.

Lama Tsongkhapa says: "Furthermore, this is a reasoning that is not able to posit different unrelated objects as having or not having the four features." There is a case in which two unrelated

objects have the four features and another case in which they do not, however this reasoning is not able to posit this. For the Prasangika Madhyamikas if a rice seed and rice sprout are an established by way of its own character other, then they would be unrelated objects because if they are established by way of their own character they would exist unrelatedly and independently.

A rice seed and rice sprout have the four features in that a rice seed:

1. is a producer of a rice sprout,
2. has the ability to produce a rice sprout,
3. is included in the same continuum as a rice sprout, and
4. is a previous moment of similar type.

Lama Tsongkhapa's *Illumination* (Tibetan text page 158) says:

3B1C-2B3E-2A1B-2B1A-2 Refuting production from other in particular

A Refuting production from other in regard to former and later cause and result
B Refuting production from other in regard to simultaneous cause and result

3B1C-2B3E-2A1B-2B1A-2A Refuting production from other in regard to former and later cause and result

1 Actual meaning [of refuting production from other in regard to former and later cause and result]
2 Dispelling disputes regarding the refutation

3B1C-2B3E-2A1B-2B1A-2A1 Actual meaning [of refuting production from other in regard to former and later cause and result]

Chandrakirti's autocommentary says:

> Thus, having at first repeatedly expressed the established otherness renowned to others as though it were established, it was disputed. Now, to explain the otherness of cause and effect as impossible:
>
> *Sprout and seed do not exist simultaneously.*
> *Without otherness, how could the seed be merely other?*
> *Hence, since sprout produced from seed will not be established,*
> *Give up this position that "there is production from others."* [6.17]
>
> Here, only the presently existing Maitreya and Upagupta are seen as merely others through mutual reliance; the seed and the sprout are not even observed together like that because the sprout does not exist without the seed totally transforming. When, thus, the sprout does not exist simultaneously with the seed, therefore, the seed does not have an otherness from the sprout and, if otherness does not exist, this so-called "sprout produced from other" does not exist. Therefore, give up this position that says, "produced from other."

The established by way of its own character otherness that is repeatedly asserted by Svatantrika Madhyamikas was disputed. Chandrakirti then says: "Now, to explain the otherness of cause and effect as impossible." This means that he will explain the position of the Prasangika Madhyamikas that cause and result being an established by way of its own character other is impossible.

The *Supplement* then says: "Sprout and seed do not exist simultaneously." The meaning of this is clear. Then Chandrakirti says: "Without otherness, how could the seed be merely other? Hence, since sprout produced from seed will not be established…" Since the Svatantrika Madhyamikas are unable to establish that a rice sprout is produced from a rice seed, the Prasangika Madhyamikas exhort them to: "Give up this position that 'there is production from others.'"

"Without otherness, how could the seed be merely other?" means that according to the Prasangika Madhyamikas a rice seed is not an established by way of its own character other than the rice sprout. Therefore, how can the rice sprout be an established by way of its own character other

than the rice seed? If the rice seed and rice sprout are not an established by way of its own entity other, there cannot be production from other. For this reason, the Prasangika Madhyamikas tell the Svatantrika Madhyamikas and the other lower Buddhist schools to give up asserting production from other.

Chandrakirti then says that Maitreya and Upagupta are two people who exist simultaneously and are established as other in mutual dependence, but that such simultaneous and mutually established existence is not the case for the rice seed and rice sprout. Simultaneous existence does not apply to the rice seed and rice sprout because only upon the deterioration of the capacity of the rice seed does the rice sprout arise. In other words, only after the rice seed transforms does a rice sprout arise, whereby they do not exist simultaneously.

Chandrakirti then says: "When, thus, the sprout does not exist simultaneously with the seed, therefore, the seed does not have an otherness from the sprout and, if otherness does not exist, this so-called 'sprout produced from other' does not exist. Therefore, give up this position that says, 'produced from other.'" In short, the Prasangika Madhyamikas exhort the Svatantrika Madhyamikas to give up their assertion of production from other.

Chandrakirti's autocommentary says:

> The meaning of this is explained [in the *Treatise on the Middle Way*, 1.3]:[18]
>
> > The nature of [resultant] things
> > Does not exist in conditions and so forth.
> > If the property of a self does not exist,
> > How could the property of other exist?[19]
>
> Here, "conditions and so forth" signifies the causes or conditions or a collection of causes and conditions or whatever is suitable as other than that.
>
> If the nature does not transform, the natures of effects just would not exist because of non-production. If that does not exist, otherness would not exist on the conditions and so forth. The statement, "existing *at* some place is the definition of existent," is the seventh [case, the locative]. When [the conditions] are a basis, at that time the natures of the effects do not exist on the conditions and so forth like a juniper [tree] and [its] vessel.

(Note: *Treatise on the Middle Way* v. 1.3 is translated in the *Fundamental Wisdom of the Middle Way* as:

> The essence of entities
> Is not present in the conditions, etc.
> If there is no essence
> There can be no otherness-essence.)

The *Treatise on the Middle Way* says: "The nature of [resultant] things does not exist in conditions and so forth." This means that if things are inherently existent they could not have conditions and so forth. In other words, if things are inherently existent they could not be produced by conditions. Nagarjuna then says: "If the property of a self does not exist, how could the property of other exist?" This means

[18] This verse may also be numbered as #5 as it is preceded by two verses of introduction. The Tibetan translation of root text has line d as: 'other things would not exist' – [Tibetan: gZhan dNgos yod pa ma yin no].

[19] Here, 'property of a self' [Tibetan: bDag.gi dNgo.bo; Sanskrit: svabhave] and 'property of other' [Tibetan: gZhan dngo; Sanskrit: parabhavo] could he translated as 'self-entity,' and 'entity of otherness/production from other. See Hopkins, p. 645 and note 628. Notice that Hopkins numbers this verse as 1.5, counting the first two introductory verses as part of chapter one.

that if things are not produced from self how can they be produced from other? 'Self' in this context refers to production from self, i.e., from itself, itself being established by way of its own character.

Chandrakirti says: "Here, 'conditions and so forth' signifies the causes or conditions or a collection of causes and conditions or whatever is suitable as other than that."

Chandrakirti then says: "If the nature does not transform, the natures of effects just would not exist because of non-production." This means that without the transformation of a rice seed there is no production of its result, a rice sprout.

Chandrakirti then says: "If *that* does not exist, otherness would not exist on the conditions and so forth." It is not clear whether the word "that" refers to the result, the rice sprout, or to the transformation of the rice seed without which there is no production of the rice sprout.

Chandrakirti then says: "The statement, "existing *at* some place is the definition of existent," is the seventh [case, the locative]." The particle "*na*," translated here as "at," in this context is the locative case, the seventh, whereas in other contexts it can be the second or fourth cases.

Chandrakirti then says: "When [the conditions] are a basis, at that time the natures of the effects do not exist on the conditions and so forth like a juniper [tree] and [its] vessel." The way in which a cause and result exist is not the same as the way in which a juniper tree and its vessel exist. The relationship of a juniper tree to the vessel in which it is planted is that of support and supported. The vessel is the support of the juniper tree, the supported, which prevents it from falling over. This is not the case for the relationship of cause and result. In the first chapter of Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* it says that support and supported assist each other. Although the vessel assists the juniper tree in terms of supporting it, the vessel and the juniper do not have the same relationship as a cause and its result. For example, in the case of a tea cup and the tea in it, they exist simultaneously and in a relationship of support and supported. The cup supports the tea in the sense of holding it; this type of relationship does not apply to cause and result.

Chandrakirti's autocommentary says:

> That which does not exist anywhere is not produced from that, for example, like sesame oil [is not produced] from sand, as was taught [in the *Treatise on the Middle Way*, 1.12]:
>
> > In case it were produced from those conditions
> > Even as a non-existent,
> > Why would it not also be produced
> > From what are not conditions?
>
> Therefore, this position of support is not finely set forth since it is exceedingly well exposed by just studying the verses by the Acharya [Nagarjuna].

(Note: *Treatise on the Middle Way* v. 1.12 is translated in the *Fundamental Wisdom of the Middle Way* as:

> However, if a non-existent effect
> Arises from these conditions,
> Why does it not arise
> From non-conditions?)

"That which does not exist anywhere is not produced from that" means that a result does not arise from a cause that does not have the capacity to produce it, like sand does not produce oil. "Existing at some place" refers to the cause. A seed that does not exist in some place cannot produce a result. In regard to this there is a Tibetan expression: "No matter how much one squeezes a handful of sand it will not produce oil." This analogy occurs in tantra in the context of explaining that without having

received empowerment there is no realizations, this being likened to oil not being produced from sand.

The citation in the *Treatise on the Middle Way* means that if a non-existent sprout arises it follows that a rice sprout can arise from a non-cause. Although a rice sprout arises it does so only from its particular conditions, not just any conditions. A result arises from conditions that have the capacity to produce it; it does not arise from conditions that do not have this capacity.

Chandrakirti concludes: "Therefore, this position of support is not finely set forth since it is exceedingly well exposed by just studying the verses by the Acharya [Nagarjuna]." In other words, Chandrakirti does not set out any further commentary on this verse from the *Treatise on the Middle Way* because it is clear in itself.

Thursday afternoon, 18 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 158) says:

> Chandrakirti says;
>
> > *Sprout and seed do not exist simultaneously.*
> > *Without otherness, how can the seed be other?*
> > *Therefore, since sprout is not established as produced from seed,*
> > *Give up the position that says "There is production from other."* [6.17]
>
> Therefore, having briefly expressed the other established by way of its own entity, which is renowned to other disputants as it is established, it is refuted. That the two, cause and result, are not feasible as other established by way of their own entity is explained [as follows.] Maitreya and Upagupta are seen to be other, saying "He is other than him" in mutual dependence, whereas *sprout and seed do not exist simultaneously* because without the transformation of the seed the sprout does not exist.

This was discussed earlier in relation to the autocommentary. According to the lower Buddhist schools from the Svatantrika Madhyamikas on down there is an otherness established by way of its own character. This is refuted by the Prasangika Madhyamikas. Lama Tsongkhapa says: "The two, cause and result, are not feasible as other established by way of their own entity." This is because if cause and result are not established by way of their own entity they cannot be an established by way of its own entity other.

The Prasangika Madhyamikas take Maitreya and Upagupta as an example of two persons who exist simultaneously but compared to each other are other. However, they say that they are not an established by way of its own character other, but are a *mere* other. Although Maitreya and Upagupta are seen to exist simultaneously, seed and sprout are not because the sprout only arises following upon the transformation of the seed. From the point of view of the Svatantrika Madhyamikas and the other lower Buddhist schools in general seed and sprout also do not exist simultaneously. However, they assert that all phenomena are established by way of their own entity. On the other hand, the Prasangika Madhyamikas say that if things, such as seed and sprout, are established by way of their own character many absurd consequences follow. The Prasangika Madhyamikas say that if seed and sprout exist unrelatedly then it follows that seed and sprout exist simultaneously, whereas this is not the case. The consequence that is flung here by the Prasangika Madhyamikas is accepted by the Svatantrika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 158-9) says:

> The seed does not exist as an *otherness* than the sprout established by way of its own entity. *Without* that, *how can the seed be other* than the sprout? It cannot.

The Svatantrika Madhyamikas assert that the seed and sprout exist as an otherness established by way of its own entity. However, on the occasion of the seed there is no otherness than the sprout established by way of its own entity. (Note that the reason for the particle "la" in the phrase *sa bon* la *myu gu las ngo bos grub pa'i gzhan nyid med*, page 158, is not clear.)

Lama Tsongkhapa's *Illumination* (Tibetan text page 158) says:

> Since they are not an otherness established by way of its own entity, *sprout is not an established* by way of its own entity *produced from seed*. *Therefore*, *give up the position that says* "Things are *produced from other*."

If the seed does not have a sprout that is an other established by way of its own entity, it follows that the seed and sprout are one. Are the seed and sprout one or other established by way of its own character? Is the seed itself an other established by way of its own entity from the sprout or is it one? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 158) says:

> If that, a seed's difference from sprout, existed inherently, inherent existence would never be averted. Therefore, even at the time of the seed, [seed] would be a different substance from the sprout. Therefore, because the two do not exist at the same time, these two are indicated saying "They are not other established by way of their own entity." The assertion that the two, cause and result, are different entities conventionally is not refuted, but it should be understood as coming down to that in regard to the object of negation.

A seed is different from the sprout, but if this difference were inherently existent then inherent existence could not be averted. Lama Tsongkhapa says: "Therefore, even at the time of the seed, [seed] would be a different substance from the sprout." In this case, seed and sprout would exist simultaneously whereas they do not. The seed and sprout are not an otherness established by way of its own character. In reality at the time of the seed there is no sprout. Since there is no sprout at the time of the cause, the sprout cannot be different from the seed because it does not exist. Or it follows that the seed is a different substance from the sprout even at the time of the seed because of being established by way of its own character. In short, there is no otherness established by way of its own character. Therefore, otherness established by way of its own character is the object of negation. However, the seed and sprout are other conventionally. Cause and result, seed and sprout, are mere other, but they are not an established by way of its own character other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 158) says:

> 3B1C-2B3E-2A1B-2B1A-2A2 Dispelling disputes regarding the refutation

The Prasangika Madhyamikas having refuted an otherness established by way of its own entity in terms of former and later cause and result, in this section the lower schools now respond to this refutation.

Chandrakirti's autocommentary says:

> [An objection is] mentioned here: The comment that stated, "The sprout does not exist simultaneously with the seed," is unreasonable. Just like the rising and falling of the pans of a balance scale, the sprout will be produced at just the same time as the seed is ceasing. Like this: at

only that very time when the seed is ceasing is the sprout being produced. Therefore, because the two, ceasing of the seed and production of the sprout, are the same time, the seed and the sprout will also be simultaneous. Therefore, in order to indicate, "there is otherness," it is mentioned:

If said: "Just as the rising and falling of the two pans of a balance scale
Are seen not to be non-simultaneous, likewise
Are the production and cessation of that produced and the producer." [6.18abc]

If it is said: Therefore, there is no fault.

The lower schools make the objection to the Prasangika Madhyamikas saying that they are not right because seed and sprout do exist simultaneously. They say that, for example, just as the rising and falling of the two pans of a scale occur simultaneously, likewise, when the producer, the seed, is ceasing the sprout, the produced, is being produced. From the Prasangika Madhyamikas' point of view, although seed and sprout are not simultaneous their ceasing and being produced are simultaneous. However, when the seed is ceasing is there a seed? When the sprout is being produced is there a sprout? Is there a difference between 'being produced' and 'produced'?
Student: Something 'being produced' is not yet 'produced,' otherwise it would be produced.
Geshe Jampa Gyatso: That is right. Here in the autocommentary it says that the ceasing of the seed and the sprout being produced are simultaneous. According to the Svatantrika Madhyamikas seed and sprout exist simultaneously just as the rising and the falling of the two pans of a scale occur simultaneously. In addition, they say that the cessation of the seed and the production of the sprout are simultaneous. However, the Prasangika Madhyamikas say that that is incorrect.

In short , in order to prove that there is production from other, in that the producer and the produced are other, the Svatantrika Madhyamikas set out the example of a scale. However, the Prasangika Madhyamikas dispel their objection saying:

[Response] Also in that case:

If [its] times are the same, it does not have simultaneity, it is not so. [6.18d]

If, through the example of the balance scale, production and disintegration of the two, object to be produced and producer, are thought of as simultaneous, that is unfitting.

The Prasangika Madhyamikas say that it is not suitable to take the two pans of a scale as an example proving that the producer and the produced exist simultaneously and that production and disintegration occur simultaneously.

The Prasangika Madhyamikas then say (Chandrakirti's autocommentary, Tibetan text page 62):

If asked: Why?

Even though rising and falling are indeed simultaneous in the example of the balance scale, but in that case, there is no simultaneity in the actual meaning arising from the example; hence it is unreasonable.

The Prasangika Madhyamikas say that although the rising and falling of the two pans are simultaneous, in the case of the meaning of the example, the seed and sprout, it is not similar in that these two do not exist simultaneously. Therefore, they say that the example is not appropriate.

Lama Tsongkhapa's *Illumination* (Tibetan text page 159) also sets out the objection of the Svatantrika Madhyamikas, saying:

OBJECTION: Chandrakirti says:

> *"Just as the rising and falling of the two pans of a scale*
> *Are not seen to not be simultaneous, likewise,*
> *Are the production and cessation of that which is produced and the producer."*[6.18abc]

"Propounding 'sprout and seed do not exist simultaneously' is unsuitable because *just as*, for example, *it is not that the rising* of one *and the falling* of the other *of the two pans of a scale are not simultaneous*, that is, they *are seen* to be simultaneous, *likewise*, because the two actions of *production and cessation* respectively *of that which is produced*, the sprout, *and the producer*, the seed, are at the same time, the two, seed and sprout, are also simultaneous. Therefore, since they exist as otherness there is no fault."

The Svatantrika Madhyamikas say that just as the actions of production and cessation of the sprout and seed are simultaneous, so to do the seed and sprout exist simultaneously. They say: "Therefore, since they exist as otherness there is no fault." In other words, there is no fault of seed and sprout not being other, that is, they are otherness. This is an objection made by the lower schools, which the Prasangika Madhyamikas then refute saying (*Illumination*, Tibetan text page 159):

RESPONSE: Chandrakirti says:

> *[Even] if they coincide, [since] here they do not exist at the same time it is not so.* [6.18d]

If, through the analogy of the scale, the two actions of production and destruction of the two, the seed and sprout, are conceived to occur at the same time that would be unsuitable. Even *if* it were as in the analogy of the scale that the two, the higher and lower ends [of the scale], occur at the same time, whereby the two actions of rising and falling *coincide*, that is, occur at the same time, *here* the actual meaning of the analogy is not suitable since the seed and the sprout *do not exist at the same time*.

The Prasangika Madhyamikas say that although in the case of the analogy it is true that the rising and the falling of the two pans of a scale occur simultaneous, it is not the case that the seed and sprout exist simultaneously.

The lower schools say that seed and sprout exist simultaneously because the actions of production of the sprout and cessation of the seed occur simultaneously. The Prasangika Madhyamikas say that even conceiving that the actions of production and cessation occur simultaneously is not suitable because they do not occur simultaneously since the seed and sprout do not exist simultaneously. On the other hand, the lower schools say that seed and sprout exist simultaneously because the actions of cessation and production occur simultaneously. That being the position of the lower schools, the Prasangika Madhyamikas then turn this assertion back on them saying that cessation and production are not simultaneous because seed and sprout are not simultaneous.

The Prasangika Madhyamikas' refutation continues in Chandrakirti's autocommentary saying:

In order to indicate just how [simultaneity] does not exist, it is explained:

> *If that being produced is not existent since approaching production and*
> *Although that being ceased exists, it is asserted as approaching*
> *Disintegration, in that case, how is this similar to a balance scale?* [6.19abc]

There, "being produced," means it is yet to come (i.e., in the future) since it is approaching production; "being ceased," means it is present because of approaching cessation. Therefore, a state that does not [yet] exist will be produced because it was not [yet] produced; an existent state will be

> ceased since it is presently [existing]. When it is like that, then how would it be similar to a balance scale? Because the two pans of the balance scale are present, the actions of rising and falling exist simultaneously, and since the present and future seed and sprout do not exist simultaneously, this [case] is not similar to the balance scale.
>
> In case it is considered: Although indeed the phenomena (i.e., the two pans; the seed and sprout) do not exist simultaneously, nevertheless their actions (i.e., rising and falling; ceasing and being produced) have simultaneity.
>
> That too is unsuitable, because actions are not accepted as different from the phenomena by those [disputants].

"Being produced" means it is approaching production, whereby it does not exist in the present in that it is yet to come. "Being ceased" or "ceasing" means approaching cessation, in this case the seed that exists in the present but is in the process of ceasing. Based on this, the Prasangika Madhyamikas ask: "Since the seed is present and the sprout future how can they be simultaneous?" For this reason they say that the analogy of the rising and falling of the pans of a scale is not similar because the seed being ceased is present whereas the sprout being produced is future, therefore they do not exist simultaneously whereby they are not similar to the pans of a scale. In other words, the rising of one pan and the falling of the other occur simultaneously in the present, whereas the seed being present and sprout being future they do not exist at the same time. Therefore, that analogy of the scale is not similar to the meaning.

The Prasangika Madhyamikas say that if the Svatantrika Madhyamikas think that although seed and sprout do not exist simultaneously their actions exist simultaneously, that too is wrong. Chandrakirti says: "That too is unsuitable, because actions are not accepted as different from the phenomena by those [disputants]." In short, this too is unsuitable because the action of cessation of the seed and the action of production of the sprout are not asserted by the Svatantrika Madhyamikas to be different from the seed and sprout themselves. Therefore, the Svatantrika Madhyamikas' assertion that seed and sprout exist simultaneously because their actions exist simultaneously is not correct.

Friday morning, 19 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 159) says:

> In order to indicate that they do not exist in this way there is the [following] explanation. Chandrakirti says:
>
> *If that being produced is approaching production, whereby, it does not exist, and,*
> *In addition, that being ceased, which is asserted to be approaching destruction, does exist,*
> *At that time, how are they similar to a scale?* [6.19abc]
>
> *If that "being produced" is approaching production* in the present, *whereby*, because of not yet being the entity of the sprout, *it does not exist* in the present, whereas, *in addition, that being ceased,* because it is *asserted to be approaching destruction*, *does exist* in the present – thus, at the time of approaching the production of the sprout the seed is present and the sprout is future – *at that time, how are those* two, the seed and the sprout, *similar to* the two, the rising and falling of *the scale?* They are not because the two higher and lower ends of the scale are [both] in the present. It is also because, whereas the two actions of rising and falling of [the scale] exist at the same time, the two, seed and sprout, do not exist at the same time.

The sprout that is "being produced" is approaching production and is not yet existent, therefore it is future. On the other hand, the seed that is ceasing exists in the present. The Prasangika Madhyamika system say to the Svatantrika Madhyamikas: "Since the seed is a present factor and the sprout a future

factor how can they exist at the same time? On the other hand, in the case of the analogy, the two pans of a scale exist at the same time in the present and, likewise, their actions of rising and falling occur simultaneously. However, the actions of the seed and sprout do not exist at the same time because the seed and sprout do not exist at the same time." In short, the lower schools say that the actions of seed and sprout exist at the same time because the seed and sprout exist at the same time. To prove this they take the pans of a scale as an analogy. However, our own system says that this is not correct.

Lama Tsongkhapa's *Illumination* (Tibetan text page 160) says:

> For these [reasons], the two actions being simultaneous whereby the two, seed and sprout, are also simultaneous, and the analogy of that – the example that sets forth the two, the rising and falling of the pans of a scale – are indicated to not be established. "If two actions at the same time are feasible, also the two phenomena regarding them are definitely simultaneous" is not indicated.
> DOUBT: Although two phenomena, such as seed and sprout, do not exist at the same time, their actions exist at the same time.
> REPLY: That too is not suitable because those disputants do not assert actions to be different objects from phenomena and because here the two actions are in the context of refuting inherent existence.

Lama Tsongkhapa says that it is also not suitable to assert that although two phenomena, such as a seed and sprout, do not exist at the same time, their actions exist at the same time because the disputants assert that the action of the seed is not different from the seed. The "action of the seed" refers to its ceasing. Since the word 'phenomena' in the phrase "those disputants do not assert actions to be different objects from phenomena" includes the sprout, also the action of production of the sprout is not asserted by the disputants to be different from the sprout itself. Since the Svatantrika Madhyamikas do not assert actions to be different from the phenomena themselves, the Prasangika Madhyamikas say that is not suitable for them to assert that the actions of seed and sprout exist simultaneously because the actions are not asserted to be different from the phenomena themselves.

QUESTIONS AND ANSWERS

Student: What do the terms 'entity' and 'nature' mean according to the Samkhyas? Are these terms synonymous for them?
Geshe Jampa Gyatso: For the Samkhyas, the nature is the occasion on which the three, activity, darkness, and lightness, are equal or balanced. 'Activity' (*rdul*) refers to attachment, 'darkness' (*mun pa*) to ignorance, and 'lightness' (*snying stobs*) to hatred. Nature is defined to be a balanced state of these three but it also refers to the general principle, which is a partless unit having five characteristics. Nature also means cause, and such a nature is a creator. Results are transformations. That which is nature and that which is transformation have four possibilities:

1. that which is a cause but not a result,
2. that which is a result but not a cause,
3. that which is both a cause and result, and
4. that which is neither a cause nor result.

An example of the first is the general principle, which is nature but not a transformation. An example of both is the seven: the great one, pride, and the five subtle objects – forms, sounds, odors, tastes, and tangible objects. The great one is a synonym of awareness or intellect, which for the Samkhyas is not consciousness. Instead they say it is like a two-sided mirror that reflects objects from both sides.

I do not know whether nature (*rang bzhin*) and entity (*ngo bo*) mean the same for the Samkhya.

Student: What do the Prasangikas mean by the term 'entity'?
Geshe Jampa Gyatso: For the Prasangikas the term 'entity' means the real nature of phenomena.

Student: What is the entity of a pot?
Geshe Jampa Gyatso: The entity of a pot is that which is bulbous, flat bottomed, and capable of holding fluid. The nature of a sprout is greenness. For the Prasangikas entity and nature are mutually inclusive.

Student: How can the different moments of a continuum of a sprout be different entities while still being the entity of sprout?
Geshe Jampa Gyatso: The different moments of a sprout are not different entities from the sprout.
Student: Are they different substances from each other?
Geshe Jampa Gyatso: They are different substances because one is cause and one is result. Former and later moments being cause and result are different substances but they are one continuum. The former moment of a pot is a congruent cause of the second moment of a pot. A congruent cause produces a result of similar type.

In regard to the former and later moments of a pot there is a lot of debate about whether they are one or different entities and one or different substances according to the different schools. Lama Tsongkhapa's *Clearing Away the Darkness of Trainees' Minds* says that one substance means: phenomena that appear to a direct cognizer but do not appear separately. This text also says that one substance means: phenomena that are not produced as distinct entities. He then defines different substances as: phenomena that are produced as distinct substances. Lama Tsongkhapa does not specify according to which school these definitions are made.

The Prasangika Madhyamikas say that there are no phenomena that are substantially established because if it is substantially existent it exists ultimately. In conclusion, the Prasangika Madhyamikas says that nothing is substantially existent because if it is substantially existent it follows that it is truly existent, ultimately existent, and so forth. On the other hand, if it is an established base it is pervaded by being imputedly existent. In short, whatever is existent is pervaded by being merely imputed by conceptuality.

Student: Would the Samkhyas say that all results are the same entity since they are the same nature?
Geshe Jampa Gyatso: They say that the nature exists in the result but is not apparent. It pervades all phenomena and is independent and partless. See Kunkyen Jamyang Shepa's *Great Exposition of Tenets* in the section on non-Buddhist schools and Ngawang Belden's *Annotations for [Jamyang Shepa's] "Great Exposition of Tenets*."

Student: It seems that in refuting production from self, the Prasangika Madhyamikas are using their own particular meanings of terms (such as nature and same entity), which may not have the same meanings for the Samkhyas. The Samkhyas, on the other hand, use terms such as transformation, the non-apparent becoming apparent, etc., whereas the Prasangikas use different terms in refuting them. Please discuss this.
Geshe Jampa Gyatso: When refuting production from self, production from self means 'itself producing itself.' Self is any phenomena that produces itself. The Samkhyas say that things are produced from their own nature. For the Prasangika Madhyamikas nature and entity are the same. The nature that is the object of negation is of two types: conventional nature and ultimate nature. From the point of view of affirmation or establishment there are also two natures in that all phenomena have the nature of conventional truth and the nature of ultimate truth. When refuting production from self, the Prasangika Madhyamikas say that a sprout is not produced from nature. The Prasangika Madhyamikas say that nothing is produced from its own nature. On the other hand, in the Svatantrika Madhyamika system a sprout is not produced ultimately but is produced naturally or from its own nature. For the Prasangika Madhyamikas a sprout is neither produced ultimately nor naturally. In order to prove that a result is naturally produced, the other schools give various reasons:

- the Samkhyas say that there is a sprout produced from its own nature because there is production from self;
- the lower Buddhist schools say that it is because there is production from other;
- the Nigranthas say that it is because there is production from both; and
- the Charvakas say that it is because there is causeless production.

Student: What is the difference between the way an object is posited in the Svatantrika Madhyamika system and Prasangika Madhyamika system?
Geshe Jampa Gyatso: They are the same.
Student: For the Svatantrika Madhyamikas an object can be posited by a non-conceptual awareness, whereas for Prasangika Madhyamikas it must be posited by a conceptual awareness.
Geshe Jampa Gyatso: In both the Svatantrika Madhyamika and the Prasangika Madhyamika systems both conceptual and non-conceptual awarenesses can posit an object, an established base.
Student: Is there a difference between 'merely posited by conceptuality' and 'merely posited by conceptuality over there'?
Geshe Jampa Gyatso: For the Prasangika Madhyamikas they are the same. For the Svatantrika Madhyamikas if it is an existent it is pervaded by being merely posited by conceptuality but there is discussion as to whether it is pervaded by being merely posited by conceptuality over there as there are different assertions in the various texts. In general for the Madhyamikas the positing of an object of comprehension depends on a valid cognizer. This is discussed in Chandrakirti's *Clear Words* and Nagarjuna's *Refutation of Objections*. Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says that because there are two objects of comprehension there are two valid cognizers. This also indicates that because there are two valid cognizers there are two objects of comprehension. In Lama Tsongkhapa's *Illumination* (Tibetan text page 127) (Klein, *Path to the Middle*) it says:

> When you understand well this [presentation of how phenomena are posited through the force of the mind according to the Svatantrika School], you will come to differentiate the two positions [of the Svatantrika School and the Proponents of True Existence which some] confuse. They think:
>
> > Objects of comprehension [that is, all objects] are posited through the force of valid cognitions, and since valid cognitions are awarenesses, the positing of objects of comprehension through them is a case of positing [objects] through the force of an awareness. Hence, even the systems of the Proponents of True Existence refute true establishment.
>
> [However,] that objects of comprehension are posited [that is, certified] through the force of valid cognitions means that valid cognitions realize the mode of subsistence of the two [types of] objects of comprehension [specifically and generally characterized objects or impermanent and permanent objects or manifest and hidden objects]. Therefore, the two – this [meaning of positing, or certifying, objects of comprehension according to the Proponents of True Existence] and the former [meaning of positing objects through the force of an awareness according to the Svatantrika School] are utterly dissimilar.

END

Monday afternoon, 22 May 2000

Chandrakirti's autocommentary says:

> Furthermore:
>
> *Without an agent, this production is also not a reasonable entity.* [6.19d]
>
> The agent of the action of being produced, the sprout, is just not [yet] existent because of being future. If it does not exist, without the support this [action of production supported on it] also does not exist. How will that [action of being produced], which is not existent, be simultaneous with cessation? Therefore, the actions [of ceasing and being produced] are only unreasonable as simultaneous.

Furthermore, there are other faults in accepting production from other. For this reason, Chandrakirti says: "Without an agent, this production is also not a reasonable entity." The action of being produced is the supported and the sprout is the support. Since the support, the sprout, does not exist, how can the action supported on it exist? The assertion that, although seed and sprout do not exist simultaneously, the action of cessation of the seed and the action of production of the sprout exist simultaneously is incorrect. This is because if the seed and sprout do not exist simultaneously, how can their actions exist simultaneously?

Chandrakirti's autocommentary (Tibetan text page 64) says:

> It is taught [in the *Treatise on the Middle Way*, 7.17]:
>
> If some not [yet] produced thing were existent somewhere,
> it would be produced. If that thing does not exist, what would be produced?
>
> The meaning is this: if some unproduced thing called 'sprout' were to exist somewhere prior to production, it would [already] be produced. Yet, prior to production, it cannot be posited as existing anytime, anywhere, because of being unproduced. Therefore, if the support of the action of production, the thing, does not exist, is not taken possession of, prior to production, what would be produced?

That which does not exist now but is yet to exist is a future object. Phenomena do not exist before their production. For example, a sprout that will be produced does not exist before its production. Chandrakirti says: "prior to production, it cannot be posited as existing anytime, anywhere, because of being unproduced." A sprout is not produced at the time of its cause but will be produced. Before it is produced, it cannot exist anytime, anywhere, and so forth because it is not yet produced. Chandrakirti says : "Therefore, if the support of the action of production, the thing, does not exist, i.e., is not present, prior to production, what would be produced?"

Chandrakirti's autocommentary says:

> The term 'it' is a common basis since it is a qualification of thing; 'thing' is the seventh [case, the locative];[20] "if... does not exist" is also a qualification of thing; the term 'what' is joined with

[20] Perhaps 'thing' is in the locative case because the phrase means 'if that thing does not exist somewhere,' i.e., at some place.

> "would be produced." Hence, "if that thing does not exist, what would be produced?" means "not even a little would be produced."

Here Chandrakirti gives his commentary on the verse from *Treatise on the Middle Way*. He says 'thing' is the seventh case, the locative. 'What,' which is conjoined with 'would be produced,' refers to the sprout.

Chandrakirti's autocommentary says:

> If said: Is the example of the balance scale not finely set out in the *Exalted Rice Seedling Sutra* saying "In the manner of the rising and falling of the pans of a balance scale, in the very same instant a seed ceases, a sprout is produced"?
>
> That it is finely set forth is indeed right, yet it is not in order to indicate production from other and it is also not in order to indicate production by way of its own character.
>
> If asked: What then?
>
> It is in order to fully clarify the establishment [of production] as a simultaneous uninvestigated dependent-arising[21] – like an illusion.
>
> It is explained [in the *Praise of the Supramundane*, 18]:[22]
>
> > From disintegrated and non-disintegrated seeds a sprout will not arise,
> > Hence, you taught all production as similar to the arising of an illusion.

Although the analogy of the pans of a scale is set forth in the *Exalted Rice Seedling Sutra*, it is not set forth in order to present the production of a sprout established by way of its own character and the production of a sprout established by way of its own entity. What is its purpose? Chandrakirti says: "It is in order to fully clarify the establishment [of production] as a simultaneous uninvestigated dependent-arising – like an illusion." The analogy of the pans of a scale, which exist simultaneously, differs from the meaning that the analogy exemplifies, the seed and sprout and their actions, in that they do not exist simultaneously. However, in general, the action of approaching the cessation of the seed and the action of approaching the production of the sprout occur simultaneously.

In short, the analogy of the two pans of a scale is in terms of two things that exist simultaneously and dependently, whereas the meaning that it exemplifies, the seed and sprout, do not exist simultaneously.

Lama Tsongkhapa's *Illumination* (Tibetan text page 160) says:

> Chandrakirti says:
>
> *That production without the agent is not even a reasonable entity.* [6.19d]
>
> There are also other faults. The agent, the sprout, which depends on the action of production, is a future [phenomenon] at the time of approaching production, therefore, at that time it does not yet exist. Also if [the sprout] does not exist at that time, since *that* action of *production*, the supported, existing *without the* supporting *agent*, the sprout, *is not even a reasonable entity*, [production] does

[21] Or, 'as being a dependent arising at the same time as being uninvestigated.'

[22] Poisson, p.294, mentions this as cited in *Bodhicharyâvatârapañjikâ*, chapter 9, verse 108, attributing it to the *Four Sets of Praises.* See Lindtner, p. 134-135.

> not exist at the same time as cessation. Therefore, the two actions occurring at the same time is not feasible.

The action of cessation of the seed and the action of production of the sprout do not occur simultaneously because, at the time of approaching production of the sprout, there is no action of production since the sprout does not yet exist. The action of production of the sprout is supported on the sprout; therefore, since the sprout does not exist, the action of production of the sprout does not exist. Therefore, that the action of production and the action of cessation occur simultaneously is incorrect.

Lama Tsongkhapa's *Illumination* (Tibetan text page 160) says:

> OBJECTION: Is that very analogy of a scale not set forth in the *Exalted Rice Seedling Sutra* saying: 'In the manner of the rising and falling of the pans of a scale in the very instant that the seed ceases, in that very instant the sprout is produced'? Therefore, it is not suitable to refute the assertion that the two, seed and sprout, are like the rising and falling of the pans of a scale.
> RESPONSE: That it is set forth is in fact true, but it is not for the purpose of indicating production from other and production by way of its own character. Therefore, when "that production" [in the root verse] refutes production, it refutes mere production which is established by way of its own entity; it does not at all refute mere production of a sprout from a seed.

Someone makes the objection that since the analogy of the pans of a scale is set out in the *Rice Seedling Sutra* in the context of discussing the production of a sprout, "it is not suitable to refute the assertion that the two, seed and sprout, are like the rising and falling of the pans of a scale." The answer to this objection is that this sutra only refutes the production of a sprout established by way of its own character, it does not refute the production of a sprout from a seed. In other words, the *Rice Seedling Sutra* does not refute the mere production of a sprout from a seed but does refute the inherent production of a sprout from a seed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 161) says:

> QUESTION: If in that sutra it is not said that the two, seed and sprout, occur at the same time in the manner of the rising and falling of the pans of a scale, what is the intention regarding that analogy of simultaneity?
> RESPONSE: They are called "simultaneously arising in dependence," which is explained in the commentary saying "in order to clarify them as being established without investigation as simultaneously arising in dependence, like illusions," [meaning that] the two actions are necessarily actions that exist simultaneously. However, although in that sutra the analogy of the rising and falling of the pans of the scale necessarily indicates simultaneity, it is not suitable that it explains the two, seed and sprout, as simultaneous.

Here, Lama Tsongkhapa says "the two actions are necessarily actions that exist simultaneously" whereas this is what was being refuted before. However, he then goes on to clarify this statement.

Lama Tsongkhapa's *Illumination* (Tibetan text page 161) says:

> Therefore, the two actions which are refuted as occurring at once are the two actions that are established by way of their own character; the two actions that in general exist simultaneously are not refuted.

The action of cessation of the seed and the action of production of the sprout are not simultaneous; however, the action of approaching the cessation of the seed and the action of approaching production

of the sprout are simultaneous. These are the two actions that Lama Tsongkhapa says in general exist simultaneously.

Lama Tsongkhapa's *Illumination* (Tibetan text page 161) says:

> Henceforth, the assertion of production regarding that is that the two, approaching the cessation of the cause and approaching production of the result, are necessarily simultaneous. It is not the case that it is unsuitable to assert mere production and nominal production, however, it is contradictory to assert ultimate production and production by way of its own character because:
> 1. in regard to the first, [mere production and nominal production], although the two actions of production of the result and cessation of cause are simultaneous, the two, cause and result, are not necessarily simultaneous, and
> 2. in regard to the latter, [ultimate production and production by way of its own character], if actions are simultaneous also cause and result would necessarily be simultaneous.

The Svatantrika Madhyamikas assert that seed and sprout are established by way of their own character, whereas according to the Prasangika Madhyamikas this is incorrect because it follows that seed and sprout would be simultaneous. In other words, if seed and sprout were established by way of their own character they would be unrelated, whereby they could exist simultaneously. Another consequence flung by the Prasangika Madhyamikas is that if the cessation established by way of its own character of the seed and the production established by way of its own character of the sprout exist simultaneously, then the seed and sprout would exist simultaneously. In short, if the two actions are established by way of their own character and exist simultaneously, then it follows that seed and sprout would also exist simultaneously. The Prasangika Madhyamikas say that although conventionally the two actions of approaching production of the result and approaching cessation of cause are simultaneous, the two, cause and result, are not necessarily simultaneous.

Lama Tsongkhapa's *Illumination* (Tibetan text page 161-2) says:

> Therefore, since the action of producing a result is necessarily supported on the agent which is "that produced," the sprout and so forth, they are support and supported. If support and supported were ultimately established, it would be inadmissible for them to transform into a different nature. Therefore, since at all times the action also needs a support, even at the time of approaching the production of the sprout and so forth, the sprout and so forth necessarily exist as the support of the action of production. Therefore, since the two, cause and result, being simultaneous and so forth is harmed, it is inadmissible.
>
> In regard to nominal production, if they became support and supported one time, they do not necessarily become [support and supported] in all times; therefore, it is not similar. The action of producing the sprout, which is simultaneous with the seed, is the action approaching the production of the sprout. The two, that [action of producing the sprout] and the sprout, are in general support and supported. Although the sprout does not exist at the time of that action, this does not contradict the action existing. For example, in general if the relating object (*'brel yul*) is hindered, the related (*'brel po*) is canceled. The seed is the relating object and the sprout is the related; however, at the time of the sprout, although the seed has been canceled, there is no contradiction that the sprout is not canceled.
>
> Having understood well the refutation by means of reasoning in this way and that the reasoning that refutes is not turned back against oneself, if one understands how to posit the Middle Way position without faults one is a Middle Wayer. At the time of refuting, having mentioned only superficial [reasonings] when they are turned back against oneself one can only set out denials. It is as said in *Clear Words*: "We do not debate with the crazy."

If support and supported were established by way of their own character, they should be support and supported at all times, in all places, etc. Therefore, it would follow that a sprout would exist at the

time of its cause, a seed. In regard to nominal production – support and supported being nominally existent – there is no such fault because they *can* be support and supported at one time. The fact that at the time of the seed, there is the action of production of the sprout but there is no sprout is not contradictory in regard to a conventionally existent support and supported. The transformation of a seed into a dreg is not incompatible with the production of a sprout. In other words, conventionally it is feasible. In other words, for the Prasangika Madhyamikas the fact of the cessation of the seed is not incompatible with the existence of the sprout. It is important to consider time in relation to causes and results; otherwise there will arise many opportunities for debate.

This concludes a discussion concerning the refutation of production from other in regard to former and later, or sequential, cause and result. Next there is a discussion concerning the refutation of production from other in regard to *simultaneous* cause and result.

Lama Tsongkhapa's *Illumination* (Tibetan text page 162) says:

> 3B1C-2B3E-2A1B-2B1A-2B Refuting production from other in regard to simultaneous cause and result

Chandrakirti's autocommentary (Tibetan text page 64) says:

> [Someone] propounds: Since a state of simultaneity mentioned here does not exist for the seed and the sprout, if production [from other] is unreasonable because otherness does not exist – production does exist since otherness exists there where simultaneity exists, for example, like eye consciousness and the feelings and so forth arisen together with it. Eye [faculty], visible form and so forth and feeling and so forth, those that arise together, produce eye consciousness at only the same time. Similarly, eye [faculty] and so forth and mind will also become the very conditions of feeling and so forth at only the same time.
>
> [Response:] That is not so.

Someone says that since seed and sprout do not exist simultaneously, there is no production from other; however, an eye awareness exists simultaneously with the mental factors in its retinue such as feeling, discrimination, and so forth, as well as with the eye sense power and form. In other words, there is production from other because causes and results exist simultaneously, for example, eye, eye consciousness, feeling, and form. The Prasangika Madhyamikas say that this too is incorrect.

Chandrakirti's autocommentary says:

> If asked: why?
>
> *If eye awareness had otherness from its producers, the simultaneous*
> *Eye [faculty] etc. and discrimination and so forth arisen together,*
> *What purpose would there be to arise into existence [again]? In case it is*
> *Said: it does not exist, the faults concerning this were already explained.* [6.20]
>
> If the eye [faculty] and so forth and the simultaneous discriminations and so forth are asserted as the very conditions of the present eye awareness, then existence would indeed become an otherness that relies on that. However, since there is not even a little purpose served by arising [again] into existence, production does not exist.

The Prasangika Madhyamikas say: "If the eye consciousness exists at the time of its causes, what purpose would there to it being produced again? There would be none." Chandrakirti says: "The

faults concerning this were already explained." This refers to the refutation of production from other in terms of former and later cause and result, which was set out previously.

Chandrakirti says: "If the eye [faculty] and so forth and the simultaneous discriminations and so forth are asserted as the very conditions of the present eye awareness, then existence would indeed become an otherness that relies on that. However, since there is not even a little purpose served by arising [again] into existence, production does not exist." This means that if a result such as an eye awareness already exists at the time of its causes, there is no purpose to it being produced again.

Chandrakirti's autocommentary says:

> In case, out of the wish to totally reject the non-existence of production, that [effect at the time of the cause][23] is not accepted as an existent state, "at that time too, the eye [faculty] and so forth are not other than the awareness that is not [yet] existing," is the very fault that was explained.

That "very fault" is probably that set out before, regarding the refutation of production from other. Chandrakirti's autocommentary says:

> Therefore, if production from others is asserted like that, even if otherness were possible, production would be impossible. Because that is impossible, both are impossible. And, even if production were possible, otherness would be impossible. Because that is impossible, both are impossible. Hence, because external objects do not exist in any way, since emptied by external objects, the gone having gone, only the mere term will remain.
>
> Therefore, this conception [of production from others] is unsuitable.

In short, production from other is not acceptable. In the context of production from other, 'other' is an established-by-way-of-its-own-character other. Although cause and result are possible, production from other is not possible. Having refuted production from other, only the mere term 'production from other' remains.

Tuesday morning, 23 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 162) says:

> OBJECTION: Here we say that since seed and sprout do not exist simultaneously, production from other is unsuitable because there is no otherness by way of its own entity. However, since cause and result do exist simultaneously, otherness exists there, therefore, there is production from other; for example, the eye consciousness and the feeling and so forth which are simultaneous with it. The eye, form and so forth, and the feeling and so forth that simultaneously arise produce an eye consciousness at only the same time. Likewise, the eye and so forth and the mind are also conditions for [the arisal of] feeling and so forth at only the same time.

Here the lower school, the Vaibhashika, gives reasons to prove production from other in terms of cause and result existing simultaneously. To this, the Prasangika Madhyamikas respond as follows. Lama Tsongkhapa's *Illumination* (Tibetan text page 162) says:

> RESPONSE: Chandrakirti says:
>
> *If an eye awareness exists as other than its producers – the simultaneous*

[23] LTK, p. 170.

> *Eye and so forth – and the discrimination and so forth that arise simultaneously,*
> *Since it exists what sense would there be for it to arise?*
> *If someone says "That does not exist," the faults were already explained concerning that.*
> [6.20]

> *If its producers – the eye and so forth simultaneous* with it *– and the discrimination and so forth that arise simultaneous* with them are conceived to be conditions for *an eye awareness*, i.e., an eye consciousness, then, in dependence on discrimination and so forth, *existence as otherness* would be permissible. However, *since it exists* from the time of the cause, *what sense would there be for it to arise* again? Since there would not even be the slightest [sense], there is no [such] production.

In short, if a result exists at the time of its cause there would be no sense in it being produced again. Because there is not the slightest sense in this, there is no production from other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 163) says:

> Desiring to dispel the faults of non-production, *if someone says* "*That* result *does not exist* at the time of the cause," then [we say that] *concerning that*, former and later [cause and result], *the faults* of their not existing as other established by way of their own entity *were already explained* previously.

In order to dispel the faults, the lower school then says "That result does not exist at the time of the cause." To this the Prasangika Madhyamikas respond: "concerning that, former and later [cause and result], the faults of their not existing as other established by way of their own entity were already explained previously." In short, if the lower school now says that cause and result are sequential, the faults explained previously would apply.

Lama Tsongkhapa's *Illumination* (Tibetan text page 163) says:

> Therefore, although this reasoning asserts that in regard to cause and result otherness does exist, inherently existent production is not feasible. Because of that, production from other is indicated to not be feasible and, although production in regard to causes and results is feasible by the former reasoning, their being inherently existent other is not feasible. Thus, production from other is indicated to not be feasible. Then, "production from other," having become empty of the meaning expressed, only the term expressing it remains.

In general, there is production from other but there is no production from an established-by-way-of-its-own-character other. Since there is no production from other, a cause, established by way of its own character, it is said that there is no production from other. Lama Tsongkhapa says: "Then, 'production from other,' having become empty of the meaning expressed, only the term expressing it remains." In other words, production from other having been refuted, only the mere words "production from other" remain. This is similar to what Chandrakirti's *Explanation of the 'Supplement to the "Middle Way"'* says. Thus, production from other is refuted both in the context of sequential cause and effect and simultaneous cause and result.

Student: In the case of cause and result that are simultaneous, for example, the eye consciousness that is produced simultaneously with form and so forth, its conditions, in what sense would there be production of the eye consciousness again?
Geshe Jampa Gyatso: In general the conditions from which an eye consciousness arise are (1) the observed object condition, a form, (2) the empowering condition, the eye sense power, and (3) the immediate condition. These three conditions are said to precede the production of eye consciousness. However, the lower school says that the eye consciousness exists simultaneously with its conditions;

this is not acceptable. The lower school says that feeling and so forth are the conditions for eye consciousness. They are therefore causes of eye consciousness, specifically they are simultaneously occurring causes. In regard to this assertion the Prasangika Madhyamikas ask: "If eye consciousness arises at the time of its conditions what sense would there be for the eye consciousness to arise again later on? Since the eye consciousness exists at the time of its causes why would it then be produced?" The Prasangika Madhyamikas use this reasoning to refute inherently existent production.

Lama Tsongkhapa's *Illumination* (Tibetan text page 163) says:

> 3B1C-2B3E-2A1B-2B1A-3 Through analyzing the four possibilities regarding results, production from other is refuted

Chandrakirti's autocommentary (page 65) says:

> Now, in order to indicate that there is no time when the cause, from the two, cause and effect, relies on an effect, it is explained:
>
> *If a producer is a cause producing other objects to be produced, calculate*
> *Whether it produces an existent, non-existent, both, or what is free of both.*
> *If existent, what purpose is a producer and what could it do for the non-existent?*
> *What could it do for both and what could it do for what is free of both?* [6.21]
>
> First of all, a cause that acts to produce is not the producer of an existent object to be produced because of the faults that were already explained by statements such as [6.8d]: *and there is just no reason for the produced to be produced again.* Therefore, there is no purpose at all of conditions for that.
>
> Also, what could those producers do for an object to be produced that is not existent, because of being non-existent, like the horns of an ass?

Here cause is called a 'producer' and result, the 'objects to be produced.' Chandrakirti says: "calculate whether it produces an existent, non-existent, both, or what is free of both." In short, there are four possibilities regarding the produced. One should investigate whether the producer produces an existent, a non-existent, both, or what is free of both. If the produced, the result, already exists at the time of its cause, the producer, there would be no need for it to be produced. For this reason, Chandrakirti asks: "If existent, what purpose is a producer?"

Chandrakirti then says: "What could it do for the non-existent?" This means: "What can a cause do for a result that is non-existent at the time of its cause given that a result is inherently existent?"

Chandrakirti then says: "What could it do for both and what could it do for what is free of both?" 'Both' and 'free of both' are respectively an inherently existent result that is both existent and non-existent and an inherently existent result that is free from being both existent and non-existent.

In short, the Prasangika Madhyamikas raise four questions, the conclusion of which is that there is no production from other. If a result exists at the time of its cause there is no purpose to it being produced again, the faults of production again having been explained previously. On the other hand, if a result does not exist at the time of its cause then a producer, a cause, could not do anything for it because the result would be non-existent, like a donkey's horn. In other words, if a result is non-existent at the time of its cause then that result is like a donkey's horn in terms of being non-existent.

Chandrakirti's autocommentary says:

> As was explained [in the *Four Hundred Verses*, 11.15]:

> For whoever asserts effects to exist and whoever asserts effects to be non-existent,
> it would also be meaningless to decorate the pillars and so forth of a house.

If the pillars of a house are inherently existent, then decorating them is meaningless. In other words, Aryadeva says that for whoever asserts a result to exist at the time of its cause and whoever asserts a result to be non-existent at the time of its cause it becomes meaningless to decorate the pillars of a house. This means that both an inherently existent result that exists at the time of its cause and an inherently existent result that is non-existent at the time of its cause are not feasible. However, the lower schools maintain that there are inherently existent results, whereas for the Prasangika Madhyamikas if there are inherently existent results then all is possible. Thus, they say to the lower schools that if you say that an inherently existent result is non-existent at the time of its cause that would be wrong because, if a result exists inherently, then it exists at all times.

Student: Could the four possibilities regarding result be discussed without qualifying the result by "existing at the time of its cause"?
Geshe Jampa Gyatso: Yes, they could.

Chandrakirti's autocommentary says:

> Also from [the *Treatise on*] *the Middle Way* [20.21-22]:
>
> If entitiness of an effect exists, what does a cause produce?
> If entitiness of an effect does not exist, what does a cause produce?
>
> If production does not exist, a cause itself would not be feasible.
> If feasible causes do not exist, of what would there be an effect?

These verses are to be understood in terms of inherently existent results in that, for example, if results exist inherently one can ask: "What does a cause produce?" Nagarjuna then says: "If entitiness of an effect does not exist, what does a cause produce?" For the Svatantrika Madhyamikas if a result does not exist inherently it does not exist. Therefore, also in this case, one can ask: "What does a cause produce?" Nagarjuna then says: "If production does not exist, a cause itself would not be feasible." In other words, if production does not exist there would be no need for a cause. Nagarjuna then says: "If feasible causes do not exist, of what would there be an effect?" In short, without a cause there is no result. These verses refute the first two possibilities: existent and non-existent results. Chandrakirti then refutes the third, results that are both, saying:

> Even if it is the state of being two, what could conditions do for that because the faults that were explained would follow. A thing that is two is the state of being two and existing as the very two is the state of being two. Possession of the entities of existence and non-existence does not exist in the same thing of the same time. Hence, a thing that has such a character does not exist. Because it is just not existent, what could conditions that act to produce do for that?

If there is a result that is both existent and non-existent what could conditions do for it in that if it is both existent and non-existent conditions cannot do anything for it. Here such a state of both existent and non-existent refers to an inherently existent state of being both existent and non-existent. Something that is both existent and non-existent in terms of the time of the cause would mean that it both exists at the time of the cause and does not exist at the time of the cause. However, this is not feasible, therefore conditions cannot do anything for it. Regarding this, Chandrakirti says: "because

the faults that were explained would follow." In short, if something does not exist, conditions cannot do anything for it!

Chandrakirti's autocommentary says:

> As was said in the *Treatise* [*on the Middle Way*, 25-14]:
>
> How could nirvana be both a thing and a non-thing?
> The two do not exist in one, like illumination and darkness.

One object being existent and non-existent is like nirvana being both thing and non-thing, which is impossible in that it would be like illumination and darkness being one. The Prasangika Madhyamikas fling this consequence at the lower schools.

Chandrakirti's autocommentary says:

> Similarly [in the *Treatise on the Middle Way*, 8.7]:
>
> Being and not being an agent does not create that which is and is not.
> How could one have being and not being, since mutually contradictory?

[This verse (8.7) is translated in *Fundamental Wisdom of the Middle Way* as:

> An existent and non-existent agent
> Does not perform an existent and non-existent action.
> Existence and non-existence cannot pertain to the same thing.
> For how could they exist together?]

That which is an agent and that which is not an agent being one is not possible. Likewise, a result that is both existent and non-existent is not possible. Nagarjuna says: "How could one have being and not being, since mutually contradictory?" For example, one object such as a sprout being impermanent and not being impermanent is not possible. Being permanent and being impermanent are mutually contradictory, therefore they cannot exist simultaneously.

Chandrakirti's autocommentary then sets out the fourth possibility, results that are free from being both:

> Also, what could those conditions do for that which is separated from both – an effect that is separated from being both, that is, neither existent nor non-existent – because an effect that has abandoned the entities of existence and non-existence does not exist.

What could conditions do for a result that is separated from both being existent and being non-existent "because an effect that has abandoned the entities of existence and non-existence does not exist"? This implies that a result must have an existing entity.

Chandrakirti's autocommentary says:

> If a state of existence and non-existence is impossible, "that which is *not* existent and *not* non-existent," the negative of that, would not be even slightly different.

A result that is neither not existent nor not non-existent is also impossible. If a result is not existent it is non-existent and if a result is not non-existent it is existent. Existent and non-existent are direct contradictions. Therefore, if a sprout is not existent it is non-existent and if a sprout is not non-existent it is existent. There cannot be a result which is both existent and non-existent.

Chandrakirti's autocommentary says:

> When the two are not established, then that which is neither existent nor non-existent is just impossible.
>
> As was taught [in the *Treatise*, 25.15]:
>
> > Whatever teaches nirvana as not a thing and not a non-thing –
> > that would be established if non-things and things were established.

[This verse (8.7) is translated in *Fundamental Wisdom of the Middle Way* as:

> Nirvana is said to be
> Neither existent or non-existent.
> If the existent and the non-existent were established
> This would be established.]

The main point of this discussion is to refute production from other. Production from other is production from an inherently existent other. If production is inherently existent, there is production from other. However, the mere production of a sprout from a seed is not production from other. Seed and sprout are otherness, but mere otherness does not imply production from other as production from other means production from an inherently existent other. In short, the Prasangika Madhyamikas say that there is no production from other, whereas the lower school asserts production from other.

Tuesday afternoon, 23 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 163) says:

> Chandrakirti says:
>
> > *If the producer is a cause that produces other, the produced,*
> > *Calculate, whether that produced is existent, non-existent, both, or free from both.*
> > *If it is existent what need would there be for that which produces it? Also in regard to the non-existent, why would it be by those?*
> > *In regard to it being both, why would it be by those? Also in regard to it being free from both, why would it be by those?* [6.21]
>
> *If the producer is a cause that produces other* than itself – *the produced* – *calculate*, i.e., investigate, *whether* the result *produced* by that cause is:
>
> 1. inherently *existent*,
> 2. *non-existent*,
> 3. *both* existent and non-existent, *or*
> 4. *free from* being *both* existent and non-existent.
>
> For instance, in regard to that *if* a result *is* inherently *existent what need would there be* for conditions *that produce it?* They would not be necessary because if production exists inherently that already produced would be produced again; however, this has already been indicated to be unsuitable. *Also in regard to a non-existent* result, *why would it be* created *by those* conditions in that it would be non-existent like the horns of a donkey? *In regard to it being* a collection of *both*

> existent and non-existent, *why would it be* created *by those* conditions in that a collection of both of these is not possible? *Also in regard to* it *being free from* being *both* existent and non-existent, *why would it be* created *by those* conditions in that not being either of those two is not feasible?

Lama Tsongkhapa's commentary is a synthesis of Chandrakirti's. The main point is that if a cause produces a result one should investigate whether that result is inherently existent, non-existent, both, or neither. If it is inherently existent, what need would there be for it to depend on conditions for its production? Therefore, if an inherently existent result exists it follows that it is produced again, whereas that which is already produced does not need to be produced again. That this is unsuitable was already explained.

On the other hand, if the result that is produced is non-existent, then what need would there be for conditions to produce it since it would be non-existent, like the horns of a donkey? In addition, since there is no result that is a collection of being both existent and non-existent, such being impossible, what need would there be for conditions to produce it? Also in regard to a result that is free from being either existent or non-existent, what need would there be for conditions to produce it?

This discussion analyzes the four possibilities in regard to results in order to negate production from other. For this reason the section is called "Through analyzing the four possibilities regarding results, production from other is refuted."

Lama Tsongkhapa's *Illumination* (Tibetan text page 163) says:

3B1C-2B3E-2A1B-2B1B Dispelling harm from the world regarding the refutation

1. Dispelling harm from the world through asserting production from other due to it being renowned in the world
2. Dispelling harm from the world by means of production from other not existing even for the conventions of the world

3B1C-2B3E-2A1B-2B1B-1 Dispelling harm from the world through asserting production from other due to it being renowned in the world

A. The disputes [as set forth by the Prasangika Madhyamikas] are harmed by the world
B. Indicating the response which is not harmed by the world

3B1C-2B3E-2A1B-2B1B-1A The disputes [as set forth by the Prasangika Madhyamikas] are harmed by the world

Chandrakirti's autocommentary says:

> In order to thoroughly prove production [from others], this and that reasoning (such as perceiving certainty and the balance scale analogy) which were mentioned were like dry firewood saturated with butter since the fire of your [Madhyamika] intelligence burned [everything] without exception. Requesting the firewood of reasoning to intensely kindle your wisdom fire was enough [– now, it is no longer necessary]!

All the assertions of the lower schools regarding production from other are like dry firewood saturated with butter, which are burned by the reasonings of the Madhyamikas. In other words, just as dry firewood saturated with butter is easily burned, likewise the reasonings of the Madhyamikas easily refute the lower schools' proofs regarding production from other.

Chandrakirti's autocommentary says:

If [the Madhyamika] asks: Is it not that the meaning desired to be expressed (i.e., production from others) wou1d not be proved without a fine indication through reasoning?

That is not so. There is nothing at all to be accomplished by reasoning about that meaning which is proved through the world itself. Because the perception of the world possesses extreme strength, it is mentioned:

Since it is asserted as valid by those worldly ones abiding in their own view,
What can be done here through just mentioning reasoning?
Other arising from other is also realized by the world, hence,
Production from other exists here. What is the need for reasoning? [6.22]

If it is said: if the entire world abides in only its own view, it has extreme strength and it also views [things] as being produced only from others. But to finely set forth reasoning is worthy for only non-manifest things – not for the manifest. Therefore, even without [further] admissible [reasoning], things being produced from others only exists.

The lower schools say that if an object exists conventionally it cannot be refuted by the world because the perceptions of worldly beings possess great strength. Therefore, the lower schools say that production from other exists and there is no need to establish it by reasonings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 164) says:

Whatever reasonings were propounded in order to establish production from other, like dry firewood sprinkled with butter, you burnt all of them without exception with the fire of intelligence. Therefore, exhorting the firewood of reasoning which kindled the fire of your wisdom was sufficient, but now it is no longer necessary.
QUESTION: Is it not that the meaning of asserting production from other is not established without presenting reasonings?
RESPONSE: It is not so, [that is, it is established without presenting reasonings]. Since it is established for the world, there is nothing whatsoever [to be established] by other reasonings. The statement [in the autocommentary] "because the perception of the world possesses great force" is explained [as follows].
Chandrakirti says:

Anyone abiding in his own view asserts the world as valid,
Therefore, in regard to that what is to be done by propounding reasonings?
Also, that other arises from other is realized by worldly beings.
Therefore, in regard to the existence of production from other, what need is there for reasonings? [6.22]

The lower schools say that since production from other is directly perceived by worldly beings, there is no need to present other reasonings in order to establish it since such perception of worldly beings possesses great force. In brief, production from other is directly perceived and therefore does not need to be proven by reasoning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 164) says:

Anyone, all worldly beings, through *abiding in his own view* alone, *asserts* the perception of *the world as valid*, *therefore*, this possesses great force. *Also that other* results *arise from other* causes established by way of their own entity *is* directly *realized by worldly beings*. Therefore, when the logic of reasoning is set forth, it is set forth with respect to the second from among the two, (1) the directly perceivable and (2) the not directly perceivable.

> In regard to the first, [the directly perceivable,] someone says: Because [the directly perceivable] are established by a direct valid cognizer, logic is not set forth regarding them. Therefore, *in regard to that* existence of production from other, *what it to be done by propounding* other *reasonings* which establish it to exist*? Therefore*, although there is no other logic that establishes production from others, things are established to be produced from other. Therefore, *in regard to the existence of production from other, what need is there* to present other *reasonings?* There is none because it is established by a direct perceiver.

The lower schools say that since production from other is directly perceivable, no reasonings are needed to prove it.

In short, in this section the lowers schools say that "The disputes [as set forth by the Prasangika Madhyamikas] are harmed by the world." Therefore, since production from other is directly perceivable by worldly beings no reasoning is needed to prove it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 164) says:

> 3B1C-2B3E-2A1B-2B1B-1B Indicating the [Prasangika Madhyamikas'] response which is not harmed by the world

Chandrakirti's autocommentary says:

> [The Madhyamika responds:] Whoever has not unmistakenly realized the meaning of the treatise and who, due to the maturation of the imprints of [true-grasping toward] things is unable to bear to listen to separating from the dear friend of strong settling upon things, depends on the opinion of damage by the world – he is unable to reverse from the opinion of damage of the world without explaining the very many and extensive events of the world. Hence, in order to indicate the qualification of the object of damage of the world:

Those who do not realize the meaning of the treatises and have strong adherence to the true existence of things require an extensive explanation of the events of the world in order "to reverse from the opinion of damage of the world."

Lama Tsongkhapa's *Illumination* (Tibetan text page 164) says:

> [To this the Prasangika Madhyamikas respond]: Whoever does not unmistakenly realize the meaning of the scriptures and whoever is unable to bear listening again and again to the mode of non-inherent existence – the freedom, i.e., the method for becoming free, from the company of associating over a long time with the strong settling on things as truly existent which arises from the ripening of the latencies of conceiving things to be truly existent deposited since beginningless cyclic existence – depends on chatter, i.e., frivolous talk, which is the harmer of the world. Since they cannot be turned away from the frivolous talk which is the harmer of the world without explaining the many events of the world, it is necessary to present particular objects that are harmed, saying "harmed by the world" with respect to such objects, and particular objects that are not harmed, saying "not harmed by the world" with respect to such objects. With respect to this, it is necessary to begin by presenting the divisions of the two truths.

We do not correctly realize the meaning of the scriptures and have been strongly settling on things as truly existent since beginningless time. Due to not being familiar with the fact that phenomena lack inherent existence but also being unable to bear listening to this again and again, we depend on the talk of the worldly. Since worldly beings say that they directly perceive production from other, we have to agree with them in that they do not rely on reasoning and therefore cannot be refuted by reasoning. Lama Tsongkhapa says: "It is necessary to present particular objects that are harmed,

saying 'harmed by the world' with respect to such objects, and particular objects that are not harmed, saying 'not harmed by the world' with respect to such objects." What are the particular objects that are harmed by the world and the particular objects that are not harmed by the world? In order to answer this one has to understand the two truths; for this reason Lama Tsongkhapa presents the two truths next.

The worldly who are not trained in reasoning engage in chatter or frivolous talk. For example, in India there is a language used by business people which differs from that of the scriptures; this is called "chatter," "frivolous talk," or "jargon." This also includes dialects, for example, the Tibetan nomads have their own way of talking which cannot be understood by other people.

In conclusion, according to the Prasangika Madhyamikas there is no production from other. The refutation of production from other is discussed under two main outlines:

- Refuting production from other in general
- Refuting production from other in relation to the Chittamatra school

In this section, the lower schools say to the Prasangika Madhyamikas that they should not refute production from other because it is perceived by the world. The lower schools say that since production from other is perceived by the world, its refutation would be harmed by the worldly beings. However, one has to identify the particular objects that are harmed by the world and those that are not harmed by the world. A particular object harmed by the world is, for example, the horns of a rabbit. The tail of a human being is also a particular object harmed by the world because it is commonly known to the world that a human being does not have a tail. Thus, the refutation of something commonly known to the world is said to be harmed by the world.

Wednesday morning, 24 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 165) says:

> This has five [outlines]:
>
> 1 General presentation of the two truths
> 2 Applying that to the meaning of this context
> 3 Explanation of the individual entities of the two truths
> 4 Indicating that which harms that harmed by the world in regard to refutation
> 5 Indicating the way of harming that which is harmed by the world
>
> 3B1C-2B3E-2A1B-2B1B-1B1 General presentation of the two truths
>
> A Stating that phenomena have two entities each by means of the division into the two truths
> B Indicating other presentations of the two truths
> C Explaining the divisions of conventionalities relative to the world
> D Indicating that the referent object of that mistaken with respect to the referent object does not exist even conventionally
>
> 3B1C-2B3E-2A1B-2B1B-1B1A Stating that phenomena have two entities each by means of the division into the two truths

Chandrakirti's autocommentary (Tibetan text page 67) says:

> Initially from the viewpoint of the presentation of the two truths, it is explained:
>
> *All things uphold two entities,*
> *The existents found by perfect and false perception.*
> *Whatever is the object of correct perception is thusness –*
> *Of false perception, [that] is taught as the deceptive truth.* [6.23]

All objects of knowledge possess two entities:
(1) that found by a correct perception, reality or ultimate truths, and
(2) that found by a false perception, conventional truths.
Chandrakirti says: "Whatever is the object of correct perception is thusness." This statement indicates the entity of the ultimate. Chandrakirti says: "Of false perception, [that] is taught as the deceptive truth." In brief, all objects of knowledge are suitable as having two entities: the ultimate truth and conventional truth (deceptive truth). The word "things" in this context refers to all existents in that both the Tibetan words *dngos po*, things, and *yod pa*, existent, are translations of the Sanskrit term *bhava*. Therefore, it includes objects seen by a superior's exalted wisdom of meditative equipoise as well as those seen by a valid cognizer of conventionalities.

Chandrakirti's autocommentary says:

> Here, the buddha bhagavans, unmistakenly knowing the self-entities of the two truths, thoroughly indicated the two types of self-entity of all inner and outer functional things such as the compositional factors and sprouts and so forth. Like this: the deceptive (or, conventional) and the ultimate.

All inner phenomena, compositional factors and so forth, and all external phenomena, sprouts and so forth, have two entities. Thus, phenomena are presented as possessing or holding two entities.

Chandrakirti's autocommentary says:

> There, the ultimate finds its entity as the very object of a special type of exalted wisdom of those [aryas] correctly perceiving [reality]; it is not established by its own essential nature. This is one entity.

Ultimate truth is that perceived by a superior's exalted wisdom of meditative equipoise. It is not established by its own entity or nature, nor is it inherently existent. Ultimate truth is the first of the two entities.

Chandrakirti's autocommentary says:

> The other, [the deceptive,] finds its existence through the strength of false perception of ordinary beings, those whose wisdom-eyes[24] are completely covered by the thick film of the cataract of ignorance. It is not established by its own entity like that kind of self that is the object of perception by the childish.

A conventional truth is that which is seen by childish beings or that which found by a valid cognizer analyzing a conventionality. It too is not established by its own entity.

Chandrakirti's autocommentary says:

> Therefore, all things uphold two natures.

[24] Literally: eyes of awareness.

The two natures that all things uphold are the ultimate and conventional natures.

Chandrakirti's autocommentary says:

> Also, from the two natures, that which is the object of correct perception is thusness, meaning, "that is the ultimate truth." The self-entity of that will be explained. That which is the object of false perception is the deceptive truth.

In short, if it is an established base or an object of knowledge it is pervaded by having two entities:
1. the entity of the ultimate truth and
2. the entity of the conventional truth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 165) says:

> Chandrakirti says:
>
> *All things – things found by correct*
> *And false perception – possess two entities.*
> *Any object of correct perception is thusness,*
> *That of false perception is said to be conventional truth.* [6.23]
>
> The bhagavans, who unmistakenly know the respective entities of the two truths, thoroughly presented *all things*, i.e., everything, – the internal, compositional factors, intention, and so forth, and the external, sprouts and so forth – as *possessing two* types of own *entities*. What are they? They are the entity of conventional truth and the entity of ultimate truth. Therefore, when the entity of one, for example, a sprout, is divided it is presented as having two, the entity of being conventional and the entity of the ultimate. A single entity of a sprout is not at all presented as the two truths in dependence on ordinary beings and superiors.

A single object is not distinguished as being the entity of the conventional and the entity of the ultimate in dependence on ordinary beings and superiors. In other words, all existents have two entities; it is not the case that a single object has two entities in dependence on the two types of beings. All objects of knowledge have two entities: that found by a superior's exalted wisdom of meditative equipoise and that found by a valid cognizer of conventionalities.

The definitions of the two truths are the same for the two Madhyamika schools.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 282-3) says:

> The <u>definition of that being an ultimate truth</u> is: an object found by a consciousness of [an ultimate] type (*rigs shes*) analyzing the final [nature of phenomena] and with regard to which that consciousness of [an ultimate] type analyzing the final [nature of phenomena] becomes a consciousness of [an ultimate] type analyzing the final [nature of phenomena]. When [ultimate truth] is divided by way of the base of emptiness, there are sixteen and so forth.
> The <u>definition of that being a conventional truth</u> (truth for a concealer, *kun rdzob den pa*) is: an object found by a valid cognizer of conventionalities and with regard to which that valid cognizer of conventionalities becomes a valid cognizer of conventionalities. When [conventional truth] is divided relative to the perspective of a worldly consciousness, there are two: real (*yang dag pa)* and unreal (*log pa*) [conventionalities].

In the *Presentation of Tenets,* the definitions given by Jedzun Chogyi Gyeltshen are slightly different:

> The definition of an ultimate truth is: an object found by a valid cognizer distinguishing the final [nature of phenomenon] and with respect to which a valid cognizer distinguishing the final [nature of phenomenon] becomes a valid cognizer distinguishing the final [nature of phenomenon].
> The definition of a conventional truth is: an object found by a valid cognizer distinguishing a conventionality and with respect to which a valid cognizer distinguishing a conventionality becomes a valid cognizer distinguishing a conventionality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 166) says:

> If it were taken to be like that, since entitless phenomenon are not possible, if it is an established base it does not pass beyond being one or different entities. Although [phenomena] are asserted to have an entity, this does not contradict them not having an inherently existent entity.

In his *Collected Topics,* Purbujok Jamba Gyatso defines a phenomenon (*dharma*) as that which is able to hold (*dhara*) its own entity. For this reason, phenomena that are entitiless are not feasible. If it is an established base or an existent, it has to be either one or different entities. There is no phenomenon that is not one or different entities (one or many, singular or plural). However, if something has an entity it does not have to have an inherently existent entity. In other words, although all phenomena hold their own entity, it is not an inherently existent or independent entity.

Lama Tsongkhapa's *Illumination* (Tibetan text page 166) says:

> In regard to that, the ultimate entity of things, such as sprouts and so forth, is the very object of a special exalted wisdom of those directly seeing the perfect object (*yang dag pa'i don*), whereby its own entity of a self is found; however, it is not established by way of its own essence. This is one of the explanations of the two entities.
> "A special exalted wisdom" means that [the ultimate entity] is not found by just any superior's exalted wisdom; it is a special, i.e., particular, exalted wisdom. Moreover, [the ultimate entity] is found by an exalted wisdom comprehending modes. When the [ultimate entity] is indicated to be found or established by that exalted wisdom, in order to refute the conception thinking "if there is something that can be established by that [exalted wisdom], it is truly existent," [the autocommentary] says that it is not established by way of its own essence. There are those who propound the system of the master [Chandrakirti] to be that if a superior's exalted wisdom of meditative equipoise comprehends ultimate truth, it is truly existent, whereby it is not an object of knowledge. Because they do not realize the meaning explained by this system – that although it is found by meditative equipoise it is not truly existent – they corrupt the system of the scholars.

From among the two, an exalted wisdom analyzing a conventionality and an exalted wisdom analyzing the ultimate, "a special exalted wisdom" is an exalted wisdom analyzing the ultimate. In general, the object perceived by an exalted wisdom comprehending modes is the ultimate. If it is an object established, found, or realized by a superior's exalted wisdom it is not pervaded by being truly existent. However, some think that if it is found by a superior's exalted wisdom of meditative equipoise it must be established by way of its own character. In order to refute this, Chandrakirti says that it is not established by way of its own essence. Some people incorrectly think that an ultimate truth is not an object of knowledge because it is not found by a superior's exalted wisdom of meditative equipoise. Lama Tsongkhapa's *Great Exposition of the Stages of the Path of Enlightenment* recounts that (see Newland, *Two Truths*, page 89) Loden Sherab asserts that ultimate truth is *not* an object of knowledge because it is *not* found by a superior's exalted wisdom of meditative equipoise. On the other hand, Charpa Chogyi Sengge says that ultimate truth *is* ultimately existent because it *is*

found by a superior's exalted wisdom of meditative equipoise. However, saying that this is the system of the master, whether Chandrakirti or Nagarjuna, is a corruption of their system.

In short, Loden Sherab says that ultimate truth is not an object of knowledge and Charpa Chogyi Sengge says that ultimate truth is truly existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 166) says:

> That which is other than the ultimate, the entity of the conventional, is: that existing as the entity of a self found through the force of false perception by those ordinary beings who eyes of awareness are completely covered by the film of the cataract of ignorance. Objects which are seen by the childish appear to be established by way of their own character, and, likewise, to exist as their own entity, whereas they do not in that they are one of the two entities.

An object seen by the valid cognizer of an ordinary being is a conventional truth. All four Buddhist schools, Vaibhashika, Sautrantika, Chittamatra, and Madhyamika, are similar in having a presentation of the two truths, but their definitions differ. All schools have a presentation of the two truths, four truths, and basis, path, and result. The following definitions are found in Jedzun Chogyi Gyeltshen's *Presentation of Tenets*. The Vaibhashikas distinguish conventional truth and ultimate truth in the following way:

> The definition of a conventional truth is: a phenomenon which is such that, if it were broken or mentally separated into parts, the mind apprehending that object would cease.
>
> The definition of an ultimate truth is: a phenomenon which is such that, if it were broken or mentally separated into parts, the mind apprehending that object would not cease.

According to the Sautrantikas they are:

> The definition of an ultimate truth is: a phenomenon that is able to perform a function ultimately.
>
> The definition of a conventional truth is: a phenomenon that is not able to perform a function ultimately.

Therefore, for the Sautrantikas all things are ultimate truths and all permanent phenomena are conventional truths.

The definitions for the Chittamatrins are:

> The definition of an ultimate truth is: that which is realized by means of a valid direct perceiver realizing it clearly without dualistic appearance.
>
> The definition of a conventional truth is: that which is realized by means of a valid direct perceiver realizing it clearly with dualistic appearance.

The definitions for the Madhyamikas are as was mentioned before:

> The definition of a conventional truth is: an object found by a valid cognizer distinguishing a conventionality and with respect to which a valid cognizer distinguishing a conventionality becomes a valid cognizer distinguishing a conventionality.
>
> The definition of an ultimate truth is: an object found by a valid cognizer distinguishing a final phenomenon and with respect to which a valid cognizer distinguishing a final phenomenon becomes a valid cognizer distinguishing a final phenomenon.

In short, the two truths are the basis; method and wisdom are the paths; and the two bodies are the results.

Wednesday afternoon, 24 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 166) says:

> Therefore, in regard to finding the ultimate truth, the finder is said to be a superior. With the thought that [superiors] are the main [finders], it is not asserted that it is not found by ordinary beings who possess the view of the Middle Way in their continua.

All superiors directly realize the ultimate truth, therefore their exalted wisdom of meditative equipoise is posited as the finder of ultimate truth. "It is not asserted that it is not found by ordinary beings who possess the view of the Middle Way in their continua" means that also ordinary beings who have the Middle Way view in their continua can realize the ultimate truth. Therefore, even ordinary beings such as ordinary bodhisattvas on the paths of accumulation and preparation realize the ultimate truth.

The finder of conventional truth is also posited as an ordinary being. Because the majority of ordinary beings do not realize the ultimate truth but only realize conventional truths, they are posited as the finders of conventional truth. However, superiors also realize conventional truths in that superiors have a valid cognizer of conventionalities realizing conventional truths. Among ordinary beings it is necessary to make distinctions in that there are those who are normal ordinary beings and those who are higher ordinary beings, in that normal ordinary beings have not realized emptiness while higher ordinary beings have realized it.

"Finder" is to be understood in the sense of realize.

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> In regard to finding the conventional, the finder is also said to be a normal ordinary being.

An illustration of a conventional truth is pot and so forth. In order to realize pot and so forth one does not need to have found the view of the Middle Way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> Illustrations of the conventional are external and internal things perceived under the influence of ignorance. This being the main thought, it is not asserted that these things are not found by valid cognizers of conventions in the continua of superiors. Illustrations of conventional truths are finding pot and so forth; they exist even for those who have not found the view of the Middle Way. However, when these bases are found by a valid cognizer *to be* conventional truths, it definitely must be by one who has previously found the view of the Middle Way because when these bases are established as conventional truths they are necessarily established as falsities, and in order to directly establish them as falsities one must have previously refuted true existence in regard to these bases by means of a valid cognizer.

In order to realize pot, pillar, and so forth there is no need to have found the view of the Middle Way; however, in order to ascertain pot, pillar, and so forth to be conventional truths one must have previously found the view of the Middle Way.

The Tibetan word *kun rdzob* is translated as 'conventional' or 'concealer' in dependence on the context. How is pot realized to be a conventional truth (*kun rdzob den pa*)? In order to realize pot to be a conventional truth, one must have realized that pot is a truth only in the perspective of a concealer (*kun rdzob*), this being the ignorance that is the conception of true existence. The conception of true existence is called a 'concealer' because it obstructs or conceals the reality of the pot. In order to realize the pot to be a conventional truth, one must first realize that the pot is a falsity. In order to do so, one must first find the view of the Middle Way. Therefore, prior to realizing the pot to be a conventional truth one must first realize that the pot is empty of true existence. Lama Tsongkhapa says: "in order to

directly establish them as falsities one must have previously refuted true existence in regard to these bases by means of a valid cognizer." 'These bases' refers to pot and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> Therefore, "through the force of false perception" is [as follows]. Although normal persons perceive falsities, they do not necessarily establish them *to be* falsities. For example, when spectators of an illusion see illusory horses and elephants, although they see falsities, that appearance is not necessarily established to be false by them.

A magician has the appearance of horse or elephant but is mindful that although there is such an appearance it is not true. For the spectators it is not necessarily established that the appearance of horse and elephant is false. Lama Tsongkhapa says: "although they see falsities, that appearance is not necessarily established to be false." When ordinary beings see falsities, there is no need for them to have established them as false.

This is explained by means of an analogy and the meaning that it exemplifies. The analogy is the three types of persons in relation to a magic show:

1. a person who has the appearance but no adherence it,
2. a person who has the appearance and adheres to it,
3. a person who does not have the appearance and does not adhere to it.

The meaning of this analogy in relation to a conventional truth, such as pot, is:

1. a person who has the appearance of truly existent pot and adheres to it as truly existent,
2. a person who has the appearance of truly existent pot but does not adhere to it,
3. a person who does not have the appearance of truly existent pot and does not adhere to it.

These are respectively:

1. a normal ordinary being who has the appearance of truly existent pot and adheres to it,
2. a higher ordinary being who has realized emptiness by way of a meaning generality who has the appearance of truly existent pot but does not adhere to it,
3. a superior in meditative equipoise directly realizing emptiness who does not have the appearance of truly existent pot and does not adhere to it.

The relation between the analogy and the meaning is:

1. The spectators of the magic show are analogous to ordinary beings who have not realized emptiness in that they have the appearance of horse and elephant and adhere to it as true.
2. The magician is analogous to higher ordinary beings in that he has the appearance of horse and elephant but does not adhere to it as true.
3. Latecomers are analogous to superiors in that they do not have the appearance of horse and elephant and do not adhere to it as true.

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> Therefore, the meaning of finding that posited as conventional truths by perceiving them to be falsities is to find them by means of a valid cognizer of conventions comprehending the meaning of false or deceptive objects of knowledge.

This is the meaning of the verse in the *Supplement* (v. 6.23) which says:

> *All things – things found by correct*
> *And false perception – possess two entities.*
> *Any object of correct perception is thusness,*
> *That of false perception is said to be conventional truth.* [6.23]

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> From the two natures, or entities, that were explained before, any object found by a consciousness of [an ultimate] type perceiving, i.e., comprehending, the perfect object is itself an ultimate truth, that which was explained in the context of "by the strength of cataracts."

The definition of ultimate truth is given here as: "any object found by a consciousness of [an ultimate] type perceiving, i.e., comprehending, the perfect object is itself an ultimate truth." This implies that the definition of conventional truth is an object found by a valid cognizer distinguishing a conventionality. However, in order for this definition to be complete, it is necessary to add the words: "and with respect to which a valid cognizer distinguishing a conventionality becomes a valid cognizer distinguishing a conventionality."

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> That found by a valid cognizer of conventions perceiving a false object of knowledge is taught by indicating it to be a conventional truth. The two bases of finding the ultimate and conventional are taught individually; it is not that in regard to one there occur two ways of finding it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 167) says:

> 3B1C-2B3E-2A1B-2B1B-1B1B Indicating other presentations of the two truths
>
> Although there are indeed many different ways of asserting the divisions of the two truths, here what is to be understood is as taught in the *Meeting of Father and Son Sutra* which is quoted in [Shantideva's] *Compendium of Trainings* saying:
>
> > Therefore, the Tathagata through comprehending the two, the conventional and ultimate, also [comprehended] that which is to be known as being limited to them, the conventional and ultimate truths. Furthermore, the Bhagavan, thoroughly seeing and thoroughly knowing emptiness, excellently actualized it, thereby becoming omniscient.
>
> "Also [comprehended] that which is to be known" refers to the divisions of objects of knowledge and "limited to them" means that the truths are definitely two in number.

An object of knowledge is either a conventional truth or an ultimate truth because if it is an object of an awareness, it is limited to being either a conventional truth or an ultimate truth because there does not exist a third possibility. It can be said: if it is an object of knowledge it is pervaded by being either a conventional truth or an ultimate truth. However, someone can say in debate: "What about the subject 'pot-and-emptiness-of-pot'? Is it a conventional truth or an ultimate truth? It is an object of knowledge because it is an existent." If someone says "Pot-and-emptiness-of-pot are a conventional truth," then one asks: "Is the emptiness of the pot a conventional truth?" If the other responds that it is not, one says: "It is a conventional truth because 'pot-and-emptiness-of-pot' are a conventional truth." To this the other person says: "There is no pervasion."

Lama Tsongkhapa's *Illumination* (Tibetan text page 168) says:

> Because the Tathagata comprehended both truths, he is said to be omniscient. Therefore, explaining that ultimate truth is not an object of knowledge and is not realized by any awareness as being the thought of [Shantideva's] *Engaging in the Bodhisattva Deeds* is to explain it wrongly.

'Omniscient," literally "all-knower," is one who knows the two truths simultaneously. 'All' means that all aspects of the two truths are realized simultaneously without anything left out. Because of knowing this, one is an all-knower or omniscient one.

Someone says that the thought of Shantideva is that ultimate truth is not an object of knowledge and is not realized by any awareness because the ninth chapter of his *Engaging in the Bodhisattva Deeds* says:

> The conventional and ultimate,
> They are asserted to be the two truths.
> The ultimate is not an object of an awareness,
> Awareness is said to be conventional.

Guy Newland in *Two Truths* (page 105) translates this verse as:

> Conventionalities and ultimates,
> These are asserted as the two truths,
> The ultimate is not the province of awareness.
> Awareness is asserted to be a conventionality.

Taking this verse literally, this person asserts that according to Shantideva ultimate truth is not an object of knowledge and is not realized by any awareness. However, Shantideva means that ultimate truth is not an object of ignorance, the conception of true existence, which is a concealer that obstructs seeing reality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 168) says:

> The division into two, conventional truths and ultimate truths, is the entity of the divisions. There are also many differences in regard to the meaning of the divisions. Here, both [conventional truths and ultimate truths] have an entity because it is not feasible for them to not be either the same or different entities and because if the substrata were different entities from the emptiness of true existence they would be truly existent. [Conventional truths and ultimate truths] are the same entity but different isolates, like product and impermanence. [Nagarjuna's] *Essay on the Mind of Enlightenment* says:
>
> > Suchness is not observed
> > To be different from the conventional.
> > Conventionalities are explained to be just empty.
> > Because it is definite that if they were not only empty
> > Conventionalities would not arise,
> > They are like product and impermanence.
>
> The meaning of the first four lines is that suchness is not a different entity from the conventional:
> 1. because conventionalities are empty of true existence and
> 2. because even the emptiness of true existence is posited on a conventional basis.

All phenomena have two entities: the conventional truth and the ultimate truth. These two truths are the same entity but different isolates. For example, in regard to the statement "form is empty" which occurs in the *Heart Sutra*, the basis of qualification is form whereas its quality or attribute is its being empty; thus, form and its emptiness are one entity but different isolates.

All objects of knowledge have two entities: the entity of conventional truth and the entity of ultimate truth. Since all phenomena have two entities it can be asked: "In terms of a single base, such as a table, what is its entity of ultimate truth and what is its entity of conventional truth?" In terms of a single base, a table, its entity of ultimate truth is the table's emptiness of true existence, while its

entity of conventional truth is the conventionally existent table. These two truths are one entity but different isolates. Lama Tsongkhapa's *Essence of Eloquence* says that if the two truths were one, there would be four errors and if they were different entities there would be four errors. In regard to these errors, the conclusion is that the two truths are one entity but different isolates.

Lama Tsongkhapa says: "because if the substrata were different entities from the emptiness of true existence they would be truly existent." In terms of a single base such as a pot, if the pot were a different entity from its emptiness of true existence it would be truly existent. Lama Tsongkhapa says: "[Conventional truths and ultimate truths] are the same entity but different isolates, like product and impermanence." A pen, for example, has many attributes such as being a product, being impermanent, and so forth. Such attributes appear to a non-mistaken awareness but do not appear separately. The definition of one substance is: that which appears to a non-mistaken awareness but does not appear separately. Lama Tsongkhapa's *Clearing Away the Darkness of the Mind* gives the definition of one substance as: that which appears to a direct perceiver and does not appear separately. In addition, it gives the definition of one entity as: that which appears to a direct perceiver but does not appear as separate substances.

The attributes of product, impermanence, and so forth in terms of a single base, such as a pen, are one entity in that they appear to an eye consciousness but do not appear separately. A pen, for example, is composed of many substances that are not matter such as the substance of being impermanent, the substance of being a product, the substance of being a thing, the substance of being a compounded phenomenon, and so forth. All of these appear to an eye consciousness but do not appear to it separately. One entity and one substance mean the same in relation a functioning thing. However, they are different in relation to uncompounded phenomena. For example, uncompounded space is not the substance of being product, the substance of being impermanent, the substance of being able to perform a function and so forth, which means that it is not a product, it is not impermanent, it is not able to perform a function, and so forth. Therefore, being one substance cannot be posited in relation to a base that is an uncompounded phenomenon, whereas one can posit its being one entity, for example, the entity of permanence, the entity of non-functioning thing, the entity of non-product, and the entity of being empty of the ability to perform a function. These entities exist upon a base which is an uncompounded phenomenon. They are one entity but different isolates. However, keep in mind that the presentation of this varies according to the different schools.

Does uncompounded space appear to an eye consciousness? It does appear. Is the eye consciousness able to apprehend uncompounded space? Think about it.

Thursday morning, 25 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 168) says:

> Following that, the [last] two [lines] indicate being such, it is a definite relation, if one were not to exist, the other would not occur. Furthermore, this is a relationship of same nature (*bdag gcig pa'i 'brel ba*), therefore, they are indicated as being the same entity, like product and impermanence.

A conventional basis and its attribute of being empty of true existence are one entity. The definition of a relationship of same nature is given here as: 'if one were not to exist, the other would not occur.' A relationship of same nature involves two phenomena such that if one is ruled out the other is also ruled out; for example, product and impermanence. If being a product is ruled out, then being impermanent is also ruled out. In other words, if a pot is ruled out as being a product it is also ruled out as being impermanent.

Another type of relationship is a causal relationship, for example, the relationship between fire and smoke. When fire is eliminated, then smoke is also eliminated. This is a causal relationship of different entities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 169) says:

> The identification of the individual divisions is as was explained previously in regard to the individual definitions as found by the two valid cognizers.
> QUESTION: "When explained according to the two, [the *Sutra of the Meeting of Father and Son* as quoted in the *Compendium of Training*] and *Engaging in the Bodhisattva Deeds* in which it says:
>
> > The conventional and ultimate,
> > They are asserted to be the two truths.
> > The ultimate is not an object of an awareness,
> > Awareness is said to be a conventionality.
>
> How are they explained?"
> RESPONSE: The first two lines present the division of the two truths. When the entities of the individual divisions are identified, the identification of ultimate truth is presented by the single [word] "ultimate" and the identification of the conventional truth by the single [word] "conventional." The first of the [last two] lines is the thesis 'ultimate truth is not an object of an awareness'; the last line is asserted to be the proof. The meaning of these phrases is not at all as they appear.

Someone says that since the explanation of the two truths in the *Sutra of the Meeting of Father and Son* as quoted in the *Compendium of Training* and in *Engaging in the Bodhisattva Deeds* are different, how does Chandrakirti explain this. The response is that "The first two lines present the division of the two truths" and so forth. In other words, the two lines from *Engaging in the Bodhisattva Deeds,* "The conventional and ultimate, they are asserted to be the two truths," present the divisions of the two truths. "The ultimate is not an object of an awareness" means that ultimate truth is only the object of an awareness that is a superior's exalted wisdom of meditative equipoise. Ultimate truth is not at all the object of a valid cognizer analyzing conventionalities; it is not an object of a concealer, the conception of true existence, which obscures the mind. The etymology of "ultimate truth" (*don dam den pa*) is that the 'ultimate' (*don dam*), literally holy or sublime object, is a superior's exalted wisdom of meditative equipoise while that which is a 'truth' (*den pa*) for a superior's exalted wisdom of meditative equipoise is an ultimate truth.

In the term conventional truth, or truth for a concealer, or concealer-truth (*kun rdzob den pa*), *kun rdzob* refers to an awareness which is a concealer. That which is a truth for this concealer is a phenomenon that is true in the perspective of that concealer but is actually false. The Tibetan word *kun rdzob* literally means all-concealer or thoroughly obscuring. What is a concealer (*kun rdzob*)? It is the ignorance that is the conception of true existence which obscures the seeing of reality. Forms and so forth are falsities but are truths for a concealer, or conventional truths.

Saying that the meaning of the statement "The ultimate is not an object of an awareness" is that ultimate truth is not an object of *any* awareness is incorrect. Rather, it means that the ultimate is not an object of a concealing awareness (*blo kun rdzob*). The ultimate is not an object of a false concealing awareness because a false concealing awareness obscures the seeing of reality. That concealing awareness, or awareness that is a concealer, is what conceals or obscures the reality of phenomena. Ultimate truth is not an object of a concealer. As was mentioned earlier, Lama Tsongkhapa's *Great Exposition of the Stages of the Path of Enlightenment* says that Loden Sherab asserts that ultimate truth is not an object of knowledge because it *is not* found by a superior's exalted wisdom of meditative equipoise. Charpa Chogyi Sengge, on the other hand, asserts that ultimate truth is ultimately existent because it *is* found by a superior's exalted wisdom of meditative equipoise.

Lama Tsongkhapa's *Illumination* (Tibetan text page 169) says:

> Therefore, the identification of the two truths is as taught in the *Meeting of Father and Son Sutra* which is quoted in the *Compendium of Trainings* as saying:
>
> > In regard to that, conventionalities are seen by the Tathagata to be objects of the world. Whatever is ultimate is inexpressible; it is not that which is to be known, it is not that which is to be completely known, it is not that which is to be fully known, it is not indicated.
>
> The meaning of this passage is set forth in *Engaging in the Bodhisattva Deeds*.

In the *Meeting of Father and Son Sutra* it says "conventionalities are seen by the Tathagata to be objects of the world." Here the word 'world' ('*jig rten*) can be understood in different ways. In general, the 'world' includes both the inhabitants of the world and the environment of the world, but here it specifically refers to the inhabitants, sentient beings. Therefore, conventionalities are objects of ordinary beings, the world. The Tibetan word '*jig rten* (pronounced *jig ten*) literally means the basis or support (*rten*) of the transitory or perishing ('*jig*). The basis of the transitory are the five aggregates. The Tathagata knows that the conventional are objects of the basis of the transitory, i.e., sentient beings.

The sutra then says "Whatever is ultimate is inexpressible." This attribute of inexpressibility is mentioned in a preliminary verse to the *Heart Sutra*:

> To the perfection of wisdom, inexpressible in words and thought,
> The entity of the unproduced and unceasing,
> An object of the mind individually cognizing it,
> Mother of the conquerors of the three times, I prostrate.

With this verse one prostrates to the mother, the perfection of wisdom, which is ultimate truth.

The sutra continues: "it is not that which is to be known, it is not that which is to be completely known, it is not that which is to be fully known, it is not indicated." Lama Tsongkhapa then says that the meaning of this verse from the *Meeting of Father and Son Sutra* is as explained in *Engaging in the Bodhisattva Deeds*. There is debate about whether or not ultimate truth is actually inexpressible. The conclusion is that it is not completely inexpressible, but it is inexpressible in the sense that a term cannot express it just as it is. There is also debate about the statement "it is not indicated" in that someone can assert that ultimate truth is not an object of knowledge because it cannot be indicated. The difference between "it is not that which is to be known, it is not that which is to be completely known, it is not that which is to be fully known, it is not indicated" can perhaps be explained in relation to different types of persons.

Lama Tsongkhapa's *Illumination* (Tibetan text page 169) says:

> With respect to that, the meaning of saying that ultimate truth is not that which is to be know is that it is not an object of an awareness [of conventionalities], which accords with the meaning of the cited sutra setting out the two truths explained below. If it were not posited in that way, i.e., [ultimate truth] not being the object of any awareness, it would contradict the explanation that the Conqueror, through all conventionalities and the ultimate possessing an aspect of emptiness having become evident [to him], is posited as omniscient. Further on this will also be explained many times.

In the context of ultimate truth not being an object of an awareness, it refers specifically to it not being an object of a false concealing awareness.

Student: What is the difference between the *kun rdzob* that occurs in the context of *kun rdzob den pa* (conventional truth or truth for a concealer) and *blo kun rdzob* (concealing awareness)?
Geshe Jampa Gyatso: If it is an awareness it is necessarily a conventional truth. Is a superior's exalted wisdom of meditative equipoise a conventional truth? It is. Why? Because it is that which is able to perform a function. Is a superior's exalted wisdom of meditative equipoise a concealing awareness? It is not a concealing awareness, however, it is a conventional truth. Why is it not a concealing awareness? Because it is an awareness of the ultimate. It is an awareness of the ultimate because ultimate truth is posited with respect to it. For the Prasangika Madhyamikas, a concealing awareness in the context of the two truths is always a false awareness which is a conception of true existence. However, according to the Svatantrika Madhyamikas eye consciousness, nose consciousness, and so forth are also concealing awarenesses because they also conceal reality.
Student: Then for the Prasangika Madhyamikas an eye consciousness is not a concealing awareness?
Geshe Jampa Gyatso: An eye consciousness is also a concealing awareness for the Prasangika Madhyamikas, but it is not the concealer which is discussed in the stanza from *Engaging in the Bodhisattva Deeds*. An eye consciousness is not a concealer in the context of a truth for a concealer (conventional truth).
Student: Since there is a false concealing awareness (*blo kun rdzob rdzun pa*) is there a true concealing awareness?
Geshe Jampa Gyatso: It depends. If one understands 'true' to mean non-mistaken then there is, but if one understands 'true' in the sense of the mode of abidance being concordant with the mode of appearing, then there is no true concealing awareness. In general, true (*den pa*) refers to the ultimate truth, emptiness, and false *(rdzun pa*) to the conventional truth. The mode of abidance and the mode of appearing of all conventional truths is not concordant.

In short, there is a lot to debate about the meaning of the statement "Whatever is ultimate is inexpressible; it is not that which is to be known, it is not that which is to be completely known, it is not that which is to be fully known, it is not indicated," in that one can ask whether it means that a buddha does not know ultimate truth and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 169-170) says:

> The identification of conventional truth does not mean to be posited to an awareness alone; rather it is an object of an awareness. Furthermore, "object of the world" means that it is found to be an object, i.e., an object of use, which is comprehended by the world, that is, a false knower of conventions, whereby this is likewise the meaning of asserting an object of awareness to be a conventionality.
>
> **The division of objects of knowledge into two truths**
>
> Objects of knowledge are presented [in the scriptures and by reasonings] to definitely be those two in number.
> (1) In the scriptures
> The *Meeting of Father and Son* which was quoted before and also the *Exalted Meditative Stabilization Definitely Indicating Suchness* clearly teach:
>
> > Everything is conventional or ultimate,
> > Nothing exists as a third truth.
>
> Also the autocommentary says:
>
> > Likewise, any other truth, even the slightest whatsoever, is to be ascertained as only subsumed in the two truths

The *Sutra on the Ten Grounds* says:

> All the teachings on the many [things] with the name 'truth' are said to be condensed into the two truths. The divisions that are explained here, the truths that are realized, are also asserted by this master to definitely be two truths in number in order to explain the presentations of the aggregates, constituents, and spheres.

'The world' is a knower of conventionalities (*tha snyad pa'i shes pa*). A falsity found by a knower of conventionalities is a conventional truth. Objects of knowledge are definitely two in number: conventional truths and ultimate truths. There is no truth that is other than the two truths. All phenomena are included in the two truths in that they must be one or the other. In short, there is no third truth.

An object found by a knower of conventionalities or a valid cognizer analyzing a conventionality is a conventional truth. An object found by an ultimate awareness or a superior's exalted wisdom of meditative equipoise is an ultimate truth. These are the definitions of the two truths according to the Madhyamikas. The definitions according to the Chittamatrins are also similar, whereas they are different in the two lower schools. The two truths are asserted by all four schools but when they are defined and examples of them are posited, they are different. The two truths are said to be like layers of an onion in that just as an onion has many layers that can be peeled away, the two truths can be explained on many different levels. The explanation of the Prasangika Madhyamikas is the most profound and the most difficult to understand. We should try to understand the two truths by, for example, asking ourselves: Is this cup a conventional truth? It is. Why? Is there an ultimate truth in terms of this cup? There is. How is it established? The ultimate truth existing in terms of the cup is the cup's emptiness of inherent existence, its emptiness of establishment by way of its own character, and so forth. The cup itself is a conventional truth, but on top of it, there is also an ultimate truth. The conventional truth that is the cup has different levels of subtlety. The cup itself is a coarse conventional truth. The subtle conventional truth of the cup is its being imputed over there by conception on its ability to perform a function.

Thursday afternoon, 25 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 170) says:

> (2) By reasonings
> If a basis is affirmed to be an object that is false and deceptive, it is necessarily eliminated as being non-deceptive suchness; therefore, deceptive and non-deceptive are a direct contradiction in the sense of abiding in mutual abandonment. If [it is a direct contradiction abiding in mutual abandonment], since that pervades all objects of knowledge, a third possibility of being both or neither is eliminated. [Kamalashila's] *Illumination of the Middle Way* says:
>
> > A pair of phenomena fulfilling the definition of abiding in mutual abandonment is that if something's being one is refuted while its being the other is not established it does not exist; therefore, conceiving a position that is neither is unfeasible.
>
> [This text] also says:
>
> > The definition of abiding in mutual abandonment is: a pair, such that if something's being one is eliminated while its being the other is not affirmed, it does not exist. Any two that are the definition of abiding in mutual abandonment are a pair that pervade in all ways. Any two that pervade in all ways are a pair that eliminate other possibilities; for example, instances of the embodied and unembodied, and so forth.

The deceptive, i.e., the false, and the non-deceptive, i.e., the truth, are 'a direct contradiction in the sense of abiding in mutual abandonment.' This means that if it is an object of knowledge it has to be either deceptive or non-deceptive, that is, there is nothing that is both and nothing that is neither. A direct contradiction abiding in mutual abandonment is a pair of phenomena such that if something is established to be one, it is refuted as being the other. If it is a contradiction, is it necessarily a direct contradiction abiding in mutual abandonment? No. Posit! White and red colors are contradictions because there is nothing that is a common locus of the two, yet they are not a direct contradiction abiding in mutual abandonment. They are not a direct contradiction abiding in mutual abandonment because there are many colors that are neither white nor red, for example, blue, yellow, etc. Is there a difference between a direct contradiction and a direct contradiction abiding in mutual abandonment? Posit!
Student: A person who is eating and a person who is not eating.
Geshe Jampa Gyatso: It follows that a pillar and pot and a right arm and a left arm are direct contradictions!
Student: A crow and an owl.
Geshe Jampa Gyatso: They are a direct contradiction in the sense of not abiding simultaneously without harming each other. During the day the crow harms the owl, whereas at night the owl harms the crow. This discussion comes in the text *Signs and Reasonings*.
Student 2: Permanence and impermanence.
Geshe Jampa Gyatso: Are you saying that they are direct contradictions because there is nothing that is a third possibility?
Student 2: Yes.
Geshe Jampa Gyatso: Are product and permanence a direct contradiction?
Student 3: Perhaps an example of a pair that are a direct contradiction is wisdom and ignorance.
Geshe Jampa Gyatso: They are indirect contradictions.
Student 4: An example of a direct contradiction is day and night.
Geshe Jampa Gyatso: It follows that if it is a contradiction it is pervaded by being a direct contradiction!
Student 5: An example of a direct contradiction is wet and dry.
Geshe Jampa Gyatso: It follows that if it is not wet it is dry!

Permanent and impermanent are a direct contradiction. Permanent and functioning thing are a contradiction but are not a direct contradiction because when a cup is realized to be a functioning thing, one does not need to have refuted the object of negation that is permanence. The opposite of functioning thing is non-functioning thing. When a cup is realized to be a functioning thing, one necessarily realizes that the cup is not a non-functioning thing. A direct contradiction is such that when something is established to be one of the pair, it is refuted as being the other.

Functioning thing and permanent are a contradiction but are not a direct contradiction because when a particular basis, such as pot, is established to be a functioning thing by a valid cognizer, there is no pervasion that it is refuted as being permanent.

Wisdom and ignorance are a contradiction abiding in mutual abandonment, but are not a direct contradiction abiding in mutual abandonment. When debating this, one can say: The view of the transitory collection, as the subject, is wisdom. It follows that the view of the transitory collection and wisdom abide simultaneously without harming each other although [ignorance] is the contradictory partner, the discordant class of knowledge, exalted wisdom. The definition of ignorance is posited in this way. The wisdom realizing emptiness by means of a meaning generality, as the subject, does not abide simultaneously with ignorance without harm because it is a wisdom directly realizing selflessness.

In short, is there a difference between a direct contradiction and a direct contradiction abiding in mutual abandonment? Think about it. There exist both direct contradictions and indirect contradictions. Kamalashila's *Illumination of the Middle Way* says: "The definition of abiding in mutual abandonment is: a pair, such that if something's being one is affirmed while its being the other is not eliminated, it does not exist." This definition also fits a direct contradiction. The text continues: "Any two that are the definition of abiding in mutual abandonment are a pair that pervade in all ways. Any two that pervade in all ways are a pair that eliminate other possibilities; for example, instances of the embodied and unembodied, and so forth." The embodied and unembodied are a direct contradiction abiding in mutual abandonment in that they eliminate a third possibility, i.e., there is nothing that is both embodied and unembodied and nothing that is neither embodied nor unembodied.

Lama Tsongkhapa's *Illumination* (Tibetan text page 171) says:

> This is also to be understood in regard to all other direct contradictions.

The definition of a direct contradiction (*Collected Topics*) is: mutually and directly abiding inharmoniously. Are a crow and owl a direct contradiction? They are not. Phenomena that are a direct contradiction are opposites, for example, functioning thing and non-functioning thing, permanent and impermanent, and so forth. Permanent and functioning thing are not a direct contradiction since they are not opposites.

Lama Tsongkhapa's *Illumination* (Tibetan text page 171) says:

> If there is nothing to indicate as a direct contradiction eliminating a third possibility, there would be nothing to refute through investigation that determines the two possibilities saying "What is asserted to be existent or non-existent, one or many, and so forth?" If there is something to indicate [as a direct contradiction eliminating a third possibility,] since it is a direct contradiction such that if something's being one is refuted while its being the other is not established it does not exist, saying that there are no direct contractions for the Prasangika Madhyamikas is to not understand the presentation of the refutation [of the other's system] and the establishment [of one's own system].
>
> (1) A direct contradiction such that if one is eliminated the other is affirmed and (2) such that if one is refuted the other is necessarily established are not different for the Svatantrika and Prasangika Madhyamikas.

A direct contradiction abiding in mutual abandonment is a direct contradiction eliminating a third possibility. Those who say that a direct contradiction does not exist for the Prasangika Madhyamika system do not understand the presentation of the refutation of the others' system and the establishment of one's own system. The definition of a negative phenomenon is posited as: an object that is realized by the conception apprehending it in the manner of directly eliminating an object of negation. The definition of an affirmative phenomenon is: an object that is realized by the conception apprehending it in the manner of not directly negating an object of negation.

"A direct contradiction such that if one is eliminated the other is affirmed" is, for example, the impermanence and permanence of a pot in that when a pot is affirmed to be impermanent, it is eliminated as being permanent.

The Svatantrika Madhyamikas and Prasangika Madhyamikas define a direct contradiction in the same way. This is probably true for all the Buddhist schools. In brief, a direct contradiction is such that when a basis is established to be one of the pair, it is refuted as being the other.

There are different types of contradictions. A pillar and pot are contradictions but are not direct contractions.

Friday morning, 26 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 171) says:

3B1C-2B3E-2A1B-2B1B-1B1C Explaining the divisions of conventionalities relative to the world

Chandrakirti's autocommentary says:

> Therefore, having thus presented the two truths, since, among correct and false perceptions themselves, false perceptions also have the very two, in order to indicate the very two, the object to be apprehended by that and the consciousness, it is explained:
>
> *Also false perception is asserted [as] two types,*
> *With clear senses and faulty senses.*
> *The consciousnesses of those having faulty senses are*
> *Asserted as wrong compared with consciousnesses with sound senses.* [6.24]
>
> There, possessors of clear senses, those free of cataracts and not impaired by jaundice and so forth and that unmistakenly apprehend external objects of that type. Possessors of faulty senses are the opposite of those.
>
> There, in relation to consciousnesses with sound senses, whatever is a consciousness possessing faulty senses is asserted as a wrong consciousness.
>
> Just as these consciousnesses are twofold by way of mistaken-ness and unmistaken-ness, similarly, in order to indicate that "objects are also," it is explained:
>
> *Anything apprehended by the unimpaired six senses*
> *[And] realized by the world, that*
> *Is truth within the world itself. The remainder*
> *Is presented as wrong within the world itself.* [6.25]

Chandrakirti has presented the two truths in general and will now present conventional truths, which are falsities. Relative to the perspective of the world, conventional truth is divided into (1) real conventional truths and (2) unreal conventional truths. Real and unreal conventional truths are further divided in relation to objects and subject (object-possessors). From the point of view of subjects, there are real and unreal subjects, whereas from the point of view of objects, there are real and unreal objects. On the side of subjects, a real subject is a non-defective consciousness whereas an unreal subject is a defective consciousness. A non-defective consciousness is based on a sound, or unimpaired, sense power while a defective consciousness is based on an impaired sense power.

A correct sense power is one that is not polluted by a superficial cause of error. A faulty sense power is one that is polluted by a superficial cause of error. A faulty sense power is, for example, an eye sense power impaired by cataracts due to which there is the appearance of falling hairs. Another example is jaundice, due to which a white conch appears as yellow. Another example is the eye sense power of someone in a moving vehicle who has the appearance of other objects moving past, although they are in fact stationary. Such sense powers are impaired or polluted by a superficial cause of error.

A correct sense power is one that is not impaired by cataracts, jaundice, a moving vehicle, and so forth. Purbujok's *Awarenesses and Knowers* describes four types of superficial causes of errors:

1. a cause of error existing in the basis,
2. a cause of error existing in the abode,
3. a cause of error existing in the object, and
4. a cause of error existing in the immediately preceding condition.

This text (translation by E. Napper) says:

> [Facsimile of a direct perceiver] and mistaken consciousness are synonyms. Second, when [facsimiles of a direct perceiver] are divided, there are seven. This is because there are six conceptual facsimiles and one non-conceptual facsimile of a direct perceiver.
>
> The first six [conceptual facsimiles of a direct perceiver] exist because there are (1) mistaken conceptions, (2) conventional conceptions, (3) inferential conceptions, (4) conceptions arisen from inference, (5) memory conceptions, and (6) wishing conceptions.
>
> Illustrations are respectively of the first, a thought apprehending sound as permanent; of the second, an inferential cognizer which realizes sound to be impermanent; of the third, a thought which is a mind apprehending a sign; of the fourth, a thought which arises after an inferential cognizer; of the fifth, a thought which today remembers an object of the past, and, of the sixth, a thought which today wishes for an object of the future.
>
> There are many non-conceptual facsimiles of a direct perceiver. From among the two, [non-conceptual facsimiles of a direct perceiver] which are mental consciousnesses and which are sense consciousnesses, an illustration of the first was explained above. With regard to the second, [non-conceptual facsimiles of a direct perceiver which are sense consciousnesses], there are four: the cause of error existing in the basis, in the abode, in the object, and in the immediately preceding condition. The first, [the cause of error existing in the basis], is, for example, an eye impaired by obscuring disease, for a sense consciousness which sees one moon as two is produced in dependence upon that. The second, [the cause of error existing in the abode], is, for example, sitting in a boat, for a sense consciousness which sees trees as moving is produced in dependence upon that. The third, [the cause of error existing in the object], is, for example, a quickly whirling firebrand, for a sense consciousness which sees a firebrand as a wheel is produced in dependence upon that. The fourth, [the cause of error existing in the immediately preceding condition], is, for example, a mind disturbed by hatred, for a sense consciousness which sees the earth as red is produced in dependence upon that.

On the side of the object there are real and unreal objects. An example of an unreal object is the reflection of a face in a mirror that appears to be a real face but is not. It is said to be an unreal conventional truth because it is realized to be false even by ordinary beings who have not realized emptiness. On the other hand, a face or a pot are real conventional truths in the perspective of the world because ordinary beings do not realize that a face or a pot does not exist as it appears.

Therefore, with respect to a worldly consciousness, both objects and subjects have two divisions: real and unreal. In the perspective of a worldly consciousness, consciousnesses are real and unreal; an example of an unreal sense consciousness is the eye consciousness of someone with jaundice to whom a white conch appears as yellow. Therefore, in regard to subjects, the unreal is due to a faulty sense power caused by jaundice and so forth whereby a white conch appears as yellow. The eye consciousness has the appearance of yellow conch, i.e., the unreal appears to it, due to a fault in its support, the eye sense power. In other words, the appearance of a yellow conch instead of white conch is due to impairment of the eye sense power by jaundice. Chandrakirti says: "The consciousnesses of those having faulty senses are asserted as wrong."

An example of a real subject is an eye consciousness that has the appearance of a white conch as white in that it is unmistaken. It is unmistaken because the eye consciousness is based on an eye sense power that is free from impairment. On the other hand, an eye consciousness that has the appearance of a yellow conch is unreal. Thus, the eye consciousness can be real or unreal, in that an eye consciousness perceiving a white conch is real and an eye consciousness perceiving a yellow conch is unreal. Real and unreal are posited only in the perspective of the world. Ordinary beings do not realize that a white conch does not exist as it appears (that is, as truly existent). However, ordinary

beings do realize that a white conch appearing as yellow does not exist as it appears (that is, as yellow).

Lama Tsongkhapa's *Illumination* (Tibetan text page 171) says:

> Chandrakirti says:
>
> > *Also those seeing falsities are asserted to be two types:*
> > *Those having clear sense powers and faulty sense powers.*
> > *A consciousness of those having a faulty sense power,*
> > *Compared to a consciousness of those having a sound sense power, is asserted to be unreal.* [6.24]
>
> With respect to conventionalities from among the two, objects and subjects, initially relative to a consciousness of a worldly being subjects are presented as two, real and unreal. Not only are objects of knowledge divided into two truths, *also* subjects which *see falsities are asserted to be two*, real and unreal. [Respectively they are]:
>
> 1. *clear sense powers*, that is, sense powers that are not polluted by a superficial cause of error, and the consciousnesses that are supported on them, and
> 2. *those having faulty sense powers*, that is, subjects that are polluted by a superficial cause of error.
>
> *A consciousness* that is polluted due to *having a faulty sense power*, *compared to a consciousness* that is not polluted by a superficial cause of error, that is, [a consciousness having] *a sound sense power*, is *asserted to be* an *unreal* consciousness. The former, [a real consciousness], is asserted to apprehend objects unmistakenly. These two particularities are not the Middle Way system, but are related to the consciousnesses of worldly beings.

Conventionalities are divided into two, real and unreal, only relative to the consciousnesses of worldly beings. This is because for the Prasangika Madhyamikas, conventionalities are necessarily unreal, that is, there are no real conventionalities. Thus, there are real and unreal conventionalities only relative to the consciousnesses of worldly beings. In general the term 'worldly being' refers to those who are unlearned, but here it specifically means those who have not realized emptiness or who do not understand the meaning of emptiness. Real and unreal conventionalities are posited in the perspective of a consciousness of such worldly beings.

A cause of error can be either superficial or deep. The appearance of objects as existing from their own side or existing inherently is a deep cause of error. What is a deep cause of error? It is the innate conception of true existence. Due to it, one has the appearance of phenomena as though existing from their own side. This is different from a superficial cause of error, which is due to temporary circumstances, for example, being in a moving vehicle. Another example of a superficial cause of error is to put pressure on the eyeball, whereby one moon appears as two. The appearance of a white conch as yellow due to jaundice is also due to a superficial cause of error. It is also said that a white snow mountain appears as blue due to a particular illness and that when someone becomes very angry, everything appears to be red. Thus, there are many superficial causes of error.

QUESTIONS AND ANSWERS

Production from Other

Student: According to the Prasangikas, what is meant by the 'mere action of the production of the sprout'? Is it equivalent to the 'mere action approaching the production of the sprout'?

Geshe Jampa Gyatso: I think that there is a difference in that if it is a 'mere action of the production of the sprout' it is not necessarily a 'mere action approaching the production of the sprout'; for example, a sprout that is being produced. This is a 'mere action of the production of a sprout' but is not a 'mere

action approaching the production of a sprout.' Approaching the production of a sprout means that the sprout is ready to be produced but is not yet being produced. Lama Tsongkhapa's *Illumination* (Tibetan text page 162) says " The action of producing the sprout, which is simultaneous with the seed, is the action approaching the production of the sprout." At this time, the sprout is not yet produced; it will be produced in the future. The mere production of the sprout is of two types in relation to the sprout: (1) approaching the production of the sprout, which exists at the time of the seed and (2) the production of the sprout, at which time the sprout is being produced. In relation to the sprout, approaching production of the sprout is past, whereas the production of the sprout is present.

Student: Is it that approaching production of the sprout is simultaneous with the cessation of the seed whereas production of the sprout is not simultaneous with the cessation of the seed?

Geshe Jampa Gyatso: The sprout and the action of the production of the sprout are support and supported. This is clear in the *Illumination* in which Lama Tsongkhapa says: "The action of producing the sprout, which is simultaneous with the seed, is the action approaching the production of the sprout. The two, that [action of the production of the sprout] and the sprout, are in general support and supported."

Student: How do the Svatantrikas explain that the agent of the action of production of the sprout is the sprout itself?

Geshe Jampa Gyatso: I think that for the Svatantrikas the agent of the action of the production of the sprout is the seed, its cause. But, what is produced? The sprout is produced. By what is it produced? It is produced by its cause and the collection of conditions. Are the sprout and the action of the sprout simultaneous? Are the sprout and the action of the production of the sprout simultaneous? When the Prasangika Madhyamikas and Svatantrika Madhyamikas debate, the Prasangikas say to the Svatantrikas that the sprout and the action of production of the sprout are simultaneous because you Svatantrikas assert that they both exist inherently whereby they do not need to arise sequentially. In short, the Prasangikas say that the Svatantrikas should accept that the sprout and the action of production of the sprout exist simultaneously because they exist inherently.

Student: Is there a difference between 'inherently other' and 'other that is inherently existent'?

Geshe Jampa Gyatso: For the Prasangika Madhyamikas neither exist. There is no difference in this sense. Also for the Svatantrikas they are the same. For the Prasangikas both are objects of negation that are to be refuted in the context of emptiness. In short, there is no difference between them.

Meditation Advice

Student: Will Geshe-la please give some general meditation advice with regard to:

- keeping mindfulness on emptiness throughout the day,
- identifying the object of negation of the inherently existent person, and
- our current topic, refuting production from other?

One should be mindful of emptiness during the four types of activities – sitting, walking, lying, and standing. This itself is a practice of emptiness. One can reflect "I do not exist inherently," "If I search for myself I do not find myself," and so forth.

There is no production from other, but if there were it would follow that there is inherently existent production. If we ask "Is there production from mere other?" there is because a seed and sprout are mere otherness. In relation to ourselves, we can think that the subject matter learned and the learner are mere otherness. In the context of refuting production from other, the distinction needs to be made that production from mere other is not what is being refuted.

The best meditation is meditation on emptiness. In addition, one can reflect that whatever one does is for the benefit of others. This makes the four kinds of activities beneficial. For example, we can

visualize that while we eat breakfast, we are nourishing the 84,000 microorganisms in our body and pray that all of them will be reborn as humans and have the opportunity to practice Dharma. In other words, we can practice giving material things to them now and pray that in the future we will be able to offer them the generosity of Dharma. This kind of thought can be cultivated whenever we eat. In addition, when showering we can also think, "I am washing myself in order to have a healthy body so that all the microorganisms in my body will also remain healthy." In a similar way, we can think of benefiting others when we are drinking, eating, dressing, and so forth.

Six Causes and Four Conditions

Student: What are the immediate condition and congruent cause of the first moment of eye consciousness apprehending blue? Could they be ear consciousnesses?

Geshe Jampa Gyatso: The congruent cause of the first moment of eye consciousness apprehending blue is its immediate condition. This is because a congruent cause is of similar type. The observed object condition and empowering condition are not congruent causes, although they are also necessary for the production of eye consciousness. The ear consciousness can be the immediate condition of the first moment of eye consciousness. For example, if someone says, "Look, there is blue behind you," an ear consciousness is produced, one then looks at the blue whereby an eye consciousness apprehending blue is produced. However, this is in relation to this specific situation in which the ear consciousness is the cause of an eye consciousness apprehending blue. In general, an ear consciousness is not an immediate condition for eye consciousness. Also, if someone says "Help, snake!" an ear consciousness hearing this is produced and then one looks at the snake, whereby an eye consciousness apprehending snake is produced. In this way, in particular situations an ear consciousness can be an immediate condition for an eye consciousness.

Student: In the case of an eye consciousness apprehending blue that does not arise from an ear consciousness, what is the immediate condition of an eye consciousness?

Geshe Jampa Gyatso: It is the mental consciousness.

END

Monday afternoon, 29 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 172) says:

> Chandrakirti says:
>
> > *Anything apprehended by the six sense powers*
> > *Free from impairment and realized by the world*
> > *Is a truth for the very world. The remaining*
> > *Are presented as unreal for the very world.* [6.25]
>
> Just as subjects are divided into the two, mistaken and unmistaken, so too are objects. They are presented [as follows]. *Any object apprehended by* the consciousnesses of *the six sense powers free from* the *impairment* of a superficial cause of error *and realized by the world* is *a truth*, i.e., is real, *for the very world*, that is, the world itself. These objects are not posited as truths and real relative to superiors. "Superiors" and "the Middle Way system" mean the same here.

Just as subjects are divided into two, mistaken and unmistaken, so too are objects divided into two, real and unreal, *in the perspective of worldly consciousnesses*. Thus, real and unreal objects are posited *only* in the perspective of worldly consciousnesses. In the perspective of a worldly consciousness, real objects are those apprehended by any of the six consciousnesses based on its respective unimpaired sense power. 'Unimpaired' means that it is free from a superficial cause of error. The six objects of the six consciousnesses are: forms of an eye consciousness, sounds of an ear consciousness, odors of a nose consciousness, tastes of a tongue consciousness, tangible objects of a body consciousness, and phenomena of the mental consciousness.

In this way, objects are not posited as real relative to superiors. For this reason, Lama Tsongkhapa says: "These objects are not posited as truths and real relative to superiors. 'Superiors' and 'the Middle Way system' mean the same here." In this context saying 'superiors' is equivalent to saying 'the Middle Way system.' The reason that forms, sounds, and so forth are not posited as truths and real relative to superiors is because they do not exist as they appear. In other words, forms and so forth are truths and real in the perspective of worldly beings but are not truths and real in the perspective of superiors. Here, 'superiors' means those trained in the Middle Way (Madhyamika) system.

Lama Tsongkhapa's *Illumination* (Tibetan text page 172) says:

> *The remaining*, reflections and so forth, appear as objects when there is impairment to the sense powers. They *are presented as unreal* relative to *the very world* (*'jig rten nyid*). The term 'very' (*nyid*) indicates that in order to posit these consciousnesses as mistaken it is enough to do so by means of a valid cognizer of conventions without basing it on a consciousness of [an ultimate] type.

This is Lama Tsongkhapa's commentary on the line from Chandrakirti's *Supplement* (v. 6.25cd): "The remaining are presented as unreal for the very world." 'The remaining' include both:

1. the reflections of a face in a mirror and so forth, which can be realized by ordinary beings to not exist as they appear and
2. the eye consciousness apprehending the reflection of a face to be a face and so forth, which can be realized by ordinary beings to be wrong consciousnesses.

These are posited as unreal conventionalities in the perspective of worldly consciousness.

A valid cognizer of conventions can realize a consciousness to be mistaken; for example, the consciousness to which a reflection of a face appears to be a face, the consciousness to which a mirage appears as water, and so forth. Likewise, a valid cognizer of conventions can realize that an echo is

not the original sound. All consciousnesses have their respective false objects; for example, a nose consciousness smelling food when there is no food present.

Lama Tsongkhapa's *Illumination* (Tibetan text page 172) says:

> Internal conditions that impair the sense powers are cataracts, jaundice, and so forth, as well as eating *datura* and so forth. 'Datura' is thorn apple; when its fruit is eaten everything appears as gold. [The words] 'and so forth' include infectious diseases and others. External conditions that impair the sense powers are mirrors, speaking in caves and so forth, and sun rays in springtime striking a place of light sand. Although these are not internal conditions that impair the sense powers, they are the causes of apprehending respectively reflections, echoes, mirage water, and so forth. Mantras, medicines, and so forth prepared by magicians and others are also to be understood similarly.

Internal and external conditions can cause impairment of the sense powers. Internal conditions that do so are cataracts, jaundice, eating datura, and so forth. Cataracts cause one to see a single moon as two moons and so forth. Jaundice causes one to see white objects, such as a conch, as yellow. Eating datura causes one to see things as gold-colored. Datura is a plant that has a yellow flower and a root like a potato. People cook and eat the roots thinking that it is good for strengthening the body. However, if it is not prepared well, it can actually poison the body. Infectious diseases and so forth also impair the sense powers.

Lama Tsongkhapa says: "External conditions that impair the sense powers are mirrors, speaking in caves and so forth, and sun rays in springtime striking a place of light sand. Although these are not internal conditions that impair the sense powers, they are the causes of apprehending respectively reflections, echoes, mirage water, and so forth." Mantras, medicines, and so forth are also external conditions that impair the sense powers.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> [The things] that impair the mental sense power are those mantras, medicines, and so forth, as well as harm from wrong tenets, facsimiles of reasons, sleep, and so forth.

Mantras and medicines can cause one to have an unclear memory and can disturb the mind, whereby they impair the mental sense power. For example, an overdose of certain medicines can cause one to hallucinate. Harm to the mental sense power can also come from learning wrong tenets, such as upholding the Samkhyas' assertion of a general principal, an I composed of three activities, and so forth. The mental sense power is also harmed by facsimiles of reasons such as "Sound is permanent because it is a product." The mental sense power can also be harmed by sleep such as when one has nightmares.

Lama Tsongkhapa's *Illumination* (Tibetan text page 172-3) says:

> From among the six sense powers, sleep is said to impair the mental [sense power], therefore, saying that "Acharya [Chandrakirti] asserts that sense consciousnesses exist in dreams" is a completely wrong explanation.

Sleep impairs the mental sense power. For example, a dream in which many events happen can disturb the mind, whether the events are enjoyable or suffering. During sleep there are no sense consciousnesses, only mental consciousness. That there is 'no sense consciousnesses' means that they are not manifest.

Lama Tsongkhapa's *Illumination* (Tibetan text page 173) says:

> Therefore, the impairment which is pollution by the ignorance that is the two conceptions of a self, which has been operating since beginningless time and so forth, is not taken to be a cause of impairment here. Rather, the superficial causes of error which impair the sense powers as was explained before are taken [to be the cause of impairment].

The two conceptions of a self are not superficial causes of error, in that they are deep causes of error. Thus, there are two causes of error, one superficial and one deep. Due to the two conceptions of a self, there is the appearance of things as existing inherently or existing from their own side. Due to ignorance, forms appear to the eye consciousness as being established by way of their own character, sounds appear to the ear consciousness as being established by way of their own character, and so forth.

In the perspective of a worldly consciousness, the two conceptions of a self are not unreal conventionalities, but are real conventionalities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 173) says:

> Conventional objects which are apprehended by the six consciousnesses free from such impairment and the objects opposite to them – those posited [respectively] as real and unreal [conventionalities] – are [posited as such] only relative to the consciousnesses of worldly beings because [respectively] they are not harmed and they are harmed by the consciousnesses of worldly beings with respect to their existing as objects in accordance with how they appear. The two, real and unreal, are not [posited] relative to superiors because, like objects that do not exist in accordance with how they appear, such as reflections and so forth, likewise, blue and so forth appear to those who have ignorance to be established by way of their own character, but do not exist as objects in accordance with their appearance. Therefore, mistaken and unmistaken are also indistinguishable with respect to those two consciousnesses.

Chandrakirti's autocommentary (Tibetan text page 68) says:

> There, cataracts, jaundice, and so forth, and ingesting white thorn apple[25] and so forth are internal conditions of impairment for the senses. Sesame oil, water, and mirrors, expressing sounds within caves and so forth, and sunlight and the particulars of place and time being in proximity and so forth, are external conditions of impairment for the senses, for, while not being internal conditions of impairment for the senses, they are causes of apprehending reflections, echoes, mirages, water-moons and so forth. Mantras, medicines, and so forth thoroughly prepared by magicians and so forth should also be known similarly.
>
> That which impairs the mental [consciousness] are those [mantras and medicines], tenets that are incorrectly made and so forth, and facsimiles of inference. The presentation of dreams and so forth will be explained.
>
> Therefore, an object apprehended by any of the six senses without such conditions of impairment for the senses that is realized by the world is a truth within the world; it is not [a truth] in relation to an arya.
>
> Anything, such as a reflection, that when there is impairment to the sense powers appears as the very entity of an object, is wrong in relation to the world.

[25] Sanskrit: Dhattura.

Like Chandrakirti's *Supplement*, Lama Tsongkhapa's *Illumination* also sets out mantras, medicines, wrong tenets, and facsimiles of inference or facsimiles of reasons as those which impair the mental consciousness. While Chandrakirti mentions dreams, Lama Tsongkhapa mentions sleep. However, the meaning is the same.

The six objects, six unimpaired sense powers, and six unimpaired consciousnesses are real conventionalities in the perspective of a worldly consciousness, but are not real conventionalities in the perspective of superiors.

Lama Tsongkhapa's *Illumination* (Tibetan text page 173) says:

> QUESTION: Due to superficial impairment to a physical sense power an object appears wrongly, whereas due to impairment to the mental consciousness from sleep and so forth the appearances of human beings in a dream are apprehended as human beings and so forth, when awake the appearances of illusory horses and elephants are apprehended as horses and elephants, and the appearance of mirage water is apprehended as water. That these [appearances] are mistaken is realized even by the normal awarenesses of worldly beings. However, objects that are apprehended wrongly due to impairment to the mental [sense power] from bad tenets are not realized to be mistaken by the normal awarenesses of worldly beings. Therefore, how are they posited as unreal for the very world?

Worldly beings realize that the appearances to a sense consciousness caused by a superficial cause of error and appearances to a mental consciousness caused by the impairment of sleep and so forth are mistaken. However, they do not realize that objects that are apprehended wrongly due to the impairment caused by wrong tenets, such as the Samkhyas' tenet of a general principal, the Vaisheshikas' tenet of a generality that is a different entity, and so forth, are mistaken.

Lama Tsongkhapa's *Illumination* (Tibetan text page 173-4) says:

> REPLY: Here impairment [is taken to be] the harm from analyzing existence and non-existence; it is not taken to be the harm from innate mistaken conceptions. Therefore, imputations due to bad tenets are mainly those that are imputed wrongly through the awareness being affected by tenets. Although they are not realized to be mistaken by the normal awarenesses of worldly beings, when they are realized to be wrong by a valid cognizer of conventions not approaching suchness, they are realized to be wrong by a consciousness of a worldly being.

In short, impairment in this context is not harm from the innate conception of true existence; rather it is harm from a superficial cause of error, which includes wrong tenets. Appearances caused by this are realized to be mistaken, even by those who have not realized emptiness. For example, although a normal ordinary being, one who has not studied tenets, is not able to realize that the general principal does not exist, an ordinary being who has not realized emptiness but has studied tenets can realize that it does not exist.

Tuesday morning, 30 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 174) says:

> For example, objects apprehended by the two innate conceptions of a self are said to be apprehended by unimpaired sense powers. Although [the two selves] are indeed real, or true, relative to the normal thoughts of worldly beings, they do not exist even conventionally.

The objects apprehended by the two innate conceptions of a self are a self of persons and self of phenomena. A self of persons and a self of phenomena appear to those who have an innate conception of self.

Objects appear to unimpaired consciousnesses to be established by way of their own character; therefore, according to the Prasangika Madhyamikas the object of negation, true existence, *does* appear to unimpaired consciousnesses. An unimpaired consciousness is one that is free from a superficial cause of error. Although the two selves appear to be real or true relative to worldly consciousness, in fact they do not exist at all.

Lama Tsongkhapa's *Illumination* (Tibetan text page 174) says:

> QUESTION: Due to your not asserting real conventionalities, they are not considered to be two [types], the real and unreal. But, why are objects and subjects polluted by ignorance not posited as unreal conventionalities?
> REPLY: Because conventionalities are necessarily posited by a valid cognizer of conventions (*tha snyad pa'i tshad ma*), when positing unreal conventionalities they would also necessarily be posited relative to [a valid cognizer of conventions]; however, [objects and subjects] polluted by the latencies of ignorance are not established by a valid cognizer of conventions to be mistaken.

The two conceptions of a self are not posited as unreal conventionalities because they are not established to be mistaken by a valid cognizer of conventions. This is because ordinary beings do not realize that the referent object of the two conceptions of a self does not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 174) says:

> 3B1C-2B3E-2A1B-2B1B-1B1D Indicating that the referent object of that mistaken with respect to the referent object does not exist even conventionally

Chandrakirti's autocommentary (Tibetan text page 69) says:

> Now, in order to indicate in detail the very meaning that was already expressed through the mode of expressing examples, it is explained:
>
> *The fundamental nature as it is imagined by the Forders,*
> *Strongly agitated by the sleep of unknowing, and*
> *Whatever is imputed as illusions, mirages, and so forth –*
> *They are just not existent, even within the world.* [6.26]
>
> The Forders, since they wish to enter into thusness, desire to progress to perfection [while] definitely apprehending as reality[26] the unmistaken production, disintegration, and so forth of things renowned even to untrained beings such as shepherds, women, and so forth. Hence, like a tree climber having let go of the former branches [but] not holding on to the latter branches, they fall into the ravine of bad views due to the great downfall and do not attain [their] result due to being separated from the two truths. Therefore, the three qualities and so forth that are imagined by them just do not exist in the conventions of the world.

Up to now, the division of conventionalities into real and unreal relative to worldly consciousness in general has been discussed. Now Chandrakirti explains [unreal conventionalities] in particular in relation to the Forders' awarenesses, which are disturbed by the sleep of unknowing. Chandrakirti says that the Forders do not understand even that which is known to the untrained or unlearned, for

[26] LTK, p. 183, has instead: 'not holding/apprehending the unmistaken production, disintegration and so forth...'

example, shepherds, women, and so forth. Women are mentioned here because in the past in India, they worked in the home and were not educated. The Forders have facsimiles of reasons, yet think that their views are supreme in the world. Chandrakirti likens a Forder to a tree-climber who climbs a tree by letting go of one branch before taking hold of the next, whereby he falls, in that because the Forders do not know the correct meaning of the two truths, "they fall into the ravine of bad views." Chandrakirti says: "[they] will not attain [their] result due to being separated from the two truths." 'Separated from the two truths' means that they do not understand the two truths properly.

Chandrakirti says: "Therefore, these three qualities and so forth that are imagined by them just do not exist in the conventions of the world." These three qualities or activities are the darkness, lightness, and movement asserted by the Samkhyas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 174) says:

> Due to the impairment of a mental [sense power], which was already explained, [the mental consciousness] is mistaken with respect to its referent object. In order to present this very meaning, which was indicated in general, there is the [following] explanation by means of setting forth analogies in regard to particular illustrations.
> Chandrakirti says:
>
> *The exact nature and*
> *The illusions, mirages, and so forth*
> *Imputed by the Forders, who are disturbed by the sleep of unknowing,*
> *Just do not exist even within the world.* [6.26]
>
> *The Forders*, whose minds *are disturbed by the sleep of unknowing*, have a mental [sense power] impaired by mistaken bad tenets and facsimiles of reasons. Desiring to engage thusness, they do not unmistakenly apprehend the production, destruction, and so forth which are renowned even to untrained beings – herdsmen, women, and so forth. Desiring to become supreme among worldly beings, like a tree climber who, without holding on to the next branch, lets go of the former, they (1) fall into the ravine of bad views due to the great downfall, and (2) do not attain the final result due to being separated from excellently perceiving the two truths.

Due to holding bad views, the Forders (Skt. *Tirthikas*) cannot attain liberation. There are five or eleven types of Forders, which are discussed extensively in Kunkyen Jamyang Shepa's *Great Exposition of Tenets*. The five types are:

1. the Samkhyas
2. the Vaisheshikas,
3. the Nirgranthas,
4. the Naiyayikas,
5. the Charvakas.

Each of these schools holds particular views. The Samkhyas say that in order to attain liberation one must know the twenty-five categories, which include all objects of knowledge. The Vaisheshikas say that all objects of knowledge are included in six categories. The Nirgranthas set forth nine categories, which include all objects of knowledge. According to some the three activities, darkness, lightness, and movement, are the three mental poisons, attachment, hatred, and ignorance. The Samkhyas set out these three qualities, whereas the Vaisheshikas set out twenty-four. Here the three qualities are emphasized because the Samkhya school is the highest of the various non-Buddhist schools. In fact, it is said that someone who leaves behind the Samkhya view becomes a Prasangika Madhyamika.

Lama Tsongkhapa's *Illumination* (Tibetan text page 175) says:

> Therefore, whatever is *imputed by* the Forders, such as the three qualities and so forth with respect to the *exact nature* which appear in their respective texts, does not exist even within the

> conventionalities of the world. Therefore, saying that [Chandrakirti's] system posits that which is conventionally existent as an existent in the perspective of a mistaken awareness is well refuted.

The three qualities do not exist but are merely imputed or imagined by the Forders. Therefore, the being, which is composed of consciousness, knower, and self, as well as the principal generality and so forth exist only in the perspective of the Forders themselves; they do not actually exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 175) says:

> Likewise, although *those illusions*, *mirages*, reflections, *and so forth are imputed* as [respectively] a horse and elephant, water, a face, and so forth, they *just do not exist even within* the conventionalities of *the world*.

"Do not exist even within the conventionalities of the world" means that even ordinary beings know that mirage water is not actual water, that a horse and elephant created by a magician are not an actual horse and elephant, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 175) says:

> Therefore, that which exists as a convention (*tha snyad du yod pa*) is necessarily established by a valid cognizer.

That which exists as a convention must be established by a valid cognizer because the definition of an existent is: that which can be observed by a valid cognition.

Lama Tsongkhapa's *Illumination* (Tibetan text page 175) says:

> Although such referent objects do not exist even conventionally, appearing objects are not asserted to be like that. Excluding mere degrees of subtlety, there is no difference in terms of being mistaken or unmistaken with regard to appearing objects whether they are:
> (1) appearances, the five present [objects], forms, sounds, and so forth, to sense consciousnesses as established by way of their own character due to being polluted by ignorance or
> (2) the appearance of reflections, echoes, and so forth to sense consciousnesses.
> Blue and so forth established by way of their own character and reflections existing as faces are not feasible. However, just as there exist reflections that are not faces, likewise, although not established by way of their own character, blue and so forth necessarily exist. Furthermore, just as [blue and so forth] exist among external objects, reflections are also asserted to be form spheres. Further on [in the text] it also says that a reflection produces a sense consciousness having its appearance. That these modes are also to be understood with respect to illusions appearing to the eye as horses and elephants, as well as with respect to echoes, and so forth is the uncommon presentation of this supreme system.

Although the referent objects of the two conceptions of a self do not exist even conventionally, their appearing objects do exist. Lama Tsongkhapa says: "Excluding mere degrees of subtlety, there is no difference in terms of being mistaken or unmistaken with regard to appearing objects." This means that there are different levels of mistaken consciousnesses; for example, an eye consciousness to which forms and so forth appear to be established by way of their own character is a *subtle* mistaken consciousness. On the other hand, an eye consciousness to which the reflection of a face appears as a face is a *coarse* mistaken consciousness. Blue and so forth are not established by way of their own character, yet they appear to be established by way of their own character due to the sense consciousnesses being polluted by ignorance. For this reason, ordinary beings do not realize that they are not established by way of their own character. On the other hand, even ordinary beings realize

that the reflection of a face appearing to be a real face is not true. The reflection of a face is said to be a form sphere because it produces eye consciousness.

Lama Tsongkhapa then says: "That these modes are also to be understood with respect to illusions appearing to the eye as horses and elephants, as well as with respect to echoes, and so forth is the uncommon presentation of this supreme system." Because the appearance of a magical horse and elephant produces an eye consciousness, those appearances are form spheres. Do illusory horse and elephant exist? They do. For the Prasangika Madhyamikas, because the illusory horse and elephant appear to the eye consciousness they are forms; therefore they are included in the form sphere. There are two types of form: form that is a form sphere and form that is a phenomenon sphere:

1. Form that is a form sphere is: an appearing form that appears to an eye consciousness.
2. Form that is a phenomenon source is: an appearing form that appears to a mental consciousness.

The remaining types of form are: form that is a vow, form that is a non-vow, and form that is occasionally manifest.

Lama Tsongkhapa's *Illumination* (Tibetan text page 175) says:

> 3B1C-2B3E-2A1B-2B1B-1B2 Applying that to the meaning of this context

Chandrakirti's autocommentary (Tibetan text page 69-70) says:

> Therefore, here:
>
> *As the observation of an eye with cataracts*
> *Does not harm the knowledge [of] one without cataracts,*
> *Similarly, there is no damage to a stainless wisdom*
> *By an awareness that has abandoned stainless wisdom.* [6.27]
>
> The refutation of production from others that was explained was not [made] through abiding in only the view of the world.
>
> If asked: What then?
>
> It is through accepting the perceptions of the aryas. When this refutation of production is distinguished, then, just as observing the entities of hairs and so forth of those with cataracts does not damage the knowledge of those without cataracts, similarly, since there is no damage to uncontaminated perceptions by the knowledge of ordinary beings separated from uncontaminated exalted wisdom, there is also no damage by the world to objects of such type. Therefore, such outsiders are just worthy as objects of laughter by the excellent ones.

Those with cataracts see falling hairs, but this does not harm the knowledge of those without cataracts. Likewise, the consciousnesses of ordinary beings, which are separated from uncontaminated exalted wisdom and polluted by ignorance, do not harm a superior's uncontaminated exalted wisdom of meditative equipoise.

Lama Tsongkhapa's *Illumination* (Tibetan text page 175) says:

> Chandrakirti says:
>
> *The observing by one whose eyes have cataracts*
> *Does not harm a knower without cataracts;*
> *Likewise, an awareness that has abandoned the stainless exalted wisdom*
> *Does not harm a stainless awareness.* [6.27]

> The object thusness is not posited by a knower of conventions (*tha snyad pa'i shes pa*). Therefore, the refutation of production from other is not made only through abiding in the view of worldly beings; it is refuted with respect to the ultimate through asserting a superior's perception of thusness. When the refutation of production from other is applied to the instance of the ultimate [it is as follows].
>
> Just as a knower of *one whose eyes have cataracts observing* falling hairs and so forth *does not harm* the non-appearance of falling hairs and so forth to *a knower without* the pollution of *cataracts*; *likewise*, *the awareness*, polluted by ignorance, of an ordinary being who *has abandoned*, i.e., is free from, *the stainless*, that is, uncontaminated, *exalted wisdom does not harm a stainless*, that is, uncontaminated, *awareness* not polluted by ignorance.

Here, it would seem that in refuting production from other there is the need to qualify it by saying 'production from other ultimately.' However, in general according to the Prasangika Madhyamikas there is no need for this qualification. From the point of view of the Svatantrika Madhyamikas, however, there is the need to qualify production from other by the word 'ultimately,' because they assert that there is production from other. This is because they assert that a cause established by way of its own character produces a result established by way of its own character. The Prasangika Madhyamikas do not make a distinction between existing ultimately, establishment by way of its own character, existing truly and so forth, whereas the Svatantrika Madhyamikas do.

Lama Tsongkhapa's *Illumination* (Tibetan text page 176) says:

> The refutation of production from other with respect to the ultimate is not harmed even though it is permissible to establish production from other in the perspective of worldly beings. Therefore, the opponents are objects of the laughter of holy beings and scholars.

One can ask: "Is the refutation of production from other actually harmed by worldly beings?" The answer to this question varies according to the school. For example, the Svatantrika Madhyamikas say that the refutation of production from other is harmed by worldly beings, whereas the Prasangika Madhyamikas say that it is not.

Those with cataracts have the appearance of falling hairs due to a faulty eye sense power, this being the condition for the appearance of falling hairs. An awareness based on a faulty sense power does not harm an awareness of one who does not have a faulty sense power, for example, someone without cataracts. For example, one who becomes intensely angry has the appearance of things as red; however, his eye consciousness does not affect one who is not angry who does not have the appearance of red. Likewise, the awareness of an ordinary being polluted by ignorance does not harm, or affect, the awareness of a superior that is not polluted by ignorance.

In conclusion, if it is real in the perspective of worldly consciousness it is not necessarily real; for example, the two selves – the self of persons and the self of phenomena. On the other hand, the reflection of a face is unreal in the perspective of a worldly consciousness, because even ordinary beings realize that it does not exist as it appears.

Tuesday afternoon, 30 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 176) says:

3B1C-2B3E-2A1B-2B1B-1B3 Explanation of the individual entities of the two truths

- A Explanation of the conventional truth
- B Explanation of the ultimate truth

3B1C-2B3E-2A1B-2B1B-1B3A Explanation of the conventional truth

1 Truths and non-truths in the perspective of a concealer
2 The way in which mere conventionalities appear and do not appear to the three persons
3 The way in which [things] are ultimate and conventional relative to ordinary beings and superiors

3B1C-2B3E-2A1B-2B1B-1B3A-1 Truths and non-truths in the perspective of a concealer

A Actual meaning
B Explanation of the uncommon presentation of the afflictions

IDENTIFICATION OF THE CONVENTIONAL TRUTH

3B1C-2B3E-2A1B-2B1B-1B3A-1A Actual meaning

Chandrakirti's autocommentary says:

> Therefore, due to this, the truths are two and through the divisions of deceptive and ultimate, the entities of all things are expressed as two. There, because the deceptive truth of the world is to be indicated, it is explained:
>
> *Because confusion obscures self-nature, it is all-concealing (deceptive),*
> *Whatever fabrication appears as true due to that,*
> *The Muni taught as "truth for an all-concealer" (deceptive truth).*
> *Fabricated things are all-concealing (deceptive).* [6.28]
>
> There, since it acts as darkness with regard to sentient beings viewing how things abide, it is confusion. Ignorance acting to superimpose a self-entity of things that does not exist, having the character of obscuring the perception of the nature [of reality], is the all-concealer (i.e., the deceiver).[27]
>
> For something to appear as true due to that concealing (deception) while without self-nature, to appear individually as a self-nature – that is truth for a concealer (deceptive truth) of the mistaken world. That is the fabricated dependent arising.
>
> Some dependent arisings such as reflections, echoes, and so forth, also appear false to those possessing ignorance; some visible forms such as blue and so forth, mind and feeling and so forth, appear as true. The self-nature [of the mode of existence of phenomena] does not appear in all ways to those possessing ignorance. Therefore, that [self-nature] and also whatever is deceptively false, are not the deceptive truth.

Chandrakirti now explains the entities of the two truths individually, beginning with the conventional truth. Chandrakirti says: "Because confusion obscures self-nature, it is all-concealing." Confusion is a concealer because it obstructs one from seeing the [final] nature.

Chandrakirti then says: "Whatever fabrication appears as true due to that, the Muni taught as "truth for an all-concealer." For example, a cup is a truth for a concealer because it is a truth in the perspective of the conception of true existence. Chandrakirti says: "Fabricated things are all-concealing." Fabricated things are mere conventionalities; they are not pervaded by being conventional truths. This is because in the perspective of three types of persons – hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas abiding on the three pure grounds – a cup, for example, is a conventionality but not a truth. It is not a truth for them because they do not have the ignorance that is the conception of true existence that obscures seeing the reality of phenomena, [whereby, it cannot be a truth for their concealers, the conception of true existence].

[27] According to the reading of LTK, p. 185.

Phenomena can be divided into:
1. phenomena such as reflections, echoes, and so forth, which are realized by ordinary beings to not be real and true and
2. phenomena, such as blue and so forth, which are not realized by ordinary beings to not exist as they appear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 176) says:

> Chandrakirti says:
>
> > *Because confusion obstructs the nature it is a concealer.*
> > *By that, fabrications appear as truths.*
> > *The Subduer taught them as "truths for a concealer."*
> > *Things which are fabrications are conventionalities.* [6.28]
>
> Therefore, *because confusion*, i.e., ignorance, acts to *obstruct*, that is, obscure, sentient beings from viewing *the nature* of how things abide, although the entity of things is not inherent existence, it superimposes inherent existence on them.

A concealer is an obstructor because it obstructs one from seeing the nature or reality of phenomena. This means that it obstructs one from seeing that phenomena are empty of inherent existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 176-7) says:

> That having the nature of obstructing the perception of the nature of the mode of being (*yin lugs*) is a *concealer*. The truth called "a truth for a concealer" (*or* "a conventional truth") is identified to be a conventionality posited in the perspective of a concealer; it is not identified to be a conventionality in general.

This is the explanation of the first line of Chandrakirti's root verse (v. 6.28a): "Because confusion obstructs the nature it is a concealer."

Lama Tsongkhapa's *Illumination* (Tibetan text page 177) says:

> This identification, moreover, is mentioned in the *Descent into Lanka Sutra* saying:
>
> > The production of things is a conventionality.
> > Ultimately it is without nature.
> > Whatever is mistaken regarding non-inherent existence
> > Is asserted to be a concealer of the perfect.
>
> The meaning of this is [as follows]. An awareness which mistakes what is ultimately without inherent existence to have inherent existence is a concealer. That concealer – obstructor being an equivalent term for concealer – is an obstructor by engagement. What does it obstruct? Saying "[it] is asserted to be a concealer of the perfect (*yang dag kun rdzob*)" is to say "Since obstructing the perfect object, it is asserted to be a concealer or an obstructor." It does not indicate a real conventionality (*yang dag kun rdzob*) from among the two, real and unreal.

Lama Tsongkhapa identifies a concealer, saying: "An awareness which mistakes what is ultimately without inherent existence to have inherent existence is a concealer." Concealer is equivalent to obstructor; the conception of true existence is an obstructor because it obstructs from seeing the reality of phenomena. In other words, a concealer is so-called because it obstructs from seeing the perfect object, emptiness. This stanza does not present real conventionality (in Tibetan this is *yang dag kun*

rdzob), but presents the concealer of the perfect (this also being *yang dag kun rdzob*). The "perfect" (*yang dag*) is the mode of abidance of phenomena, whereas the "concealer" (*kun rdzob*) is that which obstructs from seeing it. Thus, in this context *yang dag* is not the real (*yang dag*) that occurs in the context of that which is a real conventionality (*yang dag kun rdzob*) in the perspective of a worldly consciousness. Any consciousness that obstructs from seeing the emptiness of inherent existence of phenomena is a concealer of the perfect (*yang dag kun rdzob*).

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> The two, the conventional (*kun rdzob*) presented by the first line and the concealer (also *kun rdzob*) presented by the last two lines, are not the same because in the first case *kun rdzob* is a conventionality which is asserted to be the production of things and so forth anywhere, whereas in the latter case *kun rdzob* is a concealer which is the conception of true existence, in the perspective of which things are true.

When the *Descent into Lanka Sutra* says "The production of things is a conventionality (*kun rdzob*)" it presents conventionalities, whereas when it says "Whatever is mistaken regarding non-inherent existence is asserted to be a concealer (*kun rdzob*) of the perfect" it presents the concealer that obstructs from seeing the perfect, emptiness. The point here is that the Tibetan for both conventionality and concealer is *kun rdzob,* but the meaning is very different.

Lama Tsongkhapa's *Illumination* (Tibetan text page 177) says:

> *By* the force of *that* concealer, the conception of true existence, *the fabrications* fabricated as appearing to it, blue and so forth, although not inherently existent, *appear as truths* to sentient beings. Due to being truths in the perspective of the mistaken concealer of the world which was explained previously, *the Subduer taught them as* "*truths for a concealer* of the world." This way of teaching is taught in that sutra [cited] above. *Things which are fabrications* due to being fabricated by a conception of non-true existence in the perspective of any of the three persons are said to be mere *conventionalities* due to their not being true in the perspective of their concealers.

Here, Lama Tsongkhapa does not specify who the "three persons" are. However, they are later presented to be hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas of the three pure grounds. In the perspective of these three persons, a pot is a mere conventionality but not a truth, because they have abandoned the conception of true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 177) says:

> [Chandrakirti's autocommentary] says:
>
> > A few dependent-arisings, such as reflections, echoes, and so forth, although false, appear to those who have ignorance. A few such as forms, blue and so forth, and minds, feelings, and so forth appear to be true, that is, the nature of the mode of being of all phenomena does not appear in all ways to those who have ignorance. Therefore, that nature, as well as whatever is a falsity even for a concealer, are not truths for a concealer (conventional truths).

Lama Tsongkhapa quotes Chandrakirti's autocommentary, which says that although reflections, echoes, and so forth appear to those who have ignorance, they are realized to not be true (i.e., they are realized to not exist as they appear). On the other hand, forms and so forth appear to be true to those who have ignorance but are not realized to not exist as they appear.

Chandrakirti's autocommentary says:

> In that case, briefly, the all-concealing (or, deceptive) truth is presented by the power of deluded ignorance fully included in the [twelve] links of [cyclic] existence.
>
> Furthermore, for hearers, solitary realizers, and bodhisattvas who have abandoned deluded ignorance and who see the compounded as like the existence of reflections and so forth, [those phenomena] are of a fabricated nature and not true because [the three individuals are] without strong adherence [to phenomena] as true.

Conventional truths are true only in the perspective of the ignorance included in the first link of the twelve links of dependent-arising. This ignorance is the cause for wandering in cyclic existence. For the hearers, solitary realizers, and bodhisattvas who have abandoned afflicted ignorance, phenomena are not conventional truths but are mere conventionalities. They see only mere conventionalities because they are without the strong fancying of, or adherence to, true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 178) says:

> When the meaning of this passage is explained, it is [as follows]. "A few" in the translation of Nagtso is translated as "some;" this is convenient. "Reflections, [echoes,] and so forth, although false, appear" means that they appear as false. [A reflection] is a falsity that is a collection of the two: appearing to be a face and empty of [being a face]. Therefore, its emptiness of truth is its emptiness of truth as a face. It does not mean that a reflection is empty of the truth that is establishment by way of its own character. Therefore, although a reflection is established as empty of being a face, a reflection is a truth for a concealer (conventional truth) in the sense of it being a thing that is not at all contradictory to it being a truth in the perspective of a concealer that conceives it to be established by way of its own character.

The translation of Chandrakirti's autocommentary says 'a few' whereas Nagtso translates the same Sanskrit word as 'some.' Lama Tsongkhapa says that this is a convenient way of translating it.

A reflection of a face appears to be a face but is realized to not be a real face. However, it is not realized by ordinary beings to be empty of being established by way of its own character. The realization of that would be the realization of emptiness. Reflections, echoes, and so forth are truths for a concealer, or conventional truths, because they are truths in the perspective of the conception of true existence, which is the subject (the consciousness) in the perspective of which they appear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 178) says:

> Therefore, the intention in saying that a reflection is not a truth for a concealer, for example, the reflection of a face in the perspective of concealer of the worldly trained in terminology, is that since its being a face is a falsity, relative to that it is not a truth for a concealer. It is not at all posited to be the conventional truth that is explained (v. 6.23d) saying: "That of false perception is said to be conventional truth."

The reason that reflections and so forth are not truths for a concealer is that they are not real conventionalities in the perspective of a worldly consciousness because they do not exist as a face as they appear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 178) says:

> Not being such, if not existing as a truth for a concealer were contradictory to its being a conventional truth, saying that establishment by way of its own character does not exist even nominally would contradict all the refutations of true existence, proofs of non-true existence, and the presentations of nominal activities. Therefore, saying that objects that are known to be mistaken even by the normal consciousnesses of worldly beings, such as reflections and so forth, are not conventional truths but are mere conventionalities seems to be the talk of those who have not understood (1) the two truths which are definite in number, (2) truths and falsities with respect to worldly beings, and (3) the truths and falsities posited by the Middle Wayers.

In the context of "truths and falsities posited by the Middle Wayers," 'truths' are those phenomena whose mode of appearing accords with their mode of abidance, whereas 'falsities' are those phenomena whose mode of appearing does not accord with their mode of abidance. In the context of "truths and falsities with respect to worldly beings," 'worldly beings' are those who have not realized emptiness in whose perspective there do exist truths and falsities. "The two truths which are definite in number" means that all phenomena of cyclic existence and nirvana are definitely included in the two truths, there not being a third truth.

It is incorrect to assert that reflections, echoes, and so forth are not conventional truths. They are conventional truths because otherwise they would be ultimate truths, since there is no third possibility. Therefore, saying that they are not conventional truths is the talk of those who have not understood the above three points.

The two truths are presented in all four Buddhist schools, but the presentation differs. Because of this, the concealer is presented in different ways. For example, for the Madhyamikas the concealer is the conception of true existence. On the other hand, for the Chittamatrins the concealer is not the conception of true existence because they assert true existence. For them, the concealer is the conception apprehending forms to be an established by way of their own character as a basis for affixing the term 'form' or the conception apprehending form and the valid cognizer apprehending form to be different substances.

The two truths are important for Buddhists because they are the basis on which one generates the two paths of method and wisdom, the cultivation of which enables one to actualize the result, the two bodies, the form body and truth body.

Wednesday morning, 31 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 179) says:

> Although [the autocommentary] says that "The nature does not appear to all those who have ignorance," since superiors who have not abandoned ignorance are asserted to directly realize suchness, the intention [of this statement] is consciousnesses polluted by ignorance. Since the exalted wisdom of subsequent attainment of learner superiors and the view of suchness of ordinary beings are polluted by ignorance and its latencies, in general ultimate truth is necessarily asserted to appear [to them] although it does not appear directly.

Chandrakirti's autocommentary says: "The nature does not appear to all those who have ignorance." The nature is the final mode of abidance; it does not appear to learner superiors in subsequent attainment and to ordinary beings who have not *directly* realized emptiness because they are polluted by ignorance and its latencies. However, in general the nature, the final mode of abidance, ultimate truth, is asserted to appear to them although it does not appear directly. This is because ordinary beings do realize emptiness, even though it is by way of a meaning generality and not directly. Therefore, the final mode of abidance of phenomena appears to them by way of a meaning generality but not directly. Similarly, the exalted wisdom of subsequent attainment of superiors sees the nature

as an illusion; the nature does not appear directly to the exalted wisdom of subsequent attainment. According to the Prasangika Madhyamikas, all consciousness except an exalted wisdom of meditative equipoise directly realizing emptiness are polluted by ignorance and its latencies.

Lama Tsongkhapa's *Illumination* (Tibetan text page 179) says:

> [The autocommentary] says, "In that case, briefly, the presentation of truth for a concealer is from the point of view of the afflicted ignorance included in the links of existence." Therefore, the ignorance which conceives phenomena to be truly existent – renowned as the conception of a self of persons and the conception of a self of phenomena – is asserted to be the ignorance of the twelve links, due to which it is not asserted to be a knowledge obstruction.

Lama Tsongkhapa says that the ignorance that is the first of the twelve links of dependent-arising is both the conception of a self of persons and the conception of a self of phenomena; this is the view of the Prasangika Madhyamikas. For the lower schools, only the conception of a self of persons is posited as the ignorance that is the first of the twelve links. This is because they assert that the conception of a self of persons is an afflictive obstruction, whereas the conception of a self of phenomena is a knowledge obstruction. The lower schools say that it is possible to become free from cyclic existence by abandoning the conception of a self of persons alone, without abandoning the conception of a self of phenomena. For the Prasangika Madhyamikas both the conception of a self of persons and the conception of self of phenomena are afflictive obstructions and the ignorance that is the first link.

Ignorance, not knowing (*ma rig pa*), is not just the opposite of knowledge (*rig pa*); it is a mental factor that is the opposite, the discordant class, of the knowledge that is exalted wisdom.

Lama Tsongkhapa's *Illumination* (Tibetan text page 179) says:

> The statement "truths for a concealer are posited *from the point of view of* that ignorance, the conception of true existence" indicates a manner of positing which posits truths in the perspective of a concealer. On the other hand, the statement "pots, blankets, and so forth, which are conventional truths, are posited *by* that conception of true existence" is not because we assert that 'posited by the conception of true existence' is not feasible even nominally.

Truths for a concealer, or conventional truths, are only truths *in the perspective of* a concealer, the conception of true existence. It is not the case that conventional truths, such as pots, blankets, and so forth, are posited *by* that conception of true existence, because there is nothing that is posited by the conception of true existence, even nominally or conventionally.

Lama Tsongkhapa's *Illumination* (Tibetan text page 179) says:

> Therefore, since concealers (*kun rdzob*), in the perspective of which truths that are a facet of "truths for a concealer" are posited, and conventionalities (*kun rdzob*), which are posited as existing conventionally, pots and so forth, are similar in name [in Tibetan], the meaning also appears to many mistaken [persons] to be the same; however, they should be well distinguished.

The word *kun rdzob* occurs in the context of a truth posited in the perspective of a concealer (*kun rdzob*) and in the context of conventionalities (*kun rdzob*), such as pots, blankets, and so forth, which exist conventionally. Although they are the same term in Tibetan, the meaning differs in relation to the context. The *kun rdzob* of the first case is an obstructor, whereas the *kun rdzob* of the second case is not an obstructor but refers to existing nominally (*tha snyad pa'i yod pa*).

Lama Tsongkhapa's *Illumination* (Tibetan text page 179) says:

> QUESTION: Are pots and so forth truths in the perspective of the concealers of all persons who are not buddhas or do they also exist as non-truths in the perspective of the concealers of some persons?
> REPLY: Those forms, sounds, and so forth that are posited as truths for a concealer, moreover, are [as it says in the autocommentary:]
>
> > For those hearers, solitary realizers, and bodhisattvas who have abandoned afflicted ignorance and perceive compounded phenomena to be like reflections, and so forth, they are the nature of fabrications and are not truths because [such persons] are free from strongly fancying them as truly existent.

The reply to the question is that falsities, forms and so forth, are not truths in the perspective of the three types of persons who have abandoned afflicted ignorance. However, excluding them, that is, in the perspective of all other persons, they are truths. This is because other persons have the conception of true existence. For the three persons, hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas on the three pure grounds, forms and so forth are mere conventionalities because these persons have abandoned the ignorance that is the conception of true existence.

Is there the appearance of true existence to these three persons?

Student: Since they still have knowledge obstructions they still have the appearance of true existence.

Geshe Jampa Gyatso: Why?

Student: Because a knowledge obstruction is the appearance of true existence itself.

Geshe Jampa Gyatso: You are saying that the three persons have the appearance of true existence because they still have knowledge obstructions. For them forms, sounds, and so forth are not true. Why are they not true for them? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 180) says:

> When the meaning of this statement is explained it is [as follows]. The three persons for whom [forms, sounds, and so forth] are not true in their perspective are the hearers, solitary realizers, and bodhisattvas. Moreover, since they are not taken to be just any hearer, solitary realizer, or bodhisattva, they are in fact special because the direct realization that all compounded phenomena are empty of inherent existence, yet appear as [inherently existent], like reflections, is special. Since even seventh ground bodhisattvas and below, as well as hearer and solitary realizer learner superiors, have that [realization], in order to eliminate them, [the autocommentary] says "who have abandoned ignorance" in regard to these three persons. Therefore, they are to be taken as the bodhisattvas on the pure grounds and the two, hearer and solitary realizer foe destroyers. Thus, [forms, sounds, and so forth] are not truths in the perspective of these three [persons].

Forms and so forth are not truths in the perspective of these three persons because these persons have abandoned the ignorance that is the conception of true existence and see all phenomena as like reflections. In short, they have abandoned adherence to the true existence of phenomena, whereby in their perspective phenomena are not true.

Lama Tsongkhapa's *Illumination* (Tibetan text page 180) says:

> "Whatever is not a truth, moreover" is all external and internal phenomena. There is a reason that they are not truths [for the three persons]; it is because they do not fancy, that is, do not adhere to, them as truly existent because they have extinguished the ignorance that is the conception of true existence.

The reason that external and internal phenomena, forms and so forth, are not truths for these three persons is because they have abandoned the conception of true existence. Forms and so forth are mere conventionalities in their perspective.

Lama Tsongkhapa paraphrases Chandrakirti's statement, "Therefore, that [nature] and whatever is false even conventionally are not conventional truths," saying "Whatever is not a truth, moreover." External and internal phenomena are not truths for the three persons because they have abandoned the conception of true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 180) says:

> Therefore, all external and internal phenomena are proven to not be truly existent in the perspective of *the concealers of* these three persons. Commenting in this way does not at all prove that [external and internal phenomena] are not conventional truths in their perspective, rather they are proven to "not be truths." In regard to that, conceiving them to be proven to not be conventional truths is a bad system of explanation [caused by] polluting the master's thought with one's own mental stains through the extremely rough operation of one's mind.

External and internal phenomena are not truths for the three persons, but are mere conventionalities for them.

Although the Tibetan text actually says "Therefore, all external and internal phenomena are proven to not be truly established in the perspective *of the concealers* of these three persons," it should probably just say 'in the perspective of these three persons,' that is, the words 'of the concealers' should be omitted.

Lama Tsongkhapa says: "conceiving them to be proven to not be conventional truths is a bad system of explanation." This is because forms, sounds, and so forth are simply proven to not be *truths* in the perspective of the three persons; they are not proven to not be *conventional truths* in their perspective.

Lama Tsongkhapa's *Illumination* (Tibetan text page 180) says:

> Although such is to be proven, it is not [to be proven] for these three persons. That which is not a truth in the perspective of these three is to be proven for other persons, such as ourselves. Lower beings who are not these three persons have the innate conception of true existence, whereby nothing can be proven to be non-truly existent in the perspective of any of their concealers.

Forms and so forth are not established to be truths in the perspective of these three, but are established to be truths in the perspective of others, such as ourselves. For us, phenomena, forms and so forth, need to be proven to not be a truth, that is, not truly existent, because we have the conception of true existence and adhere to these phenomena as true.

Lama Tsongkhapa's statement would seem to mean that in the perspective of some concealers, forms and so forth can be proven to be non-truly existent, whereas in the perspective of others they cannot. Lama Tsongkhapa says: "nothing can be established as non-truly existent in the perspective of any of their concealers." If it is a concealer that is a conception of true existence, although phenomena cannot be established as non-truly existent in its perspective, can they be established as such in the perspective of another concealer? What could that concealer be? Does it mean that in the perspective of the concealer that exists in us, forms and so forth cannot be established as non-truly existent, but in the perspective of the concealers of the three persons they can be established as non-truly existent? Those who are not the three persons are the bodhisattvas on the seventh ground and below and so forth. The word 'nothing' is a subject of much debate. 'Their concealers' perhaps includes those who have the conception of true existence to which phenomena cannot be established as non-truly existent

and those such as bodhisattvas on the seventh ground and below, to which they can be established to not be truly existent. Perhaps the meaning of this is clearer in Kunkyen Jamyang Shepa's commentary.

The main point here is that external and internal phenomena are mere conventionalities in the perspective of the three persons but are not truths. They are not truths in their perspective:

1. because they have realized compounded phenomena, external and internal phenomena, to be like reflections and
2. because they have abandoned the conception of true existence, whereby there is no adherence to phenomena as true.

For those other than the three persons, external and internal phenomena are conventional truths and true. This is because they have the conception of true existence. External and internal phenomena are truths for a concealer, which is the conception of true existence. In brief, all conventionalities are not truths but are falsities. This is why the Madhyamikas say that ultimate truth is posited as truth, whereas conventional truths are posited as false.

If it is an established base it is pervaded by having two entities: the entity of conventional truth and the entity of ultimate truth. These two truths are the same entity but different isolates.

Wednesday afternoon, 31 May 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 181) says:

> If [phenomena] were proven to not be conventional truths in their perspective, which is not as explained above, it would become a proof that is thoroughly unrelated. Upon establishing such-and-such a basis in the perspective of such-and-such an awareness to be a conventional truth, that basis is necessarily established to be a falsity, therefore, setting forth as the reason [for this] that it is not adhered to as truly existent is a source of laughter.

Forms, sounds, and so forth are proven to not be truths in the perspective of the three persons, but are not proven to not be conventional truths in their perspective. If forms and so forth were proven to not be conventional truths in their perspective, that proof would be thoroughly unrelated. When a particular basis is established to be a conventional truth in the perspective of a particular awareness, that basis is also established to be a falsity in the perspective of that very awareness. When this point is proved, if the reason given is that it is "because they do not have a conception of true existence," this would be a source of laughter. This is because by means of the reason that there is no adherence to the true existence of the basis, a base is not necessarily established to be false, for example, ultimate truth. Thus, although hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas of the pure grounds do not have the conception of true existence of ultimate truth, there is no pervasion that they establish ultimate truth to be a falsity.

Lama Tsongkhapa's *Illumination* (Tibetan text page 181) says:

> Although such-and-such a basis is established to be a conventional truth in the perspective of such-and-such an awareness, there is a reason that that basis is necessarily established to be a falsity. When positing truth in the term "conventional truth" in regard to pots and so forth, among the two, awarenesses and objects, they are not posited as truths in terms of objects, but are necessarily posited as truths in the perspective of a concealer, the conception of true existence. When that is seen, if that difference is not applied, since the main point is that it is necessary to see that they are not established as truths and are falsities, it is so.

When pots and so forth are posited as conventional truths, they are posited as such relative to a concealer that is the conception of true existence. Thus, pots and so forth are only posited as truths relative to that conception of true existence.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 285) says:

> Regarding the third, etymologies of ultimate truth (*don dam bden pa*) and conventional truth (*kun rdzob bden pa),* the first is as follows. The reality (*chos nyid*) of a pot as the subject, there is a reason for calling it "ultimate truth" (literally, supreme object truth); it is because it is referred to as such since it is an object (*don*), supreme (*dam pa*), and a truth (*bden pa*). It is an *object* because it is the object found by a superior's exalted wisdom of meditative equipoise. It is *supreme* because it is the supreme mode of abiding (*gnas lugs*). It is a *truth* because it is non-deceptive in that its mode of abidance and its mode of appearance are concordant. [Chandrakirti's] *Clear Words* says:
>
> > Since it is an object and supreme, it is the supreme object. Since just that is a truth, it is the supreme object truth, [that is, the ultimate truth].
>
> Regarding the second, [the etymology of concealer-truth (conventional truth) (*kun rdzob bden pa*)], there are two, the etymology from the perspective of the object and from the perspective of the subject. The first is as follows: pot as the subject, there is a reason for calling it a "concealer-truth;" it is because it is referred to as such since it is a *truth* in the perspective of the confusion which is the conception of true existence, a *concealing* awareness. The second is as follows: the conception of true existence as the subject, there is a reason for calling it a "concealer-truth;" it is because it is referred to as such for the reason that it is an obstructer to directly seeing the meaning of mode of abiding. [Chandrakirti's *Clear Words* says:]
>
> > Since confusion obstructs the nature, it is a concealer.
>
> With respect to the second [etymology]: "all" (*kun*) is variety, "conceal" (*rdzob*) means falsity, and "truth" (*bden pa*) is a truth in the perspective of the conception of true existence. The meaning of [this section of the] text is as follows: inner and outer things as the subject, there exist two entities in terms of them, because there exist in terms of those two: (1) an object found by a consciousness of [an ultimate] type analyzing the final [nature of phenomena] and (2) an object found by a valid cognizer of conventions.

A conventional truth is a truth only in the perspective of a concealer; otherwise it is a falsity. When one ascertains that a particular basis, such as a pot, is a conventional truth, a truth for a concealer, does one necessarily establish it to be a falsity?
Student: Yes.
Geshe Jampa Gyatso: If Chandrakirti were to ask Bhavaviveka "Would you say that the table is a conventional truth or an ultimate truth?" what would he say? Does Bhavaviveka realize the table to be a falsity because he establishes the table to be a conventional truth? Think about it.

In conclusion, when a particular basis is realized to be a conventional truth, it is realized to be a falsity and when it is realized to be a falsity, it is refuted as being a truth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 181) says:

THIS SYSTEM'S PRESENTATION OF THE AFFLICTIONS

3B1C-2B3E-2A1B-2B1B-1B3A-1B Explanation of the uncommon presentation of the afflictions

> In this system there is an uncommon identification of the afflictions that does not accord with the explanations in the upper and lower *Knowledges* (*Abhidharmas*). Since it seems to be important to understand it, when explained [it is as follows].
> The conception of true existence of things is of two [types]:
> 1. the conception of true existence in regard to persons and
> 2. the conception of true existence in regard to phenomena.
>
> That those very [two] are also asserted to be the two conceptions of a self has already been explained before. In both the commentary on the *Supplement* and the commentary on the *Four Hundred Stanzas*, the conception of true existence is explained to be afflicted ignorance. That ignorance is abandoned by hearer and solitary realizer foe destroyers. In the commentary on the *Four Hundred Stanzas*, it is explained that it is [also] abandoned by bodhisattvas who have attained forbearance with respect to the unproduced phenomenon.

The upper *Knowledge* is Asanga's *Compendium of Knowledge,* whereas the lower is Vasubandhu's *Treasury of Knowledge*. According to the Prasangika Madhyamikas, the conception of a self of persons and the conception of a self of phenomena are afflictive obstructions. Thus, the conception of true existence is a conception of either persons or phenomena as existing truly or inherently.

The two conceptions of a self are differentiated by the Prasangika Madhyamika system in terms of their observed objects, not in terms of their modes of apprehension. On the other hand, in the Svatantrika Madhyamika system they are differentiated in terms of their modes of apprehension, not in terms of their observed objects. In the Prasangika Madhyamika system:

- the conception of a self of persons is the conception of the person as existing inherently and
- the conception of a self of phenomena is the conception of phenomena other than the person as existing inherently.

In this way, they are said to be differentiated in terms of their observed objects and not in terms of their modes of apprehension. On the other hand, in the Svatantrika Madhyamika system they are differentiated in terms of their modes of apprehension. This is because for them:

- the conception of a self of phenomena is the conception that conceives either the person or a phenomenon other than the person to exist truly, whereas
- the conception of a self of persons is either (1) the conception that conceives the person to be self-sufficient substantially existent or (2) the conception that conceives a phenomenon other than the person to be an object of use of a self-sufficient substantially existent person.

In this way, the two conceptions are differentiated in terms of their modes of apprehension. These two conceptions are posited similarly in the Chittamatra system in that they do not posit the two conceptions in terms of their observed objects, but in terms of their modes of apprehension. On the other hand, the Vaibhashikas and Sautrantikas only posit a conception of a self of persons, that is, they do not posit a conception of a self of phenomena. They say that because phenomena are established as a self, there is no selflessness of phenomena.

There is debate about these assertions. For example, for the Prasangika Madhyamikas both the conception of a self of persons and the conception of a self of phenomena are ignorance. Therefore, when they posit a conception of a self of persons they posit it as ignorance. Such a conception of a self could be both a mind and a mental factor. Do you agree? For example, there is a main mental consciousness that conceives inherently existent phenomena along with the mental factors in its retinue. But when this is posited as ignorance, it is neither a mind nor a mental factor. Ignorance, the conception of true existence, cannot be either a mind or a mental factor because it has both parts. Someone can therefore say: "Ignorance as the subject, it follows that it is not a mental factor." If the defendant accepts that it is not, the other says: "Is it not one of the six root afflictions that are included in the fifty-one mental factors?" If the defendant answers that it is not, then one insists that it is because it is one of the six and tells that person to list them so as to see that it is there!

In short, with respect to ignorance is there both a mind and a mental factor? Think about it.

Lama Tsongkhapa says: "In both the commentary on the *Supplement* and the commentary on the *Four Hundred Stanzas,* the conception of true existence is explained to be afflicted ignorance. That ignorance is abandoned by hearer and solitary realizer foe destroyers." The reason for this is that they have destroyed the foe that is the ignorance which is an afflictive obstruction; in fact, this is why they are called 'foe destroyers.'

Lama Tsongkhapa says: "In the commentary on the *Four Hundred Stanzas* it is explained that it is [also] abandoned by bodhisattvas who have attained forbearance with respect to the unproduced phenomenon." These bodhisattvas are those on the eighth ground and above. What is 'the unproduced phenomenon'?

Student: Perhaps it is emptiness.

Geshe Jampa Gyatso: Then this passage would mean that a bodhisattva who has attained forbearance with respect to emptiness has abandoned ignorance. Can this forbearance be divided into small, middling, and great with respect to emptiness? Is this forbearance with respect to the unproduced phenomenon similar to that mentioned in the *Ornament,* saying that a sharp-facultied bodhisattva attains forbearance regarding the unproduced on the path of preparation, a middling-facultied bodhisattva attains it on the path of seeing, and dull-facultied bodhisattva attains it on the eighth ground? Think about it.

Having debated about this passage, one can ask does 'forbearance with respect to the unproduced phenomenon' not mean forbearance with respect to the afflictions not being produced again? Forbearance with respect to the afflictions not being produced again would mean that for this bodhisattva, the afflictions are definite to not be produced again.

Lama Tsongkhapa's *Illumination* (Tibetan text page 181) says:

> Therefore, afflicted ignorance is the discordant class of the knowledge of the suchness which is selflessness. Moreover, [that afflicted ignorance] is not just an absence of that knowledge and not just other than that [knowledge]. Rather it is the discordant class, the opposite, [of that] which superimposes inherent existence on persons and phenomena.

The objects of the mode of apprehension of the exalted wisdom realizing emptiness and ignorance are direct contradictions, given that non-inherent existence and inherent existence are direct contradictions. Thus, when a pot is realized to be non-inherently existent it is refuted as being inherently existent.

Lama Tsongkhapa says: "Moreover, [that afflicted ignorance] is not just an absence of that knowledge and not just other than that [knowledge]." Likewise, Gedun Drup's commentary (chapter 3) on Vasubandhu's *Treasury of Knowledge* says:

> If one asks, what is the nature of ignorance? Ignorance is not merely not knowing, nor merely what is other than knowledge; rather it is another phenomenon that is the discordant class of and contradictory to knowing-wisdom. For example, an adversary is not merely someone who is not a friend, or merely someone who is other than a friend; rather it is defined as the opposite of a friend. Similarly, lying words are defined as the opposite of true words. So it is like these examples and others.

In *Awareness and Knowers,* ignorance is said to be a mental factor that obscures its object, or a mental factor that engages its object with an aspect of obscuring it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 182) says:

> When taken in this way, positing the superimposition of a self of phenomena as afflicted ignorance and positing the two conceptions of an I and mine established by way of their own character as the view of the transitory collection does not accord with the Abhidharmists.

The view of the transitory collection must be a conception of a self of persons. However, Lama Tsongkhapa posits four possibilities regarding the view of the transitory collection and the conception of a self of persons.

In short, the conception conceiving I and mine to be established by way of their own character is ignorance. If someone says that the view of the transitory collection is ignorance, then one asks: "Is the view of the transitory collection one of the six root afflictions because it is ignorance?" Another point of debate is: "Among the fifty-one mental factors which is the view of the transitory collection?" Think about it. The view of the transitory collection is defined as wisdom. In relation to this, one can ask: "If it is wisdom is it one of the five object-determining mental factors? Does the view of the transitory collection ascertain its object?" The five object-determining mental factors are aspiration, belief, mindfulness, meditative stabilization, and wisdom.

Thursday morning, 1 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 182) says:

> The system of the Abhidharmists is as explained in the ninth chapter of the commentary on the *Treasury of Knowledge*, that is:
>
> - the conception of a self-sufficient substantially existent person is posited as the view of the transitory collection conceiving I and
> - the conception of the mine as under the control of such a substantially existent person is posited as the view of the transitory collection conceiving mine.
>
> This is very different [from the system of the Prasangika Madhyamikas].
>
> Although the conception of a self-sufficient substantially existent person does in fact exist in those whose minds have not been affected by tenets, the conception of the person and aggregates as having different, dissimilar natures does not exist in those whose minds have not been affected by tenets. Therefore, the view holding to an extreme is also of two [types].

In the lower schools, from the Svatantrika Madhyamikas down, the view of the transitory collection is posited as the conception of a self-sufficient substantially existent person. That view of the transitory collection is of two types: a view of the transitory collection conceiving I and a view of the transitory collection conceiving mine. Regarding the first, Lama Tsongkhapa says: "the conception of a self-sufficient substantially existent person is posited as the view of the transitory collection conceiving I." Regarding the second, Lama Tsongkhapa says: "the conception of the mine as under the control of such a substantially existent person is posited as the view of the transitory collection conceiving mine." This way of positing the two conceptions is very different from how they are posited by the Prasangika Madhyamikas. This is because the Prasangika Madhyamika system defines a view of the transitory collection as: an afflicted ignorance that, observing the I or mine in one's own continuum, conceives it to be established by way of its own character.

The conception of a self-sufficient substantially existent person exists in those whose minds have not been affected by tenets, such as farmers, animals, etc. Therefore, there is an innate conception of a self-sufficient substantially existent person. On the other hand, Lama Tsongkhapa says: "the conception of the person and aggregates as having different, dissimilar natures does not exist in those whose minds have not been affected by tenets." That is, it only exists in those whose minds have been affected by tenets. The conception of the person and aggregates to be different entities is to conceive the I to be the utilizer and the aggregates to be the object of its use, or to conceive the I to be the carrier

and the aggregates to be the load. Such conceptions do not exist in those whose minds have not been affected by tenets. In fact, in sutra it says that the five aggregates are the load, there is a person who carries them, and that it cannot be expressed to be either permanent or impermanent. Thus, this sutra presents a self of persons. Buddha taught this sutra with the intention to lead non-Buddhists who assert a self of persons into the Buddhist path.

The view holding to an extreme is also of two types: the acquired and the innate, or the view holding to the extreme of an inherently existent I and the view holding to the extreme of an inherently existent mine. Among the five types of view, two of them, the view of the transitory collection and the view holding to an extreme, are of two types, the acquired and innate, whereas the other three, the view holding bad conduct and bad morality as supreme, the view holding a bad view as supreme, and wrong view, are only acquired. These views cannot be innate because they arise from reasons and tenets.

Lama Tsongkhapa's *Illumination* (Tibetan text page 182) says:

> QUESTION: In regard to the position that asserts persons and phenomena to be established by way of their own character, how are such conceptions proven to be afflicted ignorance and the two conceptions of a self?
> REPLY: Inherently existent persons and phenomena are negated by the reasonings that refute them. At that time, such conceptions are established to be conceptions of true existence which are mistaken with respect to their referent objects (*zhen yul*). When that is established, the conceptions of the two, persons and phenomena, as truly existent are established to be the two conceptions of a self.

The Prasangika Madhyamikas adopt this position in an attempt to force the Svatantrika Madhyamika system to accept their assertions. Thus, they say that the conception of persons and the conception of phenomena as inherently existent are the two conceptions of a self, and so forth. When the Prasangika Madhyamikas say the conception of the person as inherently existent is a conception of a self of persons, the Svatantrika Madhyamikas would respond that the reason is not established. The Prasangika Madhyamikas would respond that it is so because the person is not found when thoroughly sought. The Svatantrika Madhyamikas would again respond that the reason is not established because the person *is* found when thoroughly sought. The Svatantrika Madhyamikas say that this is because when the person is sought among the five aggregates it is found; that which is found being the mental consciousness, the illustration of the persons.

The Svatantrika Madhyamikas, such as Bhavaviveka, would ask the Prasangika Madhyamikas: "Do you find the person or not? If not, then you, Chandrakirti, do not find yourself! If you do not find yourself, then it follows that even your parents do not find you when you are sought? However, this would contradict the conventions of the world because everyone would say that you are found by your parents." The Prasangika Madhyamikas would say that there is a difference in the way of searching.

Lama Tsongkhapa's *Illumination* (Tibetan text page 182) says:

> When they are established, the conception of true existence is established to be the discordant class opposing a knower of the meaning of suchness, whereby it is established to be ignorance. As long as that is not extinguished, the view of the transitory collection can also be proven to not be extinguished, whereby it is established as *afflicted* ignorance. Therefore, it is very important to understand that this is posited as the uncommon presentation of the afflictions.

Lama Tsongkhapa says: "the conception of true existence is established to be the discordant class opposing a knower of the meaning of suchness." This is because relative to the object, a self, there is

both exalted wisdom and ignorance, in that the conception of true existence opposes the exalted wisdom realizing emptiness. When the conception of true existence is established to be the discordant class of the exalted wisdom realizing emptiness, it is also established to be ignorance. As long as that ignorance is not extinguished, the view of the transitory collection is not extinguished because the view of the transitory collection itself is a kind of ignorance. Therefore, it is established to be *afflicted* ignorance. Such a way of positing the afflictions is not common to, or shared by, the lower schools.

In short, the Prasangika Madhyamikas say that both the conception of a self of persons and the conception of a self of phenomena are ignorance. The lower schools do not say that the conception of a self of phenomena is ignorance because they say that ignorance is a root affliction, whereas the conception of a self of phenomena is not an affliction, but is a knowledge obstruction.

Lama Tsongkhapa's *Illumination* (Tibetan text page 182-3) says:

> The way the other afflictions, attachment and so forth, also operate through the confusion which is a conception of true existence [is as follows]. [Aryadeva's] *Four Hundred Stanzas* (6.10ab) says:
>
> > Like the body sense power [abides in] the body,
> > Confusion abides in all.
>
> The commentary on this says:
>
> > Confusion, because of obscuring to realize them as truths just as they are, thoroughly operates to exaggeratedly superimpose true existence on things as their own entity. Because attachment and so forth also operate to superimpose the distinctions of attractiveness, unattractiveness, and so forth on only the nature of things which are imputed by confusion, they operate not differently from confusion. They are also based on confusion because confusion is the main [affliction].

Attachment and hatred operate on the basis of ignorance. This is because on the basis of the ignorance that conceives an object to exist from its own side, attachment superimposes attractiveness on an object. On the other hand, on the basis of the ignorance conceiving the object to exist from its own side, hatred superimposes unattractiveness on an object. Ignorance in this case is the conception apprehending persons or phenomena to be inherently existent, to exist from their own side, and to be established by way of their own character. This conception arises naturally in our continua without relying on reasons. On this basis, we superimpose attractiveness and unattractiveness on objects. When several people see a single object, does it appear in the same way to all of them? It does not, because to some it may appear as attractive and to others it may appear as unattractive. Why does this difference arise? With the innate conception of true existence as a condition, we superimpose attractiveness or unattractiveness on an object. Due to seeing the object as attractive, attachment arises, whereas due to seeing it as unattractive, hatred arises.

Ignorance and attachment engage their object in a similar way. For example, the body is the abode of the eye, ear, nose, tongue, and body sense powers. Since the body sense power is the main one, if it is destroyed all the remaining sense powers are destroyed since they rely on it. On the other hand, if the eye sense power is destroyed the other sense powers are not destroyed. Similarly, if a single affliction such as hatred is destroyed the other afflictions, such as attachment and so forth, are not destroyed, whereas if ignorance – the support – is destroyed, all the remaining afflictions – the supported – are also destroyed. This is the way in which they are support and supported, whereby they assist each other.

Aryadeva says: "Confusion abides in all." This means that the conception of true existence abides in all the afflictions or that the conception of true existence is the abode of all the afflictions. The commentary says: "Because attachment and so forth also operate to superimpose the distinctions

of attractiveness, unattractiveness, and so forth on only the nature of things which are imputed by confusion, they operate not differently from confusion." Therefore, it can be said that the conception of true existence operates in regard to the observed objects of all the afflictions. First of all, phenomena are conceived to be truly existent; then, on this basis the other afflictions, attachment and so forth, superimpose attractiveness and so forth. In other words, on the basis of phenomena being conceived by ignorance to be truly existent, the other afflictions superimpose attractiveness, unattractiveness, and so forth on objects, forms, sounds, and so forth. Thus, we conceive attractive and unattractive forms, attractive and unattractive sounds, attractive and unattractive odors, attractive and unattractive tastes, and attractive and unattractive tangible objects, on the basis of which we generate respectively attachment or hatred.

The verse from Aryadeva's *Four Hundred Stanzas* continues: "Therefore, when ignorance is destroyed, all the afflictions are destroyed."

Student: On the basis of conceiving an object to exist from its own side, does merely conceiving an object to be attractive generate attachment or do we have to exaggerate its attractiveness?
Geshe Jampa Gyatso: An object itself has some kind of attractiveness, but due to improper mental attention, we exaggerate its attractiveness. There is a story about a couple in the past in India. One day the man said to the woman, "You are becoming more beautiful." The woman asked, "How is it possible, in that I am not changing?" The man replied, "I see you as becoming more and more beautiful every day." This is due to projecting beauty on the object, in that although the object does not change, the perception of it changes. The person who was perceived to be beautiful in this case was actually missing an eye!

In short, ignorance and attachment are concomitant and are support and supported.

Lama Tsongkhapa's *Illumination* (Tibetan text page 183) says:

> When this is explained [it is as follows]. The statement "confusion, because of obscuring to realize them as truths just as they are, thoroughly operates to exaggeratedly superimpose on things their own entity of truth" indicates that confusion is the conception of true existence. "Attachment and so forth... operate not differently from confusion" [means that] they operate concomitant with confusion and do not operate free from it. The reason for that is as said: "Because attachment and so forth, also operate to superimpose the distinctions of attractiveness, unattractiveness, and so forth on only the nature of things which are imputed by confusion." Regarding this, that which superimposes the distinctions of pleasantness and unpleasantness on objects is improper mental attention – the cause that produces the two, attachment and hatred. Therefore, it does not indicate the way in which the two, attachment and hatred, conceive [their objects].

Geshe Jampa Gyatso: What are the objects of the mode of apprehension of ignorance, attachment, and hatred?
Student: A hypothetically truly existent object, a hypothetically truly existent attractive object, and a hypothetically truly existent unattractive object.

Student: Is the object of the mode of apprehension of ignorance the referent object of ignorance?
Geshe Jampa Gyatso: In this case, they are the same. In *Awareness and Knowers* it says that in the case of a conceptual consciousness, the object of the mode of apprehension, the referent object, and the object of engagement are mutually inclusive.

Thursday afternoon, 1 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 183) says:

> Therefore, "on only [the nature of things which is] imputed by confusion" and so forth means "because the two, attachment and hatred, operate in dependence on superimposing pleasantness and unpleasantness which are only inherently existent." From_among the two types of observed objects of attachment and so forth, the true existence alone which is imputed by confusion is not indicated to be an observed object because the observed objects that are the two types of observed objects of both innate conceptions of a self are established bases. Attachment and so forth, due to being concomitant with confusion, also have similar observed objects.

While ignorance – the conception of true existence – does have an observed object, its object of the mode of apprehension does not exist. What is the observed object of the conception of a self of persons? It is the I. What is the observed object of the conception of a self of phenomena? It is the five aggregates and so forth. From the point of view of their production, first the conception of a self of phenomena is produced, then on this basis the conception of a self of persons is produced. But from the point of view of the realizations of the selflessness of persons and the selflessness of phenomena, first one realizes the selflessness of persons and then the selflessness of phenomena. This is mentioned by Lama Tsongkhapa in his *Great Exposition of the Stages of the Path*. In short, first there is the production of the conception of a self of phenomena followed by the production of the conception of a self of persons because first, in dependence on seeing the aggregates of a person, the conception of a self of phenomena is produced, then upon being introduced to the person, the conception of a self of persons is produced. The reason that first there is the realization of the selflessness of persons followed by the realization of the selflessness of phenomena is because one first realizes that the person is imputed upon the aggregates, whereby the existence of a self of persons is refuted.

Lama Tsongkhapa says: "From among the two types of observed objects of attachment and so forth, the true existence alone which is imputed by confusion is not indicated to be an observed object because the observed objects that are the two types of observed objects of both innate conceptions of a self are established bases." The true existence imputed by ignorance is not the observed object of attachment, hatred, and so forth because the two conceptions of a self have their respective observed objects, [which are existents]. On the other hand, the object of the mode of apprehension of the two conceptions of a self is non-existent.

Lama Tsongkhapa says: "Attachment and so forth, due to being concomitant with confusion, also have similar observed objects." This would seem to mean that ignorance and attachment, as well as ignorance and hatred, have five concomitances. One should analyze whether it is enough to have an observed object in common to be concomitant or whether all five concomitances are necessary. Ignorance and attachment, or ignorance and hatred, have the same support, but do they have a common substance and common time? In general, from the point of view of the lower schools, two things being concomitant means that they have five points in common. The observed object of both ignorance and attachment is the same. However, is their aspect the same? If the Prasangika Madhyamikas ask, what is the object of the mode of apprehension of the ignorance that is the conception of true existence, the answer is true existence, inherent existence, establishment by way of its own character, and existence from its own side. This is the aspect of ignorance. On the other hand, the aspect or object of the mode of apprehension of attachment is that having an aspect of pleasantness, whereas the aspect of hatred is that having the aspect of unpleasantness. It cannot be said that there is no object of the mode of apprehension of attachment, since attractiveness or pleasantness is the object of the mode of apprehension.

Lama Tsongkhapa's *Illumination* (Tibetan text page 183) says:

> That having the aspect of desiring an object and that having the aspect of not desiring but turning away from an object, which are induced by the two [types of] improper mental attentions, are [respectively] attachment and hatred.

The aspect of desire is the aspect of pleasantness, whereas the aspect of hatred is the aspect of unpleasantness. The object-aspect or object of the mode of apprehension of attachment is exaggerated attractiveness on a basis that is attractive. The object-aspect or object of the mode of apprehension of hatred is exaggerated unattractiveness on a basis that is unattractive.

The object-aspect of attachment is the object of the mode of apprehension of attachment, whereas the subject-aspect of attachment is the attachment itself. An object of the mode of apprehension is only posited from the side of the object; it is not posited from the side of the subject. On the other hand, aspects are of two types: object-aspects and subject-aspects.

If we say attachment and hatred are not wrong consciousnesses but are mistaken consciousnesses, what is the consequence? Or if we say that the conception of true existence is a wrong consciousness but that attachment and hatred are not, what is the consequence? The object of the mode of apprehension of ignorance does not exist, but the object of the mode of apprehension of attachment and hatred does exist. Are they not wrong consciousnesses? They are not. Are they mistaken consciousnesses? They are. Therefore, the object of the mode of apprehension of attachment and hatred exists.

There are two ways of talking about the object, because the exaggeratedly attractive object does not exist, whereas the attractive object does exist. In general, attachment is defined as that which has the aspect of attractiveness of a contaminated object. Hatred is defined as that which has the aspect of unattractiveness of a contaminated object.

Student: How is mere attractiveness exaggerated if attractiveness is imputed?
Geshe Jampa Gyatso: Do you not accept attractiveness?
Student: Yes.
Geshe Jampa Gyatso: What is it?
Student: It is a ripening of karmic latencies in my continuum.
Geshe Jampa Gyatso: In general, attractiveness and unattractiveness exist; however, they are imputed by the subject. This is what depends on the ripening of karmic latencies.
Student: It seems that when an object appears, it appears as attractive due to karmic latencies and then the mind starts to embellish its beauty. Is that what happens?
Geshe Jampa Gyatso: Yes; first the attractive object appears and then we begin to think, "It is beautiful. It is really beautiful," and so forth." However, some time later we might even start to think about that same object, "It is ugly. It is really ugly," and so forth!

In short, the observed objects of ignorance and attachment are the same. However, their objects of the mode of apprehension are different.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Therefore, because those [minds] that have the mere aspect of desire or non-desire induced by the conception of a self-sufficient substantially existent person are not posited as attachment and hatred, the way of positing attachment and hatred is also not the same [in the lower schools and the Prasangika Madhyamika].

The lower schools posit the aspect of attractiveness and the aspect of unattractiveness induced by the conception of a self-sufficient substantially existent person as the aspect of attachment and hatred. However, Lama Tsongkhapa says that this is not sufficient in the Prasangika Madhyamika system to posit the aspects of attachment and hatred. When Lama Tsongkhapa says: "the way of positing

attachment and hatred is also not the same," it means that the way they are posited in the lower schools and the Prasangika Madhyamika system are not the same.

Lama Tsongkhapa's *Illumination* (Tibetan text page 184) says:

> The phrase "they are also based on confusion" means that attachment and so forth are induced through being preceded by the confusion which is the conception of establishment by way of its own character.

Lama Tsongkhapa says that this phrase cited from the commentary on the *Four Hundred Stanzas* "means that attachment and so forth are induced through being preceded by the confusion which is the conception of establishment by way of its own character." This means that in dependence on ignorance – the conception of true existence – attachment and hatred arise. In this way, the conception of true existence is a cause for the result that is attachment or hatred. If this is the case, then ignorance and attachment, or ignorance and hatred, cannot be concomitant in that they arise serially.

Lama Tsongkhapa's *Illumination* (Tibetan text page 184) says:

> The analogy [in Aryadeva's *Four Hundred Stanzas*] of "[like] the body sense power [abides in] the body" means that just as the other four sense powers do not have a basis which is a separate location from the body sense power, likewise, also all other afflictions operate in dependence on confusion and operate without being separated from it.

All afflictions engage their object without being separated from ignorance, that is, they engage their object together with ignorance. Here Lama Tsongkhapa only explicitly mentions attachment and hatred but the other afflictions such as pride, doubt, and afflicted view also operate in dependence on ignorance. In short, all five root afflictions engage their respective objects without being separated from the sixth, ignorance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 184) says:

> Therefore, since by destroying ignorance itself all afflictions are destroyed, it is said that one should respect the advice concerning its antidote, dependent-arising, the emptiness of inherent existence.

Just as the body sense power is the support of all the other remaining sense powers, ignorance is the support of all other afflictions. Likewise, just as when the body sense power is destroyed all the remaining afflictions are destroyed, similarly, when ignorance is destroyed all the other afflictions are destroyed. Therefore, in order to destroy ignorance, one should listen to teachings on dependent-arising, the emptiness of inherent existence. By means of the antidote, the understanding of dependent-arising, ignorance can be destroyed, in that by developing this wisdom, ignorance is abandoned. In many texts, in the context of calm-abiding and special insight, it is said that the meditation on dependent-arising is the antidote to the conception of a self. In answer to the question as to what meditation is the antidote to strong attachment, Lama Tsongkhapa's texts on the stages of the path and others say that the antidote to intense attachment is meditation on repulsiveness. Likewise, they say that when one has strong hatred due to tendencies developed in the past, one should meditate on love; when ignorance is strong, one should meditate on dependent-arising; when pride is strong, one should meditate on the detailed divisions of the constituents; and when one has a lot of conceptions, one should meditate on the breath. Lama Tsongkhapa bases this advice on texts such as Asanga's *Bodhisattva Grounds*.

In short, the meditation on dependent-arising is of great benefit.

Lama Tsongkhapa's *Illumination* (Tibetan text page 184) says:

> Although the conception of the true existence of things is the ignorance which is the root of cyclic existence, [Nagarjuna's] *Seventy Stanzas on Emptiness* and his *Sixty Stanzas of Reasoning* say:
>
> > When any abode is found
> > The afflictions with the deceitfulness of a poisonous snake
> > Seize hold of it. Whoever's mind
> > Lacks that abode will not be seized.
>
> It is said that when any abode – a referent point for the conception of true existence – is found, it is seized by the snake of the afflictions.

When a referent point (target) for the conception of true existence is found, the snake of the afflictions arises. On the other hand, when the referent point of the conception of true existence is destroyed, the other snake-like afflictions are also destroyed. In short, the conception of true existence, ignorance, is the basis upon which other afflictions arise. A poisonous snake is dangerous in that it can cause one to die quickly, likewise when one has ignorance, the support, and the other afflictions, the supported, one risks losing the life-force of the path to liberation, i.e., one will not attain liberation. The analogy is a poisonous snake, which endangers one's life; the meaning it exemplifies is the ignorance and other afflictions, which endanger one's attainment of liberation.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Afterward this same text says:
>
> > In those whose minds have that abode,
> > Why would the afflictions, the great poisons, not arise?
>
> This is the sublime assertion of Arya [Nagarjuna].

Here the question is raised: "In those who have the abode of ignorance, why would there not be the arisal of the poisonous snakes of the afflictions?" While conceiving persons and phenomena to be truly existent and yet wishing to attain liberation, to not do anything would be absurd. This is because it is impossible for someone to abandon the afflictions while conceiving of a self, aggregates, and so forth that are inherently existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 184) says:

> To make a connection with the last two lines [is as follows]. That, even though observing the nature of forms and so forth, the afflictions are asserted to be abandoned is said to be taught based on the statement "It is not possible to abandon the afflictions." Also the later commentary says:
>
> > If it is observed to be a thing, the infinite afflictions, such as attachment and so forth, definitely arise without being counteracted. Why? When that thing accords with the mind, at that time it is difficult to counteract the attachment which follows that, whereas if it does not accord [with the mind], at that time it is difficult to avert anger and spite.

The later commentary says that if something is observed to be an inherently existent thing, infinite afflictions will definitely arise without being counteracted in that they are a result of the conception of true existence. This text then says: "When that thing accords with the mind, at that time it is difficult to counteract the attachment which follows that, whereas if it does not accord [with the mind], at that time it is difficult to avert anger and spite." Due to the conception of a self, attachment and hatred arise. How do attachment and hatred arise due to ignorance? Attachment is produced in relation to an object that accords with one's mind, whereas hatred is produced in relation to an object that does not accord with one's mind. The text actually says 'anger and spite.' Which is worse, anger or spite? Anger is stronger. Spite arises from anger. What is spite? Think about it.

Friday morning, 2 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 185) says:

> It is said in the commentary that even if an object is neither attractive nor unattractive, ignorance is produced. If the conception that the object is established by way of its own character operates in the continuum, even if neither of the two, attachment or hatred, are produced, it is asserted to operate like a type of confusion. [Shantideva's] *Engaging in the Bodhisattva Deeds* (v. 9.50-1) says:
>
> > A mind that has an observed object
> > Is an abode in some.
> >
> > In a mind separated from emptiness,
> > Ceased, they are produced again,
> > Like the absorption without discrimination.
>
> In regard to this position, the commentaries on the thought of Arya Nagarjuna by these two masters, [Chandrakirti and Shantideva], and a third, Buddhapalita, are not different.

Objects that are attractive, unattractive, and neutral produce respectively attachment, hatred, and ignorance. This concept is similar to the meditation on equanimity described in the teachings on the stages of the path, in which one visualizes a friend, enemy, and stranger and then examines which mental factors arise in relation to them. Doing so, one will find that in relation to a friend attachment arises, in relation to an enemy hatred arises, and in relation to a stranger ignorance arises.

Lama Tsongkhapa says that as long as the conception that an object is established by way of its own character operates in one's continuum, attachment, hatred, or confusion will arise in relation to that object.

The verse from *Engaging in the Bodhisattva Deeds* means that whenever the mind has a referent point (target) for the conception of true existence, even though the afflictions may cease for a while, they will be produced once again. This is because without the realization of emptiness, the cessation of afflictions is only temporary, like the temporary cessation of minds and mental factors when absorbed in the absorption without discrimination.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 127) says:

> The meaning of "A mind that has an observed object is an abode in some" [is as follows]. A path that is separated from the view that is the realization of subtle emptiness cannot abandon craving because in the continuum of a person whose mind has the observed object that is the conception of true existence, craving induced by that conception of true existence manifestly arises.
>
> [Shantideva's *Engaging in the Bodhisattva Deeds* then says:]
>
> > In a mind separated from emptiness,
> > Ceased, they are produced again,
> > Like the absorption without discrimination.
> > Therefore, meditate on emptiness.
>
> Those who are intent upon liberation and omniscience should meditate on the emptiness which is the person's and aggregates emptiness of establishment by way of their own character. This is because persons who are separated from the realization of the emptiness, which refutes persons and aggregates established by way of their own character, stop other manifest afflictions for a while by means of cultivating other paths, but they will manifestly arise once again; for example, like persons abiding in the absorption without discrimination.

Someone who lacks the realization of emptiness but cultivates an antidote separated from emptiness can achieve a temporary cessation of the afflictions but, due to lacking a realization of emptiness, the afflictions will return again. For this reason, Shantideva says that one should meditate on emptiness. This is similar in the case of someone who meditates on repulsiveness in that this person achieves a temporary cessation of attachment but, due to not having realized emptiness, the attachment will arise again later on. We can verify the return of attachment based on our own experience in the desire realm. While we may be able to avert attachment to some people, we are not able to do so in regard to all people. Likewise, as long as one remains absorbed in the absorption without discrimination, one will have a temporary cessation of coarse minds and mental factors, but when one arises from that absorption they will return again.

When Lama Tsongkhapa says "these two masters" he is referring to Chandrakirti and Shantideva.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Since the main point [of the two *Knowledges*] is the intention to explain passing beyond sorrow by the mere path of the sixteen [attributes], impermanence and so forth, the identification of the afflictions from the point of view of that path is also incomplete. In dependence on these [explanations], pride and so forth can also be understood. The uncommon ignorance, the view of the transitory collection, and the view of an extreme are to be understood as being both acquired and innate; however, fearing too many words I have not written about that.

The explanation in the upper and lower *Knowledges* regarding the attainment of nirvana by the mere path of the four noble truths requires interpretation. This is because one cannot attain nirvana by means of the four noble truths explained in these two texts. In these texts, the identification of the afflictions from the point of view of the path is not complete in that there is more to be said. This is because the presentation of the afflictions in these texts lacks certain information, such as the Prasangika Madhyamikas' assertion that the two conceptions of a self are afflictive obstructions and that in dependence on the ignorance that is the conception of true existence, attachment, hatred, and so forth arise.

QUESTIONS AND ANSWERS

Student: Would Geshe-la please discuss the differences between 1) a relationship of support and supported and 2) a relationship of cause and effect?
Geshe Jampa Gyatso: The aggregates are the support and the person is the supported. The person is posited on the support, which is the five aggregates. For example, in the case of a cup filled with tea, the cup is the support and the tea is the supported. The cup is the support because it functions to prevent the tea from pouring down.
Student: But what is the difference between the two types of support and supported, those that are simultaneous and those that are serial?
Geshe Jampa Gyatso: Do you mean support and supported that are different entities and those that are the same entity?
Student: Yes.
Geshe Jampa Gyatso: The supported, the aggregates, and the support, the person, are support and supported which are one entity and simultaneous. On the other hand, serial support and supported are cause and effect which are not simultaneous; for example, seed and sprout. For this reason, there is a discussion of support and supported in the context of cause and effect. However, in the case of a cup of tea, are they support and supported that are one or different entities? In one way they would seem

to be two different entities. However, in the first chapter of Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition,* an example is given of juniper leaves which are put in a pot made of juniper and a question is raised as to whether such a support and supported are one or different entities? Since the pot made of juniper functions to prevent the juniper leaves falling down, they are support and supported. But are they support and supported that are one entity or different entities? If we take the example of this flower in this bowl we can ask a similar question.
Student: If they are simultaneous support and supported they should be one entity even though they do not appear as such.
Geshe Jampa Gyatso: How are they simultaneous? How are the flower in the bowl and the supporting bowl established to be simultaneous? The bowl functions to prevent the flower from falling down. Because the bowl assists the flower it can be considered a cause. The flower and the bowl are different entities because when they appear to our eye consciousness they appear separately or individually. On the other hand, in the case of Chogyal's aggregates and the person Chogyal, they appear together and not separately. Therefore the way in which the person Chogyal and the aggregates of Chogyal appear is as one entity and not separate. Therefore, support and supported in terms of the person and the aggregates are simultaneous and one entity.
Student: Therefore, the bowl and the flowers do not exist at the same time?
Geshe Jampa Gyatso: If this is debated, one can also ask: "Do mother and son not exist simultaneously even though they are cause and effect? It follows that they do exist at the same time.
Student: Do two books leaning on and supporting each other not exist simultaneously?
Geshe Jampa Gyatso: They are not simultaneous but exist simultaneously, like the flower and the bowl. Two books leaning on each other assist each other, therefore they are support and supported which exist simultaneously. Are the two books one entity? They are not one entity. Are they cause and effect? They are not. Therefore, there is a third possibility for support and supported: (1) a relationship of cause and effect, (2) a relationship of same essence, and (3) a relationship that is neither.

There are many types of support and supported. For example, students who receive financial support in order to be able to continue their studies.

Student: Is it correct to say that 'horns of a rabbit exist' for the consciousness apprehending horns of a rabbit?
Geshe Jampa Gyatso: Yes, it is correct to say that horns of a rabbit exist for the consciousness apprehending horns of a rabbit. But if we then ask, does that mean that horns of a rabbit exist, they do not. In *Awareness and Knowers,* it says that if it exists in the perspective of a conception apprehending it, there is no pervasion that it exists. In conclusion, the horns of a rabbit exist for a consciousness apprehending horns of a rabbit, but horns of a rabbit do not exist.

Student: According to the Prasangikas, what is the difference between 'confusion' (*gti mug*) and 'ignorance' (*ma rig pa*)?
Geshe Jampa Gyatso: They are the same. Ignorance (*ma rig pa*) means obscuration and not knowing. In the texts, it gives the definition of ignorance as a mental factor that engages its respective object with the aspect of being obscured. Confusion (*gti mug*) and ignorance (*ma rig pa*) are synonyms.

Student: One of the meanings of *kun rdzob* (conventional, conventionality, or concealer) is *tha snyad* (nominal or convention). Please explain the meaning of *tha snyad* in this context.
Geshe Jampa Gyatso: *Tha snyad* is of two types, expressive sound and motivating conception. For example, first there is a motivation, a motivating conception, to say something which is followed by the actual words expressed, expressive sound. *Kun rdzob* is an obstructor and that which exists for a knower of conventions. Usually *tha snyad* is related to designating a name (i.e., to conventions).

Student: What is the pervasion between congruent cause and substantial cause?
Geshe Jampa Gyatso: If it is a substantial cause it is not pervaded by being a congruent cause. For example, the last moment of the supreme mundane quality level of the path of preparation realizing emptiness by way of a meaning generality, as the subject; it is a *substantial* cause for the first moment of the uncontaminated path of seeing directly realizing emptiness but is not a *congruent* cause of that. The last moment of the supreme mundane quality level of the path of preparation realizing emptiness by way of a meaning generality and the first moment of the uncontaminated path of seeing directly realizing emptiness are not congruent (literally, of equal fortune) because the first is contaminated and the latter uncontaminated. Yet the last moment of the supreme mundane quality level of the path of preparation realizing emptiness by way of a meaning generality is a substantial cause for the first moment of the uncontaminated path of seeing directly realizing emptiness because it is that which transforms into that.

Student: Is it possible for two different sense consciousnesses – e.g., an eye consciousness and a body consciousness – to operate simultaneously for an ordinary being and for a learner superior?
Geshe Jampa Gyatso: Yes, they can operate simultaneously. For example, an ordinary being can look at the body and simultaneously experience the sensation of touching it. On the other hand, one can also touch something without the need to look at it. Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says: "A form, a pot, exists in the darkness." Although it cannot be seen, it can be touched and identified. In conclusion, even for an ordinary being or a learner superior, two sense consciousnesses can function simultaneously. Perhaps there is a difference for the mental consciousness, but think about it. In my opinion, the experience of an eye consciousness and that of a body consciousness can occur simultaneously. The body consciousness experiences tangible objects, the eye consciousness experiences forms, colors and shapes. Although in one text it says that two conceptions cannot exist simultaneously, it actually means that, for example, the conception "beautiful" and the conception "soft" do not exist simultaneously. Think about this.

Student: What is the immediate condition of a form such as a pot? Is the immediate condition the immediately preceding moment of the pot? What is the relationship between this and the substantial cause?
Geshe Jampa Gyatso: In my opinion, there is no immediate condition for a form such as a pot. However, earlier in the *Illumination* it was said that even form has an immediate condition. Generally speaking, for the lower schools a form does not have an immediate condition because an immediate condition is a condition for the arisal of a consciousness. Therefore, an immediate condition is necessarily the factor of clarity and knowing that immediately precedes a consciousness. However, there are some who differentiate between a concordant immediate condition and a mere immediate condition. If a cup had an immediate condition what would it be? The clay is not the immediately preceding condition because it is the cup's substantial cause. However, I will think about the relationship between an immediate condition and a substantial cause in terms of an eye consciousness.

Student: According to the *Illumination*, an empowering condition is defined as an acting cause, which is anything that does not interfere with the production of a phenomenon. However, in general, we say that the empowering condition of the nose consciousness apprehending a smell is the nose sense power. According to the definition from the *Illumination*, a pot could also be the empowering condition of a nose consciousness. Would it be correct to say this?
Geshe Jampa Gyatso: An empowering condition being defined as an acting cause is mentioned in the *Treasury of Knowledge,* which sets out the point of view of the Vaibhashikas. A pot is not the empowering condition of a nose consciousness apprehending a smell because a pot is not an

empowering condition for nose consciousness. Even if there is no pot present, a nose consciousness can still arise when there is the presence of a smell. In conclusion, the empowering condition of a sense consciousness must be clear physical matter (i.e., a sense power).

On the other hand, according to what Vasubandhu says in the *Treasury of Knowledge,* it follows that even a smell is an empowering condition for nose consciousness because it does not interfere with the production of nose consciousness but instead assists the production of nose consciousness. For example, in regard to an eye consciousness the empowering condition is a clear sense power, the observed object condition is a form, color and shape, and the immediate condition is the immediately preceding consciousness. The immediate condition is usually an antecedent mental consciousness, but sometimes it can even be an ear consciousness. For example, if someone says "There is someone behind you," you generate an ear consciousness hearing this and then look at that person, whereby you generate an eye consciousness apprehending that person. In fact, Vasubandhu's *Treasury of Knowledge* says that the immediate condition is any of the six consciousnesses.

END

Wednesday morning, 21 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 185) says:

> Similarly, dividing the conceptions that apprehend phenomena to be truly existent into nine – the great, middling, and [small], objects of abandonment of the path of meditation – and connecting them with their antidotes, the nine paths of meditation, in the same way that the conceptions that apprehend apprehendeds and apprehenders to be different substances are divided into nine – the great, middling, and [small], objects of abandonment of the path of meditation – and explained in connection with the objects of abandonment and their antidotes, the nine paths of meditation, is to be understood as the interpretive meaning that was taught for some trainees who for the moment are not able to completely realize both the coarse and subtle selflessnesses of phenomena.

Buddha divided the conceptions of true existence into nine – the three great, three middling, and three small – just as he did the conceptions apprehending apprehendeds and apprehenders to be different substances for those who are temporarily unable to realize the subtle selflessness of phenomena. The division of the innate conceptions that apprehend phenomena to be truly existent into nine and the division of the conceptions that apprehend apprehendeds and apprehenders to be different substances into nine are both from the point of view of the hinayana *path*. This differs from the presentation of the Prasangika Madhyamikas, who assert that the conception of true existence, or the conception of inherent existence, is an afflictive obstruction and not a knowledge obstruction. For this reason, the Prasangika Madhyamikas assert that when one attains the state of a hinayana foe destroyer, one abandons the conception of inherent existence. Thus, from the point of view of the mahayana *path*, the conception of true existence is not divided into nine. However, for the Prasangika Madhyamika system, if the conception of true existence were divided into nine, the way in which these nine levels are abandoned would differ from how they are abandoned according to the lower schools. They would say that the first six levels are abandoned by a bodhisattva on the first six grounds, that the three great levels are abandoned on the seventh ground, and that on the eighth ground all nine levels have been abandoned. Thus, Lama Tsongkhapa says that the divisions of the conception of true existence into nine is an interpretive teaching "that was taught for some trainees who for the moment are not able to completely realize both the coarse and subtle selflessnesses of phenomena."

Lama Tsongkhapa's *Illumination* (Tibetan text page 186) says:

> 3B1C-2B3E-2A1B-2B1B-1B3A-2 The way in which mere conventionalities appear and do not appear to the three persons

Chandrakirti's autocommentary (Tibetan text page 71) says:

> For the childish, [even those things] will act to deceive.
>
> For those other than them, since merely arising dependently like illusions and so forth, they are the mere deceptive. Furthermore, because of perpetually using mere ignorance possessing the characteristic of the obscuration of knowing, it appears to the aryas who have a sphere together with appearance – it does not to those possessing a sphere without appearance.
>
> Because buddhas are manifestly, completely enlightened about all aspects of all phenomena, they are asserted as reversing forever the flow of mind and mental factors.
>
> Hence, at first, the Bhagavan taught the deceptive truth and the mere deceptive.

Ordinary beings are deceived by the fact that things have the appearance of true existence. On the other hand, for the three persons, hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas on the three pure grounds, although phenomena appear to them as truly existent, they do not adhere to them as truly existent because they have abandoned the conception of true existence. Therefore, phenomena appear to them as dependent-arisings and mere conventionalities. In other words, they perceive phenomena as like illusions in that they appear to be truly existent but are not. For whom is there no appearance of true existence? The answer is only for a buddha. For the minds of sentient beings, excluding that of non-conceptual meditative equipoise, there is the appearance of true existence.

According to what it says in Chandrakirti's commentary, it would appear that the three persons still have the ignorance that has the characteristic of a knowledge obstruction. It can be asked: "Is ignorance a knowledge obstruction? Is there a knowledge obstruction that is ignorance? Are there two types of ignorance, one that is afflicted and one that is not afflicted? Is the mere ignorance that has the characteristic of a knowledge obstruction the ignorance that is a conception of true existence or is it another type of ignorance?" Think about these questions.

Chandrakirti says: "it appears to the aryas who have a sphere together with appearance – it does not to those possessing a sphere without appearance." 'The aryas who have a sphere together with appearance' means that for those superiors who have the appearance of conventionalities, there is the appearance of true existence, whereas for those superiors who do not have the appearance of conventionalities, there is no appearance of true existence. In short, for superiors in subsequent attainment, because there is the appearance of conventionalities there is the appearance of true existence, whereas for superiors in meditative equipoise, because there is no appearance of conventionalities there is no appearance of true existence.

Chandrakirti then says: "Because buddhas are manifestly, completely enlightened about all aspects of all phenomena, they are asserted as reversing forever the flow of mind and mental factors." This would seem to imply that a buddha is without the flow of mind and mental factors but, if this were the case, it would have to be said that a buddha does not have a mind. Later on, the *Supplement* says:

> *The pacification due to burning the entirety of dry firewood*
> *Of objects to be known is the dharmakaya of the conquerors.*
> *Then, non-produced and non-ceasing,*
> *By stopping the mind, it is manifested by the body.* [12.8]

Thus, it would seem that a buddha is without mind! However, it refers to the fact that the flow of mind and mental factors occurs in subsequent attainment and not in meditative equipoise. This distinction is made only at the level of sentient beings, whereas for complete buddhas there is no distinction between meditative equipoise and subsequent attainment, in that they are one entity for a buddha. It can also be said that for a buddha, the flow of mind and mental factors that is conceptuality has ceased.

Chandrakirti says: "the Bhagavan taught the deceptive truth and the mere deceptive." (Note that this could also be translated as "the Bhagavan taught the conventional truth and mere conventionalities.") One can ask: "Is ultimate truth a mere conventionality? Can it be said that ultimate truth is a mere conventionality but not a conventional truth?" In short, ultimate truth exists as a mere conventionality but it is not a conventional truth.

Student: Why is *mere* conventionality specified?

Geshe Jampa Gyatso: The word 'mere' eliminates it being truly existent. The *Illumination of the Middle Way* says: "The opposite to existing conventionally is existing truly." Thus, ultimate truth is not a conventional truth but it is a mere conventionality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 186) says:

> These things, moreover, while not inherently existent, deceive the childish by appearing to be [inherently existent]. Whereas, for the three persons other than them, who were explained before, because of being dependent-arisings, fabricated things, they are not truly existent but mere conventionalities.

"Things" can refer to functioning things or to phenomena in general. To the childish they appear to be truly existent, whereas to these three persons they appear to be truly existent but they do not adhere to them as truly existent because their real nature appears to them. "Fabricated things" refers to dependent-arisings, which are real conventional natures; for the three persons, they are not truly existent but are mere conventionalities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 186) says:

> Furthermore, because they always employ mere unafflicted ignorance which has the characteristic of a knowledge obstruction, [things] appear to superiors abiding in subsequent attainment who have objects that are together with appearances that are polluted by ignorance and its latencies; they do not appear to superiors abiding in meditative equipoise possessing an object that is without appearances.

As in Chandrakirti's autocommentary, also here in Lama Tsongkhapa's *Illumination,* it appears that the three persons possess a mere unafflicted ignorance, which has the characteristic of a knowledge obstruction. What is this unafflicted ignorance? For the Vaibhashikas, there are two types of ignorance, the afflicted and unafflicted. According to the Vaibhashikas, there are four types of unafflicted ignorance (from Gedun Drup's *Clarification of the Path to Liberation*, translated by G. Churinoff):

> If it is asked: well then, what are the four causes of unknowing?
> 1. Unknowing due to the profound and subtle qualities of the Buddha is, for instance, as was said [in a sutra]:
>
> > The Teacher said to Shariputra, "Shariputra, do you know the Tathagata's aggregate of morality, etc.?" Shariputra answered, "It is not known [by me]."
>
> 2. Unknowing due to very remote location is, for instance, Maudgalyayana not knowing his mother had been reborn in the northern direction in the world [called] Having Light Rays.
> 3. Unknowing due to very remote time is, for instance, when Shariputra did not know that the householder [called] Glorious Rebirth possessed the roots of virtue of the similitude of liberation and hence did not ordain him, the Teacher said, "I see the very subtle seeds of your liberation like gold hidden amidst colored powder or stone," and granted ordination.
> 4. Unknowing due to the infinite divisions of aspects is not knowing the particularities of the constituents, migrations, places of rebirth, rebirths, etc. which are difficult to realize, like, for example, not knowing the causes of the various colors of the center of the peacock's feathers, etc., as was taught by the Elder Rahula: "The various divisions of causes of a single eye of the peacock's feather are not objects of knowledge of the not-

omniscient since knowing that is the strength of omniscience."

These three persons have such unafflicted ignorance. In short, phenomena only appear to the three persons abiding in subsequent attainment and not to those abiding in meditative equipoise.

Lama Tsongkhapa's *Illumination* (Tibetan text page 186) says:

> QUESTION: Well then, what does this system consider to be knowledge obstructions?
> RESPONSE: In the *Explanation of the* '*Supplement to the "Middle Way"*' (commentary on v. 12.31) it says:
>
> > In [foe destroyers] the latencies of ignorance prevent the full distinguishment of objects of knowledge. The presence of latencies of attachment and so forth are also causes of such kinds of engagements of body and speech. Furthermore, the latencies of ignorance, attachment, and so forth are overcome only in the omniscient and buddhas; they are not in others.

In brief, knowledge obstructions are the latencies of ignorance; they prevent seeing the two truths simultaneously. A knowledge obstruction is that which obstructs the simultaneous and direct knowledge of the entities of the two truths. The latencies of attachment and so forth are also included in knowledge obstructions. Due to the existence of latencies of attachment in his continuum, a foe destroyer has negative tendencies of body and speech such as engaging in activities like swinging from tree to tree, using vulgar language, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 186) says:

> Although the Teacher prohibited the negative tendencies of body and speech of jumping like monkeys and calling others "female servants," the engagements of body and speech that exist in foe destroyers, they are not overcome. Stating "furthermore" indicates that the latencies of attachment and so forth also prevent the distinguishment of objects of knowledge. The latencies of the afflictions are knowledge obstructions. Their results, all factors of mistaken dualistic appearance, are also included in [knowledge obstructions].

In short, the latencies of the afflictions are knowledge obstructions as are their results, all factors of mistaken dualistic appearance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 186-7) says:

> From among the two,
> 1. the seeds of the afflictions deposited as latencies and
> 2. the latencies that are not seeds of the afflictions,
>
> the latter are posited as knowledge obstructions.

There are two types of latencies: a latency that is a seed of an affliction and a latency that is not a seed of an affliction. A <u>latency that is a seed of an affliction</u> is: a latency of a former affliction that has the capacity to bring about a future affliction. A <u>latency that is not a seed of an affliction</u> is: a latency of an affliction that does not have the capacity to produce a future affliction.

Lama Tsongkhapa's *Illumination* (Tibetan text page 187) says:

> This is because, due to having extinguished all the seeds of the afflictions, the conception of true existence is not produced whereas, due to the pollution of latencies, an awareness that is mistaken with respect to its appearing object is produced.

Although the conception of true existence is no longer produced, an awareness that is mistaken with respect to its appearing object, meaning one with the appearance of true existence, is produced due to the pollution of latencies.

Lama Tsongkhapa's *Illumination* (Tibetan text page 187) says:

> Since superiors who are not buddhas have not abandoned the ignorance that is a knowledge obstruction, they alternately have conceptions together with appearances in subsequent attainment and are without appearances in meditative equipoise. On the other hand, because buddhas are "manifestly" (that is, evidently), "completely" (that is, without exception) "enlightened" (that is, realized) regarding the ultimate and conventional aspects of all phenomena, all the conceptual flow of minds and mental factors is forever stopped, whereby they do not alternately have and not have conceptions of appearances in subsequent attainment and in meditative equipoise. The word 'forever' indicates that in other superiors the stopping [of the conceptions of appearances] in meditative equipoise is occasional; therefore, they alternately exist [and do not exist] in subsequent attainment and meditative equipoise.

For superiors who are not buddhas, the stopping of the conceptions having the appearance [of true existence] is occasional because, although in meditative equipoise they do not have the appearance of true existence, in subsequent attainment they do have the appearance of true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 187) says:

> Therefore, the statement [in the autocommentary] "because of employing the ignorance that is a knowledge obstruction" is not the reason for the existence of appearances; rather it is proof that appearances occur alternately – existing and not existing – in subsequent attainment and meditative equipoise.
>
> "The flow of minds and mental factors" [mentioned in the autocommentary] is asserted to be conceptuality. *Clear Words* says:
>
> > Conceptuality is the flow of mind. Because of being free from that, suchness is without conceptuality.
>
> It is as explained in sutra saying:
>
> > What is ultimate truth? If it is even without the flow of mind, what need is there to also mention [that it is without] letters?

Lama Tsongkhapa says: "the statement [in the autocommentary] 'because of employing the ignorance that is a knowledge obstruction' is not the reason for the existence of appearances; rather it is proof that appearances occur alternately." In other words, this is not a reason for saying that there are appearances but rather, it is proof that during meditative equipoise, because there is no appearance of conventionalities, there is no appearance of true existence whereas because there is the appearance of conventionalities in subsequent attainment, there is also the appearance of true existence.

Clear Words says: "Conceptuality is the flow of mind." Thus, the flow of mind and mental factors refers to conceptuality. A buddha does not have such a flow of mind and mental factors.

Wednesday afternoon, 21 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 187) says:

3B1C-2B3E-2A1B-2B1B-1B3A-3 The way in which [things] are ultimate and conventional relative to ordinary beings and superiors

Chandrakirti's autocommentary (Tibetan text page 71) says:

> There, that itself that is the ultimate of ordinary beings is the mere deceptive of the aryas having a sphere together with appearance. That which is the self-nature of that, emptiness, is their ultimate.

That which is ultimate for ordinary beings is a mere conventionality for the superiors who have objects together with appearance. This means that in the perspective of ordinary beings things, such as a pot, are ultimately or truly existent. On the other hand, for superiors in subsequent attainment who have the appearance of conventionalities, although phenomena appear to them as truly existent, they do not adhere to phenomena as truly existent. Instead, due to their having directly realized emptiness, phenomena are mere conventionalities, whereas the nature of these conventionalities is ultimate for them. For this reason, Chandrakirti says: "That which is the nature of that, emptiness, is their ultimate."

Chandrakirti's autocommentary says:

> The ultimate of the buddhas is self-nature itself, and further, as it is just incontrovertible (non-deceptive), it is the ultimate truth; it is an object to be cognized by themselves individually. The deceptive truth, because of just deceiving, is not the ultimate truth.

The ultimate, emptiness, is undeceptive and individually realized by a superior's exalted wisdom of meditative equipoise. Thus, because the conventional truth is deceptive, it is not an ultimate truth. Therefore, the two truths can be distinguished simply by the fact that a conventional truth is a deceptive substratum, whereas an ultimate truth is an undeceptive substratum. In terms of truths and falsities, a truth is that which has a mode of appearing that is concordant with its mode of abiding, whereas a falsity is that which has a mode of appearing that is not concordant with its mode of abiding. If conventional truth and ultimate truth are defined in this way, that which is deceptive and conventional truth can be considered to be synonymous, and that which is undeceptive and ultimate truth can be considered to be synonymous. However, if this is debated one can say: "The son of a barren woman, as the subject, it follows that it is an ultimate truth because its mode of appearing and its mode of abiding are concordant." If someone objects to this, one insists asking: "Is this not the case?" The point here is that the son of a barren woman is non-existent, as are the horns of a rabbit and the tail of a human being. When debating, it is permissible to take as a subject that which is without potential, such as the son of a barren woman, a sky-flower, the horns of a rabbit, and other non-existents.

Lama Tsongkhapa's *Illumination* (Tibetan text page 187-8) says:

> [The autocommentary] says:
>
> > In regard to that, whatever is ultimate for ordinary beings is itself a mere conventionality for superiors who have objects that are together with appearances. Their nature is emptiness; that is ultimate for them.
>
> The meaning of the first [phrase is as follows]. Pot and so forth, which are apprehended by ordinary beings to be ultimately existent, are indicated to be mere conventionalities for those three superiors explained before who have appearances in subsequent attainment upon arising from meditative equipoise. Therefore, in their perspective [pot and so forth] are negated to be mere truths but are

> not negated to be conventional truths. The referent objects conceived by ordinary beings to be ultimately existent, pot and so forth, are not indicated to be conventionalities for superiors because that is not possible.

Conventionalities that are apprehended to be ultimately existent by ordinary beings are, for the three superiors – hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas of the three pure grounds in subsequent attainment – mere conventionalities because, although they appear to be truly existent, these three do not adhere to them as truly existent due to having abandoned the conception of true existence. Things, such as pots and so forth, are mere conventionalities for superiors in subsequent attainment but are ultimately or truly existent for ordinary beings. Why do pot and so forth not exist truly for these three persons in subsequent attainment? It is because they have already abandoned the conception of true existence. To ordinary beings conventionalities, such as pot and so forth, appear to be truly existent and they adhere to them as truly existent. Do pot and so forth exist truly in the perspective of the childish? Perhaps it can be said that if it is truly existent in the perspective of the childish it is not pervaded by being truly existent. In other words, if something is truly existent in the perspective of a particular person, it is not pervaded by being truly existent. Think about this.

Childish ordinary beings have the appearance of conventionalities as truly existent and adhere to them as truly existent. Therefore, it said that conventionalities, pot and so forth, are conventional truths in the perspective of childish beings because they appear as truly existent to the conception of true existence but in reality are not truly existent.

Lama Tsongkhapa says: "Therefore, in their perspective [pot and so forth] are negated to be mere truths and are not negated to be conventional truths. The referent objects conceived by ordinary beings to be ultimately existent, pot and so forth, are not indicated to be conventionalities for superiors because that is not possible." This is not possible because if it is a referent object of the conception of true existence of ordinary beings, it is pervaded by being non-existent. Because it is non-existent, it cannot be a conventionality for superiors.

Lama Tsongkhapa's *Illumination* (Tibetan text page 188) says:

> The meaning of the second phrase is [as follows]. Reality, the nature of conventional dependent-arisings, is indicated to be ultimate for superiors. Therefore, mistakenly propounding the opposite to that phrase, saying, "A single basis, such as a pot and so forth, is a conventionality relative to ordinary beings and ultimate relative to superiors" is the talk of those who have not understood that, having become a conventional truth in the perspective of an awareness, it is necessarily prevented from being a truth in the perspective of that [awareness].

In short, it is incorrect to say: "A single basis, such as a pot and so forth, is a conventionality relative to ordinary beings and ultimate relative to superiors."

Lama Tsongkhapa's *Illumination* (Tibetan text page 188) says:

> [The autocommentary] says:
>
> > The ultimate for the buddhas is the very nature. Moreover, due to being undeceptive, it is ultimate truth. It is known by them individually.

"It is known by them individually" means that the exalted wisdom of meditative equipoise knows its respective object, an emptiness, individually.

Lama Tsongkhapa's *Illumination* (Tibetan text page 188) says:

> The word 'very' of "is the very nature" is to be taken as unvarying. That distinguished by [the buddhas], the ultimate truth of other superiors, is not alternately posited as the nature which is without appearances in meditative equipoise and the nature which is together with appearances in subsequent attainment; rather, the nature at all times is the reality of meditative equipoise. The meaning of "Moreover..." and so forth is that, having asserted that the 'truth' of ultimate truth is presented as not being true existence, it is explained to mean that it is the truth that abides undeceptively in the perspective of a seer of suchness.

Here, Lama Tsongkhapa explains Chandrakirti's statement, "The ultimate for the buddhas is the very nature." The word 'very' of "is the very nature" eliminates the nature being at times an object with appearance and at other times an object without appearance, in that ultimate truth is not like that. Lama Tsongkhapa says: "rather, the nature at all times is the reality of meditative equipoise." The word 'truth' in the context of 'ultimate truth' is indicated to not mean true existence; rather it is the truth that abides undeceptively in the perspective of a seer of suchness. It is a truth in that its mode of appearing concords with its mode of abiding. The etymology of ultimate truth (literally, highest meaning truth) is that 'ultimate' (literally, highest meaning) is the exalted wisdom of meditative equipoise, whereas ultimate truth is that which is true for that highest meaning or ultimate – the exalted wisdom of meditative equipoise. The way in which emptiness appears to the subject, which is the highest meaning or ultimate, the exalted wisdom of meditative equipoise, concords with the way in which it abides; for this reason emptiness is ultimate truth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 189) says:

IDENTIFICATION OF THE ULTIMATE TRUTH AND
HOW AN EXALTED KNOWER OF ALL ASPECTS KNOWS THE TWO TRUTHS

(Note that these titles that occur in this version of the Tibetan text are not by Lama Tsongkhapa but were added by the publisher.)

3B1C-2B3E-2A1B-2B1B-1B3B Explanation of the ultimate truth

1 Explanation of the meaning of the words of the root verse
2 Dispelling disputes about [the meaning of the words of the root verse]

3B1C-2B3E-2A1B-2B1B-1B3B-1 Explanation of the meaning of the words of the root verse

Chandrakirti's autocommentary (Tibetan text page 71) says:

> Therefore, having indicated the deceptive truth like that, since I desire to indicate the ultimate truth, because it is inexpressible and because it is just not the object of knowledge [resulting from such expression], since it cannot be indicated explicitly – in order to clarify its nature to those desiring to hear, an example of one's own experience is explained:
>
> *[If] some wrong entity due to the strength of cataracts,*
> *Such as falling hair and so forth, is investigated,*
> *That perceived by pure eyes where the essence of that itself*
> *[Is supposed to be], is reality. Like that, it should be known here.* [6.29]
>
> Due to the strength of cataracts [of the eyes], those with cataracts see a continuously transforming assembly of falling hair and so forth within vessels of rhinoceros [horn] and so forth that are held in their hand. Hence, wishing to dispel that, they repeatedly overturn the vessel. Knowing they are finding difficulty, those without cataracts wonder, "What are they doing?" and

> having come nearby that, although they direct their eyes to the area of the falling hair, they do not observe the aspect of falling hair and do not even think (investigate) about the distinctions having the support of the falling hair – such as thing, non-thing, falling, hair not falling, azure (sky-blue), and so forth.

Having presented conventional truth, Chandrakirti now wishes to present the ultimate truth. It is said that since ultimate truth cannot be expressed by terms and is not an object of knowledge, it cannot be indicated explicitly. However, that it is "not an object of knowledge" means that it is not an object of knowledge of a consciousness of conventionalities. Chandrakirti says: "in order to clarify its nature to those desiring to hear, an example of one's own experience is explained." Because emptiness cannot be easily expressed, an analogy is needed to explain it. It is like, for example, the taste of molasses which, when asked how it is, one can only respond that it is sweet. If the questioner then asks "what does sweet mean,?" the taster can only continue to say, "It is sweet."

The analogy given here involves those who have cataracts who see falling strands of hair. A person with cataracts who is holding a vessel of rhinoceros horn or a golden vessel sees falling hair in it and continuously strives to clean it. Meanwhile, if someone without cataracts asks him what he is doing, he would answer that he is trying to clean away the falling hair in the vessel. Although there is no such falling hair, there is the appearance of falling hair due to the cataracts. This is analogous to that fact that although phenomena do not exist truly, ordinary beings have the appearance of true existence. Likewise, although there is no falling hair, there is the appearance of falling hair to those with cataracts. On the other hand, for those without cataracts there is no appearance of falling hair. The meaning of this analogy is that for ordinary beings, phenomena appear to be truly existent and just as they appear they adhere to them as truly existent, whereas in the perspective of superiors in meditative equipoise there is no appearance of true existence. For such superiors, what appears (that is, the absence of true existence) actually exists.

In short, emptiness cannot be expressed just as it is by terms and it cannot be conceptualized just as it is by the conception that follows upon these terms. However, this does not mean that emptiness is not an object of a consciousness. If someone says that it is not an object of a consciousness, one would ask: "Is it not an object of a valid inferential cognizer? Is it not an object of a valid direct perceiver?" If someone says that it is not, one then asks: "Is it not an object of knowledge?" If someone says that it is not an object of knowledge, one asks: "Is it not established by a valid cognizer?" If someone says that it is not, we say that then it follows that ultimate truth is non-existent. Some people, such as Loden Sherap, actually arrive at the conclusion that ultimate truth is not an object of knowledge. Loden Sherap, a famous lama, was a previous incarnation of Dagyab Rinpoche who now lives in Bonn, Germany.

Chandrakirti's autocommentary says:

> Also, when those with cataracts indicate their thoughts to those without cataracts saying, "I see falling hair," then, desiring to dispel their fantasies, having taken the side of the observation of those with cataracts, they indeed mention encouraging words of pacification saying, "There is no falling hair existing here." Yet, in this comment there is no underestimation of the hair.
>
> The reality of the falling hair is that which is seen by those without cataracts; [what is seen] by others is not.
>
> Similarly, due to not seeing suchness since harmed by the cataract of ignorance, that which is the referent – the self-entity of the aggregates, elements, and sources – is their deceptive entity.

> That [object] seen in whatever self-nature by the buddha bhagavans [who are] separated from the ignorance of those very aggregates and so forth, in the manner that those not possessing cataracts do not see falling hair, is their ultimate truth.

Those with cataracts see falling hair, whereas those without cataracts do not. The meaning of this analogy is that for the bodhisattvas of the pure grounds who have abandoned the conception of true existence conventionalities, such as pot and so forth, are mere conventionalities and not ultimately existent. On the other hand, childish ordinary beings see only the conventional entities of the aggregates, constituents, and spheres; they do not see their ultimate entity. In other words, ordinary beings do not see the ultimate truth or reality of the aggregates, constituents, and spheres, whereas the buddha bhagavans see the nature or reality of the aggregates, constituents, and spheres just as it is.

To summarize, it is important to understand the distinction between conventional truth and ultimate truth and to know how to posit each of them. The two truths are described in Jedzun Chogyi Gyeltshen's *General Meaning*, in his *Tenets*, and in many other texts.

> The definition of a conventional truth in *Tenets* is: an object which is found by a valid cognizer distinguishing a conventionality and with respect to which a valid cognizer distinguishing a conventionality becomes a valid cognizer distinguishing a conventionality.
>
> The definition of an ultimate truth is: an object which is found by a valid cognizer analyzing for the final mode of existence and with respect to which a valid cognizer analyzing for the final mode of existence becomes a valid cognizer analyzing for the final mode of existence.

One should memorize the various definitions of the two truths according to the different schools. Then, on the basis of the two truths, one should know how to posit the four noble truths, and on this basis one should know how to posit the basis, paths, and results. The two truths are one entity but different isolates.

Thursday morning, 22 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 189) says:

> [Chandrakirti's autocommentary] says:
>
> > Because ultimate truth is inexpressible by means of words and because it is not an object of a knower that follows upon those words, it cannot be explicitly indicated. However, since I wish to present the ultimate truth, in order to clarify its nature to those desiring to listen, I will explain an analogy experienced by ordinary beings themselves.

Ultimate truth is not expressible by words *just as it is* and it cannot be realized by a conception that follows from these words *just as it is*. However, if it is not specified that it is not expressible *just as it is,* it would follow that there are no words that express emptiness and therefore it would be non-existent. Likewise, a conception that follows from these words cannot realize emptiness *just as it is,* but in general a conception can realize emptiness upon hearing words describing it. There can be debate about this subject, such as: "Ultimate truth, as the subject; if follows that it is not an object of comprehension of a valid inferential cognizer because the conception that follows upon words cannot realize it. "

Chandrakirti says: "it cannot be explicitly indicated." This too can be debated, asking: "Is emptiness not explicitly indicated in sutra? Is there no sutra that explicitly explains emptiness? Is

there no sutra that takes emptiness as its main subject matter? Is there no second Dharma wheel? Does the second Dharma wheel not take emptiness as its main subject?"

Chandrakirti then says: "However, since I wish to present the ultimate truth, in order to clarify its nature to those desiring to listen, I will explain an analogy experienced by ordinary beings themselves."

Lama Tsongkhapa's *Illumination* (Tibetan text page 189) says:

> The meaning of [ultimate truth] not being an object of knowledge and an object of expression is as stated: "it cannot be explicitly indicated." In addition, Nagtso's translation says "it cannot be *directly* indicated."

As before, this statement can be debated, asking: "Do the sutras not explain emptiness explicitly and can trainees intent upon it not realize emptiness?" If emptiness cannot be explained explicitly, then also those who listen to teachings on it could not realize it explicitly. In short, ultimate truth cannot be indicated nakedly just as it is, but if this is not specified, then there follow many absurd consequences. Terms can expresses emptiness but not exactly or nakedly *just as it is*. This is because they express emptiness by means of a term generality. Likewise, when a conception realizes emptiness, it does so by means of a meaning generality and not directly or nakedly.

Lama Tsongkhapa's *Illumination* (Tibetan text page 189) says:

> The meaning of this is [as follows]. The commentary that says that the meaning of suchness is not to be known as other, *Clear Words*, says:
>
> > When those with cataracts mistakenly see the entity of falling hair and so forth, even though those without cataracts have already indicated [their absence], they cannot realize, as it exists, that which is to be realized in the way in which those without cataracts do not see the respective entities of falling hair and so forth.
>
> Although one without cataracts says to one with cataracts "There is no falling hair," [the one with cataracts] is said to not realize the absence of falling hair like it is seen by one without cataracts. Therefore, although the listener does not realize [the absence of falling hair like it is seen by those without cataracts,] it is not that the absence of falling hair is not realized.

When the text says, "the meaning of suchness is not to be known as other," it is not clear whether this means that the meaning of suchness is not to be known *in another way* or if it means that it is not to be known *through others*.

Those with cataracts see falling hair, whereas those without cataracts do not see falling hair. Yet, if one without cataracts says to one with cataracts that there is no falling hair, the one with cataracts does not realize the absence of falling hair just like the one without cataracts realizes it. This is because the one with cataracts still continues to see falling hair, even though one without cataracts says that there is no falling hair. Those with cataracts do not see the absence of falling hair in the same way that those without cataracts see its absence.

The meaning of this analogy is that an ordinary being does not see emptiness in the same way that a superior sees emptiness. Superiors realize emptiness directly, whereas ordinary beings who realize emptiness only do so by means of a meaning generality and, therefore, do not realize it directly. Similarly, those with cataracts see falling hair, whereas those without cataracts see the absence of falling hair.

Lama Tsongkhapa's *Illumination* (Tibetan text page 189) says:

> Taking that as an analogy, when presenting suchness it is asserted that although it is not realized like it is seen by those free from the pollution of the cataracts of ignorance, in general it is not that suchness is not realized.

Although ordinary beings realize emptiness, they do not realize it in the same way that superiors realize it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 189-90) says:

> Therefore, it is not the case that ultimate truth
> - cannot be expressed by scriptures of definitive meaning that possess the profound meaning and by speech presenting [the profound meaning] and
> - cannot be realized even by the awareness that follows upon them.
>
> All [such] statements that the meaning of suchness is not an object of knowledge and an object of expression are also to be understood similarly.

It is not that suchness is not realized by the awareness that follows upon speech presenting the profound meaning; rather, it is not realized *just as it is*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 190) says:

> Chandrakirti says:
>
> *Due to the force of cataracts, those unreal entities*
> *Of falling hair and so forth are imagined.*
> *Their nature is seen by the eyes on anything.*
> *Likewise, understand suchness here.* [6.29]
>
> Those with cataracts, *due to the force of* being polluted by *cataracts* of the eyes, upon seeing falling hair and so forth, that is, bees and so forth, in a vessel for food and drink made of rhinoceros [horn] and other [materials] in their hands, *imagine those unreal entities to be falling hair*, bees, *and so forth*. Then, wishing to get rid of them, they overturn that vessel again and again. Knowing that they are having difficulty, those without cataracts of the eyes come nearby but, although they direct their *eyes* to *the nature of* the falling hair and so forth *seen on any* basis, they do not observe the aspect of falling hair and do not conceive any attributes, that is, that having the support, of falling hair.

One with cataracts, while eating food from a vessel, sees falling hair, bees, and so forth there and tries to remove them. Even if someone without cataracts tells him that there is no falling hair or bees, he still continues to see them. This is the case even though a person without cataracts explains to him that because his eyes are mistaken he has such appearances.

The meaning of this analogy is that ordinary beings are likened to those with cataracts and superiors to those without cataracts. Ordinary beings have the appearance of phenomena as truly existent and adhere to them as truly existent. Although superiors tell ordinary beings that phenomena are not truly existent, they still continue to appear to ordinary beings to be truly existent and they continue to adhere to them as truly existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 190) says:

> Furthermore, when one with cataracts reveals his thoughts to one without cataracts saying "I see falling hair," although [the one without cataracts,] wishing to dispel the conceptions of the one with cataracts, takes his side and says words that earnestly refute that, saying, "There is no falling hair," that speaker does not deprecate the falling hair.

When one who has realized emptiness explains emptiness to those without this realization, it is difficult for them to understand.

Lama Tsongkhapa's *Illumination* (Tibetan text page 190) says:

> The *suchness* of the falling hair seen by those with cataracts is what is seen by those without cataracts; it is not what is seen by those with cataracts. *Likewise*, *understand* the two analogies *here* in the context of their meanings.

The two analogies are those with cataracts and those without cataracts, whereas the two meanings are ordinary beings and superiors.

There was a geshe in Sera Monastery who one time when the *Heart Sutra* was being recited very slowly was sitting in meditation. When another monk asked him what he was doing, he replied that he was meditating on emptiness. When the other asked him what it was like, he replied that it was like the appearance of blue. When asked to describe it further, he said that it was as difficult for him to describe as for a mute person to describe a deity's body. In short, although emptiness is realized, it is difficult to explain it to others.

Lama Tsongkhapa's *Illumination* (Tibetan text page 190-1) says:

> The way they are to be understood is:
> 1. Those who do not see suchness due to a polluted awareness – the impairing cataracts of ignorance – observe the own entities of the aggregates, constituents, and spheres, the conventional entities of those aggregates and so forth, like those with cataracts observe falling hair.
> 2. Those observed by means of not seeing the aggregates and so forth – the objects seen by the buddhas who are free from knowledge obstructions, the latencies of ignorance, as what is the nature of the aggregates and so forth in the way in which falling hair is not seen by the eyes of those without cataracts – are ultimate truths for those buddhas.

The buddhas have directly realized the nature of the aggregates, constituents, and spheres, whereas ordinary beings have not. Those without the cataracts of ignorance realize emptiness just as it is, whereas when ordinary beings realize emptiness, they do so obstructed by the cataracts of ignorance.

Another example is the situation in which one person is eating molasses and another person who has never tasted molasses asks him what he is eating. The person asking the question is like someone who does not know what emptiness is, whereas the person eating the molasses is like someone who has realized emptiness. When the person who has never eaten molasses asks what it tastes like, the person who is eating answers that it is sweet, but when the other person then asks "What is 'sweet'?" the other person has difficulty explaining sweetness just like a person who has realized emptiness has difficulty explaining what emptiness is.

Student: Please explain the meaning of the sentence "The *suchness* of the falling hair seen by those with cataracts is what is seen by those without cataracts; it is not what is seen by those with cataracts."
Geshe Jampa Gyatso: Those with cataracts see falling hair, but do they see the suchness or reality of the falling hair? They do not, because they have mistaken appearance. On the other hand, those without cataracts see the suchness of the falling hair. The absence of falling hair is what is actually real.

In short, when those with the realization of emptiness talk about it to those without the realization of emptiness, they will not understand what it is. Ordinary beings have the appearance of inherent existence and adhere to it, whereas superiors who have realized emptiness have the appearance of phenomena as inherently existent but do not adhere to them as inherently existent. Previously, Chandrakirti's autocommentary said:

> Whatever nature of the aggregates and so forth, seen by the buddha bhagavans free from the latencies of ignorance in the manner in which those without cataracts do not see falling hair, is ultimate truth for them.

The buddhas see the nature of the aggregates and so forth like those without cataracts see the absence of falling hair.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191) says:

> 3B1C-2B3E-2A1B-2B1B-1B3B-2 Dispelling disputes about [the meaning of the words of the root verse]

Chandrakirti's autocommentary (Tibetan text page 72) says:

> If asked, is not the self-nature that is like that aspect, just without seeing? Therefore, how do they see?
>
> That is indeed true, nevertheless, through the manner of not seeing, "they see" is expressed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191) says:

> OBJECTION: If just as the eyes of those without cataracts do not see even mere appearance in regard to falling hair, the buddhas do not see conventionalities – the aggregates and so forth – which appear to an awareness polluted by ignorance, then [those conventionalities] would not exist because if they did exist the buddhas would necessarily see them. If conventionalities, the aggregates and so forth, do not exist, even the attainment of buddhahood would not exist because a person who initially generates the mind [of enlightenment] has the pollution of ignorance.

Those without cataracts do not have the appearance of falling hair. In regard to this, someone asks: Do the buddhas who are free from the cataracts of ignorance not see conventionalities, the aggregates and so forth? Does a buddha see phenomena, such as the aggregates and so forth, that appear to ordinary beings? They must see them, as otherwise they would be non-existent. Do phenomena, such as the aggregates and so forth, which appear to ordinary beings who have the cataracts of ignorance, appear to buddhas? They do appear to them. If the buddhas see them, do they see them due to the cataracts of ignorance? They do not. Phenomena, such as the aggregates and so forth, do not appear to buddhas as they appear to ordinary beings, yet they do appear to them. This is because since phenomena, the aggregates and so forth, exist, they must be seen by the buddhas. Similarly it is said in the *Ornament for Clear Realizations* that bad-tasting food appears to a buddha as delicious. This means that bad-tasting food for an ordinary being appears as delicious to a buddha. There is a story about this in relation to Shakyamuni Buddha. One day when the Buddha was out begging for alms, a woman offered him the rotten dregs of alcohol, yet the Buddha accepted them and ate some. Although Ananda had warned the Buddha not to eat them, the Buddha said that they were very good and in order to prove this, took some from his mouth and gave it to Ananda to eat. Ananda found that it was in fact delicious! Bad-tasting food appears to a buddha as delicious due to his vast collection of merit. In fact, whatever appears to a buddha is pure and good.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191) says:

> RESPONSE: The explanation of the way in which there is no such fault [is as follows]. There are two ways in which a buddha's exalted wisdom knows objects of knowledge:
> 1. the way in which it knows all objects of knowledge that are ultimate truths and
> 2. the way in which it knows all objects of knowledge that are conventional truths.

It is important to understand these two way in which a buddha's exalted wisdom knows object of knowledge.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191) says:

> The first, [the way in which a buddha's exalted wisdom knows all objects of knowledge that are ultimate truths,] is: in a manner of not seeing the appearance of conventionalities, the aggregates and so forth, [a buddha's exalted wisdom] knows their suchness.
> The second, [the way in which a buddha's exalted wisdom knows all objects of knowledge that are conventional truths,] is: because with respect to buddhas it is not suitable to posit an implicit realization realizing [conventionalities] even though they do not appear, [a buddha's exalted wisdom] necessarily knows them through their appearing; therefore, in the perspective of that exalted wisdom knowing varieties, it knows [conventionalities] in a manner of the dualistic appearance of object and subject.

The way in which a buddha's exalted wisdom knows all objects of knowledge that are ultimate truths is that although when a buddha sees the reality of conventionalities he does so without the appearance of conventionalities, he still realizes their suchness. In other words, in the perspective of a buddha's seer of suchness, there are no conventionalities. Thus, a buddha's exalted wisdom seeing suchness is an exalted wisdom seeing modes; it sees the suchness of conventionalities without seeing conventionalities.

The way in which a buddha's exalted wisdom knows all objects of knowledge that are conventionalities is that a buddha's exalted wisdom realizing varieties sees them in a manner of the dualistic appearance of object and subject. In other words, in the perspective of a buddha's exalted wisdom seeing varieties, there is the dualistic appearance of object and subject in that they are seen as different. Lama Tsongkhapa says: "Because with respect to buddhas it is not suitable to posit an implicit realization realizing [conventionalities] even though they do not appear, [a buddha's exalted wisdom] necessarily knows them through their appearing."

In short, in the perspective of a buddha's exalted wisdom seeing modes or suchness there are no conventionalities, such as the aggregates and so forth. On the other hand, in the perspective of a buddha's exalted wisdom seeing varieties there are conventionalities. That there are no conventionalities, the aggregates and so forth, in the perspective of a buddha's exalted wisdom seeing modes is the final reality. For this reason, such an exalted wisdom is said to realize suchness in a manner of not seeing.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191) says:

> Although the aggregates and so forth do not appear to a buddha's exalted knower of varieties through it being polluted by the latencies of ignorance, since they do appear to other persons' knowers, which are polluted by ignorance, they must appear to buddhas because their non-appearance to them is not feasible in that if conventionalities exist they must be observed by an exalted knower of varieties.

Buddhas do not have the appearance of conventionalities, such as the aggregates and so forth, due to being polluted by ignorance. However, the appearance of conventionalities to sentient beings due to their being polluted by ignorance appears to buddhas. This is because the appearance of conventionalities to those sentient beings is an existent. Lama Tsongkhapa says: "since they do appear to other persons' knowers which are polluted by ignorance, they must appear to buddhas because their non-appearance to them is not feasible in that if conventionalities exist they must be observed by an exalted knower of varieties."

Do conventionalities, the aggregates and so forth, appear to buddhas due to their being polluted by ignorance? They do not. How do conventionalities, the aggregates and so forth, appear to sentient beings? They appear to sentient beings as if truly existent. That way of appearing does not appear to buddhas. However, does the appearance of true existence to sentient beings appear to buddhas?

Student: It does not.

Geshe Jampa Gyatso: Yet to sentient beings conventionalities, the aggregates and so forth, appear to be truly existent. Is there the appearance of truly existent aggregates to sentient beings? There is. Does the appearance of true existence to sentient beings also appear to a buddha's exalted knower of varieties?

Student: It does appear because the appearance of true existence is an object of knowledge.

Geshe Jampa Gyatso: If something exists, does it necessarily appear to a buddha?

Student: Yes.

Geshe Jampa Gyatso: That is right.

In conclusion, the appearance of the aggregates as truly existent in the perspective of sentient beings appears to buddhas, but the aggregates and so forth do not appear to be truly existent to buddhas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191) says:

> Although an eye consciousness free from cataracts does not have the appearance of the falling hair that appears to those with cataracts, since that appearance is not necessarily non-existent it is not like the case of a buddha.

To those without cataracts, there is no appearance of falling hair. Is the appearance of falling hair necessarily non-existent? It is not; the appearance of falling hair exists. For whom does it exist? It exists for those with cataracts, in that for those with cataracts there is the appearance of falling hair. Does the falling hair exist? No, it does not. If someone says "It follows that it does exist because there is the appearance of falling hair," we reply that there is no pervasion. Likewise, does true existence exist? If someone says that it does exist because the appearance of true existence exists, we reply that there is no pervasion.

Lama Tsongkhapa's *Illumination* (Tibetan text page 191-2) says:

> As long as the latencies of mistaken dualistic appearance are not extinguished, the two direct comprehensions of modes and varieties cannot be generated in the same entity. Since they must be comprehended alternately in meditative equipoise and subsequent attainment, those two, [the modes and varieties,] do not come to be comprehended by means of a single moment of exalted wisdom. On the other hand, when all the latencies of mistaken [dualistic appearance] without exception are abandoned, even in each moment of exalted wisdom the two exalted wisdoms are uninterruptedly generated in the same entity. Thereby, simultaneously the alternating of direct comprehension with non-comprehension of the two objects of knowledge is no longer necessary.

As long as the latencies of mistaken dualistic appearance are not abandoned, a single awareness cannot realize the two truths directly and simultaneously. This is why for non-buddhas there is alternately the comprehension of varieties in subsequent attainment and the comprehension of modes in meditative equipoise. On the other hand, a buddha is completely free of the latencies of ignorance and is therefore able to see the two truths directly and simultaneously. Therefore, at this point the two truths are no longer seen alternately in meditative equipoise and subsequent attainment in that on the buddha ground, meditative equipoise and subsequent attainment become one entity. Therefore, it is said that a buddha is constantly absorbed in meditative equipoise on the two truths or that a buddha is absorbed in meditative equipoise on reality in a manner of non-arising. Such a quality is unique to only buddhas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 192) says:

> Therefore, this also does not contradict [the autocommentary on the *Two Truths*] that says:
>
> > Even a single moment of an exalted knower
> > Pervades all the mandalas of objects of knowledge.
>
> Although the two exalted wisdoms are the same entity, there is not even the slightest contradiction in there occurring two different modes of knowing in relation to the two objects; this is a distinctive quality of the buddha bhagavans alone. Taking the way of knowing suchness alone as a buddha's way of knowing and then saying that a knower of varieties does not exist in the mental continuum of a buddha, but is included in the continuum of trainees, is to deprecate a buddha's knower of varieties. Someone who also says that an exalted knower of modes does not exist in the mental continuum of a buddha appears to deprecate both exalted wisdoms. Some remaining [information] about this will be explained in the chapter on the result.

The *Two Truths on the Middle Way* is by Acharya Jnanagarbha, as is its autocommentary. "All the mandalas of objects of knowledge" refers to the two truths. A single moment of a buddha's exalted knower knows the two truths simultaneously; this is a distinctive quality of a buddha that is not shared by anyone else.

Lama Tsongkhapa says: "there is not even the slightest contradiction in there occurring two different modes of knowing in relation to the two objects." This means that the exalted knower of a buddha is only one entity but, relative to the two types of objects, it has two modes of knowing. Thus, although a buddha's exalted knower of ultimate truths and a buddha's exalted knower of conventional truths are one entity, they are posited as two relative to their modes of knowing.

Lama Tsongkhapa's *Illumination* (Tibetan text page 192) says:

> QUESTION: Is the nature that is such an aspect, the vanishing of all dualistic appearances, not without seeing? Therefore, how do buddhas see ultimate truth?
> RESPONSE: That [the nature] is not seen in a dualistic manner due to the vanishing of dualistic appearances in the perspective of a seer of suchness [is as said in the autocommentary]:
>
> > Although indeed true, nevertheless, it is said "In a manner of non-seeing they see."
>
> The way of proceeding in the response to this debate [is as follows]. The exalted wisdom knowing modes,
> - because of directly seeing the suchness of the aggregates and so forth,
> - because that which is not established in the perspective of a seer of the aggregates and so forth is their suchness, and
> - because their suchness must be seen in a manner of not seeing the aggregates,
>
> the autocommentary (commentary to verse 6.97) says:

> Without contacting a functioning thing that has production, he directly enacts the nature alone. Therefore, because of comprehending suchness, he is called "buddha."

> Saying 'a buddha's exalted wisdom knowing the ultimate comprehends reality alone without contacting the substratum' means the same as saying 'their suchness is seen in a manner of not seeing the aggregates.' Although 'not seeing' means "highest seeing," to not see anything is not asserted to be seeing.

A buddha's exalted wisdom seeing modes realizes the reality of conventionalities without seeing the appearance of conventionalities. The very non-establishment of phenomena, the aggregates and so forth, in the perspective of a buddha's exalted wisdom seeing modes, is their final mode of abidance. Lama Tsongkhapa says: "that which is not established in the perspective of a seer of the aggregates and so forth is their suchness." The non-existence of the aggregates in the perspective of a buddha's exalted wisdom knowing modes is suchness.

Lama Tsongkhapa says: "because their suchness must be seen in a manner of not seeing the aggregates." This was discussed previously.

Lama Tsongkhapa then quotes Chandrakirti's autocommentary. A buddha's exalted wisdom knowing modes does not contact functioning things that have production, yet it sees their nature. This means that a buddha directly realizes their emptiness. Lama Tsongkhapa says: "Saying 'a buddha's exalted wisdom knowing the ultimate comprehends reality alone without contacting the substratum' means the same as saying 'their suchness is seen in a manner of not seeing the aggregates.'"

Lama Tsongkhapa says: "'not seeing' means 'highest seeing.'" In the perspective of a buddha's exalted wisdom realizing modes there are no conventionalities. This non-seeing of conventionalities is highest seeing, that is, seeing the highest, the ultimate. In other words, the non-seeing of varieties by a buddha's exalted wisdom realizing modes is highest seeing or the seeing of the ultimate. On the other hand, Lama Tsongkhapa says: "to not see anything is not asserted to be seeing."

Lama Tsongkhapa's *Illumination* (Tibetan text page 193) says:

> Since, as was explained before, not seeing elaborations is posited as 'seeing free from elaborations,' seeing and non-seeing are not posited in regard to a single basis.

"Seeing and non-seeing are not posited in regard to a single basis" means that seeing is posited in regard to modes and non-seeing is posited in regard to varieties or conventionalities. In other words, the non-seeing of conventionalities is the seeing of the ultimate.

Lama Tsongkhapa's *Illumination* (Tibetan text page 193) says:

> Moreover, the *Compendium on the Mahayana* says:
>
> > "Not seeing forms, as well as not seeing feelings,
> > Not seeing discriminations, not seeing intentions,
> > Not seeing consciousnesses, minds, and mentality anywhere,
> > Is seeing phenomena;" this is taught by the Tathagata.
> >
> > Sentient beings express in words "I see space."
> > How is space seen? They should investigate it.
> > Also seeing phenomena like that is taught by the Tathagata.
> > Such seeing cannot be described by other analogies.
>
> "Not seeing the five aggregates and seeing phenomena" is the meaning of suchness. As is taught: "Whoever sees dependent-arising, sees phenomena."

The exalted wisdom seeing the reality of the five aggregates does not see the substratum, the five aggregates. In other words, the reality of the five aggregates is seen by this exalted wisdom in a manner of not seeing the five aggregates. This is called "seeing phenomena." 'Phenomena' in this context refers to suchness or ultimate truth.

That the exalted wisdom realizing the reality of the five aggregates realizes their reality in a manner of not seeing the substratum, the five aggregates, means that the five aggregates do not appear to or do not exist in the perspective of that exalted wisdom.

The Buddha said that one who sees dependent-arising sees phenomena. In this context 'phenomena' is the ultimate truth. When dependent-arising is realized, one realizes ultimate truth. Thus, the realization of ultimate truth arises from the realization of dependent-arising.

It is said that in order to realize ultimate truth for the first time, one must do so in dependence on a correct reason. Is there pervasion that it is based on a correct reason? According to the Prasangika Madhyamika system, there is no pervasion because it is possible to generate an inferential valid cognizer in dependence on a mere consequence. Is an inferential valid cognizer necessarily produced in dependence on a correct reason? In general, the definition of an inferential cognizer is: a new, incontrovertible determinative knower that is directly produced in dependence on a correct reason that is its basis. What is the definition of an inferential cognizer in the Prasangika Madhyamika system?

Student 1: Perhaps for the Prasangika Madhyamika system it is necessary to add "or a consequence" to this definition.

Student 2: I think that for the Prasangika Madhyamika system one does not need to say that it is a *new* incontrovertible determinative knower.

Student 3: Thus, the definition could be: an incontrovertible determinative knower that is directly produced in dependence on a correct reason or consequence that is its basis.

Geshe Jampa Gyatso: Then, is the conclusion that it is "an incontrovertible determinative knower that is directly produced in dependence on a consequence that is its basis"? The Prasangika Madhyamikas say that it is possible to generate an inferential cognizer realizing the probandum in dependence on a mere consequence. The etymology of the word 'Prasangika,' translated as Consequentialist, is that it is one who propounds that an inferential cognizer realizing the probandum is generated in dependence on a mere consequence. According to other schools, it is necessary to do so in dependence on an autonomous sign.

Friday morning, 23 June 2000

Jedzun Chogyi Gyeltshen's *General Meaning* (page 331) says:

> The presentation of our system
> The definition of a valid cognizer is: an incontrovertible knower.
> The definition of a direct valid cognizer is: a valid cognizer that is an incontrovertible knower with regard to its object of comprehension, its object of the mode of apprehension, without directly depending on a reason.

Jedzun Chogyi Gyeltshen's *General Meaning* (page 333) says:

> The definition of an inferential cognizer is: an incontrovertible knower with regard to its object of comprehension, which is hidden to itself, and that is directly produced in dependence on its basis, a correct reason.

This can be debated, saying: "If it is an inferential valid cognizer it is pervaded by being produced in dependence on its basis, a correct reason, but there is no pervasion that an inferential valid cognizer is produced in dependence on a correct reason." An inferential valid cognizer produced in dependence on a consequence is produced in dependence on its basis, a correct reason. However, is that a correct reason? It is not. For example, sound, as the subject, it follows that it is a non-product because it is

permanent. When such a consequence is set forth, an inferential valid cognizer can be produced in dependence on it. However, although it is not a correct reason, it involves an implicit correct reason. Thus, when this consequence is set forth, an inferential valid cognizer can be produced in dependence on it, whereby it is produced in dependence on the implicit correct reason, "because it is impermanent."

Lama Tsongkhapa's *Illumination* (Tibetan text page 193) says:

> In addition, space, for example, is the mere elimination of obstructive contact; seeing or realizing that is likened to the function of not seeing, in that if the object of negation, an obstructive phenomenon, existed, it would be visible. Also with respect to that, obstructive phenomena are the unseen while the space is the seen.

The entity of space is the mere elimination of obstructive contact. The definition of uncompounded space given in *Collected Topics* is: a non-affirming negative that is the mere negation of an obstructive phenomenon. "Obstructive contact" implies form.

Lama Tsongkhapa says: "seeing or realizing that is likened to the action of not seeing in that if the object of negation, an obstructive phenomenon, existed, it would be visible." This seems to mean that if obstructive contact existed, it could be seen, whereas it is not. However, although obstructive phenomena are seen in general, when looking at space one does not see obstructive phenomena; one sees only space. According to the Vaibhashika school uncompounded space is a phenomenon that is able to perform a function because it functions to permit movement, construction, and so forth.

Lama Tsongkhapa says: "Also with respect to that, obstructive phenomena are the unseen while the space is the seen." This means that the non-seeing of obstructive phenomena is the seeing of space.

Lama Tsongkhapa's *Illumination* (Tibetan text page 193-4) says:

> The last line [of the above stanza] refutes the seeing of blue, which is not like the seeing in the analogy, for example, as being like seeing suchness.

Seeing blue is not like seeing the reality of space. In other words, someone says that the reality of space is seen in the same way as blue is seen; this is what is refuted here. The last line of the stanza is: "Such seeing cannot be described by other analogies."

Chandrakirti's autocommentary says:

> As extensively taught in the *Exalted Engaging in the Two Truths:*
>
> > Devaputra, ultimately, if ultimate truth were the nature of the objects of body, speech and mind, that would not proceed to be counted "ultimate truth," since it would be just deceptive truth.
> >
> > Nonetheless Devaputra, ultimately, ultimate truth is passed beyond all conventions, is without particulars, is unproduced and does not cease, is separated from being an object to be mentioned or mentioning, object to be known or knowing.
> >
> > Devaputra, ultimate truth is passed beyond until the object of the exalted wisdom of omniscience, possessing supremacy of all aspects. Hence, it is not like the expression, "ultimate truth." All phenomena are false since [they are] controvertible (deceptive) phenomena.

> Devaputra, ultimate truth is not able to be indicated. If asked, why is that? Whoever indicates, whatever is indicated, and whoever is indicated to – all these phenomena are ultimately not strongly produced. Not strongly produced phenomena are not able to explain strongly produced phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 194) says:

> In regard to the knowing that is seeing in a manner of non-seeing, the autocommentary [cites the *Exalted Engaging in the Two Truths Sutra*] with respect to the two truths:
>
> > "Devaputra, if, for the ultimate, ultimate truth were the nature of objects of body, speech, and mind, it would not be counted as that called 'ultimate truth' in that it would be conventional truth."
> >
> > "Furthermore, Devaputra, for the ultimate, ultimate truth is passed beyond all conventions, without instances, unproduced, unceasing, free from being an object of speech and a speaker, and free from being an object of knowledge and a knower."

This is a description of ultimate truth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 194) says:

> The meaning of the first sutra [passage] that is to be interpreted [is as follows]. In the perspective of a seer of the ultimate, ultimate truth is not seen in the manner in which conventionalities, such as the aggregates and so forth, are not seen. If [ultimate truth] were an object – like the aggregates and so forth are objects of body and speech and like they are objects of mind – since it would not be free from elaboration in the perspective of a direct seer of suchness, [the Buddha] says it would not be ultimate truth but would be an elaboration that is a conventionality. When taken to be like this, [a seer of the ultimate] becomes a knower that sees in a manner of non-seeing.

What is ultimate truth like? The sutra says: "ultimate truth is passed beyond all conventions, without instances, unproduced, unceasing, free from being an object of speech and a speaker, and free from being an object of knowledge and a knower." This is mentioned in the praise to the perfection of wisdom:

> To the perfection of wisdom, inexpressible in words and thought,
> The entity of the unproduced and unceasing,
> An object of the mind individually cognizing it,
> Mother of the conquerors of the three times, I prostrate.

In short, when the exalted wisdom knowing modes sees the ultimate truth of the varieties, it does so without seeing the varieties, that is, conventionalities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 194) says:

> The meaning of the second sutra [passage is as follows]. In the perspective of a direct seer of the ultimate, there are no instances of ultimate truth, that is, there are not many dissimilar particulars of it. The other three [qualities, being unproduced, unceasing, and free from being an object of speech and a speaker,] are easy [to understand]. That [ultimate truth] is free from being an agent and an object of speech in the perspective of that seer is easy [to understand].
> Although the exalted wisdom directly seeing suchness can be posited as a knower of the ultimate and ultimate truth as its object known, this does not contradict [ultimate truth] being free from being

> the two, agent and object, in the perspective of that exalted wisdom. [That lack of contradiction] is because the two, agent and object, are posited only in the perspective of an awareness of conventions. For example, although an inferential consciousness of [an ultimate] type can be posited as the subject and ultimate truth as the object, the two, the agent and object which are subject and object, are not posited in the perspective of a consciousness of [an ultimate] type.

In the perspective of the exalted wisdom seeing modes there is no agent and object, that is, speaker and object of speech. Likewise, an object of knowledge and a knower do not exist in the perspective of a consciousness of an ultimate type.

QUESTIONS AND ANSWERS

Student: That the state of the mind absorbed in the direct realization of emptiness is like water poured into water seems to be the same as the state of the mind of a Samkhya who has attained liberation and has a vision of totality. Is this correct? If it is like this, could it be said that to attain the same mental state, it is possible to take very different paths?
Geshe Jampa Gyatso: It is true that when absorbed in the direct realization of emptiness it is like water poured into water in that subject and object are one. However, this is not the same as the state of the mind of a Samkhya who has a vision of totality. What is a vision of totality? Does it mean that everything vanishes like a rainbow vanishes in the sky?
Student: It seems to mean that the consciousness expands and is able to enter into a state of union or totality with the entire universe.
